tribes existed on the Oregon coast, with its concomitant local exogamy to maintain caste in marriage. This is implied for the Alsea, where there was "a decided preference for marriage with women from another tribe. This is explicitly stated of the nobility. At the same time there is evidence that the men did not care to go too far afield for their wives, for in such specific cases as could be cited, the favored tribes were the Yaquina and Siuslaw, whose languages are almost identical with Alsea and who regarded each other as closely akin. It is more likely that the exogamous tendency was local and extended to villages rather than to tribes."[580] In general culture the Coos resembled the Alsea, hence it may be presumed that the same exogamic sentiments prevailed. This is the more certain since the tribes to the south, the northwestern Californians, were also locally exogamous by habit. Coos marriages were apparently all made by purchase, often being those of children. The amount transferred was pitifully small in comparison with bride prices north and south. How far there was proprietary interest in the purchase, may be judged by the fact that the husband would demand the return of the bride price from the parents of an adulterous wife.[581]

While caste sentiment was not so definitely crystallized among the [565] Takelma, distinctions were drawn between rich and poor, freeman and slave. "There is no well-defined rule against marriage within the village, but as it must very often have happened that practically all the residents of a village were related [marriage of relatives being forbidden], it was customary to look beyond the village for a mate, and in many cases even to marry into some neighboring tribe of alien speech, like the Shasta or the Galice Creek Athabascans." But it was as true here as to the north that such extra-local marriages were dictated by the necessity of finding a wealthy mate, for "the social status of the children depended very largely, of course, on the price paid for the mother, so that poor people's children were looked down upon as not much better than dogs. . . . . The indebtedness of the husband to his father-in-law did not entirely cease with the initial purchase of the wife." He was obliged to visit him later with further gifts and to pay him again on the birth of the first child. "This pay-

[581] St. Clair and Frachtenberg, Traditions of the Coos, 26.

*171 ment was considered as equivalent to the buying of the child." Here
• 582 too childhood marriages often occurred.[632]

583 East of the Cascades among the Klamath, social stratification was far more fluid. There were rich and poor but the caste feeling was only
*171 slightly developed. Indeed the sentiment may not be more than a
582 century old, for the impression was derived that differences of wealth were slight and rank absent prior to the opening of direct contact with
583 the Columbia river tribes. This does not date back of the opening of
565 the nineteenth century. Marriage here was indifferently within or without the local community, but inasmuch as there was no sentiment dictating marriage with one of equivalent wealth and rank, such exogamy as does occur is random and without purpose. The only prescription is that some payment must be made. The amount was relatively small and no great weight attached to its size as indicative of rank, or pretension to rank.

*171 The Northern Maidu have no general rule of marriage within or
582 without the village. Of the Sacramento valley division however it is observed that "there would appear to have been a slightly greater
583 practice of local exogamy." The reason for this is not clear unless it be that co-villagers were commonly related, for these people have no feeling for distinctions of rank based on wealth.[633] Whether the Southern Maidu had a similar exogamic tendency does not appear. There is however some simulation of purchase, since the girl's father received more than the boy's in the exchange of gifts.[634]

*171 Local exogamy of a type affiliated with northwestern forms was not found in this direction beyond the Maidu. Exogamy did occur
582 among the south-central Californians, but it was the exogamy of totemic moieties, which was local exogamy only to the extent that the totemic groups were localized. Thus it happened that the majority of Yokuts marriages were locally exogamic. The most northerly of such tribes were the Miwok.[635] Since the habit of local exogamy was so slightly developed among them, it is doubtful that the Maidu case should be interpreted as an imitation of their practice. I should rather hold that it is to be taken as a result of the prohibition of marriage with relatives, hence not a reflection of either northern or southern influences.

171 * 582 583 554

To return to the coastal groups of northern California, the Yurok and their neighbors had attitudes toward social standing, wealth, and marriage appreciably like those of the Northwest Coast tribes. For the Yurok every social relation was nicely valued and the basis of them all was the marriage settlement. Social status was proportionate to a man's wealth and the amount he was willing to pay for the mother of his children. His own life was valued at the amount paid for his mother. Partial payment or a small sum put him at the bottom of the social scale. The price itself was definitely fixed. Marriage was outside the kinship group and commonly outside the village, but not necessarily so. Kroeber represents the smaller villages as practicing exogamy by reason of kinship of their inhabitants, but it is at least as likely, in view of the exaggerated importance of wealth, that a sufficiently large bride price could be obtained in many instances only from men of other towns.[666] An analogous situation may be inferred for the Tolowa, whose little known culture closely resembled that of the Yurok. On one fundamental point we have the verdict of the Yurok, who "regard the Tolowa as rich, a distinction they accord to few others of the people known to them." Inference also places the Karok in the same category, for in all other known aspects of culture they were as one with Yurok and Hupa.[667] The Hupa attitudes in the matters we are concerned with here were so nearly identical with the Yurok that to cite them would be but to repeat the Yurok case. At one point there is some difference, yet one only of degree. Our authority states briefly that women went regularly to their husbands' villages on marriage, implying that this was a uniform practice, or nearly so.[668] Yet in actual practice it may mean no more than the Yurok habit, local exogamy based on kindred exclusion and the desire for a wealthy alliance. (If the marriages were as regularly exogamous as we are told, then I can see no reason why we should not describe this as a system of unnamed patrilineal local sibs.)

The lower Klamath attitude is also that of the Shasta. It is essential that a wife be paid for in order to fix the value of the children. Even elopements are condoned if the bride price is paid later. Blood money for death or injury is equal to the sum paid for a man's mother. The price varied widely but tends to be fixed at a value somewhat less than that of the Yurok. The wealthier families, who arrange infant betrothals, ordinarily choose the girl from another village.

*171 583 Poorer men offer the bride price directly, or may serve their parents-in-law in lieu of payment.[579]

582 554 114 Purchase appears again among the Sinkyone, and perhaps prevailed in the intervening region. By no means so wealthy as their northern neighbors, values were correspondingly less. Nevertheless we observe something of the Yurok attitude in a definite value attached to a man's life. A wife was seemingly paid for, although Kroeber suggests that this may have been in the nature of a gift to be reciprocated rather than a formal purchase price. If this is so, it suggests only the practice of the generality of more southerly Californians. 848 But inasmuch as illegitimate children were paid for, the suggestion is rather of an approximation to the northwestern norm. Something of the same regularity of purchase, with reciprocal giving, is implied by Yuki statements.[580]

*171 554 The Huchnom and Pomo attitude toward marriage did not differ appreciably from more southerly Californians. The exchange of marriage gifts can hardly be described as true purchase, but appears rather "an expression of good will and dignified but affectionate etiquette." Loeb observes, however, that the man's family gave more than it received in return. It would therefore not be possible to see in it certain affiliation with northwestern customs, were it not that both people prescribed a series of gift-bearing visits of the northwestern type to consummate the marriage. I shall subsequently trace such formal visiting from the Kwakiutl southward to this point. As to exogamy, there was none; marriages were contracted indifferently within the community, outside it, or with foreigners. In neither group were there serious rankings based on wealth which might prescribe a studied attitude toward maintaining it in marriage.[581]

The typical central Californians (Wintun, Miwok, Yokuts, and Costanoan) register negative to the characteristics of northwest marriage. Social stratification of any range and rigidity was absent, wealth unimportant, marriage gifts were presents of friendship however much formality demanded their bestowal, formal visiting seemingly unknown, and exogamy casual, certainly not for the express purpose of maintaining social position. In a word marriage does not function to uphold social stratification nor do the northwestern rites appear.[582]

Marriage practices of the Northwest Coast type can be traced into 171*
the northern Plains. At least this appeals to me as the most rational 581
explanation for the similarities which Crow, Hidatsa, and Assiniboin 583
show and for their divergence from the general Plains custom. It will be well to define the latter again. Such typical tribes as Arapaho, Cheyenne, and Blackfoot viewed with favor marriages in which the son-in-law was chosen for his capacity as a man of honor, of war-like prowess, and a good provider. The father-in-law's desire was commonly to secure his services. Gifts were exchanged, but rather for the honor of the act than with thought of definite purchase and the return of an investment.

The anomaly of Crow attitudes is most intelligible, in view of their 171*
geographic position in the northwestern Plains, as ultimately derived 582 •
from the Northwest Coast. The most honorable form of marriage for 583
the Crow was by purchase, which gave to the woman a position of respect beyond that of any of her unpurchased sisters whose matches were in contrast mere elopements. The young man presented horses to her male relatives and meat to her mother. There was no band exogamy here, although marriages may have occurred outside the group almost as frequently as among the Nez Percé.[583]

It will be observed that the Crow attitude is appreciably like that 171*
of the Nez Percé. That the Nez Percé placed a higher value on a mar- 583
riage contracted because of a groom's capabilities, the Crow on purchase, is no argument against historic connection between the two. Both tribes recognize marriages of both forms; wherein they both differ from the majority of Plains peoples, is that they have marriage by purchase, and even stress it. As a matter of fact, the difference [114]
may be really one of formulation on the part of the ethnographers. Lowie's account of the Crow is so circumstantially detailed as to leave no doubt of their attitudes, but Spinden's description of Nez Percé marriage is of the briefest. If he was impressed by the Plains-like character of the culture of this Plateau tribe, his formulation may well have stressed this non-northwestern marriage form. It may also be that the history of marriage in the two tribes has taken opposite directions. Possibly the Crow, recently acquiring the purchase habit, stressed the novel form as giving distinction to marriage; the Nez Percé, possibly with purchase as the original form, took over Plains marriage regulations with a deal of other culture and stressed what was the novelty from their viewpoint.

---

[583] Lowie, Social Life of the Crow, 230, Notes on the Mandan, Hidatsa, and Crow, 74.

1 Spier E-4,5 (1925-1926) 1930 NR10 Klamath NR10
(ca. 1860-1900)

*171 582 583 It is also conceivable that purchase among the Crow is not related to the Northwest Coast forms, but that it is a derivative of their matriliny. That is, the desire to become affiliated with a particular matrilinear lineage may have been met by insistence on purchase, the groundwork for this being present in the common Plains custom of exchanging gifts. But there is nothing otherwise in Crow life to suggest that lineage as such was important.

*171 583 Among other Plains tribes possible analogies to northwestern practice are found only among Hidatsa and Assiniboin. "The Hidatsa and Crow agree in considering marriage by purchase as the most honorable form from the woman's point of view; but among the Hidatsa I got the impression, which I did not receive among the Crow, that it was somewhat discreditable for a man to have to buy a wife," for it implies a lack of personal qualifications. This attitude disposes of the suggestion made in the last paragraph, for the Hidatsa are also matrilinear. This is a duplication of the Nez Percé case; in contrast to the Crow, it may be said that here the novelty, purchase, if indeed it is a novelty, has not acquired the prestige found among the Crow. [114] There is nothing in Lowie's brief account to suggest formality in purchase, and in fact such procedure would appear quite at odds with their attitude. Matthews' statement confirms the absence of formal purchase. Nor is the Assiniboin case one of outright purchase. There are however features which suggest the Northwest Coast. As with other Plains tribes the marriage is accompanied by an exchange of gifts. Here the gifts of the bride's family were distributed among the groom's relatives, who return next day "returning to the donor some gifts of superior value to those received," these then being carried to the girl's group. This is faintly reminiscent of the potlatch. Further, the first gift-bearing party was that of the bride, whereas the Plains habit at large is for the young man's party first to make contribution. The impression gleaned from the account of the Assiniboin is a certain formality in the terms of settlement and in the marriage processions somewhat at variance with the generality of Plains marriage habits.[584] Typifying these, Beckwith's brief statement concerning the Dakota implies only the exchange of gifts, although in one form of marriage the groom offers horses until the bride's father is satisfied with the amount.[585]

[585] Beckwith, Customs of the Dakotahs, 255.

dle beyond this limit, with a notable recrudescence of the latter on the 171 *
lower Klamath river. Part of the mechanism of its exchange in 583
marriage was a series of reciprocal visits, of potlatch character southward 556
to the Columbia, a mere formal practice beyond.

Among the concepts underlying the practice of bride purchase 171*
was the sense of mutual obligations of the contractants' families.
This was avowed by the coastal tribes from British Columbia to
northern California. It assumed the express forms of compulsory
levirate and sororate and of the right to children. Further, the families
were obligated to restore the marriage settlements if the marriage
terminated unfortunately. The man's financial interest in the wife he (837]
had bought was evidenced by his ability to mulct damages from an
adulterer or one even thought to be such.

The exogamy which appears in this area was not the prohibition 171 *
of marrying within the community, but an exogamy of practice. To
maintain caste, marriage must of necessity have frequently been with 582 •
persons of the same rank and wealth outside the village or tribe. 554
This was undoubtedly more the circumstance in the upper strata of
society. It is obvious then that the distribution of this practice coincides
closely with that of sharp distinctions of caste and wealth.
Beyond those tribes whose attitudes may be so characterized, there
was a fringe of peoples who had taken over the custom without its
antecedents. Such local exogamy has been noted as far southward as
the Hupa, the Sacramento Valley Maidu, and as far eastward as the
Nez Percé.

The habits of postnuptial residence seem to correspond closely 171 *
with the sense of purchase. It was patrilocal, the bride being taken
at once to her husband, in the coastal area southward to northern 591
California. Some variability does indeed appear but this seems no
more than the common circumstance of residence according to preference.
The Wishram instance of regular temporary matrilocal
residence is an anomaly.

The position of the Klamath with respect to this northwestern 171 *
marriage complex was that of a distinctly marginal group. Purchase
to maintain social standing was present but the values not fixed; 583
the actual amount changing hands, relatively small. A series of formal 431
gift-bearing visits was prescribed, in which the bride's family
returned more than they received, but there was no intentional rivalry
in giving. The first visit was that of conducting the bride to the
groom as among all the southerly peoples. Residence was patrilocal 171 *
591

DDO 3867. Mo: "Honorable" form of marriage, but practiced mostly by poorer people; wealthy persons pay for bride. SW: Permissible, but not formalized.

3868. AW: Done occasionally, but "don't like it; it's no good marrying that way; there's no sense to it."

Exogamy; postnuptial residence; kinship avoidances.--

3874. See element 2619. NM: Local group exogamy practiced, but seemingly neither preferred nor obligatory. Men take wives from Chicago Park, Nevada City groups; do not intermarry with Colfax or Mooretown (MF) groups.

3875. MV: Man usually takes his wife from village other than his own.

● 582 3877. Kl: Local group endogamy permissible, but "can't take wife from near-by neighbor's house, even if woman unrelated to man; have to take wife from house at least 1 mile away, and rather take wives from farther off."

3878. No rule, among any of groups, forbidding intertribal marriages.

3879. "Often practiced" may be putting case too strongly. However, number of intertribal marriages, as revealed in genealogies of informants (all of whom were between 60-90 years old themselves) was rather surprising. See section on Informants, this study. Kl: Intertribal marriages of Kl with Mo, Warm Springs Sahaptin commented upon by informant.

DDO 3880-3882. MM: Applies to child-betrothal marriages.

3883, 3884. MM: Applies to simple form of marriage in which couple merely live together.

3890. AW, WS, MM: 1-2 months.

3891. Before birth of first child, couple usually go to wife's parents' home and birth hut is made for woman near her parents' house.

[606] 3901. Kl, Mo, SE, SW: Taboo attenuated; Kl: man accords mother-in-law same respect he accords his own mother. At, AW, AE, WT, WM, WS, MM, MF, NF, NM, NS, MV: Taboo important; marked.

3919. At: If mother-in-law talks to son-in-law, bear will "chew up" son-in-law; he will never be seen again. Same applies to conversation between father-in-law, daughter-in-law. WT: If do not observe taboos, mother-in-law will have bad luck; rattlesnake will bite her, or grizzly devour her, or she will be killed by enemies or burnt. MV: "Observe [these taboos] for love of son-in-law; think world of son-in-law; think so much of him that mother-in-law won't look at him."

3921. All items listed under mother-in-law, son-in-law taboos inquired about in field for father-in-law, daughter-in-law. AW: Taboos similar, except that whereas perhaps only "1 man out of 200" may violate taboo against marrying his mother-in-law it is not matter for much disapproval if under some circumstances woman marries her father-in-law after her husband's death.

[226-B]

[Klamath Reservation]

At the center of concentric circles of concern stands K M 593 602 the natal family.[16] In the myths, parents and offspring and siblings are bound by the strongest affective bonds: in trouble they provide succor and in death, revenge. The obligation transcends abstract ethical considerations. In real life, mutual responsibility reaches out to embrace the extended family, the close consanguineal kindred linked through two or three generations. K M [601] [591] Although kinship terminology acknowledges equally relationships on the maternal and paternal sides, residence practices in general favor the latter. From close kinsmen on both sides come the gifts that set the seal of approval upon the marriage of a member; during his lifetime they share food with him in his need, support him in his quarrels, and assist his avenger should he be slain. At his funeral, it is they, together with friends of the deceased, who are expected to place valuables upon the funeral pyre.

K M 602 621 571 Beyond the sphere of immediate kindred and of friends lies the domain of neighbors and remote relatives. If more central obligations tend to be principally a function of consanguinity, and thus to be ascriptive in character, village relationships and those outside are more frequently based upon performance. K M [577] Here enter those standards of behavior by which a person of good family may be confirmed in position, the poor but worthy rise, and the ne'er-do-well sink in the public view. K M 756 622 621 554 At the head of this loose and shifting status scale stand the shamans and other influential men, the leaders of hamlet groups. On occasion they may meet in an informal village council to concert decisions. Yet the village, which in its spatial limits often blends with adjacent settlements and which dissolves with the turn of the seasons, can exert little constraint upon its members.

K M 62 The prestige of the leaders, the force of public opinion, and checks imposed by rival village interests hold the unruly in line. The principle of self-help and the responsibility of kinsmen may enlarge grievances to feuds if the differences are not soon ended, and thus threaten the very being of the community. To counter such fissive tendencies, leaders mediate disputes and exhort to their fellow villagers the need to maintain harmony.

K M 621 563 • 582 Time may alter the membership of villages. Men frequently seek wives in other communities; and there is considerable intermarriage between Klamath and Modoc and Klamath and Molala,

to say nothing of captured women from Shasta, the Achumawi K M
and Atsugewi of the Pit River region, Paiute, and the tribes 621
beyond the Cascades. Among the Modoc, the villages of the band 582 •
called *gumbatwas* are said to be composite in membership, including 563
Modoc, Klamath, Pit River, and Shasta; and those of the
Upland Klamath consist of Klamath with some Modoc and
Paiute elements.[17]

Allegiance with the village may be partial. If an attack is to K M
be launched, war leaders can find recruits only among those men 621
with proclivity for fighting and an attraction toward the leader. 628
On the other hand, feuds may ignite attacks that are restricted 581
to the family groups concerned. While the myths reveal currents 701
of hostility between affinals, in real life marriage acts to extend
the ramifications of support, often into other communities.

Beyond the village lies the tribelet, an entity that recognizes its K M
being in a territorial name and in a common cause in feuds with 619
other tribelets. In its virtual autonomy this unit marks an extreme K
in band organization within the larger tribe, a quality that was 619
reduced by subsequent tribal integration. For the Klamath there
are six tribelets (see map): (1) The Klamath Marsh people,
who outnumber all the others together; (2) the tiny Agency
Lake group; (3) those of the lower Williamson River; (4) the
Pelican Bay tribelet; (5) the Klamath Falls group; and (6) the
Upland Klamath of the Sprague River valley. The Modoc comprise M
three main groups: (7) that of Lower Klamath Lake, ex- 619
tending to Tule Lake (the *gumbatwas* mentioned above); (8)
those clustered upon the lower Lost River; and (9) the eastern
tribelet, with settlements dispersed as far as Goose Lake. No K
firm evidence exists that these local territorial units are distinguished M 619
by either language or culture, although, as already 726
mentioned, at least two are of composite origin. Each tribelet
seems to have gained a tenuous cohesion through a common
recognition of the worth of several prominent headmen. Between K
tribelets there is sometimes war. Under their formidable leader, 619 726
Kokdinks, the Williamson River group attacked in turn villages
of each of the other lower Klamath tribelets, including that at
Pelican Bay, to which they considered themselves related; and
the prolonged war ended only when the Upland Klamath leader,
Monchnkasgitk, a kinsman, first joined, then slew Kokdinks.[18]

*648 in seventh and ninth grades—the beginning grades respectively
*657 for junior high and high school—was less than half the figure for
87 first grade in the same year. For tribal children, by contrast, the
563 figures for the advanced grades were each almost twice as large as that for the first grade.

On an average, roughly one-half the small number of Klamath children entering high school could be expected to graduate.
[125] That this record was not to be attributed to a difference in intellectual ability is intimated by the results of California mental maturity tests which, as administered to Klamath children as a whole at the fourth grade, yielded normal scores, averaging 96.9. When, however, the same children had reached the eighth grade, their average score had declined to 80.4.[8] A sharp drop in incentive had taken its toll.

The stresses within the school fell unequally upon Klamath boys and girls. Athletic prowess and artistic ability—both often conceived as racially innate and as masculine attributes—gave the boys legitimate avenues to social approval. At puberty, however, Klamath girls were often beginning to develop the physical
[142] massiveness that is so frequent in their racial constitution, but
[562] that at the same time is foreign to American ideals of beauty. Some bore their lot with dignity and poise. Others courted a fleeting favor through promiscuity or took out their resentments in direct assault upon rivals or upon substitute figures. Direct violence against whites occurred in the schools at about this age, and most frequently involved girls. Still others sought alternatives outside the school, dropping out entirely, going away to vocational schools, or entering into early marriages.

*648 Indeed, for many of the tribal youth—boys as well as girls—
*657 confronted by a school experience that grew increasingly irrele-
871 vant as they became older, it was merely a matter of "serving
563 time" until they gained release by attaining the age of eighteen.
• 582 Many Klamath tended to marry young, and there were incentives peculiar to their position. For a girl striving to escape the pressures and dissatisfactions of home life, the regimen of caring for younger siblings, and the boredom and vexation of the school, the importance and security of being a newlywed possessed a
[434] fairyland appeal. For the boy, the trust fund accumulated by
[429] the Agency for each minor, amounting in some instances to

$10,000, constituted an inexhaustible treasure. Ordinarily, this 648*
was placed in his hands only when he had come of age, but with 657*
marriage he attained seniority at once, and it became his. 871

Many a young couple, then, sought a new life in the last few 563
years of high school in an elopement to Reno or Las Vegas. In 582 •
a week or so they returned to take up adult life; and thus to [434]
reconcile their hopes with the social realities of the reservation. [429]
Although they would continue to maintain a degree of camara- [583]
derie with a few of their schoolmates, such intimacy as they had
known across ethnic boundaries was at an end. For the majority
of tribal members, their course and that of their white school-
mates increasingly diverged.

Individuated family relationships and the instability of the marriage tie have 593
other ramifications. Parental care-taking activities are minimal and are sometimes 855
non-existent. Given the pattern of drinking and partying, children are [581]
frequently abandoned to the care of a hired baby-sitter for days at a time, [181]
or to an older relative, or to an elder sibling. If the party occurs in the
household, children may temporarily be moved elsewhere, or they may simply be
left to shift for themselves. Thus at crucial developmental stages children may [603]
find their identification with parents broken by alternating periods of presence [155]
and absence, and their affections given over to an older sister (the picture of
the determined little twelve or thirteen year old "child-nurse" is a clear one)
or to a grandmother. When parents are present, Klamath children are usually
faced not only with minimal care and attention, but with indifference and aloofness.
The father especially is dissociated from significant relationships, and
both he and the mother are frequently given to unpredictable and alternating
fits of love and anger. Thus within the nuclear family, there is little experience [155]
with consistency in role relationships.

Thus the first years of life are spent by the Klamath child in a loosely bonded, [602]
amorphous household group, and he has some lesser, but important ties to other
kin. At age six the Klamath child attends a local public school. Reflecting 872
the incohesiveness of the family group, these children are accustomed to lax, 861
permissive controls of their behavior, and are not accustomed to confronting clear-cut,
specific, over-riding standards of conduct. At the same time they are not [593]
accustomed to maneuvering opposite a single, stable authority figure. Yet [181]
these children are characterized also by a dependent craving for affection and [156]
attention which does, initially, facilitate adjustment to the school milieu.
In contrast, they frequently anticipate rebuff. In later years the latter seems to [156]
be the stronger inter-personal need, and the growing child becomes increasingly
characterized by a kind of defensive isolation from close personal contacts.
This may be adequate training for participation in contemporary Klamath culture,
but it hampers and restricts adaptation to the larger society.

In many respects the values and skills learned within the household to not adequately 155
prepare the child even for school adjustment, with the requirement of 156
regularity and time-mindedness. Similarly, the daily routine within the household [871]
may be such as to impede the child's getting to school on time, or it may
throw the responsibility for attendance on very young children, or it may get
him there unfed and, by school standards, improperly clothed. At the same time
the child may have had recited for him, or he has surely overheard recounted,
the myth of Klamath racial inferiority. Too frequently this belief in inferiority
is assimilated as a segment of the growing child's self system, contributing
in turn to his acceptance of poor performance, to a bitter rebelliousness,
or to a destructive pride. The same experience reinforces the expectation
of rebuff, if this time somewhat more consciously. In fact, in later school [563]
years the Klamath adolescent does meet with informal racial barriers in the [582]
areas of courtship and dating, for the path to inter-marriage with local Whites
is not an easy one.

It is at this juncture, in early adolescence, that parental controls of the child 882
are almost totally relinquished. Made thus culturally independent, the child 156
may then enter high school and find that for the first time he has to compete 155
with his peers, for there are few social promotions in high school. Because he
is fully aware of his economic independence, and because of the other factors
cited, the pattern is for Klamath children then to find themselves propelled into
an adult status. The associated school phenomena at this juncture is a high [871]

Susan: Female, Age 24

Background Data

156 Unlike Slim, Susan is not so well liked or respected. The occasion for this is
*159 specific, an unsanctioned pregnancy during her last year in high school and a
[848] more recent marriage to an entirely disreputable Mexican from Utah. This community
evaluation is accentuated because of the very high respect in which her
•[582] own family is held. Everyone expected better of Susan.

[626] Susan has worked as a dishwasher in several cafeterias, both on and off the
reservation, and moved to Utah so as to take a practical nursing course. She
*159 found this training uncongenial, met and married her husband, and they returned
[464] to the reservation when his small business failed. Susan is a high school graduate.

[874] Susan's mode of selecting a husband parallels that of her mother, who met her
husband while hospitalized in New Mexico. Her father by birth is an Apache
*159 Indian, and by cultural affiliation a southwestern United States Spanish-American.
593 Without doubt, he is the most autocratic, stern, demanding, rigid adult male on
the reservation. Although a married woman with children of her own, Susan must
ask her father's permission to use the telephone or to walk downtown. Her mother
was Klamath and very well respected for her stable family life and for her active
participation in many community activities. Susan was extremely close to her
mother until her unexpected death several years ago. They were known as an inseparable
pair and her mother never went out of the house without her. The
mother's death was, perhaps, the major cause of Susan's failure to complete her
nurse's training. Susan's illegitimate pregnancy in high school was a considerable
shock to her mother and is, with her marriage, a continuing source of strain
[155] with her father. Susan evidently feels that her behavior was a contributing
cause for her mother's death. She made a death-bed promise to her mother that
she would not be a loose girl and that she would marry and stay married to one
man. It was shortly thereafter that she married and returned to the reservation
to live with her father. There is much strain within this household, derived
from the relations between father and son-in-law, and from Susan's unsuccessful
efforts to serve two masters, for along with her marital relationship she evidently
[626] was trying to act as a replacement for her deceased mother's role. At the
same time her conduct has alienated her from the church, from family friends,
and from the community.

*159 The contact with Susan was made via her father, who told her that she should
[124] cooperate. Her father's motivation in this was not, as may be supposed, the conviction
that she needed testing because something was wrong with her, but involved
[123] a more general sentiment. He felt somewhat honored to have an "educated
man" visit his house and that such a contact was a good experience for his children.
[593] Susan accepted this like an obedient, dutiful daughter. She came readily,
with no indication of unwillingness, and relations with her were quite good,
perhaps because of the strains of her marginal position and her need to talk
with someone.

*159 Susan seemed an apathetic person whose feelings were dulled. If anything, her
reactions were those of an over-trained, too obedient child. She was not very
157 responsive or active, and would seldom talk except to answer a direct question.
Then she would, frequently with evident pain and anxiety, describe her feelings
and situations tersely and haltingly. Susan clearly wants more than her life
now gives her, but cannot define her present conflicts or see her way clear to

Fidel: Male, Age 19

Background Data

*159
156 Fidel's case is that of a young man in the process of separating himself from
his family, yet without any clear sense of where he wants to go. He has never
[461] worked at any job, although he quit school in the 10th grade, when he was sixteen.
Except for 8 months residence in the San Francisco area with his family, and five
[891] school years spent in a Catholic boarding school, he has never lived away from
the reservation. He is the third eldest of six children. He presently lives at
[592] home, if the household which contains himself, his parents, and his younger siblings
may be called that. As an unmarried minor approaching maturity, his tribal
[434] income is administered by a trust officer who allocates to Fidel $110.00 monthly
[657] for spending money. Additionally, Fidel sends bills for various expenses to the
bank, which pays them. These arrangements have been in force for three years.

[733] Fidel's mother is a somewhat confused, defeated, semi-alcoholic who is very
reserved when sober and gay and promiscuous when drunk. His father is a Skagit
•582 Indian who has for years been steadily employed as a cat skinner for a logging
company, which work keeps him away from home for months at a time. During the
[648] logging slack season, his father is only occasionally at home. He is usually
[221] away hunting or fishing. When he is at home he is frequently drunk, and when
drunk characteristically assaults his wife and berates his children. The father
does not contribute to the income, the up-keep, or the conduct of household
[593] affairs. In recent years Fidel has defended his mother and the children from his
father, on several occasions has driven him from the house, and on one occasion
knocked him cold with a rifle butt. There is some doubt as to whether this person
[848] is actually Fidel's father, the doubt being due to his mother's promiscuity,
which is of long standing, and to Fidel's almost total rejection of him. Fidel's
*159 relations with his father illustrate his marked and extensive ambivalence towards
156 most personal relationships. He will call him or refer to him as "father" or
593 "dad" and in the next breath "uncle," at one moment praise his skill at hunting,
and the next deride him. Fidel cannot fully accept any relationship; he exhibits
the same ambivalence towards his mother, his siblings, his closest friends, girls,
and so on. Moreover, Fidel cannot undertake any course of action without doubt
and reservations. He can neither love nor hate fully.

Fidel's family life is marked by a complete lack of cohesion, cooperation, common
[421] activity, and common property. The major shared sentiment is an indifference to
one another. Each member occupies a part of the house where he keeps his belongings,
and these are rarely shared. For example, Clifton once needed a rifle
for a hunting trip. It was borrowed directly from the father; Fidel could not
borrow it for him. A major source of difficulty is intra-family theft, which
engenders violent reactions. The mother is psychologically divorced from the
father, and strongly oriented towards her eldest, married daughter with whom
she spends much time.

*159 Fidel thinks of himself as a guide and skillful hunter, insofar as he thinks
156 of himself as anything. On several occasions he has been in trouble with the
law, usually for drag racing or drinking when a minor. He spends his time
[673] loafing about, watching TV, playing pool, fishing, hunting, visiting with his
buddies, and sleeping. He is seldom in bed before 1 AM, and equally seldom
[512] awake before two or three PM. His main ambition is to get out of the area, away
from his family, and off by himself. He has thought about studying art, which
may result from an identification with a friend who is doing so.

773 times over them or by blowing at them, an act which is supposed to impart
776 life.

CONCLUDING WORDS.

128 The limited space allowed for this ethnographic sketch forces me to
suppress the larger part of the matter for the present and to relegate it to a
future volume. A few points characteristic of the two tribes may, however,
be added on the last page of this Report.

614 The Klamath Indians are absolutely ignorant of the gentile or clan
171 system as prevalent among the Haida, Tlingit, and the Eastern Indians of
582 North America. Matriarchate is also unknown among them; every one is
free to marry within or without the tribe, and the children inherit from the
595 father. Although polygamy is now abolished, the marriage tie is a rather
581 loose one. This tribe is the southernmost one of those that flatten their
304 infants' skulls, this practice continuing about one year only after birth.

764 Cremation of the dead has been abolished since 1868, though during
the Modoc war these Indians burned several of their dead. The custom of
suppressing the personal names of the dead is rigidly kept up at the present
178 time. Art never had any encouragement or votaries among the Klamaths,
769 and the only objects seen that could be regarded as art products were a
531 few rock paintings and a head-board on a grave near the Agency buildings,
532 which was painted in the Haida style and represented a human face
flattened out to the right and left. Some baskets are artistically formed.
285 As there is no clay to be found on or near the reservation, pottery could
323 never become an art among these Indians. Their songs and poetry are also
artless, but nevertheless instructive, and several songs have beautiful tunes
533 that should be preserved. The musical and sonorous character of the language
538 fits it well for poetic composition; but a national poetry, to be of
success, would not have to adopt the rhyme as a metrical factor. Alliteration,
assonance, or the prosody of the ancients would be more suitable to
this upland language, with its arsis and thesis, than the artificial schemes
which poets are devising for the modern European tongues. Who will be
the first to teach the Muses the Klamath language?

556

wealthy individuals. In approximate frequency of mention are slaves, horses, beads—and not always dentalium—food, archers' equipment, furs and hides, especially elk hides, Plains type garments, armor, large houses, buffalo skins, canoes. It is just as interesting to observe what things were not mentioned as valuable, or so to a lesser degree: baskets, nets, mortars, etc. In a word, articles of value in foreign commerce, articles of dress and adornment, of war, ritual, and sustenance, have value; domestic utensils have not. Some of the phrases describing wealthy men are illuminating. A war leader is chosen in part for his riches: he would own five quivers (five is the pattern number); he goes into battle with a quiver under each arm and one on his back. If his bowstring is cut he has another. A rich man has fur blankets, coyote and wolf pelts.

Dentalium shell beads do not function as money here as on the lower Klamath river. They are strung in fathom or half-fathom lengths, but neither length of string nor size of shell is standardized. The longer individual shells are more valuable but no one is known to haggle over the precise length as Yurok and their neighbors do. 436

MARRIAGE

A marriage payment is a social obligation. It is not a negotiated transaction as with the Yurok, Hupa, and Karok, for example, where indeed the social status of the family is measured in exact accord to the sum paid for the bride. Here failure to pay, which can be only a confession of inability, leads only to a lowering in social esteem. It is consonant with this that the bride is in no sense a chattel; she may leave her husband at will, and she certainly cannot be disposed of as a possession. Bride purchase is as inapplicable a term as can be found for the Klamath practice. In the interchange of presents which follows marriage the advantage lies most frequently with the husband's family. Payment constitutes an obligation, a seal of respectability. This is the well-nigh universal situation in North America if payments enter at all; it is a far cry from the commercial, contractual bride purchase of Africa, for example. The peculiarity of the Klamath is that failure to pay constitutes a social stigma. This is clearly explicable as a function of their geographic position, lying between the tribes to the west, with their clear-cut monetary evaluations of social relations, and the tribes of the Great Basin to the east, utterly devoid of any such sentiments. 583 • [171]* [626] [177]

ä'ukckni were sisters from his own settlement on Williamson river above 582
bɛxākse'was, a third was from that town, and the fourth from glā'tapak'is, a 595
mile or so down river. His daughter by the Modoc wife was counted ä'ukckni;
while living at k'taidi she married an ä'ukckni of Yainax.

A gu'mbôt man, Woḳau'k!alla, married two Molala sisters.

Girls usually marry within a year or so after puberty, which is 584
marked, at least among the well-to-do, by a big dance. Betrothals may have been arranged while the couple were yet preadolescent, presents having been exchanged by the families. They are expected to carry out the agreement after the girl's dance, payments being made again. Should one of them die another match may be arranged with the same family, but not of necessity. Poor and rich alike arrange such betrothals.

How far great disparity of age occurs I do not know, but it does [582]
happen that an older man marries a young girl. A shaman for
instance may be given a daughter by a man too poor to reward him [756]
otherwise.

But it must not be thought that there is no choice. On the contrary, the majority of marriages follow the desire of the couples.
Elopements take place and although the levirate is the rule, much 583 •
depends on the widow's willingness. Yet a girl's consent is not necessary. Despite her protests she may be carried to her husband's home. 587
If she runs home she is almost invariably taken back again. That she
would be driven to suicide is doubtful; one informant never heard of [762]
such a thing; another stated she would hang herself and in this event her parents had to return the gifts of the groom.

An orphan girl of du'kwa lived with her mother's brother. She was married 583
against her will to a man of k'taidi. She clung to the ladder of the earthlodge but they pulled her away and dragged her up-river to k'taidi. Next 159
morning she ran home and never went back. Nothing had been paid for her at the time but she was given in return for valuables contributed to the cremation of a relative of hers some time before by her husband's relatives. Immediately after this she married a man at Klamath marsh; whether payment was then made is not remembered.

Elopements occur but payment is so much insisted on as a sign 583
of respectability that parents guard their daughters with great care. This is at least true where the family wealth makes a suitable payment imperative. It is unthinkable that a chief's daughter should be per-
mitted to enter an unceremonious, clandestine union. The poor and 834
forward have little to lose. Modest demeanor is expected of a girl.

1: Spier E-4,5 (1925-1926) 1930
(ca. 1860-1900) NR10 Klamath NR10

834 836 [881] She dances with downcast eyes in her adolescent rite; she sits apart and does not talk with male visitors at home. A man seen prowling about the camp is shouted away. A girl who does not wish to be molested will go over to her mother to sleep. A father will whip a daughter who has clandestine visitors, and his son for misconduct. No obligations may be assumed for which no payment is made.

583 [836] Despite the fact that elopements are frowned on, clandestine visits and elopements are frequent. The girl's parents may follow a runaway couple and force her to return with them. It is usual however for the families to accept the fact and make gifts in proper form.

583 159 585 The most lavish marriage display ever known was that of Lzlo'ks' only daughter, Go'solülb. They were living at taka'lmakeda during the fishing season when Ski'lüls of Yainax eloped with her. They fled riding double; the horse fell with them while fording the river, but they escaped to Yainax. Soon after the girl returned alone. It took a month to get ready to conduct a proper marriage. Lzlo'ks made the trip across the mountains to Jacksonville to get store goods. A great many people went with them to Yainax, the majority taking gifts of horses, blankets, clothing, or anything they had. One man with nothing better stripped himself of his only shirt. It must be remembered that such Plains shirts were then newly fashionable and hence valuable. They gave the horses they rode there, hoping for reciprocal gifts on which to return. Horses to a total of ten were given the groom's people. They gave horses and other gifts in return. Payment having been made the affair was considered as honorably ended, and as though the groom had sent an emissary in proper order.

583 554 Marriage without payment brings a slur on the children to be cast in the teeth by quarreling women. "Your children are worth nothing; you were not bought." Children taunt each other in the same way. They are respected in proportion to the amount changing hands at their parents' marriage, but this does not mean that a man's life is assessed at this sum. Nor is there any suggestion here that husband and wife are financially accountable to each other for injuries to their children. Marriage payment is prescribed not alone because it fixes social status in a general way but because, as one informant phrased it, it is decidedly unlucky not to make payment. So it is, for the couple have made an unsuccessful start of their social career.

The amount is not prescribed but varies with the wealth of the individuals. A chief gives a slave and more; a poor man buys with food. A chief will not give his daughter for nothing; the groom must
583 continue to bring gifts even after marriage. The valuables customarily exchanged are slaves, horses, blankets, beads, food (pond-lily seed and roots), elk and other hides, and strings of beads. Pat Kane's father gave five fathoms of glass trade beads. It is important to

recognize that the marriage is consummated by a series of gift 583 exchanges and inasmuch as it was said that in the long run the man and his relatives have the advantage, it is clear that this is no outright bride purchase.

583 Giving a girl in marriage is sometimes a means of paying off a social obligation. Considerable property is destroyed at a cremation. This is normally furnished by the relatives of the deceased but in 764 order to do honor a non-relative may contribute beads and other valuables to be consumed on the pyre. The recipient family is under obligation to reciprocate. Should one of the contributing family later want a wife from among them, they must acquiesce. The groom must make payment at the time of marriage, however. That no payment had been made in the case cited above undoubtedly explains why the runaway bride was not forced to return to her husband.

586 Possibly the sum must be repaid in the event of separation, at least if the wife leaves the husband. Probably the time element is important; a marriage soon terminated means restoring the *status quo;* in one of long duration this is impossible.

584 A man sends a friend to sound the girl's people on their willingness and the price expected. This man is chosen for his forwardness; he may be a relative but never a brother or father. He carries a bundle of sticks representing the gifts offered, which if successful he leaves, though they are not used further. The girl's father consults his wife before agreeing. 584 Next day or as soon as the girl's people can get ready their gifts and contributions of food they take their 585 daughter to the groom.[66] The groom's relatives have gathered meanwhile, collecting their gifts in the groom's home. The exchange takes place within the lodge, each party putting down its gifts beside the other seated opposite. The gifts from the bride's side, at least, commonly include clothing (presumably the Plains type), pond-lily seed, and roots of various sorts. The payment now made on behalf of the groom includes the promised articles. Speeches are made by the parents of both, admonishing them to live in harmony. Payment for a bride is called woḳo'wi, the reciprocal gifts, i'wi.

It is difficult to say just how formal are the visits that follow marriage; at least one or two are usual, if not prescribed for the well-to-do among whom further payments by the groom are expected.

---

[66] In a Modoc (or Klamath?) song recorded by Gatschet (Songs of the Modoc Indians, 27, 29) a bride is carried on her brother's back. As Gatschet points out, carrying the bride is a custom of northerly tribes.

177 At least one minor element, assigned by tradition to this period,
535 was derived from another direction; the notched rattle used in war
534 and scalp dances in imitation of the Upland Takelma.

Direct contact was opened with the Upper Chinook at the Dalles
174 only after 1800. By this time Snake raids had dispossessed the
Sahaptins of central eastern Oregon, driven them north of the
648 Columbia, and cleared the south bank of that stream by scattering
Cayuse-Molala east and west. Direct contact quite across Oregon
brought the Klamath in touch with the great trading center at the
Dalles and revealed to them the superior and stimulating cultures of
the Chinookan tribes and the semi-Plains groups from above on the
Columbia.

174 The whole rise of the chiefs, the growth of social stratification
177 based on wealth, the concern with slave-holding, all seem to date from
this time. Wealth began to be considerable: its form was new: horses
[556] and slaves. Chiefs grew in wealth and prominence over shamans.
[622] The basis of their selection changed in some degree from war to wealth.
Slave-raiding to the south increased in frequency: the booty was
[721] carried to Warm Springs and the Dalles.

It is doubtful if the material differences in wealth and slave-holding
[567] existed prior to 1800. Shamans were dominant over chiefs
and were but slightly more wealthy than the majority. The historic
174 tribal subdivisions were in existence, the village groups and their distribution
177 established, and the basic social relations, as reflected in kinship
terminology for example, much as we know them. Marriage may
[756] well have been by purchase, but possibly without the pseudo-potlatch
[622] custom of reciprocal visiting. Material culture was prevailingly
southern Plateau in aspect, and religious practices, while more north
[619] Californian, had already some impress of the Northwest Coast.

• [583] Is there a Lutuamian culture province? I am doubtful. Kroeber
has somewhat hesitatingly posited one, set off by a certain distinctiveness
101 from that phrasing of Northwest Coast culture found localized on
the lower Klamath river, and favoring rather the Basin and Plateau,
105 to which the Klamath country lies open.

114 "The Lutuamian culture or subculture, as represented by the
Klamath and Modoc, corresponds well with this setting. It reveals
some specializations, such as its wokas and tule industries, that are
obviously founded on peculiar environment. There are some northwestern
influences, but rather vague ones. The basis of the culture
is perhaps central Californian, with certainly some Great Basin or

If we look for elements peculiarly Klamath, they are difficult to 171*
find. At best there is only the regularity with which seances occur at 756
midwinter, and even here we do not know with certainty that this
does not occur elsewhere. Further, if we feel that this regularity is due to recurrent possession, this merges with general Northwest Coast practice, and its uniqueness disappears. The peculiarity of the Klamath complex, then, rests only in the specific combination of widely distributed elements that they have effected, a combination known nowhere else in exactly this form.

THE MARRIAGE COMPLEX

Social relations among the Klamath, even more than the shaman- 105
istic practices, are clearly explicable as a function of their geographic position. They are most clearly crystallized in the matters of chieftainship, slaveholding, concepts of wealth, and the relative social standing of shaman and chief, but especially in their marital relations. Household and village groupings, puberty rites and analogous customs, have much less definite or peculiar form among them. For this reason, the discussion which follows will be confined largely to the earlier group of topics. As the most complex situation is that surrounding marriage, I will analyze this first.

While marriage among the Klamath is contracted by purchase, it 583 •
is not a negotiated transaction. Payment is socially obligatory. It is
a seal of respectability and in a rough way the amount changing hands [554]
is a measure of the social pretensions of the families involved. Hence clandestine matches are severely frowned on. No obligation may be assumed for which payment is not forthcoming. Yet such payment does not fix the status nor the value of an individual with any precision. For example, the purchase price of a murdered man's mother or that of his bride never enters consciously in assessing his blood price. Failure to pay for a bride is a blot not easily erased.

It must be remembered that the reciprocal gifts from the bride's 583
family frequently outweigh the purchase price. Further, the bride is 431
in no sense a chattel, but free to leave her husband at will, he having
but slight recourse to recover his gifts. Nor is a wife obligated to 581
bear children to her husband, nor does their birth cancel the marriage
debt. In adultery it is clear that a man has no eye to the monetary 837
value of his wife's affections. He kills the lover; to take payment is
unthinkable. It does not appear that a marriage brings about a con- 000

1: Spier E-4,5 (1925-1926) 1930
(ca. 1860-1900) NR10 Klamath NR10

It does not appear that a marriage brings about a con-

587 tractual union between the families. The levirate is customary but not obligatory, and the sororate only occasional. It is true that the husband's brothers may take exception to her marriage with another, but this may mean only that they look upon it as an affront to their brother's memory.

582 Marriage is denied only between blood relatives. There is no village exogamy nor trace of restrictions or preferences of any other order. At best the evidence suggests some tendency to marry within the tribal subdivision, but this may mean only that contacts are less frequent outside of this group.

584 585 The formalities of marriage prescribe a series of visits with an exchange of gifts. The prospective groom sends a male emissary with a bundle of sticks representing his offering. The bride's family proceed to the groom's house where they exchange gifts with the family of the groom. In kind and in quantity these are modest indeed when measured by Northwest Coast standards. A month later the couple and the groom's family return the visit, when again gifts are exchanged. Beyond these two, further formal visits are made only by the social pretentious. These formalities may be frequently initiated while the couple are still pre-adolescent, the bride being carried to her husband's home after her puberty dance.

583 *171 The general nature of the Klamath marriage relation smacks strongly of the Northwest Coast. This is apparent in the premium attached to purchase, to a lesser extent in the weighting accorded the amount of the purchase price, in the reciprocal nature of the gifts, and the series of formal visits before the affair is considered terminated. What is absent here is the notion that rank and privileges of a tangible nature are acquired by a marriage purchase.

This can best be brought out by instituting a series of comparisons with other tribes. For this purpose I shall select only a limited number of cases. For one thing data from Oregon tribes are almost wholly lacking, and those for California and Washington are both scattered and scanty.

Throughout California, save on the eastern border of the state, there is an appearance of purchase. But in reality it is only a presentation of gifts of no great amount as an earnest of the son-in-law's good will, a matter of etiquette rather than a stipulated price. The formality of giving varies as much as its conventional expression. With some, bride service is in order; with others, the parents-in-law must reciprocate the gifts. It is everywhere little more than an

observance, far removed from the set contractual relations established 171*
by a Northwest Coast marriage. It is nowhere an occasion for the 583
display of wealth, and social prestige is not fixed by it.[586]

Among the Basin tribes there is not even this semblance of purchase. 171*
What these people desire in a son-in-law is a good provider,
who normally takes up residence with his wife's people. His incidental 581
services can hardly be construed as payment in any sense. The groom 585
slips into their life as unobtrusively as possible. Ceremonial is almost wholly lacking; at most a feast in celebration.[587]

The situation in the Plains is not far distant, resembling rather 171*
that in California. In general the approach to the northwestern concept
consists only in an exchange of gifts. The groom's family bring 583
gifts to the home of the bride, receiving an equivalent, sometimes to 585
a greater amount. Married life begins at once with the bride's family to whom the son-in-law renders services. But it is doubtful that either the gifts or the services are looked on as specific payment. Rather they serve to establish friendly relations and no more. Large amounts of property might be given for the honor of the act, but it was equally common for an old man to marry his daughter to a suitable man to obtain a provider for the family, no compensation being thought necessary. While some ostentation is inevitable in a Plains ceremonial act, there is here no lavish display of wealth. Equally foreign to their thought is the idea of social status fixed by a transfer of property.[588]

If we turn from these to the Northwest Coast tribes, a very different picture is presented. We need go no farther north than the Kwakiutl for a typical expression of attitudes. The rank of a family, the social status of a child, are clearly defined in a regimented series depending largely on primogeniture coupled with wealth. Marriage is a purchase conducted on the same plan as the purchase of all ceremonial symbols of exceptional value. Its mechanism is the potlatch, the ceremonious bestowal of wealth on a social rival to enhance one's own status, with the certainty of its return several fold if the rival is to maintain his rank undiminished. A man buys in this fashion the rank and social privileges of his bride's family for the children of this marriage or heirs or relatives whoever they be. When the bridal price is ultimately returned two or three-fold, the contractual relation is at an end. The groom has the obvious advantage in this transfer of

[588] Kroeber, Ethnology of the Gros Ventre, 12; McClintock, Old North Trail, 184; Grinnell, The Cheyenne, 137.

*171 wealth in addition to the privileges that accrue by his investment. So
583 little is the bride concerned and so great the emphasis on the acquisition of new prerogatives for his family, that a man may carry out the
585 fiction of a marriage where there is no bride.

In the desire to keep the privileges within the family, a man of high degree may even espouse his younger brother's daughter.

Normally in return for the huge purchase price, the wife is given him as a first instalment. The heraldic crests of her family, its social privileges, and a considerable amount of property are given later to members of the husband's family. This repayment annuls the marriage; the wife is now free to return to her people, but should she choose to stay it is customary to make a new payment to the father-in-law.

The chief who desires marriage for himself or his son invites the aid of his townsmen in a matter of mutual interest; "our bride" is to be acquired, "all the tribes [lineages] have married my daughter" is her father's phrase. Four men are dispatched to the bride's town to offer the huge bride price, four hundred blankets and more. When the groom's party arrive, their spokesmen with stereotyped speech measure out the blankets, which are carried into the father-in-law's house. Like most Kwakiutl ceremonies, the marriage ritual is interwoven with myth; at this point the son-in-law and his party are put to a test which has mythical background. They must rush through torches into the house, or they are tried by a great fire and shown the sea monster whose mask spews out the bones of unsuccessful suitors. The father-in-law now makes his first repayment in self-depreciatory manner, two hundred blankets, a gesture derogatory of his rival's lavish giving. These the groom promises his followers in the name of his future heir. Soon after, when the father-in-law is ready to make full repayment, he visits the other with his followers. He makes a symbolical gift indicating the wealth he returns, the copper plates, the house and carvings the son-in-law demands, his own title acquired in marriage, and his ceremonial office and dance in the secret societies, which are to go to his grandson. The bride is brought out to have her valuable finery placed on the shoulders of the groom. Next day the young man distributes the wealth among his tribesmen in recompense for their aid at the marriage, and to start the wealth on an interest-bearing round once more. In doing so he assumes the proud titles acquired from his wife's father and bestows them too on others.

The marriage of those of lower rank is doubtless analogous but on a smaller scale.[509] 171*

I shall trace the elements of this marriage complex from this area southward, in order to make clear their relation to the customs of the Klamath. At the outset I will deal with the interrelated attitudes toward wealth and rank, marriage as an expression of it, and local exogamy dictated by it. Later I will return to a comparison of the marriage ceremony itself, to the levirate and sororate as expressions of family contracts, and to related phenomena such as reactions to adultery. 583 585

Purchase, Rank, and Exogamy

The marital customs of other Vancouver island tribes duplicate those of the Kwakiutl in all essentials. Their divergence is in a less sharp definition of rank and prerogative and diminished elaborateness of marriage ceremonialism. This diminution can be traced by successive steps to the Klamath and beyond. Not only are the attitudes of the island tribes respecting rank and wealth analogous to the Kwakiutl, but marriage is the same kind of mechanism for their transfer. We may also assume here the kind of local exogamy implied for the Kwakiutl. As marriages with relatives are normally prohibited, and mates of suitable rank and wealth are not to be found in the same tribe or village, a practice of local exogamy follows. While there is no prohibition against marriage within the community, the vast majority of alliances must be outside, since pretension to rank sinks deep in the several strata of society. There is at least some studied exogamy on the part of those of highest rank for whom foreign alliances mean increased prestige. 171* 582

As expressed by Sapir "among the more southern tribes intermarriage is prohibited only between such as are demonstrably related by blood, even if fairly remotely so. Owing to the structure of the village community, this would in many cases mean that there are few persons in a village that one is legally entitled to marry; but it is important to note that the village community as such need not be exogamous, that is, does not specifically prohibit intermarriage among its members."[510] [114]

[510] Sapir, Social Organization of the West Coast Tribes, 367.

*171 The alternative to this exogamic practice was marriage with blood 582 kindred. While it was generally frowned on, an exception was permitted if no other mate was available. This is an attitude different from that of the Kwakiutl, who, desiring to keep privileges within the family, married his niece or cousin. When there is no available mate [114] outside the blood group, a Klallam may marry his first cousin. Eells implies that a Twana (and Klallam?) always sought a wife first "within a certain circle of his relatives."[611]

There is no adequate information for western Washington tribes save from the Klallam and more moderately from the Chinook. Inasmuch as their attitudes and practices coincide in large degree, it is safe to assume that they are representative of the intervening territory.

Both Klallam and Chinook view wealth as a criterion of rank and its lavish display in the wedding ceremonial as an index of social pretension. Marriage with a person of lower rank is unthinkable. *171 It is apparent that most Klallam brides are paid for, yet elopements occur and slave alliances are formed. Once such marriages are con- 556 tracted the parents make no effort to separate the couple, but a girl who • 583 marries in this way is not highly respected. Whether payments are 585 made following elopements to legitimatize them, we are not told. Upper-class Klallam have a definite preference for extra-tribal mar- *171 riages, especially with the people of Vancouver island. Local exogamy is even more general, holding for all ranks, for in a record of fifty- 582 seven marriages only five were with co-villagers.[612] Purchase, or its *171 simulation, is so obviously the normal Chinook procedure also that even a successful elopement will be nullified unless a small sum is 583 paid. And these sticklers for form go through the orthodox ritual on this occasion as though the marriage was not yet consummated. For a man too poor to pay, there is no recourse but in matrilocal residence with bride service.[613]

There are but scattered observations on the tribes of the intervening territory but they suggest conformable practices. Since we learn that common people among the Makah paid a small amount for a bride without any ceremony, purchase must have been the regular form for all classes of society. Yet as elopements were frequent and are said always to have ended amicably, this suggests an approxima-

tion to the Klallam situation and perhaps the payments made in such 171*
cases by Chinook. Marriage occurred in or out of the tribe, but with
no near relative, which includes fourth cousins.[314] Caste stratification 583
was as strong among the Quinault as among their northern neighbors, 171*
and marriages had to be contracted with persons of equivalent status.
This brought it about that tribal or at least village exogamy was 565
insisted on for chiefs. The sentiment was nearly as strong for commoners 582
as well, although in their case emphasis was on the fact that
all co-villagers, or nearly all, were related; marriage of relatives of
even remote degree being forbidden. Not only might a man normally
not marry in his own village, but for the same reason he could not
ordinarily marry in that from which his mother came. The upper [583]
class always purchased wives from other noble families; to marry
below one's rank was disgraceful in the highest degree. If a common
man wanted to marry a chief's daughter, the chief would pay someone
to kill him. In contrast to the Klallam desire in extra-tribal marriages,
the Quinault had no preference for northern tribes. All marriages,
of whatever rank, were made by purchase, that is by the
exchange of gifts of high value. Elopements were common, yet this 171*
was theft and therefore dangerous, for the girl's father might kill the
man, whose relatives could not retaliate. The bride who eloped must 583
be paid for, in fact the price then demanded was inclined to be
exorbitant. Legitimatizing of marriage was Quinault theory at least, [848]
yet illegitimate children were many and not looked on with contempt.[315]

Purchase of the same order appears among the Puget Sound tribes, 171*
at least for the wealthy, that is the upper classes. The interchange
of gifts was not compulsory, so that poor people married on agreement 565
alone or deferred payment until they were able. The general 583
impression obtained from the account of these people (Nisqually,
Snohomish, Snuqualmi, Skokomish, and Suquamish) is that class distinctions
did not cut so deep as on Vancouver island and coastal
Washington. Differences of wealth were not so great, hence, comparatively, 171*
wealth and its function in marriage were not emphasized
to the same degree. The exogamic habit is present however but
apparently confined rather to the upper class. Even fourth and fifth
cousins could not marry.[316] The Nisqually maintain that tribal
exogamy held for all; one who broke the rule was not only disgraced

*171 but heavily fined. "Generally speaking, these Indians seek their wives
582 from among other tribes than their own. . . . . It seems to be a
matter of pride, in fact, to unite the blood of several different ones in their own persons. . . . . With the chiefs, this is almost always the case."[317]

*171 Marriage by purchase was the usual form among the Nez Percé,
583 but it is said that a marriage by agreement because of the groom's
capabilities was a more desirable and honored form. This is a new
585 note, but it was characteristic of Plains tribes to the east. The purchase was effected with little ceremony. Bride and groom were not ordinarily members of the same village.[318] The exogamic habit here
*171 had not the same basis as among the tribes previously discussed. It
seems due solely to the Nez Percé habit of forbidding marriages to
582 relatives of even remote degree, which necessarily resulted in village exogamy. I am unable to find evidence of exogamic practice farther to the east, but will return later to analogous forms of wife purchase.

*171 To return to the Columbia river: the Wishram had as strong a sentiment for caste and wealth as their down-river relatives, the Chinook
582 proper. Rank and wealth were here not quite synonymous, for chiefs
583 were not always the wealthiest individuals. Marriage was always
with one of the same rank, so that the children would have as high
556 standing as their parents. Payment was insisted on in every case;
583 even in the case of marriage with a deceased brother's wife the
[587] procedure was gone through, else the children were as "nothing," i.e., not legitimate. The feeling was that the marriage must be regularized by payment, else the contractants were the subject of odium, and furthermore the marriage would not be permanent. So strong was the feeling, that a lower-class man guilty of adultery with a chief's daughter or other close relation would be killed; not for his crime as such, but because he was too poor to make proper recompense in marriage. Even constructive adultery, such as accidentally touching another man's wife, was heavily fined. The insistence seems to have been on the regularity of the form, for it was freely acknowledged that the gifts made on either side were about equal. The marriage of very young children was arranged and carried out in full form. Chiefs and wealthy men marry women of other tribes, but marriage within the village was prohibited to no one save a blood relative.[319] Much the same situation is implied for other Upper Chinook.

From the Columbia river southward the exogamic practice extended 171* among the coastal tribes as far as the Hupa and some form of the 582 purchase feature to the Pomo. The caste sentiment of the northern 583 tribes existed on the Oregon coast, with its concomitant local exogamy to maintain caste in marriage. This is implied for the Alsea, where there was "a decided preference for marriage with women from another tribe. This is explicitly stated of the nobility. At the same time there is evidence that the men did not care to go too far afield for their wives, for in such specific cases as could be cited, the favored tribes were the Yaquina and Siuslaw, whose languages are almost identical with Alsea and who regarded each other as closely akin. It is more likely that the exogamous tendency was local and extended to villages rather than to tribes."[580] In general culture the Coos resembled the Alsea, hence it may be presumed that the same exogamic sentiments prevailed. This is the more certain since the tribes to the south, the northwestern Californians, were also locally exogamous by habit. Coos marriages were apparently all made by purchase, often being those of children. The amount transferred was pitifully small in comparison with bride prices north and south. How far there was proprietary interest in the purchase, may be judged by the fact that the husband would demand the return of the bride price from the parents of an adulterous wife.[581]

While caste sentiment was not so definitely crystallized among the [565] Takelma, distinctions were drawn between rich and poor, freeman and slave. "There is no well-defined rule against marriage within the village, but as it must very often have happened that practically all the residents of a village were related [marriage of relatives being forbidden], it was customary to look beyond the village for a mate, and in many cases even to marry into some neighboring tribe of alien speech, like the Shasta or the Galice Creek Athabascans." But it was as true here as to the north that such extra-local marriages were dictated by the necessity of finding a wealthy mate, for "the social status of the children depended very largely, of course, on the price paid for the mother, so that poor people's children were looked down upon as not much better than dogs. . . . . The indebtedness of the husband to his father-in-law did not entirely cease with the initial purchase of the wife." He was obliged to visit him later with further gifts and to pay him again on the birth of the first child. "This pay-

---

[581] St. Clair and Frachtenberg, Traditions of the Coos, 26.

*171 ment was considered as equivalent to the buying of the child." Here
582 too childhood marriages often occurred.[552]

• 583 East of the Cascades among the Klamath, social stratification was
far more fluid. There were rich and poor but the caste feeling was only
*171 slightly developed. Indeed the sentiment may not be more than a
582 century old, for the impression was derived that differences of wealth
583 were slight and rank absent prior to the opening of direct contact with
565 the Columbia river tribes. This does not date back of the opening of
the nineteenth century. Marriage here was indifferently within or without the local community, but inasmuch as there was no sentiment dictating marriage with one of equivalent wealth and rank, such exogamy as does occur is random and without purpose. The only prescription is that some payment must be made. The amount was relatively small and no great weight attached to its size as indicative of rank, or pretension to rank.

*171 The Northern Maidu have no general rule of marriage within or
582 without the village. Of the Sacramento valley division however it is
583 observed that "there would appear to have been a slightly greater
practice of local exogamy." The reason for this is not clear unless it be that co-villagers were commonly related, for these people have no feeling for distinctions of rank based on wealth.[553] Whether the Southern Maidu had a similar exogamic tendency does not appear. There is however some simulation of purchase, since the girl's father received more than the boy's in the exchange of gifts.[554]

*171 Local exogamy of a type affiliated with northwestern forms was
582 not found in this direction beyond the Maidu. Exogamy did occur
among the south-central Californians, but it was the exogamy of totemic moieties, which was local exogamy only to the extent that the totemic groups were localized. Thus it happened that the majority of Yokuts marriages were locally exogamic. The most northerly of such tribes were the Miwok.[555] Since the habit of local exogamy was so slightly developed among them, it is doubtful that the Maidu case should be interpreted as an imitation of their practice. I should rather hold that it is to be taken as a result of the prohibition of marriage with relatives, hence not a reflection of either northern or southern influences.

171 *
582
583 •
554

To return to the coastal groups of northern California, the Yurok and their neighbors had attitudes toward social standing, wealth, and marriage appreciably like those of the Northwest Coast tribes. For the Yurok every social relation was nicely valued and the basis of them all was the marriage settlement. Social status was proportionate to a man's wealth and the amount he was willing to pay for the mother of his children. His own life was valued at the amount paid for his mother. Partial payment or a small sum put him at the bottom of the social scale. The price itself was definitely fixed. Marriage was outside the kinship group and commonly outside the village, but not necessarily so. Kroeber represents the smaller villages as practicing exogamy by reason of kinship of their inhabitants, but it is at least as likely, in view of the exaggerated importance of wealth, that a sufficiently large bride price could be obtained in many instances only from men of other towns.[586] An analogous situation may be inferred for the Tolowa, whose little known culture closely resembled that of the Yurok. On one fundamental point we have the verdict of the Yurok, who "regard the Tolowa as rich, a distinction they accord to few others of the people known to them." Inference also places the Karok in the same category, for in all other known aspects of culture they were as one with Yurok and Hupa.[587] The Hupa attitudes in the matters we are concerned with here were so nearly identical with the Yurok that to cite them would be but to repeat the Yurok case. At one point there is some difference, yet one only of degree. Our authority states briefly that women went regularly to their husbands' villages on marriage, implying that this was a uniform practice, or nearly so.[588] Yet in actual practice it may mean no more than the Yurok habit, local exogamy based on kindred exclusion and the desire for a wealthy alliance. (If the marriages were as regularly exogamous as we are told, then I can see no reason why we should not describe this as a system of unnamed patrilineal local sibs.)

The lower Klamath attitude is also that of the Shasta. It is essential that a wife be paid for in order to fix the value of the children. Even elopements are condoned if the bride price is paid later. Blood money for death or injury is equal to the sum paid for a man's mother. The price varied widely but tends to be fixed at a value somewhat less than that of the Yurok. The wealthier families, who arrange infant betrothals, ordinarily choose the girl from another village.

[587] Kroeber, op. cit., 98, 108, 126.

[588] Goddard, Life of the Hupa, 54, 56.

*171 Poorer men offer the bride price directly, or may serve their parents- 583 in-law in lieu of payment.[529]

Purchase appears again among the Sinkyone, and perhaps pre- [582] vailed in the intervening region. By no means so wealthy as their [554] northern neighbors, values were correspondingly less. Nevertheless [114] we observe something of the Yurok attitude in a definite value attached to a man's life. A wife was seemingly paid for, although Kroeber suggests that this may have been in the nature of a gift to be reciprocated rather than a formal purchase price. If this is so, it suggests only the practice of the generality of more southerly Californians. [848] But inasmuch as illegitimate children were paid for, the suggestion is rather of an approximation to the northwestern norm. Something of the same regularity of purchase, with reciprocal giving, is implied by Yuki statements.[530]

*171 The Huchnom and Pomo attitude toward marriage did not differ appreciably from more southerly Californians. The exchange of mar- 554 riage gifts can hardly be described as true purchase, but appears rather "an expression of good will and dignified but affectionate etiquette." Loeb observes, however, that the man's family gave more than it received in return. It would therefore not be possible to see in it certain affiliation with northwestern customs, were it not that both people prescribed a series of gift-bearing visits of the northwestern type to consummate the marriage. I shall subsequently trace such formal visiting from the Kwakiutl southward to this point. As to exogamy, there was none; marriages were contracted indifferently within the community, outside it, or with foreigners. In neither group were there serious rankings based on wealth which might prescribe a studied attitude toward maintaining it in marriage.[531]

The typical central Californians (Wintun, Miwok, Yokuts, and Costanoan) register negative to the characteristics of northwest marriage. Social stratification of any range and rigidity was absent, wealth unimportant, marriage gifts were presents of friendship however much formality demanded their bestowal, formal visiting seemingly unknown, and exogamy casual, certainly not for the express purpose of maintaining social position. In a word marriage does not function to uphold social stratification nor do the northwestern rites appear.[532]

Marriage practices of the Northwest Coast type can be traced into 171* the northern Plains. At least this appeals to me as the most rational 581 explanation for the similarities which Crow, Hidatsa, and Assiniboin 583 show and for their divergence from the general Plains custom. It will be well to define the latter again. Such typical tribes as Arapaho, Cheyenne, and Blackfoot viewed with favor marriages in which the son-in-law was chosen for his capacity as a man of honor, of war-like prowess, and a good provider. The father-in-law's desire was commonly to secure his services. Gifts were exchanged, but rather for the honor of the act than with thought of definite purchase and the return of an investment.

The anomaly of Crow attitudes is most intelligible, in view of their 171* geographic position in the northwestern Plains, as ultimately derived 582 from the Northwest Coast. The most honorable form of marriage for the Crow was by purchase, which gave to the woman a position of 583 respect beyond that of any of her unpurchased sisters whose matches were in contrast mere elopements. The young man presented horses to her male relatives and meat to her mother. There was no band exogamy here, although marriages may have occurred outside the group almost as frequently as among the Nez Percé.[333]

It will be observed that the Crow attitude is appreciably like that 171* of the Nez Percé. That the Nez Percé placed a higher value on a marriage 583 contracted because of a groom's capabilities, the Crow on purchase, is no argument against historic connection between the two. Both tribes recognize marriages of both forms; wherein they both differ from the majority of Plains peoples, is that they have marriage by purchase, and even stress it. As a matter of fact, the difference [114] may be really one of formulation on the part of the ethnographers. Lowie's account of the Crow is so circumstantially detailed as to leave no doubt of their attitudes, but Spinden's description of Nez Percé marriage is of the briefest. If he was impressed by the Plains-like character of the culture of this Plateau tribe, his formulation may well have stressed this non-northwestern marriage form. It may also be that the history of marriage in the two tribes has taken opposite directions. Possibly the Crow, recently acquiring the purchase habit, stressed the novel form as giving distinction to marriage; the Nez Percé, possibly with purchase as the original form, took over Plains marriage regulations with a deal of other culture and stressed what was the novelty from their viewpoint.

---

[333] Lowie, Social Life of the Crow, 220, Notes on the Mandan, Hidatsa, and Crow, 74.

*171 582 583 It is also conceivable that purchase among the Crow is not related to the Northwest Coast forms, but that it is a derivative of their matriliny. That is, the desire to become affiliated with a particular matrilinear lineage may have been met by insistence on purchase, the groundwork for this being present in the common Plains custom of exchanging gifts. But there is nothing otherwise in Crow life to suggest that lineage as such was important.

*171 583 Among other Plains tribes possible analogies to northwestern practice are found only among Hidatsa and Assiniboin. "The Hidatsa and Crow agree in considering marriage by purchase as the most honorable form from the woman's point of view; but among the Hidatsa I got the impression, which I did not receive among the Crow, that it was somewhat discreditable for a man to have to buy a wife," for it implies a lack of personal qualifications. This attitude disposes of the suggestion made in the last paragraph, for the Hidatsa are also matrilinear. This is a duplication of the Nez Percé case; in contrast to the Crow, it may be said that here the novelty, purchase, if indeed it is a novelty, has not acquired the prestige found among the Crow. [114] There is nothing in Lowie's brief account to suggest formality in purchase, and in fact such procedure would appear quite at odds with their attitude. Matthews' statement confirms the absence of formal purchase. Nor is the Assiniboin case one of outright purchase. There are however features which suggest the Northwest Coast. As with other Plains tribes the marriage is accompanied by an exchange of gifts. Here the gifts of the bride's family were distributed among the groom's relatives, who return next day "returning to the donor some gifts of superior value to those received," these then being carried to the girl's group. This is faintly reminiscent of the potlatch. Further, the first gift-bearing party was that of the bride, whereas the Plains habit at large is for the young man's party first to make contribution. The impression gleaned from the account of the Assiniboin is a certain formality in the terms of settlement and in the marriage processions somewhat at variance with the generality of Plains marriage habits.[584] Typifying these, Beckwith's brief statement concerning the Dakota implies only the exchange of gifts, although in one form of marriage the groom offers horses until the bride's father is satisfied with the amount.[585]

The Amount of the Bride Price

Analogous comparisons may be made of the quantity and value of the bride price. This is somewhat difficult for lack of precise data, but such as exist make it clear that the largest amount was that of the Kwakiutl, with diminishing values toward the peripheries of the area. A further difficulty arises from the fact that from the Columbia river northward we know only the amounts paid by members of the chiefly class. We are concerned here not alone with the gifts made by the groom, but with those given in return by the bride's relatives.

It is not easy to give an adequate notion of the huge quantity of wealth which the Kwakiutl gave in the course of their marriage exchange. A few random observations make clear that it was a vast amount; four hundred blankets and other valuables were presented on the groom's behalf, and in return the bride's father made gifts of larger value, coppers valued at thousands of blankets, his house and carvings, "a large stock of food, blankets, boxes, dishes, spoons, kettles, bracelets, coppers, and the ceremonial box lids." In addition there were the intangibles, privileges, titles, and crests. Such were the valuables transferred on the marriage of the chiefly class, which represent of course an upper limit. The price to one of lesser rank was inevitably much smaller, but in any case a very real aggregation of wealth.[536]

Contrast with this the meager amount exchanged by the Coos, where the usual price was ten fathoms of beads, a couple of blankets, an otter hide or a canoe; and the Crow, horses to the bride's male relatives, meat to her mother.

It may be well to brief all relevant data. The Klallam gave blankets, shell money, and several canoe-loads of food; on Puget sound, gifts of like value, including a fine canoe in one instance, in another forty blankets, two slaves, and a canoe, and in a third, five horses and $50 in cash. The Twana gave money, blankets, guns, horses, etc., to a total value of $100 to $400. The same lavishness, although moderate in comparison with Kwakiutl, is implied for the Chinook. The Wishram gave horses, packs of blankets, etc., and kept the dishes of the marriage feast. In return they received baskets, beads, slaves, and a good horse. A trunk full of clothing and other finery was exchanged.

---

[536] Professor Boas tells me that he was never able to get an account of a commoner's marriage.

*171 583 622 South of the Columbia river the quantity was quite moderate, even where its value in native eyes was high. For the Tillamook, the price was generally one adult and one child slave. The Coos value has been cited above. A chief's daughter came higher, being usually bought with woodpecker scalps, valuable for their use in dance caps. Such scalps formed valuables from this point to northern California. A Takelma paid dentalia and the like in moderation; the return was baskets, women's hats, camas, dried salmon, and other such household articles. The impression I derived among the Klamath was that the quantity was somewhat greater, approaching somewhat Wishram practice. A chief gave a slave, horses, blankets, beads, food, elk and other hides, but not nearly so much as my Wishram informant implied. One poorer man gave five fathoms of beads for his bride.

*171 583 Values drop appreciably among the Maidu; the northern groups made a gift of beads, deer, or gave nothing; the southerner gave shell money or other valuables such as blankets, and in return obtained baskets and other property.

On the northern coast of California values rise high again. The Yurok price was standardized. For a wealthy girl, ten strings of beads, fifty woodpecker scalps, an obsidian blade, a boat, etc., up to $300 in value, were given, with a return of ten baskets of dentalia, otter skins, a canoe or two, several deerskin blankets, and other valuables. A poor girl was valued at eight strings of beads and a boat. Hupa values may have been the same or somewhat less; Karok certainly were, five to ten strings. The Hupa groom gave woodpecker scalps, several strings of shell money, to a value of $30 to $100. Presumably he also gave articles of the kind returned to him, dresses, weapons, baskets, and food. The average Shasta price is set at one or two deerskins, fifteen or twenty long dentalia, ten or fifteen strings of disk beads, and twenty or thirty woodpecker scalps. Values dwindled again markedly south of here; the Sinkyone price was less than that of Yurok or Hupa, shell beads alone are mentioned for the Huchnom, and presumably neither group gave more, or much more, than the Pomo. The Pomo gave beads and deerskin and in return received baskets, or, according to another account, gave food, beads, deerskin or rabbit-skin blankets, receiving in return baskets, belts, and food.

Eastward of the Columbia river values were again low, even if measured in terms of the lesser quantity of valuables possessed by

171 *
583 •

these people. The Nez Percé gave a horse, elk teeth, and similar articles; the return gift comprised bags, food, and the like. Hidatsa and Assiniboin prices were similar to those of the Crow noted above. A Hidatsa man gave horses to the girl's parents, who reciprocated with as many or sometimes more; an Assiniboin gave one or more horses, received pemmican and twelve pairs of moccasins, and then gave somewhat more than he had received.

The impression derived from these data, despite their paucity, is that the bridal payments were made on a lavish scale as far southward and eastward as the Columbia river peoples. Beyond this they were meager in comparison. The region north of the Columbia was one in which material possessions bulked large. Wealth was a matter not alone of relative values but of quantity. To be sure the material wealth of the Washington tribes was by no means so great as that of the Kwakiutl. I get the impression that there the bride price was high, relatively as well as quantitatively, in comparison with the southerners. A second focal area of relatively high values appears again in northwestern California, as Kroeber pointed out, rising above those of coastal Oregon and the region to the south. It is not easy to define relative value, but it does appear when we realize that the material possessions of the Pomo and the Crow cannot have been far different from those of the Yurok. The higher values, both quantitatively and relatively, may be viewed as a corollary of a social structure dependent for its standards on wealth.

We note incidentally the articles that constituted valuables in bride purchase. Woven blankets (in the historic period, trade blankets) figure as far south as the Oregon coast, dentalium shells beyond to the south as far as Sinkyone and perhaps Huchnom, and southeastward to Klamath and Shasta. Woodpecker scalps are part of the marriage price in California, extending northward to Coos on the coast, to Shasta in the interior. The significance of this restricted distribution, for example, is that the Klamath made use of woodpecker scalps for headbands in California fashion but never mentioned them as having money value. Horses are of course associated with the Plains forms of purchase, but are mentioned as far northwestward as Klamath, Nez Percé, Wishram, and southern Puget sound. To be sure the horse was not carried beyond Puget sound, or there were few until after 1850.

*171 591 ern, and the foothill groups), Eastern and Northern Pomo. Thereafter it was not of necessity patrilocal, for residence might be continued with the woman's unit. Outright matrilocal habits appeared among the Sacramento Valley Maidu (although the majority of marriages were there patrilocal from the outset), Huchnom, and Yokuts. Southern California was again an area of patrilocal habits. Great Basin practice conformed with that of north central California; temporary matrilocal residence for Paviotso, Southern Paiute (?), Uintah Ute, Lemhi and Wind River Shoshoni. Northern Plains tribes were generally patrilocal: Crow, Gros Ventre, Assiniboin. Matrilocal residence as well occurred among the last two. Hidatsa indulge in temporary matrilocal residence, after which there is no fixed rule.

Summary

*171 554 556 We may now review the data detailed above. Sharply crystallized distinctions of rank and the importance of wealth in establishing them, wealth itself assuming real proportions, center in this area in the Kwakiutl and other northern tribes. Similar caste distinctions are traceable southward on the coast to the Alsea and Coos, and eastward not beyond the Wishram. Social distinctions based on wealth to the almost complete exclusion of other factors extend beyond these limits; in attenuated form to the Sinkyone and Yuki and perhaps beyond to the south, to the Klamath and Shasta, to the Middle Columbia Salish of eastern Washington. *171 583 431 Marriage by purchase had an even more extended distribution; from the same center it is traceable southward perhaps to Huchnom and Pomo, to the Southern Maidu, and eastward into the northern Plains, if my interpretation of the Crow, Assiniboin, and Hidatsa cases is justified. In the northwestern portions of this territory marriage by purchase is a function of the caste-wealth system; in the outlying regions, as among the Maidu on the one side and Nez Percé, Crow, etc., on the east, it would seem that we witness the spread of the purchase factor with little of these underlying concepts. It must be borne in mind that nowhere in this area are the marriage payments justly described as purchase; there is always a reciprocation of the gift. The express point is that marriage is contracted only by the making of such gifts.

*171 583 556 Wealth was very real, huge in quantity, north of the Columbia, and a correspondingly high value set for a marriage settlement, at least among the upper classes. Valuables and marriage values dwin-

dle beyond this limit, with a notable recrudescence of the latter on the 171 *
lower Klamath river. Part of the mechanism of its exchange in 583 •
marriage was a series of reciprocal visits, of potlatch character southward 556
to the Columbia, a mere formal practice beyond.

Among the concepts underlying the practice of bride purchase 171*
was the sense of mutual obligations of the contractants' families.
This was avowed by the coastal tribes from British Columbia to
northern California. It assumed the express forms of compulsory
levirate and sororate and of the right to children. Further, the families
were obligated to restore the marriage settlements if the marriage
terminated unfortunately. The man's financial interest in the wife he (837]
had bought was evidenced by his ability to mulct damages from an
adulterer or one even thought to be such.

The exogamy which appears in this area was not the prohibition 171 *
of marrying within the community, but an exogamy of practice. To
maintain caste, marriage must of necessity have frequently been with 582
persons of the same rank and wealth outside the village or tribe. 554
This was undoubtedly more the circumstance in the upper strata of
society. It is obvious then that the distribution of this practice coincides
closely with that of sharp distinctions of caste and wealth.
Beyond those tribes whose attitudes may be so characterized, there
was a fringe of peoples who had taken over the custom without its
antecedents. Such local exogamy has been noted as far southward as
the Hupa, the Sacramento Valley Maidu, and as far eastward as the
Nez Percé.

The habits of postnuptial residence seem to correspond closely 171 *
with the sense of purchase. It was patrilocal, the bride being taken 591
at once to her husband, in the coastal area southward to northern
California. Some variability does indeed appear but this seems no
more than the common circumstance of residence according to preference.
The Wishram instance of regular temporary matrilocal
residence is an anomaly.

The position of the Klamath with respect to this northwestern 171 *
marriage complex was that of a distinctly marginal group. Purchase
to maintain social standing was present but the values not fixed; 583
the actual amount changing hands, relatively small. A series of formal 431
gift-bearing visits was prescribed, in which the bride's family
returned more than they received, but there was no intentional rivalry
in giving. The first visit was that of conducting the bride to the
groom as among all the southerly peoples. Residence was patrilocal 171 *
591

*171 in conformity with northwestern views. The sense of obligation was
[591] weakly developed; the levirate was a mere custom, the sororate rare;
[587] birth of heirs played no part in their scheme of things. In brief, the
[583] Klamath derived the sense of social standing based on wealth from
• [583] the northwestern center, and the mechanism of marriage purchase to
effect it, but no more.

174 I am not inclined to indulge in an historical reconstruction of the northwestern marriage complex. But if it be in order, it seems better to suggest that the ancient, undifferentiated custom was the practice of mutual giving, subsequently formalized with the growth of concepts of wealth and rank on the Northwest Coast. The alternative is to hold that these attitudes and practices diffused from that center only after they attained full flower there. If this were so we should expect to find the specific forms of Northwest Coast procedure at a greater distance. I am very doubtful that ideas and sentiments diffuse as such, though I may have given that impression in some of the summary statements above. It seems rather that particular practices are imitated, and if but imperfectly copied or made rational in their new context, then alone do we say that merely the underlying idea has been borrowed.

*171 In the present case social stratification based on wealth had spread
174 over a wide area; wife purchase with it. I conceive that members of
583 the imitating tribes observed the aggrandizement that went with
554 wealth and took occasion among their fellows to insist on a similar,
556 and in their eyes proper, respect for themselves and their wealth
when opportunity offered. The spread of the marriage purchase custom must have been one of the most effective mechanisms for the spread of the sense of rank. Boas has already made such a case for the Kwakiutl and their neighbors. By marriage with the northern tribes among whom privilege concepts were highly developed, the Kwakiutl obtained these privileges through their wives.[557] The mechanism is clearly transparent in the Klallam preference for marriages to the north.[558] We are not told this of other tribes, to be sure, but it appeals to me that marriage into foreign tribes where payment for their women was demanded would inevitably bring in its train the notion that these women were in some way superior to those at home. This view is not drafted from thin air; among the tribes of Puget sound, e.g., the women of the more northerly tribes consider them-

selves the superiors of those among whom they are resident. Once the 171*
sentiment had become lodged in the group its fruition was made inev- 174
itable by the imitation of others. 583 •

With Kroeber, who has so expressed himself on the subject of the 554
Yurok,[509] I do not believe that the levirate and sororate were born of 556
this special development of purchase. Both customs have a nearly universal distribution in North America. It seems rather that such existing practices were drawn into the developing marriage complex of this area.

SOCIAL STRATIFICATION

The background for a study of social stratification has been laid 128
in the preceding section. I will here deal with chieftainship, its relations to wealth and heredity, and related topics.

Social stratification was but weakly developed among the Klamath. 554
Social standing did not depend directly on heredity and there was 556
apparently little difference in wealth from richest to poorest. Since wealth was inherited there was at least some stability to family standing. The marriage purchase gave respectability to the union; it did
not fix the standing of the couple by reason of the amount paid. Yet [56]
there was some differentiation based on wealth, a continuous gradation
from the wealthiest to the slaves.

The wealthiest individuals were called lō'ki, rich men. This was 556
also the term by which chiefs were styled. My interpretation of the
Indian's statements is that those prominent individuals, who exer- 622
cised functions which would elsewhere have led to their being called chiefs, were at the same time the wealthiest. A chief became such primarily by successful leadership in war, coupled with some background of spirit power, wealth, personal qualities, especially ability as an advisor, with some suggestion of hereditary interest.

The chiefly functions emphasized were leadership in war and 622
haranguing the people. The chief could not issue injunctions, he re- [701]
ceived no tribute, and was in no way responsible for the conduct or
debts of his people. Just prior to reservation days there was intro-
duced from Columbia river the practice of chiefs sitting as judges. [565]
While chiefs were set off from the mass, this did not imply any
sense of caste stratification. Their wives and children were not known by a distinctive class term.

[Klamath Reservation]

Of all the societal relationships, the government sought directly to change only those within the family. It was clear that a nation that was soon to impose upon the Mormons the American, and not the Biblical family, would permit no special marital practices among the Indians. Polygamy was banned, although not retroactively for unions such as those of Allen David and Monchnkasgitk, which had been contracted prior to January 1, 1870. Some leaders themselves appear to have advocated the change in a desire to emulate whites. In 1877, Gatschet noted that there were still two or three polygamous men.[26] Since polygamy had been a mark of the affluent, the ban, like the emancipation of the slaves that preceded it, served to erode the status of the traditional chiefs.

657*
648*
595
177
178
[556]

An effort was also made to place under the authority of the court of chiefs certain relationships which had formerly been regulated privately between the families or individuals concerned. In the legal code instituted when the court was established, the consecration of marriage was made the function of the head chief, to whom the groom was to pay a fee of five, three, or two dollars or the same amount in horses, graduated according to his means. It was again the chiefs who punished fornication and polygamy and performed divorce.[27] The traditional ritual of marriage still was being practiced by some families in the 1890's[28] but the gift exchanges between the families concerned which set a public seal on the union were superseded, and the controls exerted by the family over the couple were thereby diminished. The effects of these and other changes were recognized by Gatschet. "Matrimonial reverses . . . among the Klamath [he declared] . . are one of the unavoidable consequences of the gradual emancipation of the females from the former rule of their brutal husbands through the advent of the whites, and also of the obnoxious and corrupting neighborhood of the soldiers at Fort Klamath."[29]

[586]

With time, the seal upon marriage came to be set by the Methodist church and its ethics in turn permitted the independent of spirit to flout tradition. One woman recalled that upon the death of her husband his family proposed that she wed his brother in customary manner, but she refused out of regard for the memory of her husband and the sanctity of the bond of their marriage in the church.

$10,000, constituted an inexhaustible treasure. Ordinarily, this 648*
was placed in his hands only when he had come of age, but with 657*
marriage he attained seniority at once, and it became his. 871

Many a young couple, then, sought a new life in the last few 563
years of high school in an elopement to Reno or Las Vegas. In 582
a week or so they returned to take up adult life; and thus to [434]
reconcile their hopes with the social realities of the reservation. [429]
Although they would continue to maintain a degree of camara- [583]
derie with a few of their schoolmates, such intimacy as they had
known across ethnic boundaries was at an end. For the majority
of tribal members, their course and that of their white schoolmates increasingly diverged.

*539 58, 15. shetcháktanuapk stands for the more common form: shitcháktanuapk.

622 58, 16. nánuktua shéshatuish m'na: "all what your husband has transferred to
692 your parents to obtain your hand"; m'na stands for hishuáksham. Cf. 61, 8.

[193] [192] 59, 7. mish, *you, to you*, is often used in this article for málash, málsh, *ye, to ye*, in allocutions to two or more persons. This is a way of expressing what may be called the "inclusive plural of the second person". This mode of speaking is observed in m's lápuk, 59, 7; lápuk mish, 59, 7. In the same manner 1 stands for ät, 59, 8: 1 sissók-uapk, if ye whip each other; also 60, 22.

59, 9. 1 mi stands for mish mi.

59, 17. hä k̲úi gí'uapk: if he should fail to do his duty; 59, 10. hä tídsh gí'uapk: if he does his duty well; nanuktuánta: in every respect.

59, 22. í'χaks mi: what you may win by betting on the horses engaged in the race.

60, 2. kä'lish is the objective case of kä'liak, kéliak, "not having", the simple form of which, without -ak, would be kä'li or kä'liu (kä'li hû).

[583] 60, 11. túma wátch gitk. The horses have, of course, to be transferred to the parents of the bride and not to any of the chiefs.

[231] 60, 12. wátch. The horses owned by the Klamath Lake and Modoc people are valued from 20 to 25 dollars each; they descend from the hardy, enduring race of Cayuse ponies, and were originally obtained by bartering commodities with the Columbia River Indians at the Dalles, Oregon.

[192] [193] 60, 15. wátch spuni'-uapka; wátch refers to *one* horse only, for the verb spuni', to transfer, is used of one (living) object only; shäwána is: to give *many* objects. "Not even one horse your wife has to give to you, if she leaves you; but if you leave her, you must give her several."

[177] [595] 60, 17. láp snawä'dshla. Polygamy was abolished by the headmen of the tribe shortly after the establishment of the reservation, and this ruling was one of the greatest benefits ever conferred upon that tribe by the progress of civilization. But those who had several wives then were not compelled to dismiss all but one, and so in 1877 two or three men were still polygamists. The irascible and excitable disposition of the Modoc and Klamath females must have produced many chin-music intermezzos with their husbands at the time when polygamy was predominant.

[193] 61, 3. K̲á-i mi'sh etc. In this paragraph, in: k̲í'tgik, káktak, hémkanktgik, gitkik, the terminal k contains the abbreviated gi, which joined to the foregoing nû, n means *I said*. The construction runs as follows: Hû'nk ni gi k̲á-i mish k̲í'tgi; nánuktuanta káktak gi píla m's n hû'nk hémkanktki gi; nä'-ulakt gí'tki 1 snawä'dshash tchí'sh káktak gi píl. K̲á-i etc.

61, 6. tchik. This particle does not mean *if*, but cannot be rendered *here* (and below) with a more appropriate word. It is identical with tchĕk, *then*. A subordinate clause is here expressed by a co-ordinate one. Cf. 61, 9. 10. 12. 62, 4.

[192] [193] 61, 6. któktatska: "we clip their hair in every instance", is the distributive form of któtchka, któtska, occurring in 58, 16.

61, 9. Tsúi etc. This inverted sentence has to be construed as follows: Tsúi tchish násh híshuaksh wutódshish snawä'dsh m'na pä'n hû'nk snúkp'la, tsúi nä'-ulĕkan etc.

7:Gatschet E-4,5 (1877) 1890 NR10 Klamath NR10

NOTES.

*539 I. Erotic songs obtained from Chief Johnson, Minnie Froben, and others, in the
533 Klamath Lake dialect. The twelve songs obtained from Minnie Froben are among the
832 prettiest and most melodious, as for instance 9. 16. 17. 18. 25. 26., and the eighteen songs
dictated by Johnson are of importance for the study of manners and customs, viz: 6. 7. 8. 10. 11. 19. 20. 28. 29. 41. 42. 43 etc.

With the Indians all of these and many other erotic songs pass under the name of *pilpil* or puberty songs. They include lines on signs of womanhood, courting, love sentiments, disappointments in love, marriage fees paid to parents, on marrying and on
*539 conjugal life. Some love songs have quite pretty melodies. A few songs of the present
533 interesting series of song-lines seem to treat of commonplace subjects only, as 22. to 24.;
832 28. to 31., while others apparently contain nothing but heartless mockeries and satiric
192 strictures, like 9. 28. 40. 44. But they all refer in fact to love-making and kindred sentiments, the satiric lines confirming the proverbial inclination of lovers to fight among themselves. I have deemed appropriate to gather all these songs under a heading which unmistakably expresses their real purport.

[194] 182; 1. The accent is laid sometimes on first, sometimes on second syllable. This word is abbreviated from yuyulinē'pka, as it occurs in the Modoc pilpil song. The event mentioned here is followed by a dance-feast; cf. shúyuχalsh, and 134, 21.

182; 4. ginhiéna "inside" means into a secluded spot, lodge or enclosure. O-ólka, ō'laka is the diminutive of ō'lsh, the grayish pigeon with the plaintive voice.

182; 7. gítkuapka, a contraction of gítko gi-uápka I.

[583] 182; 8. Pay a wedding gift is equivalent to purchasing a girl from her parents for a handsome consideration.

[193] 182; 11. Sung by women. The original as given to me does not contain the negative particle: Géntala nû haíkanka púshpushlish hishuákshash.

183; 12. yan'wán I stands for yanhuáni I.

183; 13. kali'napka: they are not only "dead but out of sight", as the suffix -apka indicates. This being an erotic song-line, kalínapka simply means that the females looked for are either asleep or absent, and not deceased, as kalína would seem to indicate. 'mutchéwatk for kĕmutchéwatko; cf. 136, 5.

183; 14. 15. These two songs follow a purely anapæstic metre, No. 15 adding two acatalectic syllables to its three anapæsts. Compare also the first line of 182; 7. with one supernumérary syllable. As for the contents of 183; 15. compare the analogous Modoc song 186; 51.

[194] 183; 17. Melody very engaging. In lúluash the second *u* is redoubled for metrical reasons. Dactylic rhythm prevails here, in 16, and in 182; 11.

183; 18. That is, while he was seeking young girls inside the kayátas. Melody very beautiful.

[193] 183; 19. wayósham, possessive case of waíwash, *q. v.*

183; 20. shkutántki stands for skútatko gi or shkutanátko gi: "he is wrapped in."

183; 21. The much more so, because he is in his festive garb, the pátash and lás stuck on his headdress.

184; 26. Melody very pretty. A young woman addresses these words to a lover.

184; 27. Sung by young women who have fallen out with their beaux.

ä'ukckni were sisters from his own settlement on Williamson river above 582
bezŭkse'was, a third was from that town, and the fourth from glä'tspak'is, a 595
mile or so down river. His daughter by the Modoc wife was counted ä'ukckni; while living at k'taidi she married an ä'ukckni of Yainax.

A gu'mböt man, Wokau'kialla, married two Molala sisters.

Girls usually marry within a year or so after puberty, which is 584 •
marked, at least among the well-to-do, by a big dance. Betrothals may have been arranged while the couple were yet pre-adolescent, presents having been exchanged by the families. They are expected to carry out the agreement after the girl's dance, payments being made again. Should one of them die another match may be arranged with the same family, but not of necessity. Poor and rich alike arrange such betrothals.

How far great disparity of age occurs I do not know, but it does [582]
happen that an older man marries a young girl. A shaman for
instance may be given a daughter by a man too poor to reward him [756]
otherwise.

But it must not be thought that there is no choice. On the contrary, the majority of marriages follow the desire of the couples.
Elopements take place and although the levirate is the rule, much 583
depends on the widow's willingness. Yet a girl's consent is not necessary. Despite her protests she may be carried to her husband's home. 587
If she runs home she is almost invariably taken back again. That she [762]
would be driven to suicide is doubtful; one informant never heard of such a thing; another stated she would hang herself and in this event her parents had to return the gifts of the groom.

An orphan girl of du'kwa lived with her mother's brother. She was married 583
against her will to a man of k'taidi. She clung to the ladder of the earth-
lodge but they pulled her away and dragged her up-river to k'taidi. Next 159
morning she ran home and never went back. Nothing had been paid for her at the time but she was given in return for valuables contributed to the cremation of a relative of hers some time before by her husband's relatives. Immediately after this she married a man at Klamath marsh; whether payment was then made is not remembered.

Elopements occur but payment is so much insisted on as a sign 583
of respectability that parents guard their daughters with great care. This is at least true where the family wealth makes a suitable payment imperative. It is unthinkable that a chief's daughter should be permitted to enter an unceremonious, clandestine union. The poor and 834
forward have little to lose. Modest demeanor is expected of a girl.

Taken as a whole Klamath material culture is of Plateau type with 171 * strong leanings toward northeastern California. But their social and 101 religious culture has a different aspect. While basically of the extremely simple Basin-Plateau type, social habits reflect the Northwest 105 Coast, religious ones rather those of northern California and western Oregon.

The basis of Klamath religious experience is that of the northern 171* interior, the Basin, and the Northwest Coast, in distinction to California and the Southwest. The experience is deliberately sought and 771 the power obtained is of a generalized, unspecialized nature. In this they resemble as well the generality of North Americans. Even their spirits are of the sort universal east of the Pacific coast. Specific Northwest Coast influence appears in the circumscription of general spirit repossession to the midwinter month. On the other hand, the shaman novice's inaugural dance, which gives at least as much color to Klamath shamanism, is characteristic of northern California and western Oregon. The Klamath form of it is, rather, Oregonian. Details of shamanism, on the other hand, link more firmly with northern, especially northeastern, California.

Social organization is extremely simple, and it is quite patent that 171* as late as the end of the eighteenth century, it resembled that of the Basin and Plateau in every particular. Even now social stratification is only weakly developed. Chiefs were only recently set off from the mass, their functions vague and their influence slight. At the very 171* moment that Klamath society began to break down with the coming of 177 the whites, they first imported from the Columbia river judicial functions for the chiefs. Chiefs are the wealthiest individuals, but they 622 are not chiefs because they are wealthy. Their selection is still based on principles of personal ability. The basis of this differentiation, wealth, came from the same direction, but the accompanying principle of the Northwest Coast, caste stratification, never reached here; nor did the chief's adjunct, a speaker or advocate, although this functionary is known in the Plateau and Basin as well as in the Northwest. At the other end of the scale, slavery is apparently an old institution, 171* but was of little importance until wealth began to figure among them. 567 The Northwest Coast concept of status based on wealth appears again in marriage, here regularly by purchase. But social estimation did 171* not rest on the amount paid, which was in fact very little. With so 556 slight an emphasis on rank and wealth, those northwestern corollaries, local exogamy to maintain the one and the family compact following 584

*171 on the other, were entirely absent among the Klamath. Nevertheless
556 the mechanism of the Northwest Coast for the exchange of presents,
the potlatch, does appear here in the form of prescribed reciprocal
• 594 visits between the families of bride and groom. It has not been clearly
recognized that these features of Northwest Coast social life have
spread even farther from that focus into the northern Plains and to
north central California.

*171 Of the slender stock of Klamath ceremonials, the scalp dance is
widely known, the war or incitement dance is common to northwestern
535 California and perhaps all of Oregon. Kroeber has pointed out that
726 so far as California is concerned scalp and war dances are mutually
exclusive in their distributions.[418] But the Klamath, like all others
*171 of eastern Oregon, carry out both dances. The girls' adolescence rite
of the Klamath is one with those of western Oregon and northern
881 California. This is a local phrasing of similar rites known from
Alaska to the Southwest, but lacking east of the Sierra-Cascades.
Specific details of the Klamath affair are closer to northern Cali-
*171 fornian forms than to those of Oregon. The Ghost dance of 1870 was
evanescent among them. Its first form was that characteristic of the
original dance of Nevada; later it was overlaid by features characteristic of central California.[419]

177 Some historical relief emerges in this survey. It is definitely
traceable in some details and can be established inferentially for more
basic elements. The most recent stratum of adopted traits is post-
[285] reservation, i.e., later than 1865. This includes two types of basketry
derived from the Northern Paiute settled on the reservation, a sifting
[668] basket and a coiled water bucket, and the Ghost dance. The earlier
form of the Ghost dance was instituted by the same group of Paiute
in 1870 or '71. This was the familiar circle of dancers, whose leaders
[343] dreamed new regulations; its ideology the return of the dead. In
1873 a Pit River introduced central Californian elements; a dance
[534] lodge, probably the clap-stick rattle, new songs, etc. To the same
[533] stratum belongs the imitation of the Warm Springs-Yakima one-piece
moccasin.

[291] Other elements are recognized as pertaining to pre-reservation
days, but probably not earlier than the middle of the last century:
177 the hand drum derived from the north, and perhaps the social dances
534 in which it is used; the hand game brought by a Spokane (?) man.

---

535 [418] Kroeber, Handbook, 144, 844.

[419] Spier, Ghost Dance.

It does not appear that a marriage brings about
a con-

587 tractual union between the families. The levirate is customary but not obligatory, and the sororate only occasional. It is true that the husband's brothers may take exception to her marriage with another, but this may mean only that they look upon it as an affront to their brother's memory.

582 Marriage is denied only between blood relatives. There is no village exogamy nor trace of restrictions or preference of any other order. At best the evidence suggests some tendency to marry within the tribal subdivision, but this may mean only that contacts are less frequent outside of this group.

584 The formalities of marriage prescribe a series of visits with an
exchange of gifts. The prospective groom sends a male emissary with
585 a bundle of sticks representing his offering. The bride's family proceed to the groom's house where they exchange gifts with the family of the groom. In kind and in quantity these are modest indeed when measured by Northwest Coast standards. A month later the couple and the groom's family return the visit, when again gifts are exchanged. Beyond these two, further formal visits are made only by the social pretentious. These formalities may be frequently initiated while the couple are still pre-adolescent, the bride being carried to her husband's home after her puberty dance.

583 The general nature of the Klamath marriage relation smacks
strongly of the Northwest Coast. This is apparent in the premium
*171 attached to purchase, to a lesser extent in the weighting accorded the amount of the purchase price, in the reciprocal nature of the gifts, and the series of formal visits before the affair is considered terminated. What is absent here is the notion that rank and privileges of a tangible nature are acquired by a marriage purchase.

This can best be brought out by instituting a series of comparisons with other tribes. For this purpose I shall select only a limited number of cases. For one thing data from Oregon tribes are almost wholly lacking, and those for California and Washington are both scattered and scanty.

Throughout California, save on the eastern border of the state, there is an appearance of purchase. But in reality it is only a presentation of gifts of no great amount as an earnest of the son-in-law's good will, a matter of etiquette rather than a stipulated price. The formality of giving varies as much as its conventional expression. With some, bride service is in order; with others, the parents-in-law must reciprocate the gifts. It is everywhere little more than an

000 3773. WT: Each month when period begins menstruant stands over nest of piss ants, allows ants to crawl up her legs and bite her, to induce menopause.

Marriage

Child betrothal.--

584 3774. Kl: Boy and girl know nothing of arrangement; boy's father asks girl's, "What do you think about it; you're going to let her get married when she grows up; what do you think?" Girl's father says, "Yes; I think it [will] be all right." Boy's father then gives girl's people food; "that's how they hold her. When girl grows up, perhaps another boy tries to get her [to marry him]; her father says, 'No; you already belong to that boy over there; we already gave you to those folks.' Boy's father then tells his boy to go get girl, and boy goes after her, and brings her back to his father's house for about 5 days. Even if girl doesn't like youth, she has to comply, and her parents have to give her to her betrothed." Before marriage, boy may take gifts to girl's parents--buckskin, and such. Child betrothal an old form [178] of marriage; informant had never seen it carried out in his lifetime. SW: Boy's father sends buckskin load of money by friend to girl's fa- 000 ther; latter "sits there and looks at money, and finally accepts it; or, if he doesn't, boy's father may hire shaman to bewitch girl, so she becomes loose woman. AW: Practiced by wealthy. After betrothal arranged, "don't allow any other man to touch that girl." Child betrothal characterized by informant as "real old-time t[illegible] MM: Here, as among other groups, child bet[illegible] highly approved form of marriage. Couples [illegible] be of about same age, or young girl may be [illegible] for by old man, who marries her after she reaches puberty.

3775. AE: Usually boy's father goes to girl's family, taking hides, food with him; if girl's father does not wish to enter into agreement, he does not touch present. However, girl's father, if headman, can also start negotiations, if he wishes to. If girl and boy of 2 different local groups betrothed, boy's family "have somebody [who lives near girl] watch the girl until she is grown to see how good or how mean she is."

3776. SE: At time of actual marriage only. WT: See note 3781.

3777. Mo: Boy's side gives meat, girl's side, roots. But concept of "buying" girl recognized, although exchange of gifts also emphasized. SE: Exchange of gifts at time of actual marriage only. At: Boy's side gives meat, girl's side acorns and baskets, while children are young. AE: Exchange some presents, not many.

[584] [784] [858] 3777a. Kl, Mo: Denied any taboos; children ignorant that they are betrothed until grown. SE: After boy and girl are betrothed, taboo for them to see each other's face. Boy wears buffalo

[223-A]

000 or elkhide over head when going out of house; is "bashful." If betrothed wishes to give him bad luck, she climbs up on top of sweat house and looks down inside when he is in there eating; this makes him sick.

3781. SW: Man, A, may hire shaman to kill someone on his, A's, behalf. For this, A pays shaman by giving him his daughter, for shaman's son to espouse when both children grow up. Issue of such union are "very valuable"; they are valued "beyond any price." WT: Marked reaction against using child to pay debt. "Chinese do that; they buy women; we never did this."

3783. At: 10 strings shell beads standard payment for bride; paid only at time of marriage. MV: Beads given to girl's mother; she sends back yellowhammer bands, and other ornaments, to boy's family.

Bride purchase.--

● 584 3785. Kl: Youth's parents tell youth, "You'd better go over and get that woman [naming her], if you want her." Youth says, "Yes, I'll take her, if she likes me." So he goes over to girl's family's house, talks to girl alone; she may refuse, but if she accepts him he brings her back to his father's house, where she sleeps with him 3-5 nights. Girl then returns to her home, unescorted. At end of 5 days her relatives (father, mother, mother's relatives, some neighbors--perhaps 10 people altogether) escort her back to her husband's family's house; take gifts of food, which they present to his mother. In return, groom's family gives dried meat and suckers to bride's parents. Latter distribute these gifts among all people who have come with them. Both families eat together; bride and groom sit together on mat (see elements 3818-3819a). Bride's party departs same day they came, except for bride's mother, who may stay for 3 days, teaching girl how to live, telling her to "work hard all the time; don't let anybody tell you what to do; I'll tell you myself what you can do." In recent times, groom's and bride's fathers have both made speeches at time of marriage observance; tell couple how they are going to live, and other things. Informant had seen them do this
[178] when a boy. Also, recently, groom's father gives horses and clothes for girl; her family also gives groom's same, "just like a trade. In early
000 days, though, just gave food." AW: Youth's father goes to girl's father's house and talks to her parents, saying, "I like you; we'll 'treat' one another; I'd like to see those young folk stay together." The girl's father smokes, then says, "All right." Sometimes he asks his wife; she tells him it's up to him [father], all on him. Sometimes he says, "No, I can't do that." After this is settled, youth's father collects food and shell currency, then takes these things, together with his family, over to girl's father; big feast given. "It's just as though he's paying for that girl." If both families "have lots

[223-B]

000 of friends, they all trade together, become friends; everybody says, 'Good.'" WS: "The only time they pay for a girl is when she is a young woman, at her first marriage."

3788. Usually relative of groom's father.

[584] 3789a. Kl: Initially. See note 3785. WT: If man's parents like girl, they may advise their grown son to offer her gifts "for about 1 month; if she and her parents accept them, in about 1 month the couple are married [sleep together]."

3790. At, MV: See note 3783.

3797. Mo, SE, SW: Strongly disapproved; (SW) "only trashy people do this." AW: Disapproved of, but not so strongly as among Mo, SE, SW. "Sometimes boy goes over and sleeps with girl--marries her; his father hears gossip about it and scolds his son, and says that if he brings girl home, he is going to throw her out. Or, if youth does bring her home, sometimes his parents throw hot ashes over couple when they are asleep. Girl's parents talk to her the same way, if they don't like the boy she's sleeping with. But if boy gets a good girl this way, his father tells him to surely bring the girl home, and then both families trade food and clothes, if rich." MM: "Common" form of marriage, not much approved of.

3798. MM: Sometimes, not always.

3799. SE: Depends on whether child is born of union; if child born, mother must be paid for, to establish child's status.

3800a. Mo: If poor, groom may go over and work for girl; this type marriage referred to as wo·kobuks. SE, SW: Peculiar type bride service; if widow has daughter, she may give this daughter to good hunter gratis, in order to get man to live with her daughter, hunt for daughter and herself. But in event there are children, groom's father must pay for the wife, in order to establish status of children of union. SW informant related following concerning Kammatwa, down-river group between SW and Karuk (see note 282). "If widow wants husband for her daughter, she'd get a likely man to come over to her house and live there and marry her daughter; he would not only have to hunt and fish for women, but cook and gather vegetable food for them too. SW didn't do this; it's too bad, to make a man do anything like this." Possibly slave procured (?). Bride service in widely accepted sense of term not practiced among SW ("half marriage" also absent); "a poor man never was married; he was just kicked around; he was nothing."

3805. At, AE, WT: In fight with bare hands. NS: By race between 2 prospective suitors; swifter runner obtains girl as wife. Informant's mother's mother's father had obtained his wife thus; race run in a meadow in Pleasant Valley. Such race referred to as yulumkatu.

3806a. Rich man buys husband for daughter, in order that son-in-law may get him wood, hunt or gamble for him. AW: Rich man pays youth's father dried salmon, acorns, deermeat.

3807. WM: Well-to-do man sometimes sends grown

33. A Childhood Incident

(Mrs. Pansy Ohles)

539*
861

(1) When I was small, I always wanted to whirl around. (2) So I whirled around. (3) Then my mother said, "Don't do that! (4) You will get hurt!" (5) Then I whirled around, not minding. (6) So I then fell upon my stomach on a sharp place like this here. (7) Now I got hurt. (8) Then she spanked me with a piece of wood.

34. Marriage Customs

(Mr. Robert David)

539*
584 •

(1) I do not know it awfully well. (2) It was such a long time ago. (3) However, I heard thus, [that] these people long ago, when they liked each other thus, then they told their mother and their father too thus, "I want that girl," that man said. (4) "I want that woman." (5) And they asked, "Does she, then, want you? (6) Does she then want you, that girl?" they asked that man about that woman, his parents. (7) And he said, "Yes, she wants me," he said. (8) "Yes," they said, "Let us get ready." (9) They said, "We will get ready, and on this day we will gather together. (10) Now [you] will get her," they said.

[431]

(11) Now then they came [the groom and his parents are denoted by the verb]. (12) That man's people from this side will come—all the relatives. (13) And those from that side will do the same thing, her fathers [i.e., parents?], whatever they might be, the same sort of relatives of the girl. (14) And now they give [gifts] to each other the same way. (15) And those from that side give [gifts] to the groom. (16) All sorts of things that they have, even very valuable [things], they even did thus with horses long ago. (17) They used to give each other even many horses, if they had horses. (18) These horses have been here for a long time, among the Indians. (19) And they did thus, at that time.

539*
585
581

(20) Then when they had finished doing thus, now being pleased they did thus—now they made it tight [i.e., concluded the marriage agreement], having done thus. (21) On both sides they told [the couple], "Live as long as you will live, together. (22) You will be one now," they said. (23) Now they said, "Even however difficult [it might be], you will always

[TEXT CONTINUED ON PAGE 149]

585 177 of any such sentiments. It also seems that the reciprocal visits by which the marriage is consummated, with their exchange of presents, is a reflection at a distance of the Northwest Coast potlatch, perhaps its most southerly extension.

582 Beyond the ability to pay, the choice of a mate is restricted only by kinship. No relative of any degree may be married; the children, they contend, will not survive. Common residence is for example no bar to marriage. Step-brothers and sisters, being unrelated, are free to marry even though they have grown up together. Several men now living here married their step-sisters. Sibling terms are not used between step-siblings, though they have half-brothers and sisters in common.

There is no village exogamy despite the relationship of most co-villagers. Yet there is a great deal of shifting residence especially among the several settlements of each division. Marriage within or without the tribelet is immaterial. Such evidence as exists however suggests that the tendency is for marriage within the subdivision. The data are few but summarize in this fashion:

Husband	Wife					
	ä'ukckni	du'kwakni	gu'mbötkni	iu'"laloqkni	Modoc	Molala
ä'ukckni	8	1	——	1	1	1
du'kwakni	——	1	1	——	——	——
gu'mbötkni	——	——	1	——	——	2
iu'"laloqkni	——	2	——	1	——	——

Of the ä'ukckni marriages among themselves, two above were with co-villagers, I have no data for other endogamous marriages.

Explicitly the data are the following: Pat Kane's father and his paternal grandparents were du'kwakni, his mother and her parents gu'mbötkni. These tribelets are more closely linked than with the others. His father lived at the time of his marriage at wadö'kän, a gu'mböt village north of Klamath lake; his mother with her people lived at sle'tskai just across Seven Mile creek. Pat himself was born and grew up at mo'giqkünks, the du'kwa village at the mouth of Williamson river. His father's sisters married a man at iu'"laloqs on Klamath falls.

Tom Lang's father was white; his mother lived at iu'"laloqs. Both her parents were also iu'"laloqkni; her mother was related to Modoc and Shasta.

Nancy Phillips is ä'ukckni, born at k'taidi on Williamson river. Her father was ä'ukckni although he lived at du'kwa. His mother was of the du'kwakni. Nancy's mother was ä'ukckni of k'taidi village; her parents in turn both ä'ukckni, the father from k'taidi also, the mother from glä'tepak'is on the opposite river bank.

[595] The chief Lzle'ks had seven co-wives; four, ä'ukckni, one each, du'kwakni and Modoc, and one from no'"lukni hence probably iu'"laloqkni. Two of the

834
836 She dances with downcast eyes in her adolescent rite; she sits apart
and does not talk with male visitors at home. A man seen prowling
[881] about the camp is shouted away. A girl who does not wish to be
molested will go over to her mother to sleep. A father will whip a
daughter who has clandestine visitors, and his son for misconduct.
No obligations may be assumed for which no payment is made.

583 Despite the fact that elopements are frowned on, clandestine visits
and elopements are frequent. The girl's parents may follow a run-
[836] away couple and force her to return with them. It is usual however
for the families to accept the fact and make gifts in proper form.

583 The most lavish marriage display ever known was that of Lalo'ks' only
daughter, Go'solülb. They were living at táka'lmakeda during the fishing
159 season when Ski'lüls of Yainax eloped with her. They fled riding double; the
horse fell with them while fording the river, but they escaped to Yainax.
585 Soon after the girl returned alone. It took a month to get ready to conduct a proper marriage. Lalo'ks made the trip across the mountains to Jacksonville to get store goods. A great many people went with them to Yainax, the majority taking gifts of horses, blankets, clothing, or anything they had. One man with nothing better stripped himself of his only shirt. It must be remembered that such Plains shirts were then newly fashionable and hence valuable. They gave the horses they rode there, hoping for reciprocal gifts on which to return. Horses to a total of ten were given the groom's people. They gave horses and other gifts in return. Payment having been made the affair was considered as honorably ended, and as though the groom had sent an emissary in proper order.

583 Marriage without payment brings a slur on the children to be cast
554 in the teeth by quarreling women. "Your children are worth nothing;
you were not bought." Children taunt each other in the same way. They are respected in proportion to the amount changing hands at their parents' marriage, but this does not mean that a man's life is assessed at this sum. Nor is there any suggestion here that husband and wife are financially accountable to each other for injuries to their children. Marriage payment is prescribed not alone because it fixes social status in a general way but because, as one informant phrased it, it is decidedly unlucky not to make payment. So it is, for the couple have made an unsuccessful start of their social career.

The amount is not prescribed but varies with the wealth of the individuals. A chief gives a slave and more; a poor man buys with food. A chief will not give his daughter for nothing; the groom must
583 continue to bring gifts even after marriage. The valuables customarily exchanged are slaves, horses, blankets, beads, food (pond-lily seed and roots), elk and other hides, and strings of beads. Pat Kane's father gave five fathoms of glass trade beads. It is important to

recognize that the marriage is consummated by a series of gift exchanges and inasmuch as it was said that in the long run the man and his relatives have the advantage, it is clear that this is no outright bride purchase. 583

Giving a girl in marriage is sometimes a means of paying off a social obligation. Considerable property is destroyed at a cremation. This is normally furnished by the relatives of the deceased but in order to do honor a non-relative may contribute beads and other valuables to be consumed on the pyre. The recipient family is under obligation to reciprocate. Should one of the contributing family later want a wife from among them, they must acquiesce. The groom must make payment at the time of marriage, however. That no payment had been made in the case cited above undoubtedly explains why the runaway bride was not forced to return to her husband. 583 764

Possibly the sum must be repaid in the event of separation, at least if the wife leaves the husband. Probably the time element is important; a marriage soon terminated means restoring the *status quo;* in one of long duration this is impossible. 586

A man sends a friend to sound the girl's people on their willingness and the price expected. This man is chosen for his forwardness; he may be a relative but never a brother or father. He carries a bundle of sticks representing the gifts offered, which if successful he leaves, though they are not used further. The girl's father consults his wife before agreeing. Next day or as soon as the girl's people can get ready their gifts and contributions of food they take their daughter to the groom.[66] The groom's relatives have gathered meanwhile, collecting their gifts in the groom's home. The exchange takes place within the lodge, each party putting down its gifts beside the other seated opposite. The gifts from the bride's side, at least, commonly include clothing (presumably the Plains type), pond-lily seed, and roots of various sorts. The payment now made on behalf of the groom includes the promised articles. Speeches are made by the parents of both, admonishing them to live in harmony. Payment for a bride is called wok̦o'wi, the reciprocal gifts, i'wi. 584 584 585

It is difficult to say just how formal are the visits that follow marriage; at least one or two are usual, if not prescribed for the well-to-do among whom further payments by the groom are expected.

---

[66] In a Modoc (or Klamath?) song recorded by Gatschet (Songs of the Modoc Indians, 27, 29) a bride is carried on her brother's back. As Gatschet points out, carrying the bride is a custom of northerly tribes.

[114]

585 After a month of marriage the couple visits the bride's former home,
593 accompanied by the groom's relatives, for a further exchange of gifts. Soon after this, the girl's father and his family reciprocate. Beyond this it is a matter of mutual solicitude; undoubtedly the visits grow less frequent as the passing years bring diverging interests. Later visits are of some duration, the couple even staying through the winter.

591 Marriage is normally patrilocal, but if a man is poor, or has no close relatives, he may take up residence with his wife's people. When a young wife is about to have her first child the couple return to her mother to stay until she is strong again. This must be the circumstance of temporary matrilocal residence as it ordinarily occurs elsewhere. First marriages among primitive peoples usually follow closely on a girl's nubility. The need for advice and care during this trying period of pregnancy and delivery, the natural solicitude of the mother, are surely the reasons for the frequency with which residence is temporarily matrilocal. It will be observed that this is formally prescribed as the proper procedure almost solely in cases of first marriage. There is no need to search for a more esoteric reason such as the older writers had, matrilinear grouping, maternal authority, and the demand that the young husband prove himself to the wife's family. Among the Klamath this is the rule only on the birth of a first child.

591 A series of terms describes the facts of residence. A man and his
593 wife in matrilocal residence are non-vocatively wuko'bŏks and sḳa'bŏks
respectively.[69] A woman with her husband's people is t!e'niwas.[70]
601 On separation a woman who returns to her former home is ko'stbŏmbli,
a man returning to his, wuko'tbŏmbli.

601 I was told at least that a child's spouse is treated like an own
606 child, that parent and child terms are used between them for there are no parent-in-law taboos. This is the usage of intimacy; there are specific terms for parents-in-law. There is the familiar Indian usage of a term between the parents of a couple, "my child's parent-in-law."

582 Marriages occur any time during the year. There is no evidence suggesting their greater frequency during any season, nor any mating period[71]

---

[69] The latter term was given me at another time as meaning a newly married woman (probably the form sḳa'bŏkak was intended). This comes to the same thing. These two words apparently correspond to Gifford's wapake and kapake, earlier and later co-wife (Californian Kinship Terminologies, 42). Gifford's record is doubtless due to a misunderstanding; I enquired about these words and found that there are no terms for particular co-wives.

[70] Gatschet (2:608) gives tcina, a young woman. The meanings are not incompatible but I believe mine to be correct.

[71] As among the Yurok (Kroeber, Handbook, 44).

II. KLAMATH SHAMANISM

INTRODUCTION 771

Klamath religion centers so largely in shamanism that it may be
permissible to describe the whole in terms of shamanistic practices, [756]
the spirits with which they are concerned, and the acquisition of
supernatural powers. There is little ceremonialism apart from the
shamans' performances. There is a rite for girls at puberty, a dance [881]
in preparation for war and another in celebration of captured scalps, [721]
some formal feasting at marriage, and of recent date the Ghost dance
of 1870. [727]

The religion is only weakly developed. Power is sought from a
host of spirits whose characteristics are not sharply defined. These [585]
are predominantly birds and animals, winds, lightning and the like, [786]
and a handful of anthropomorphic beings. They are however definitely
localized in many instances and partly identified with the 776
figures of mythology. But there has been no attempt to marshal the
spirits into an ordered pantheon. Relations to the spirits have no
ethical implication. The belief in a land of the dead, too, stands apart 775
from the spirits and their functions. It has solely a folkloristic
existence, for it little concerns the actions of the living.

Power is deliberately sought by almost every Klamath. There are 776
times that are especially propitious; at puberty, in distress, or on the 787
loss of a wife, a husband, or a child. The mode of seeking and the revelation are stereotyped: one fasts at night on mountain tops, running about, piling up rocks, or diving beneath lonely pools. Mourners at least must first purify themselves in the sweat-lodge. The looked-for response is unconsciousness, a profuse hemorrhage at nose and mouth, and a spirit's song revealed in a dream. The spirit is not the seeker's guardian and exacts of him no special conduct, no offerings, no venerations. There is only one obligation; he must accept the blessing and use his power once the spirit makes itself known. The power is motivated by the song; the song and the spirit are one and inseparable. There is little specialization of spirits and their powers: curing, gambling, hunting, love-making, and shamanistic trickery are fields in which any spirit may operate.

1: Spier E-4,5 (1925-1926) 1930
(ca. 1860-1900) NR10 Klamath NR10

It does not appear that a marriage brings about a con-

587 tractual union between the families. The levirate is customary but not obligatory, and the sororate only occasional. It is true that the husband's brothers may take exception to her marriage with another, but this may mean only that they look upon it as an affront to their brother's memory.

582 Marriage is denied only between blood relatives. There is no village exogamy nor trace of restrictions or preference of any other order. At best the evidence suggests some tendency to marry within the tribal subdivision, but this may mean only that contacts are less frequent outside of this group.

584 585 The formalities of marriage prescribe a series of visits with an exchange of gifts. The prospective groom sends a male emissary with a bundle of sticks representing his offering. The bride's family proceed to the groom's house where they exchange gifts with the family of the groom. In kind and in quantity these are modest indeed when measured by Northwest Coast standards. A month later the couple and the groom's family return the visit, when again gifts are exchanged. Beyond these two, further formal visits are made only by the social pretentious. These formalities may be frequently initiated while the couple are still pre-adolescent, the bride being carried to her husband's home after her puberty dance.

583 *171 The general nature of the Klamath marriage relation smacks strongly of the Northwest Coast. This is apparent in the premium attached to purchase, to a lesser extent in the weighting accorded the amount of the purchase price, in the reciprocal nature of the gifts, and the series of formal visits before the affair is considered terminated. What is absent here is the notion that rank and privileges of a tangible nature are acquired by a marriage purchase.

This can best be brought out by instituting a series of comparisons with other tribes. For this purpose I shall select only a limited number of cases. For one thing data from Oregon tribes are almost wholly lacking, and those for California and Washington are both scattered and scanty.

Throughout California, save on the eastern border of the state, there is an appearance of purchase. But in reality it is only a presentation of gifts of no great amount as an earnest of the son-in-law's good will, a matter of etiquette rather than a stipulated price. The formality of giving varies as much as its conventional expression. With some, bride service is in order; with others, the parents-in-law must reciprocate the gifts. It is everywhere little more than an

observance, far removed from the set contractual relations established by a Northwest Coast marriage. It is nowhere an occasion for the display of wealth, and social prestige is not fixed by it.[666] 171* 583

Among the Basin tribes there is not even this semblance of purchase. What these people desire in a son-in-law is a good provider, who normally takes up residence with his wife's people. His incidental services can hardly be construed as payment in any sense. The groom slips into their life as unobtrusively as possible. Ceremonial is almost wholly lacking; at most a feast in celebration.[667] 171* 581 585

The situation in the Plains is not far distant, resembling rather that in California. In general the approach to the northwestern concept consists only in an exchange of gifts. The groom's family bring gifts to the home of the bride, receiving an equivalent, sometimes to a greater amount. Married life begins at once with the bride's family to whom the son-in-law renders services. But it is doubtful that either the gifts or the services are looked on as specific payment. Rather they serve to establish friendly relations and no more. Large amounts of property might be given for the honor of the act, but it was equally common for an old man to marry his daughter to a suitable man to obtain a provider for the family, no compensation being thought necessary. While some ostentation is inevitable in a Plains ceremonial act, there is here no lavish display of wealth. Equally foreign to their thought is the idea of social status fixed by a transfer of property.[668] 171* 583 585

If we turn from these to the Northwest Coast tribes, a very different picture is presented. We need go no farther north than the Kwakiutl for a typical expression of attitudes. The rank of a family, the social status of a child, are clearly defined in a regimented series depending largely on primogeniture coupled with wealth. Marriage is a purchase conducted on the same plan as the purchase of all ceremonial symbols of exceptional value. Its mechanism is the potlatch, the ceremonious bestowal of wealth on a social rival to enhance one's own status, with the certainty of its return several fold if the rival is to maintain his rank undiminished. A man buys in this fashion the rank and social privileges of his bride's family for the children of this marriage or heirs or relatives whoever they be. When the bridal price is ultimately returned two or three-fold, the contractual relation is at an end. The groom has the obvious advantage in this transfer of

---

[668] Kroeber, Ethnology of the Gros Ventre, 18; McClintock, Old North Trail, 184; Grinnell, The Cheyenne, 137.

*171 wealth in addition to the privileges that accrue by his investment. So
583 little is the bride concerned and so great the emphasis on the acquisition of new prerogatives for his family, that a man may carry out the
585 fiction of a marriage where there is no bride.

In the desire to keep the privileges within the family, a man of high degree may even espouse his younger brother's daughter.

Normally in return for the huge purchase price, the wife is given him as a first instalment. The heraldic crests of her family, its social privileges, and a considerable amount of property are given later to members of the husband's family. This repayment annuls the marriage; the wife is now free to return to her people, but should she choose to stay it is customary to make a new payment to the father-in-law.

The chief who desires marriage for himself or his son invites the aid of his townsmen in a matter of mutual interest; "our bride" is to be acquired, "all the tribes [lineages] have married my daughter" is her father's phrase. Four men are dispatched to the bride's town to offer the huge bride price, four hundred blankets and more. When the groom's party arrive, their spokesmen with stereotyped speech measure out the blankets, which are carried into the father-in-law's house. Like most Kwakiutl ceremonies, the marriage ritual is interwoven with myth; at this point the son-in-law and his party are put to a test which has mythical background. They must rush through torches into the house, or they are tried by a great fire and shown the sea monster whose mask spews out the bones of unsuccessful suitors. The father-in-law now makes his first repayment in self-depreciatory manner, two hundred blankets, a gesture derogatory of his rival's lavish giving. These the groom promises his followers in the name of his future heir. Soon after, when the father-in-law is ready to make full repayment, he visits the other with his followers. He makes a symbolical gift indicating the wealth he returns, the copper plates, the house and carvings the son-in-law demands, his own title acquired in marriage, and his ceremonial office and dance in the secret societies, which are to go to his grandson. The bride is brought out to have her valuable finery placed on the shoulders of the groom. Next day the young man distributes the wealth among his tribesmen in recompense for their aid at the marriage, and to start the wealth on an interest-bearing round once more. In doing so he assumes the proud titles acquired from his wife's father and bestows them too on others.

The marriage of those of lower rank is doubtless analogous but on a smaller scale.[809] 171*

I shall trace the elements of this marriage complex from this area southward, in order to make clear their relation to the customs of the Klamath. At the outset I will deal with the interrelated attitudes toward wealth and rank, marriage as an expression of it, and local exogamy dictated by it. Later I will return to a comparison of the marriage ceremony itself, to the levirate and sororate as expressions of family contracts, and to related phenomena such as reactions to adultery. 583 585

Purchase, Rank, and Exogamy

The marital customs of other Vancouver island tribes duplicate those of the Kwakiutl in all essentials. Their divergence is in a less sharp definition of rank and prerogative and diminished elaborateness of marriage ceremonialism. This diminution can be traced by successive steps to the Klamath and beyond. Not only are the attitudes of the island tribes respecting rank and wealth analogous to the Kwakiutl, but marriage is the same kind of mechanism for their transfer. We may also assume here the kind of local exogamy implied for the Kwakiutl. As marriages with relatives are normally prohibited, and mates of suitable rank and wealth are not to be found in the same tribe or village, a practice of local exogamy follows. While there is no prohibition against marriage within the community, the vast majority of alliances must be outside, since pretension to rank sinks deep in the several strata of society. There is at least some studied exogamy on the part of those of highest rank for whom foreign alliances mean increased prestige. 171* 582

As expressed by Sapir "among the more southern tribes intermarriage is prohibited only between such as are demonstrably related by blood, even if fairly remotely so. Owing to the structure of the village community, this would in many cases mean that there are few persons in a village that one is legally entitled to marry; but it is important to note that the village community as such need not be exogamous, that is, does not specifically prohibit intermarriage among its members."[810] [114]

---

[809] Boas, Social Organization and Secret Societies, 358, 421, Ethnology of the Kwakiutl, 776, 1344, Social Organization of the Kwakiutl, 116.

[810] Sapir, Social Organization of the West Coast Tribes, 367.

*171 The alternative to this exogamic practice was marriage with blood
582 kindred. While it was generally frowned on, an exception was permitted if no other mate was available. This is an attitude different from that of the Kwakiutl, who, desiring to keep privileges within the family, married his niece or cousin. When there is no available mate
(114) outside the blood group, a Klallam may marry his first cousin. Eells implies that a Twana (and Klallam?) always sought a wife first "within a certain circle of his relatives."[511]

There is no adequate information for western Washington tribes save from the Klallam and more moderately from the Chinook. Inasmuch as their attitudes and practices coincide in large degree, it is safe to assume that they are representative of the intervening territory.

Both Klallam and Chinook view wealth as a criterion of rank and its lavish display in the wedding ceremonial as an index of social pretension. Marriage with a person of lower rank is unthinkable.
*171 It is apparent that most Klallam brides are paid for, yet elopements occur and slave alliances are formed. Once such marriages are con-
556 tracted the parents make no effort to separate the couple, but a girl who
583 marries in this way is not highly respected. Whether payments are
• 585 made following elopements to legitimatize them, we are not told. Upper-class Klallam have a definite preference for extra-tribal mar-
*171 riages, especially with the people of Vancouver island. Local exogamy is even more general, holding for all ranks, for in a record of fifty-
582 seven marriages only five were with co-villagers.[512] Purchase, or its
*171 simulation, is so obviously the normal Chinook procedure also that even a successful elopement will be nullified unless a small sum is
583 paid. And these sticklers for form go through the orthodox ritual on this occasion as though the marriage was not yet consummated. For a man too poor to pay, there is no recourse but in matrilocal residence with bride service.[513]

There are but scattered observations on the tribes of the intervening territory but they suggest conformable practices. Since we learn that common people among the Makah paid a small amount for a bride without any ceremony, purchase must have been the regular form for all classes of society. Yet as elopements were frequent and are said always to have ended amicably, this suggests an approxima-

*171 but heavily fined. "Generally speaking, these Indians seek their wives
582 from among other tribes than their own. . . . . It seems to be a matter of pride, in fact, to unite the blood of several different ones in their own persons. . . . . With the chiefs, this is almost always the case."[317]

*171 Marriage by purchase was the usual form among the Nez Percé,
583 but it is said that a marriage by agreement because of the groom's capabilities was a more desirable and honored form. This is a new
• 585 note, but it was characteristic of Plains tribes to the east. The purchase was effected with little ceremony. Bride and groom were not ordinarily members of the same village.[318] The exogamic habit here
*171 had not the same basis as among the tribes previously discussed. It seems due solely to the Nez Percé habit of forbidding marriages to
582 relatives of even remote degree, which necessarily resulted in village exogamy. I am unable to find evidence of exogamic practice farther to the east, but will return later to analogous forms of wife purchase.

*171 To return to the Columbia river: the Wishram had as strong a sentiment for caste and wealth as their down-river relatives, the Chinook
582 proper. Rank and wealth were here not quite synonymous, for chiefs
583 were not always the wealthiest individuals. Marriage was always
556 with one of the same rank, so that the children would have as high standing as their parents. Payment was insisted on in every case;
583 even in the case of marriage with a deceased brother's wife the
[587] procedure was gone through, else the children were as "nothing," i.e., not legitimate. The feeling was that the marriage must be regularized by payment, else the contractants were the subject of odium, and furthermore the marriage would not be permanent. So strong was the feeling, that a lower-class man guilty of adultery with a chief's daughter or other close relation would be killed; not for his crime as such, but because he was too poor to make proper recompense in marriage. Even constructive adultery, such as accidentally touching another man's wife, was heavily fined. The insistence seems to have been on the regularity of the form, for it was freely acknowledged that the gifts made on either side were about equal. The marriage of very young children was arranged and carried out in full form. Chiefs and wealthy men marry women of other tribes, but marriage within the village was prohibited to no one save a blood relative.[319] Much the same situation is implied for other Upper Chinook.

Marriage Visits

*171 • 585 431 One of the most characteristic features of marriage in the northwest was a series of reciprocal visits. These visits were more or less formally prescribed as to number and were always the occasion for making gifts in fulfillment of the contract obligations. For the more northerly groups, they were avowedly potlatches. The peripheral groups, who did not participate in the potlatch system, had at least some approximation in the marriage ceremony. To be sure, visiting back and forth carrying gifts after marriage was the habit of the Californians at large, as well as others. The peculiarity of this series is, however, that the visits were more or less formally prescribed and stereotyped as to time and conduct.

Their number among the Kwakiutl is not described; it may not have been fixed. But it is clear that the father-in-law visited the groom's people on several occasions to return an equivalent of their payments and to deliver the privileges, honors, etc., due them. This was by their own account potlatching; indeed the emphasis is so much on this aspect that a fiction might be substituted for an actual marriage. The return of the property was several-fold; the groom distributed the articles among his followers who had previously lent him the amount needed to make the purchase, and so the property was once more started on an interest-bearing round.

Klallam marriage was just as clearly a potlatch. "After six months or a year the bride's family visits the groom's relatives, bringing food and gifts. They are expected to bring at least as much as the groom's people brought to the wedding. Generally they try to bring a little more."[587] We may presume the distribution of these in regular potlatch fashion. As potlatching is also the custom of other western Washington tribes, we may assume that it also appears in their marriage settlements. It is true that we are told that those of Puget sound were not potlatches, but they do not differ one whit from the Klallam case.[588] Further, after the exchange of gifts the parents of the couple loaned each other property, expecting to get it back some time. The reciprocating visit of the bride's parents took place a few weeks or months after the marriage.

---

[587] Gunther, Klallam Ethnography, 244.

[588] Haeberlin-Gunther, Ethnographische Notizen, 35. Both authors, who had little experience with Northwest Coast culture, clearly misunderstood the implications of their information. What may have been meant was that this was not a potlatch for the sole purpose of getting a return.

Whether the Chinook had an extended series of visits I do not know, but there is the same formal appearance of a gift-bearing messenger of the groom and the reciprocating visit of the bride's party conducting the bride to her new home. Boas' informant set their gifts at slightly less than the bride price, but Franchère would have it that even more was repaid, depending on the means and munificence of the bride's parents. The Wishram case was just as clearly one of potlatching; that is, the gifts must be reciprocated in superior amount else her parents lost caste; they were given with a lavish hand through the medium of a spokesman, participants were paid for their services, and the goods distributed among the members of the parties. The visits ran in this fashion: a messenger conveyed the groom's gifts, the groom's party proceeded to the bride's home where they were feasted, they distributed their further gifts and were recipients in turn. The same form was followed in transferring these later gifts. After matrilocal residence of a few weeks, a series of reciprocal visits began which ended in permanent residence among the man's people. Two visits apiece terminated the affair. 171* 585 • 431

From this point southward we do not seem to be dealing with the same affair, rivalry in lavish giving, although the series of visits persists. The Klamath also sent an emissary, the bride's party appeared at the groom's house, and the exchange followed. After a month the couple, with the groom's relatives, proceeded to the bride's former home, when an exchange again took place. Soon after the bride's relatives repeated their visit. Beyond this point visiting in this fashion was not fixed but occurred as an expression of mutual solicitude. The Shasta procedure was much curtailed in contrast. The girl was taken to the groom immediately after her puberty ceremony. Some time later her relatives visited to exchange gifts; after several months they were recipients in turn. Below this on the Klamath river postmarital visiting did not appear as a fixed form. Something of the sort appears among the Huchnom. The kinsmen of the groom carried gifts to the bride's home, where the groom then stayed. "The return of the husband to his own people was made the occasion of gifts of food and beads to the pair, which they gave to the wife's parents, besides entertaining their kin. A return visit to the wife's people followed, after which the couple usually founded their own home. This was always among the group or in the town of the wife."[illegible] Precisely the same visits are noted for the Pomo, and in addition the procedure was repeated several times, particularly if the couple's original homes had

---

[illegible] Kroeber, Handbook, 211.

*171 been at a distance. This sort of formal visiting did not occur to the
• 585 southward so far as I know.

431 To return to Oregon, the Tillamook sent a messenger who brought back an equivalent gift. A week later the groom's party went to make the purchase, when they also received gifts. "Once every month this exchange of visits was repeated."[640] Something of the sort held among the Takelma, for the son-in-law was obligated to visit his parents-in-law with presents from time to time.

We must not believe that the potlatch sentiment was entirely extinguished in this direction. Farrand was impressed by the Alsea practice as suggesting "in certain ways the potlatch system of Vancouver island, for there was an apparent effort on the side of each family party to the contract to keep the other family in debt to it."[641] Coastal Oregon seems to be the limit to which such sentiment extended; it was certainly not the thought of the Klamath or the Californians.

In the direction of the Plains, potlatching did not appear unless we so construe the fact that among the Nez Percé the gifts made by the bride's people were somewhat greater than the groom's. The visits of these people consisted in conducting the bride to the groom's home, with a return visit a month later. Crow and Hidatsa knew nothing of this formal visiting. The Assiniboin procedure however resembled that to the northwest. A messenger was dispatched with purchase presents, the girl's party went to the groom, and soon after the groom's people returned the visit.

It thus appears that the marriage ceremonial partook of the nature of a potlatch in the northwest, but that beyond the Columbia river the practice had dwindled to an attenuated copy of the potlatch visiting without its sentiment of rivalry.

One further point in this connection should be noted. The first gift-bearing party is sometimes the groom's, sometimes the bride's; the distribution of the practice is not random. Among the Kwakiutl, Klallam, Puget sound tribes, and Wishram, it is the groom's party who go to the bride. Among the Chinook, Klamath, Shasta, Hupa, Yurok, Nez Percé, and significantly the Assiniboin, the bride's party first approaches the groom's group. The data on the Tillamook are not clear and for others wanting. Huchnom and Pomo, Crow and Hidatsa, conform to the generality of Californian and Plains practices in that the groom carries his gifts to the bride's parents.

daughter or daughters (2) to chief, or may send 1 daughter to man who is good hunter. Young women carry 2 large baskets fine acorn flour; when reach chief's house, they sit down outside until chief's mother or 1 of his wives bids them enter. In evening chief comes in, and sits down between 2 girls (if 2 sent); when he eats 1 puts acorn soup in basket for him, other salmon in basket "pan"; all 3 eat together. That night he sleeps with both of them; they stay with him about 1 month or so; he or his helpers kill deer and they dry meat; when they leave they take this meat home to their mother. At their departure, chief tells them, "whenever you girls want to come back, you can come," and they return later, to him.

Marriage observances.--
If entry applies only to 1 or more of several forms of marriage practiced by group, note explains to which it applies. If entry applies to all forms practiced by group, no note given.

3808. SE: Refers to simple marriage established by couple living together; to marriage by service for bride, no payment; to marriage by abduction and marriage where husband bought. At: Groom's father goes to girl's house, pays girl's father 5 strings (1/2 of total) of shell beads, while girl is asleep. Girl is awakened, and goes over to groom's father's house with her family; she and family stay there 2-3 days; girl sleeps with youth; much feasting; remaining 5 strings of beads paid to her family and gifts of meat, salmon given them. After 2-3 days bride returns home with her family; stays there 2-3 days, then goes back to husband, loaded with presents from her side, roots, acorns, other foodstuffs. Her sister escorts her back to her husband's house; sister stays there 1 night, then returns home. AW, AE: Applies to simple marriage. WT, WM, WS: Applies to child-betrothal marriage; bride-purchase marriage; simple marriage. WS: See note 3635 for data on child-betrothal marriage. MM, MF, NM: Applies to child betrothal and simple marriage. NS: Applies to simple marriage.

WS: Applies to child betrothal; bride purchase; simple marriage. NF, NM: Bride makes informal visits at irregular intervals to her family, but no formal return shortly after she has begun living in her husband's father's house.

[585] 3812. Kl, Mo, SE, SW, At, AW, AE, WT, WM, WS, MV: Refers to child betrothal and bride purchase. Mo: "This was the decent way to do--for the family to take the girl to her husband's house. This made her respectable; they couldn't have her running back and forth between those 2 houses. Wealthy people always did this." MM, MF: Refers to child betrothal.

3812a, 3813. Mo, SE, WM, WS: Applies to simple marriage.

3814. SE, AW, AE, WM: Refers to child betrothal and bride purchase. AW: See note 3815. Bride and groom may stay on at bride's family's home (if marriage celebrated there) anywhere from 2 days to 1 or 2 months. Groom gets wood for his father-in-law; bride packs water for mother-in-law, whichever place they are staying. If both families wealthy, couple keep visiting back and forth; if 1 family does not have much to eat, stay with more affluent relatives, and "take food and pack wood for poorer side once in awhile." WS: Refers to bride purchase. MF, NM: Refers to child betrothal.

[585] 3815. Kl, Mo: Applies to child betrothal; bride purchase; simple marriage. SE, At, AW, AE, MV: Refers to child betrothal, bride purchase. WS: Refers to bride purchase. Kl, Mo, At: Bride's family escort daughter back to groom's house, on her return to her husband. SE: Groom's family stays at bride's family's house. AW: In child-betrothal marriage, either groom's family goes to bride's house or vice versa, depending on which side says, "You come to my place." AE: Visiting family may stay from 2 to 6 months at groom's father's house. WM: Visiting family stays only few hours.

[225-A]

585 000 3816, 3817. Kl, Mo, SE, At, AE, MV: Refers to child betrothal, bride-purchase marriage. AW: Refers to child betrothal; bride purchase; simple marriage. In simple marriage, feast may be given if groom meets with approval of bride's family, and both groom's and bride's family are wealthy. Host contributes larger share of food; friends help him. "Sometimes at times like this the people dance, too, just for fun, because there are so many people there." WS: Refers to bride purchase. MM, NM: Refers to bride purchase. NF: Refers to simple marriage. NS: Refers to child betrothal and marriage where woman won by contest.

[585] 3818-3819a. Kl, Mo: Refers to child-betrothal, bride-purchase marriages. Bride sits with back to people, groom faces people.

[537] [585] 3820-3821. Kl, WS: Refers to bride purchase. Mo, SE, At, AE, WM, MV: Refers to child betrothal, bride purchase. MM, MF, NM: Refers to child betrothal. NF: Refers to simple marriage. NS: Refers to child betrothal, to marriage where woman won in contest.

Polygamy; marriage of blood relatives.--

3824. AW: Shaman may have as many as 10 wives, given to him in payment for doctoring. More usual for man to have about 3 wives, 1 of whom he paid for; other 2 may be orphans or relations of his first wife. MM: See note 3826.

3824a. NS: First wife head wife; "supposed to look after her first of all."

3825. WT, WM: Sometimes, not always. NS: If live in same house, "wives fight each other, pull hair."

3826. MM: Example: man at Big Meadows (MM group) has wife, whom he lives with part of year; other part he may spend with his wife who lives in Indian Valley (informant's group). "Just common men do this; and sometimes, if comman man has 2 wives, they both live with him, in same house."

3828. MM, MF: Headman has 1 wife only; "common men" are only ones who practice polygyny. NS: Chief has several wives to pound acorns for him.

3835. Mo: See note 3961. AE: If first wife barren, she may urge husband to marry her younger sister, so that latter will have baby. "Then barren wife almost claims that little baby; they like it so much."

3836. AE: If man's first wife has 3-4 or more children, she may send her husband over to her family, to get a younger sister as wife, telling him, "You go get my sister, to help me take care of these children."

3838. SW: See note 3839.

3839. SW: Man can demand that his dead wife be replaced, and it is then obligatory for dead wife's sister to marry him; "but most men want to 'get away' from their dead wife's family" (and so do not demand this replacement; informant did not know why). WT: Dead wife's sister marries brother-in-law "because it would make her feel bad to see him with another woman, in place of her dead sister. Man feels he belongs to his dead wife's

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one who had obstructed Agency-sponsored reforms, but had left the membership of the lesser chieftaincies intact. It is clear that administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693
executive role to constitute a court, while a sheriff, chosen from among the Indians, together with constables, one per chief, were to maintain order. Chiefs, somewhat extralegally, soon began to assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at all, advising them that the object of the law is to *protect* the people and not to *oppress* them."[19] Soon thereafter, he reduced the court to a membership of only seven chiefs and set its sessions at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622 [68]
against property (arson), together with what can only be considered redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585] •
were to be confirmed before the principal chief, who was to [643]
receive a fee; the bride price was not to be returned on the [586]
desertion of the husband; while the court might order the separation of an irreconcilable couple. Monogamy alone was per- [595]
missible.[21]

Thus, not only were the chiefs given new and different powers,

[Klamath Reservation]

Of all the societal relationships, the Social Change ~~government~~ sought directly 103 657*
to change only those within the family. It was clear that a nation 648*
that was soon to impose upon the Mormons the American, and 595
not the Biblical family, would permit no special marital practices 177
among the Indians. Polygamy was banned, although not retro- 178
actively for unions such as those of Allen David and Monchnkasgitk, which had been contracted prior to January 1, 1870. Some leaders themselves appear to have advocated the change in a desire to emulate whites. In 1877, Gatschet noted that there
were still two or three polygamous men.[26] Since polygamy had [556]
been a mark of the affluent, the ban, like the emancipation of the slaves that preceded it, served to erode the status of the traditional chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals con- 622
cerned. In the legal code instituted when the court was estab- 692
lished, the consecration of marriage was made the function of 685 •
the head chief, to whom the groom was to pay a fee of five, three, 583
or two dollars or the same amount in horses, graduated according [643]
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] The traditional ritual [586]
of marriage still was being practiced by some families in the 1890's[28] but the gift exchanges between the families concerned which set a public seal on the union were superseded, and the controls exerted by the family over the couple were thereby diminished. The effects of these and other changes were recognized by Gatschet. "Matrimonial reverses . . . among the Klamath [he declared] . . are one of the unavoidable consequences of the gradual emancipation of the females from the former rule of their brutal husbands through the advent of the whites, and also of the obnoxious and corrupting neighborhood of the soldiers at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independ- 648*
ent of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

648*

office, I will have to insist upon having the leases drawn through 657*
this office."[11] Even marriage had to be restricted at first in order 427
that proper records be maintained. Thus Marshall Petet rejected 648*
the request of an off-reservation preacher to marry a couple 657*
with the statement that "it is the custom for the Indians to either 585 •
be married by Mr. Starnes, the Methodist preacher, or myself."
He added, "Indians marrying off of the Reservation, and where
no notice of the same ever reaches this office, has given rise to
much trouble, and I therefore require that they be married
here."[12] With time, such controls had to be relinquished.

Meanwhile, such a man as O. C. Applegate, with his broad 648*
acquaintanceship in Klamath Falls and his long familiarity with 657*
the Indians, took upon himself the role of patron and middle- 426
man. For several women who wished to employ an Indian house- [464]
keeper or cook he was indefatigable in his efforts. He gave
advice on the credit ratings of various Indians to numerous merchants in Klamath Falls. Occasionally he loaned money to those he deemed good risks, or advanced out of pocket cash to pay a debt long outstanding. Usually, however, he merely paraphrased the words of Emery that "Jim Smith has a contract to cut wood" and therefore can be trusted for an advance of $50.00 worth of merchandise. He might observe that "Judge Joseph Kirk is a good square man, and I wish you might make him an exception in his case." On a few occasions he sought to have Henry Jackson agree to underwrite a credit for another Indian.

Other men undertook to extend credit on a smaller scale. Daniel Cronemiller, who long before (1883) had advanced credit to Indians, cosigned at least two notes with Indians: one with Jesse Kirk and another with Henry Wilson. About the turn of the century, the former Agent, Leroy S. Dyar, estimated that through the years he had loaned approximately six hundred dollars to Indians.

The Agent's power, however, was an important condition of 648*
his patronage. The assignment of freight loads from the railroads 657*
at Ager and Pokegama, California, was rotated among available 464
Indian teamsters, but the administrator made sure that the de- 494
serving received more frequent assignments. Thus, Emery could
request a merchant to let Stonewall Jackson have the merchan-

---

[16] Mrs. Ohles remarked that in the old days a newly married woman might make frequent and extended trips to her parents' home. Sometimes her husband would accompany her and sometimes not, as is the case in this myth.

33. A Childhood Incident
(Mrs. Pansy Ohles)

539*
861

(1) When I was small, I always wanted to whirl around. (2) So I whirled around. (3) Then my mother said, "Don't do that! (4) You will get hurt!" (5) Then I whirled around, not minding. (6) So I then fell upon my stomach on a sharp place like this here. (7) Now I got hurt. (8) Then she spanked me with a piece of wood.

34. Marriage Customs
(Mr. Robert David)

539*
584

(1) I do not know it awfully well. (2) It was such a long time ago. (3) However, I heard thus, [that] these people long ago, when they liked each other thus, then they told their mother and their father too thus, "I want that girl," that man said. (4) "I want that woman." (5) And they asked, "Does she, then, want you? (6) Does she then want you, that girl?" they asked that man about that woman, his parents. (7) And he said, "Yes, she wants me," he said. (8) "Yes," they said, "Let us get ready." (9) They said, "We will get ready, and on this day we will gather together. (10) Now [you] will get her," they said.

[431]

(11) Now then they came [the groom and his parents are denoted by the verb]. (12) That man's people from this side will come—all the relatives. (13) And those from that side will do the same thing, her fathers [i.e., parents?], whatever they might be, the same sort of relatives of the girl. (14) And now they give [gifts] to each other the same way. (15) And those from that side give [gifts] to the groom. (16) All sorts of things that they have, even very valuable [things], they even did thus with horses long ago. (17) They used to give each other even many horses, if they had horses. (18) These horses have been here for a long time, among the Indians. (19) And they did thus, at that time.

539*
585
581

(20) Then when they had finished doing thus, now being pleased they did thus—now they made it tight [i.e., concluded the marriage agreement], having done thus. (21) On both sides they told [the couple], "Live as long as you will live, together. (22) You will be one now," they said. (23) Now they said, "Even however difficult [it might be], you will always

[TEXT CONTINUED ON PAGE 149]

539*
585 •
581

live together with that man of yours," they said. (24) "You will never leave him. (25) You will never deceive him. (26) You will give him everything. (27) You will hide nothing [from him]." (28) Thus they told them. (29) "Everything of yours [pl.] will be just one. (30) Now you will tell each other [everything]. (31) Anything at all—if someone would tell you, something, then you would tell your husband. (32) If [someone] would tell you, the husband, also, then you will tell your wife. (33) Now you [pl.] will be just one. (34) Then having become just one, then you will tell your [pl.] children in the same way, to do just thus, just as we live," said that old man, speaking, who was their father, his [hers?].

(35) "So now you [pl.] will become just one. (36) We are this many living. (37) And thus having begotten children, then you will advise [them], just as we are telling you today. (38) And you must never, never forget it!" they said. (39) "If you indeed would forget it, something evil will take hold of you forever. (40) And it will always be thus. (41) Now you will hide something from him next, even something big, which you did wrongly—perhaps [something you] did. (42) If you do thus," they said, "Then something you do not want, evil, to be thus, to fall between [you] thus, then it will catch you. (43) Where we live, so you will live, being happy. (44) And so far, when we are old now. (45) So you will live together until old age with that wife of yours." (46) Thus they told them. (47) Now that's as far [as it goes].

Introductory Note to Text 35

539*
854
[124]

This is the Klamath version of "This Little Piggy Went to Market." Mrs. Ohles felt that it, or something very similar, had been used since pre-White days, but she was not sure about the details. Several of the items are untranslatable in terms of this corpus, and one, No. (6), seems to contain myth material. Mrs. Ohles thought that there definitely was a myth connected with this but could not recall it in any detail and did not wish to commit herself.

Method: The adult takes the baby's fingers one by one, starting at the little finger and ending with the thumb, reciting one of the first five words for each finger. Taking the baby's open palm, the adult taps it rhythmically and recites sentence (6). She then circles the baby's palm

[TEXT CONTINUED ON PAGE 151]

recognize that the marriage is consummated by a series of gift exchanges and inasmuch as it was said that in the long run the man and his relatives have the advantage, it is clear that this is no outright bride purchase. 583

Giving a girl in marriage is sometimes a means of paying off a social obligation. Considerable property is destroyed at a cremation. This is normally furnished by the relatives of the deceased but in order to do honor a non-relative may contribute beads and other valuables to be consumed on the pyre. The recipient family is under obligation to reciprocate. Should one of the contributing family later want a wife from among them, they must acquiesce. The groom must make payment at the time of marriage, however. That no payment had been made in the case cited above undoubtedly explains why the runaway bride was not forced to return to her husband. 583 764

Possibly the sum must be repaid in the event of separation, at least if the wife leaves the husband. Probably the time element is important; a marriage soon terminated means restoring the *status quo;* in one of long duration this is impossible. 586

A man sends a friend to sound the girl's people on their willingness and the price expected. This man is chosen for his forwardness; he may be a relative but never a brother or father. He carries a bundle of sticks representing the gifts offered, which if successful he leaves, though they are not used further. The girl's father consults his wife before agreeing. Next day or as soon as the girl's people can get ready their gifts and contributions of food they take their daughter to the groom.[66] The groom's relatives have gathered meanwhile, collecting their gifts in the groom's home. The exchange takes place within the lodge, each party putting down its gifts beside the other seated opposite. The gifts from the bride's side, at least, commonly include clothing (presumably the Plains type), pond-lily seed, and roots of various sorts. The payment now made on behalf of the groom includes the promised articles. Speeches are made by the parents of both, admonishing them to live in harmony. Payment for a bride is called wo'ko'wi, the reciprocal gifts, i'wi. 584 584 585

It is difficult to say just how formal are the visits that follow marriage; at least one or two are usual, if not prescribed for the well-to-do among whom further payments by the groom are expected.

---

[66] In a Modoc (or Klamath?) song recorded by Gatschet (Songs of the Modoc Indians, 27, 29) a bride is carried on her brother's back. As Gatschet points out, carrying the bride is a custom of northerly tribes.

587 a woman with young children is as likely as not to be a member of a joint house group with her husband's immediate kin. We may also wonder if she would not ordinarily continue to reside with them even though she does not remarry in the group. It might be illuminating to know how residence with or apart from this family affects the practice. In default of a husband's brother, the widow should marry a nephew, either fraternal or sororal, or another of his kinsmen. A payment is made but not so large an amount as at her first marriage. Since only close relatives are paid, a widow may not be paid for if she has none. Much depends on the woman's willingness; she may not care to be a plural wife. Nevertheless, it is in some degree compulsory, for if she should marry another, her deceased husband's brothers may kill the man. While their objection is voiced loudly enough, they do not announce their purpose but await a favorable opportunity to surprise him.

586 Quarrels and adultery lead to separation, which is frequent;
there seems no compulsion to endure an unbearable situation. Incompatibility and jealousy (suki'ksale'a) bring on quarrels as frequently
as they do in any other group of human beings. Typical causes
837 of domestic friction cited to me are adultery, as with a slave
woman of the household, a woman's continual anger with her husband, or her demand for sole attention in a polygynous household.
It is always the wife who leaves. My informants could imagine no
situation short of adultery which would lead a man to send his wife
away. Nevertheless he can force her to act. A good, stout-hearted
woman stays, so they said, no matter how badly she is treated; only a
mean-spirited one flies home. Inevitably the situation is complicated
by children. A wife may take all her children with her or only the
little ones. This seems a question of who is at fault, for a woman
taken in adultery may choose to submit to beatings by her husband
rather than be separated from her children. If a wife leaves of her
own volition and for just cause, her husband must pay again to have
her return, must assuage the feelings of her family by gifts. If he
does not desire her, he may ask for the return of the marriage gifts
but they are not automatically forthcoming. If the wife is at fault
he may choose to demand the return of the bride price. Its return
586 is called sĕldŏnga. If a man is impotent his wife may leave him for
842 another. But he cannot cast his wife aside because she is barren; he
adds another to the household.

In the matter of adultery it is quite clear that a man has no recourse but to kill the lover; demanding payment for the wrong is unthinkable. He waits his opportunity to ambush the other. A man of no consequence may have to put up with the situation, but at least he would never think of turning to a chief for help.[74] The husband may send his guilty wife away, may beat or even kill her. Sometimes he will send someone to demand the return of the bride price, and her people return what still remains. The woman is then free to marry her lover who must pay for her in regular fashion. Nothing goes to the former husband. If a woman finds her husband unfaithful, she may beat (satŏ'mdoḳa) the other woman; her final recourse is to return home. 837 [586]

TRANSVESTITES

Transvestites or berdaches (tw!Innă'ĕk) are found among the Klamath as in all probability among all other North American tribes. These are men and women who for reasons that remain obscure take on the dress and habits of the opposite sex. Their number is small. Five men who lived as women were cited by an informant, two women who lived as men, and others are known. One of the former was from the Dalles. This is a very minor fraction in a population numbering upward of two thousand. Kroeber has assumed that such individuals are invariably psychologically abnormal, homosexual;[75] I am not sure. The case of Lᴇle'ks below rather argues against it. At any rate their abnormality is socially canalized: they are permitted to live as they desire despite the distaste of the normal Klamath for the practice, and the scorn and taunting to which he subjects them. 838 [114]

It is to the point to note that the men who turned women adopted woman's dress, pursuits, personal habits, and speech, and in one case at least married. Neither of the two women affected male garb; one married and made some pretense of men's habits, the other is rather simply a case of an irregular sex life. The cases of two of the transformed men which follow seem to turn on adolescent experiences. While these are phrased with relation to esoteric situations, they are more adequately explained as states of psychological disturbance rationalized in these terms. A third of the men-women turned shaman, but I do not know that this followed directly from the transformation. [756]

---

[74] Punishment of adultery and other torts by a chief, as described by Gatschet (1:58 *et seq.*), are post-reservation customs.

[75] Handbook, 46, and elsewhere.

The latter reciprocated by visiting with gifts for the husband's father. 171* Here, too, indemnity was demanded for adultery or constructive adultery. Shasta data also indicate a contractual relation between the families; the levirate was compulsory and a sister must be furnished for a deceased wife or an adulteress. So firm is the contract conceived 171* that a man who carries off a widow without compensating her husband's family stands in danger of his life. Parallel to the Yurok case, 587 the husband who made no payment for his wife had no redress for adultery. Perhaps the contractual relation was as strong among the Puget sound people but the data are insufficient to support the view. A Nisqually widow was obliged to marry her husband's brother or cousin, and a widower married his wife's sister. But if the widow did not marry among his relatives, she usually returned to her own people with her children. Among Snohomish and Snuqualmi, if a [586] woman abandoned her husband or was divorced for good cause, her people had to return the bride price. Klallam expression is much the same; a widow was expected to marry her brother-in-law or a near relative, a woman's family to offer a sister or relative of hers on her death. Similarly a wife's parents were expected to offer repayment [586] of the bride price if she left her husband, but it was bad form for him to accept it.

The Klamath attitude is at some remove from this one of mutual obligations. The levirate was customary but not obligatory, and the sororate permissible but no fixed custom. The widow was under some obligation to her husband's brothers, who might object should she marry another, but this seems rather a matter of sentiment than right. The feeling was that she, a member of their family and even an inmate of their house, should remain one. The reaction to a wife's adultery [837] is the common one of revenge on the lover, but with no thought that the husband's rights to the wife had been damaged.

Throughout a wider area the levirate and sororate were both practiced, but nowhere do we find them of the obligatory nature described above. It will suffice to list these cases. The levirate was customary among the Tillamook. (Perhaps if we knew more of this people this would transpire to be another obligatory case, considering their proximity to the Chinook.) Among the Achomawi it was perhaps regular;[446] the Sacramento Valley Maidu, usual; the Northwestern Maidu, general; occurred sometimes among Yuki and Pomo (northern, southeastern, and eastern divisions, although of the latter Gifford says

DdO run around, just like dogs. In old days women never ran around; they stayed home." SW: Husband may send wife home, and demand bride price be returned.

3960a. SW: Wife may return home, and her bride price need not be returned.

3961. Mo: Husband may send barren woman home to parents; "that's been done, lots of times; but if he loves her, he will keep her, and take another woman also as wife. SW: Barren wife not divorced, but her family must supply second wife free to her husband. WM: If woman barren, husband deserts her, often for another woman; does not bring this second wife home to live with first one; latter returns home to her parents.

3962. SW: Wife may leave husband, no return of bride price necessary.

3963. SW: No return of bride price if husband is aggressor.

3964. SW: If husband lazy, "after awhile wife returns home." If wife lazy, she is sent home and bride price must be returned. AE: If husband lazy or "mean," and woman returns to her family, her father or father's brother usually sends her back to her husband; tells her to come home "only in a good way, together with her husband." Daughters, when told this, usually return to husband. WT: If woman lazy, but if she stays home and behaves self, husband keeps her; but if she is "run-around" as well as lazy, husband turns her out of house.

3965. SW: If husband "mean," and beats wife, and wife returns home, first time she does so her parents send her back to her husband; second time she comes home for such reason she can stay; no return of bride price. AE: See note 3964. WM: Woman never fights back, if husband beats her, hits her with rock, but her brother or uncle may fight husband in her stead.

3966. SW: See notes 3960-3965. In all instances where repayment is mentioned above, such is necessary only if there have not been children born of union. But if 1 or more children have been born, money is not repaid (would ruin child's status), and either wife or husband may take charge of child.

3968. SW, At, AW: Boys usually stay with father, girl with mother's mother or grandmother. AW: "But hardly ever do this."

[586] 3972. Kl: Wife leaves her belongings in her husband's house. WT: Wife does not take her clothes, "because her husband has made them; she just takes clothes she has on." But anything she herself has made, such as baskets, she takes with her. WM: Woman takes clothes and baskets.

[587
684] 3973. Kl: If new husband does not pay before he marries woman, liable to be killed. AW: 6-10 strings of beads paid to widow's brother-in-law by her suitor. Brother-in-law then tells widow to marry suitor; if she demurs, he may threaten her with death. (Brother-in-law often more violent in demeanor toward widow than her husband ever was.) "The brother-in-law has a share in

[227-B]

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one who had obstructed Agency-sponsored reforms, but had left the membership of the lesser chieftaincies intact. It is clear that administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693
executive role to constitute a court, while a sheriff, chosen from among the Indians, together with constables, one per chief, were to maintain order. Chiefs, somewhat extralegally, soon began to assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at all, advising them that the object of the law is to *protect* the people and not to *oppress* them."[19] Soon thereafter, he reduced the court to a membership of only seven chiefs and set its sessions at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622
against property (arson), together with what can only be con- [68]
sidered redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585]
were to be confirmed before the principal chief, who was to [643]
receive a fee; the bride price was not to be returned on the [586] •
desertion of the husband; while the court might order the sepa-
ration of an irreconcilable couple. Monogamy alone was per- [595]
missible.[21]

Thus, not only were the chiefs given new and different powers,

[Klamath Reservation]

Of all the societal relationships, the government sought directly 657*
to change only those within the family. It was clear that a nation 648*
that was soon to impose upon the Mormons the American, and 595
not the Biblical family, would permit no special marital practices 177
among the Indians. Polygamy was banned, although not retro- 178
actively for unions such as those of Allen David and Monchnkasgitk, which had been contracted prior to January 1, 1870. Some leaders themselves appear to have advocated the change in a desire to emulate whites. In 1877, Gatschet noted that there
were still two or three polygamous men.[26] Since polygamy had [556]
been a mark of the affluent, the ban, like the emancipation of the slaves that preceded it, served to erode the status of the traditional chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals con- 622
cerned. In the legal code instituted when the court was estab- 692
lished, the consecration of marriage was made the function of 685
the head chief, to whom the groom was to pay a fee of five, three, 583 [643]
or two dollars or the same amount in horses, graduated according
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] The traditional ritual [586]
of marriage still was being practiced by some families in the 1890's[28] but the gift exchanges between the families concerned which set a public seal on the union were superseded, and the controls exerted by the family over the couple were thereby diminished. The effects of these and other changes were recognized by Gatschet. "Matrimonial reverses . . . among the Klamath [he declared] . . are one of the unavoidable consequences of the gradual emancipation of the females from the former rule of their brutal husbands through the advent of the whites, and also of the obnoxious and corrupting neighborhood of the soldiers at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independ- 648*
ent of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

KLAMATH CHILDHOOD AND EDUCATION[1]

By

MARION PEARSALL

INTRODUCTION

128 culture, social and political organization are
not described here except in their effect on
124 education. Wherever particular items are mentioned, we specifically asked our informants for
a description, even though they had been described in previous ethnographies. Such accounts may thus be taken as corroborating
earlier evidence unless otherwise specified in
the text.

131 The Klamath reside in their old territory
178 in southern Oregon, but the aboriginal way of
life has long since disappeared. Today they are
241 farmers and ranchers, but a considerable part of
the earlier culture remains alive in the memo-
233 ries of a few oldsters. Our seven informants
178 (4 men and 3 women) were all in their late
seventies or eighties and had participated in
the last phases of the aboriginal culture as
115 children. It is regrettable that it was necessary to reconstruct childhood training from the reminiscences of elderly individuals. Doubtless much of the material represents the ideal rather than the actual pattern of education. The ideals do, however, give a definite insight into what was considered important in the upbringing of children, whether these standards were always maintained or not. Since there is little or nothing in the early literature on this subject, there is no way of comparing impressions received from old people who are admittedly looking back to "the good old days" with impressions of objective eyewitnesses to the old ways as they were really practiced.

BIRTH AND INFANCY

Barrenness is sometimes con-
sidered cause for divorce. Since the blame
842 seems to fall most commonly on the woman, her
husband's parents may suggest that he send her
586 away and get a wife who can provide him with
606 children. Ordinarily, though, the parents-in-
law are more lenient with a barren woman.
Most Klamath express a preference for boys. A
842 variety of reasons are offered, the most common
being that boys are less bother than girls.
"Girls are always getting into trouble, and you just raise them for someone else because they go off to their husbands when they get married." Once the child is born, however, there seems to be no special favoritism shown to boys. One

Sparrow: Male, Age 63

Background Data

*159

156 Sparrow's case is cited because of his position on the lowest rung of the local status hierarchy. He is known as a happy-go-lucky, worthless old drunk and is 872 generally considered as "lacking a few of his marbles." However, Sparrow is seldom publicly disparaged, for local citizens simply pay little attention to 464 him. He has a sixth grade education, gained at the Agency school. He has apparently never worked consistently at any job, and most of his work experience 434 has been as a farm or ranch laborer. He is and has for years been totally dependent upon per capita income and the income from ranch lands owned by his mother, with whom he lives. Their affairs are managed by a local businessman who some years ago was appointed their guardian. He is the second eldest of four siblings. After his father's death forty years ago, his mother remarried and bore two other 586 children. He was married once when a young man, and after four years divorced his wife because of "her shiftless ways." He is a semi-invalid, the result of 164 an accident years ago when a drunken brother drove over him with a truck, crushing 191 his pelvis. He speaks fluent Klamath, the result of constant association with his aged mother who represents a direct link with the aboriginal Klamath past, as well as adequate English, learned in school.

733 Much of Sparrow's time is spent in jail for drunkenness, in the local tavern, with one of the drinking cliques, or passed out in a doorway. When he is not totally drunk he spends much of his time with his mother, for whom he cares in his fashion. Occasionally he goes fishing in a nearby river. For at least twenty five years, this has been the pattern of his activities.

*159 154 Sparrow has many skills, among the most striking of which is the ability to "fly from here to the Agency without once touching the ground." There are several dimensions to this delusion, one of which is an association, in Sparrow's thinking, with the acquisition of power. When a young man he dreamed of acquiring the power to "rise up off the ground, like Jesus Christ." While such a belief may have aboriginal correlates, there are no Klamath today who would accept it as valid. Sparrow keeps this secret to himself, and relates it only to strangers and transients from whom he intends to borrow money. His other skills include the following: the ability to keep house and cook, harness making, leather working, painting, canning food (the notion involves laying in stores for the winter), tanning buckskin, wood carving, carpentry, poetry composition (in Klamath), arrowhead making, making traditional basketry, stock raising, restaurant management, and finally, the ability to bewitch rich old white ladies, who are captivated by him and who drive him about in their white Cadillacs. The latter may be associated with a recurrent dream of meeting with a white buffalo, also a symbol of power, but it is difficult to say, for there were never any buffalo near the Klamath, and it is more likely that he has got this idea from reading western stories. Needless to say, most of these skills are quite delusional also. There is no evidence for any of them being more than this. Relating one or more of these is Sparrow's single style of interacting with others, for in reaction to a question or another's anecdote he will sift about in his memory until he comes up with one of his capacities which seems relevant. Very frequently, the writer could not see where or how they were appropriate, but for Sparrow there seemed to be some connection. He relates these matter of factly, with only the most slight suggestion that they were self-enhancing, and no indication that he meant to justify himself, and will then coyly watch his listener to see if he is properly impressed. This behavior tends to merge with Sparrow's

Nell: Female, Age 33

Background Data

159*
In contrast to Sparrow, much of Nell's behavior is disparaged and negatively
sanctioned by the community, while she too must be located at the lower end of [156]
the status hierarchy. Nell got her first job when she was 18, and for the [464]
last five years she has been working steadily as a clerk in the Agency. She
is a high school graduate and has 2½ years of business school training. Except [874]
for being away at school and a short period of residence with one of her hus-
bands in Oklahoma, she has lived all of her life on the reservation.

Nell was raised by her own parents on their ranch and is the second oldest of
nine children. Her earliest memories are of being fearful of domestic animals
and of preferring to be by herself, playing with her dolls. She seldom played
with her siblings or with other children, and her interest in dolls and making
and dressing paper dolls continued through her first marriage in her early
twenties. She felt that her mother always blamed her or the other girls for
everything, while her father favored his daughters. All of the children were [871]
sent away to boarding school, and most of their childhood was spent away from
home. By the age of 12, when home, Nell was busy with housework, cooking, baking, [857]
and caring for her younger siblings. In this large nuclear family there was an
extensive division of labor, with each assigned his or her specific tasks. Her [593]
parents never left their children with "sitters" or relatives. Their "caretaking"
activities are, perhaps, among the most consistent and extensive in the area,
with the exception of the boarding school. Nell received little direct instruc- [868]
tion from her mother, and her closest adult woman companion was her grandmother.
Nell knows none of the Klamath language. Both her mother and her father were [191]
disturbed because Nell always wanted to be off by herself. When she was in
boarding school her parents visited her once or twice yearly, but they never wrote
her. Nell preferred her father, and when she grew up she felt that her mother
was not the kind of person she had thought she was. Nell feels that this may be
due to her own behavior. She received no direct sex training, and was 18 before [864]
she discovered the significance of her menses. Her first sexual experience was
at 8, when she was molested by a cousin.

Nell has always preferred to play with boys rather than with girls. Today she [626]
is socially isolated at her office, where none of the other women speak to her. [156]
She is equally isolated from her family, who rejected her and threw her out of
their house when she was 20, at which time she was pregnant by her first husband,
who had deserted her when he discovered her pregnancy. She has been married and [586]●
divorced three times and has maintained a regular liaison with at least five
other men. She will go directly from one such liaison to another, with never [156]
more than a few days between men, and on several occasions some overlap. Occa-
sionally one of her ex-husbands or ex-lovers returns to live with her and attempts [588]
to take up with her again. She has borne eight children, has had two miscarriages,
and at least one abortion. She cannot tolerate not having a man in the house
(it is her house maintained at her expense). Several of her children are tech-
nically illegitimate and the paternity of at least one is in doubt. It is this 59*
sexual laxity which particularly brings down the ire of the community upon her. 56

Nell thinks of herself as an unfriendly person who would rather be left alone,
particularly by other women. She always waits until someone else makes the first
advance. It was therefore surprising to have her show up one day and request [124]
testing and advice. She was in trouble and she was convinced something was
wrong with her. The "presenting problem" was an unbearable load of shame, guilt,

Aunt May: Female, Age 58

Background Data

*159
[156] Like Carrie, Aunt May's social position is marginal to Klamath and White seg-
ments of the community, and she occupies a position of leadership, although
[184] hers is of a more informal variety. She has 8 years of formal education, but
in her words, has been learning all her life. She has been married four times.
[871] Two marriages were broken by the death of a spouse, one by divorce, and the
fourth, to a White wage worker, to whom she has been married 20 years. One of
[586] the tragedies of her life is that she has never been able to conceive, but she
[842] has made up for this biological failing by formal and informal adoptions of
numerous children, four of whom she had for at least for three years, and one,
[597] an adolescent boy, since birth.

Unlike many of the other subjects, Aunt May is a town girl, although she has
spent some time on a ranch in her youth and would now prefer to live in the
[756] country. When she was young she seriously considered becoming a Shaman, and was
closely identified with one of the surviving "Indian Doctors," but she became
dissatisfied with the prospects of this role. Yet she remained ambitious and
[894] wanted something more for her life than the "other Indians" were getting. She
took up with a white woman who put her to work and trained her as a seamstress.
[759] She became an accomplished mid-wife and frequently will answer to the query if
she knows a certain party, "Do I know him? Why, I cut his umbilical cord with
[857] a pair of my nail scissors." When a small girl she held the role of a "child
nurse" and more or less raised the remainder of her siblings. In recent years
*159 she was literally dragged from her home by a group of white ladies who wanted
156 her to attend their church, a church, which as a girl, on Sunday mornings she
had stood outside, wishing she could enter. She is the social center of gravity
177 for two large but separate circles of Klamath and Whites. She is one of the
184 few Klamath women with whom elite White ladies will associate, and with them
her position is so esteemed and secure that an invitation to her house is highly
[794] valued. For her Klamath friends, relatives, and "pick-up" relatives (i.e., per-
sons she has taken to her bosom as her own flesh) she is a confidant, an ad-
[608] visor, and an out-spoken critic. She is out-spokenly critical of many patterns
*159 of contemporary Klamath life, particularly excessive drinking and disordered
family life. "When I was a young woman I just stopped drinking. It was making
156 a mess of my life. I didn't want to be a wet blanket, though. I still went to
[273] dances and all. What happened was that I told the boys that I had broken my
glass." Aunt May's home today is one built with her share of tribal income,
[353] spotlessly clean, well furnished and homey. Every room of the house has its
walls and corners covered with mementos and souvenirs, each of which is asso-
ciated with a treasured memory of a particular person and association. It is
noteworthy that these memories are her personal property and do not include her
[571] husband or adopted son. Most of her current social contacts are with Whites,
for although other Klamath visit in her home, she never visits in theirs, be-
cause she does not want to get involved in their arguments.

[157] Aunt May is an extremely assertive woman whose tongue is too often sharp and biting, but every criticism is immediately followed by an effort to soften a person up, reflecting her extreme sensitivity to personal relationships. Perhaps, like Carrie, this strong joking behavior constitutes an appropriate social role. Aunt May is equally sensitive to the reactions of others to her and she will call friends to task for imagined snubs. In public she sits erect and quiet, yet attentive to all that is going on about her, and with great care

ä'ukckni were sisters from his own settlement on Williamson river above bäzŭkse'was, a third was from that town, and the fourth from glä'tspak'is, a mile or so down river. His daughter by the Modoc wife was counted ä'ukckni; while living at k'taidi she married an ä'ukckni of Yainax. 582 595

A gu'mböt man, Wokau'k!alls, married two Molala sisters.

Girls usually marry within a year or so after puberty, which is marked, at least among the well-to-do, by a big dance. Betrothals may have been arranged while the couple were yet pre-adolescent, presents having been exchanged by the families. They are expected to carry out the agreement after the girl's dance, payments being made again. Should one of them die another match may be arranged with the same family, but not of necessity. Poor and rich alike arrange such betrothals. 584

How far great disparity of age occurs I do not know, but it does happen that an older man marries a young girl. A shaman for instance may be given a daughter by a man too poor to reward him otherwise. [582] [756]

But it must not be thought that there is no choice. On the contrary, the majority of marriages follow the desire of the couples. Elopements take place and although the levirate is the rule, much depends on the widow's willingness. Yet a girl's consent is not necessary. Despite her protests she may be carried to her husband's home. If she runs home she is almost invariably taken back again. That she would be driven to suicide is doubtful; one informant never heard of such a thing; another stated she would hang herself and in this event her parents had to return the gifts of the groom. 583 587 • [762]

An orphan girl of du'kwa lived with her mother's brother. She was married against her will to a man of k'taidi. She clung to the ladder of the earth-lodge but they pulled her away and dragged her up-river to k'taidi. Next morning she ran home and never went back. Nothing had been paid for her at the time but she was given in return for valuables contributed to the cremation of a relative of hers some time before by her husband's relatives. Immediately after this she married a man at Klamath marsh; whether payment was then made is not remembered. 583 159

Elopements occur but payment is so much insisted on as a sign of respectability that parents guard their daughters with great care. This is at least true where the family wealth makes a suitable payment imperative. It is unthinkable that a chief's daughter should be permitted to enter an unceremonious, clandestine union. The poor and forward have little to lose. Modest demeanor is expected of a girl. 583 834

The number of plural wives depends on wealth; hence chiefs have 595 more than others. From my notes I glean two instances of two wives, [622] another of three. The wives in both bigamous cases were sisters. The greatest number known was the case of the chief Lzle'ks, who had at one time seven wives, two of them sisters.[72] I have described their derivations above. These women bore him many children. Whether the wives are sisters is a matter of complete indifference. To have two wives is called la'bwewa'nsgītkt (lit., two females), three ꭓnda'nwewa'nsgītkt, and so on. Collectively the wives may be referred to as sīpkska'ltk; they call each other p'telki'p. Plural wives are paid for, but whether there is reciprocal visiting I do not know. Slaves [567] are also taken to wife. Polyandry is unthinkable to the Klamath; it would be adulterous.

Barrenness is as usual a reason for taking a second wife, but not 595 always. Pat's maternal uncle had a barren wife. He kept her 842 throughout his life and never took another. The case of three wives noted above was one in which there were no children; the children of this family always died in infancy, I was told. Whether this implied that two of the three were barren, I do not know. One word, ts'e'do, means a sterile man or woman.

The sororate is not obligatory on the death of a wife, nor is there 587 any notion that a girl must marry an older sister's husband when she comes of age.[73] It is thought better to marry a deceased wife's sister, and from her family's point of view it is evidence that they care for the husband when they provide another daughter. There is however no feeling that they are under compulsion to make good the loss he sustained because of his marriage payments. A bereaved person waits a year or more before remarrying. The second wife has to be paid for like the first, but the amount is less. Again this depends on the man's affluence. The sororate is called spīno'la, the sister, [601] spī'nuwīp, i.e., sibling-in-law when the spouse is dead (cf. spīnu', to cremate, spī'nuks, cremation place).

The levirate is customary but not obligatory. It is desirable to keep a woman in the family, especially one with children. This is perhaps nothing more than an expression of household solidarity, for

---

[72] Gatschet states ten, but I am certain there were not more than seven, at least at one time (2:126).

[73] There is just a suggestion. When asked for the kinship term used by a [601] woman for her sister's husband, my informant gave the term for husband, but somewhat in confusion corrected herself with the woman's term for brother-in-law.

587 a woman with young children is as likely as not to be a member of a joint house group with her husband's immediate kin. We may also wonder if she would not ordinarily continue to reside with them even though she does not remarry in the group. It might be illuminating to know how residence with or apart from this family affects the practice. In default of a husband's brother, the widow should marry a nephew, either fraternal or sororal, or another of his kinsmen. A payment is made but not so large an amount as at her first marriage. Since only close relatives are paid, a widow may not be paid for if she has none. Much depends on the woman's willingness; she may not care to be a plural wife. Nevertheless, it is in some degree compulsory, for if she should marry another, her deceased husband's brothers may kill the man. While their objection is voiced loudly enough, they do not announce their purpose but await a favorable opportunity to surprise him.

586 Quarrels and adultery lead to separation, which is frequent; there seems no compulsion to endure an unbearable situation. Incompatibility and jealousy (suki'kssle'a) bring on quarrels as frequently as they do in any other group of human beings. Typical causes
837 of domestic friction cited to me are adultery, as with a slave woman of the household, a woman's continual anger with her husband, or her demand for sole attention in a polygynous household. It is always the wife who leaves. My informants could imagine no situation short of adultery which would lead a man to send his wife away. Nevertheless he can force her to act. A good, stout-hearted woman stays, so they said, no matter how badly she is treated; only a mean-spirited one flies home. Inevitably the situation is complicated by children. A wife may take all her children with her or only the little ones. This seems a question of who is at fault, for a woman taken in adultery may choose to submit to beatings by her husband rather than be separated from her children. If a wife leaves of her own volition and for just cause, her husband must pay again to have her return, must assuage the feelings of her family by gifts. If he does not desire her, he may ask for the return of the marriage gifts but they are not automatically forthcoming. If the wife is at fault he may choose to demand the return of the bride price. Its return
586 is called sĕldŏnga. If a man is impotent his wife may leave him for
842 another. But he cannot cast his wife aside because she is barren; he adds another to the household.

It does not appear that a marriage brings about a con-

587 tractual union between the families. The levirate is customary but not obligatory, and the sororate only occasional. It is true that the husband's brothers may take exception to her marriage with another, but this may mean only that they look upon it as an affront to their brother's memory.

582 Marriage is denied only between blood relatives. There is no village exogamy nor trace of restrictions or preference of any other order. At best the evidence suggests some tendency to marry within the tribal subdivision, but this may mean only that contacts are less frequent outside of this group.

584 585 The formalities of marriage prescribe a series of visits with an exchange of gifts. The prospective groom sends a male emissary with a bundle of sticks representing his offering. The bride's family proceed to the groom's house where they exchange gifts with the family of the groom. In kind and in quantity these are modest indeed when measured by Northwest Coast standards. A month later the couple and the groom's family return the visit, when again gifts are exchanged. Beyond these two, further formal visits are made only by the social pretentious. These formalities may be frequently initiated while the couple are still pre-adolescent, the bride being carried to her husband's home after her puberty dance.

583 *171 The general nature of the Klamath marriage relation smacks strongly of the Northwest Coast. This is apparent in the premium attached to purchase, to a lesser extent in the weighting accorded the amount of the purchase price, in the reciprocal nature of the gifts, and the series of formal visits before the affair is considered terminated. What is absent here is the notion that rank and privileges of a tangible nature are acquired by a marriage purchase.

This can best be brought out by instituting a series of comparisons with other tribes. For this purpose I shall select only a limited number of cases. For one thing data from Oregon tribes are almost wholly lacking, and those for California and Washington are both scattered and scanty.

Throughout California, save on the eastern border of the state, there is an appearance of purchase. But in reality it is only a presentation of gifts of no great amount as an earnest of the son-in-law's good will, a matter of etiquette rather than a stipulated price. The formality of giving varies as much as its conventional expression. With some, bride service is in order; with others, the parents-in-law must reciprocate the gifts. It is everywhere little more than an

*171 but heavily fined. "Generally speaking, these Indians seek their wives
582 from among other tribes than their own. . . . . It seems to be a
matter of pride, in fact, to unite the blood of several different ones
in their own persons. . . . . With the chiefs, this is almost always
the case."[517]

*171 Marriage by purchase was the usual form among the Nez Percé,
583 but it is said that a marriage by agreement because of the groom's
capabilities was a more desirable and honored form. This is a new
585 note, but it was characteristic of Plains tribes to the east. The purchase
was effected with little ceremony. Bride and groom were not
ordinarily members of the same village.[518] The exogamic habit here
*171 had not the same basis as among the tribes previously discussed. It
seems due solely to the Nez Percé habit of forbidding marriages to
582 relatives of even remote degree, which necessarily resulted in village
exogamy. I am unable to find evidence of exogamic practice farther
to the east, but will return later to analogous forms of wife purchase.

*171 To return to the Columbia river: the Wishram had as strong a sentiment
for caste and wealth as their down-river relatives, the Chinook
582 proper. Rank and wealth were here not quite synonymous, for chiefs
583 were not always the wealthiest individuals. Marriage was always
556 with one of the same rank, so that the children would have as high
standing as their parents. Payment was insisted on in every case;
583 even in the case of marriage with a deceased brother's wife the
• [587] procedure was gone through, else the children were as "nothing," i.e.,
not legitimate. The feeling was that the marriage must be regularised
by payment, else the contractants were the subject of odium, and
furthermore the marriage would not be permanent. So strong was
the feeling, that a lower-class man guilty of adultery with a chief's
daughter or other close relation would be killed; not for his crime as
such, but because he was too poor to make proper recompense in
marriage. Even constructive adultery, such as accidentally touching
another man's wife, was heavily fined. The insistence seems to have
been on the regularity of the form, for it was freely acknowledged
that the gifts made on either side were about equal. The marriage
of very young children was arranged and carried out in full form.
Chiefs and wealthy men marry women of other tribes, but marriage
within the village was prohibited to no one save a blood relative.[519]
Much the same situation is implied for other Upper Chinook.

Family Compacts

To revert to the nature of the marriage contract, this was in some instances avowedly a compact between families. It takes two forms. When a man had paid for a wife and her family had made a settlement on him, one of them had a grievance if the marriage was disrupted by the death or desertion of the other. It appears again in the assumption that children are a natural fruit of the union; that the husband must be indemnified if there were none or the woman's family absolved from payments for every child born. These features can best be brought out by considering the levirate, sororate, divorce, and other relevant data. 171*

It is exceedingly difficult to disengage the difference in meaning between the statements that the levirate, e.g., was compulsory or customary. So much must have depended on the precise personal circumstances (the lack of appropriate relatives, the ages of the persons concerned, their sentiments, antipathies, etc.) that even where the custom was so regular as to be styled compulsory, it may nevertheless have never been more than a customary practice. The best that can be done is to discriminate those cases where the sentiment was an obligation to marry from those where it was merely good form. 171* 587 ▪

It should also be borne in mind that while the levirate was always of one kind, namely the marriage with a deceased husband's brother (or cousin), there being no polyandry in North America, the sororate included two different social situations. In one form there was the analogue of marrying a deceased wife's sister; in the other, of taking sisters as plural wives, in particular taking them to wife as they came of age. While the two forms occurred together, it was not so by necessity. They should not be confused.

The sentiment of mutual obligation was perhaps strongest among the Yurok. If a wife died early in marriage and sometimes even in later life, a sister or kinswoman was due from her family; similarly she was obligated to marry his brother on her husband's death. A divorce was possible only if each party was willing to make full restitution. If the wife desired to take the children with her, it could only be done if the full marriage price was returned. Analogously "each child left with the husband reduced the repayment, and several cancelled it altogether." Such contractual relations appear as a function of the regularity of purchase. How far that sentiment held may be

*171 judged by the fact that the husband demanded payment for adultery
*587 or actions construed as adulterous, a practise unthinkable to the majority of Indians.[443] The attitudes of the Hupa were quite analogous.[444]

Mutual obligation of the same sort is described for the Chinook. Levirate and marriage with a deceased wife's sister were a matter of course. The widow may be taken to wife by her husband's father or another relative in default of a brother. A man must be indemnified if his deceased brother's wife is carried away or he would kill the abductor. Similarly a man was indemnified with many slaves if his wife was abducted, else he had revenge. Children were as much part of the bargain as among the Yurok; if a child died the wife's father was obligated to pay a slave or a canoe as indemnity.[445]

The family contract did not differ in kind among the Kwakiutl, but had another emphasis. The members of a chieftain's tribe were jointly concerned in the purchase; they speak of "our bride"; the father-in-law says, "All the tribes came to marry my daughter." These participants were relatives of the groom, of near or remote degree. I cannot find any reference to the levirate and sororate among them, although it ought to have followed from this attitude. Here, even more emphatically than among the Yurok, children were an essential part of the compact. What is bought is "the right of membership in her [the wife's] clan for the future children of the couple." Indeed the number of children fixes the rate of repayment by the father-in-law.[446]

The feature of the families as contractants appears in other cases but I doubt that the sentiment is so emphatically expressed as in those
*171 cited above. The levirate was well-nigh compulsory among the Wishram, and the sororate in polygamous unions followed, but not always.
587 The widow married the husband's brother or a cousin, unless he did not desire an additional wife. If she married any other, which was permissible, he had to make payment to her dead husband's kin, not to
*171 hers, so that they would look on him as one of themselves. While I received no suggestion from my informants that children were part of the marriage bargain, there is an analogue pointing in this direction. A few months after the birth of each child, the husband's people, with the couple and the newborn, visited the wife's parents bearing gifts.

[446] Boas, Social Organization and Secret Societies, 358 f.

The latter reciprocated by visiting with gifts for the husband's father. 171*
Here, too, indemnity was demanded for adultery or constructive adultery. Shasta data also indicate a contractual relation between the
families; the levirate was compulsory and a sister must be furnished
for a deceased wife or an adulteress. So firm is the contract conceived 171+
that a man who carries off a widow without compensating her husband's family stands in danger of his life. Parallel to the Yurok case, 587 •
the husband who made no payment for his wife had no redress for
adultery. Perhaps the contractual relation was as strong among the
Puget sound people but the data are insufficient to support the view.
A Nisqually widow was obliged to marry her husband's brother or
cousin, and a widower married his wife's sister. But if the widow
did not marry among his relatives, she usually returned to her own
people with her children. Among Snohomish and Snuqualmi, if a [586]
woman abandoned her husband or was divorced for good cause, her
people had to return the bride price. Klallam expression is much the
same; a widow was expected to marry her brother-in-law or a near
relative, a woman's family to offer a sister or relative of hers on her
death. Similarly a wife's parents were expected to offer repayment [586]
of the bride price if she left her husband, but it was bad form for him
to accept it.

The Klamath attitude is at some remove from this one of mutual
obligations. The levirate was customary but not obligatory, and the
sororate permissible but no fixed custom. The widow was under some
obligation to her husband's brothers, who might object should she
marry another, but this seems rather a matter of sentiment than right.
The feeling was that she, a member of their family and even an inmate
of their house, should remain one. The reaction to a wife's adultery [837]
is the common one of revenge on the lover, but with no thought that
the husband's rights to the wife had been damaged.

Throughout a wider area the levirate and sororate were both practiced, but nowhere do we find them of the obligatory nature described above. It will suffice to list these cases. The levirate was customary among the Tillamook. (Perhaps if we knew more of this people this would transpire to be another obligatory case, considering their proximity to the Chinook.) Among the Achomawi it was perhaps regular;[444] the Sacramento Valley Maidu, usual; the Northwestern Maidu, general; occurred sometimes among Yuki and Pomo (northern, southeastern, and eastern divisions, although of the latter Gifford says

---

[444] Kroeber, Handbook, 318.

*171 they did not practice it).[547] Kroeber states that levirate and sororate
• 587 were followed everywhere in California except among the Colorado river tribes.[548] I have found specific statements to except from the
[114] levirate the Yuma, Akwa'ala, Cupeño, and perhaps Luiseño.[549] Further the Huchnom, in an area where it generally held, avoided the levirate. In the Great Basin it was customary among Paviotso, Moapa, Shivwits, and Wind River Shoshoni; in the Plains, Crow, Assiniboin, and Hidatsa.[550] How frequently the practice was indulged in these cases is not clear. The Hidatsa, for example, held the levirate proper but marriages of this sort were uncommon.

Curiously enough these practices seem to be absent on the Northwest Coast precisely where one would expect contractual relations of the families to be strongest. I find no mention of them among the Tsimshian and Kwakiutl. Boas recorded only one Tsimshian tale where wives were sisters.[551] The Chilcotin will have nothing of the levirate, for the widow "is still regarded as his own sister" by the brother-in-law.[552] On the other hand, the levirate was common among the interior Salish.[553] Certain of the Plains tribes apparently lack it: Blackfoot[554] and Gros Ventre.

The sororate occurred throughout much the same areas. In California, I note specifically the Northeastern Maidu, Northern and Eastern Pomo, Northern Costanoan, and Southern Diegueño; in the Basin, Paviotso, Southern Paiute, Uintah Ute, and Wind River Shoshoni; in the Plains, it was the regular practice, commonly taking the form of polygamous marriage with sisters, viz., Crow, Blackfoot, Assiniboin, Hidatsa, and Iowa.[555] Again no mention appears in the account of the Gros Ventre.

Levirate and sororate are customs so widespread in North America as to give us little concern here, were it not that they acquire special significance in connection with marriage by purchase. I have tried here to make out a case that in the coastal region from the strait of Juan de Fuca to northern California they have been absorbed in a

special configuration of social relations most aptly described as a set of mutual obligations constraining the families of marriage contractants. The Klamath, by reason of their geographical position marginal to these, show the effects of this to only a moderate degree. 171* 587

Postnuptial Residence

Residence after marriage was prevailingly patrilocal in the northwest, the bride proceeding at once to her husband's home. This held from Alaska to northwestern California; Tsimshian, Bella Coola, Kwakiutl, mainland Cowichan, Lillooet,[586] Klallam, Puget Sound Salish, Twana, Coos, Takelma, Hupa, and Yurok. The Yurok and Hupa cases indicate that this mode of residence is derived from the fact that brides were purchased; there if full payment could not be met, the husband had to be content with joining his wife who would not be given up by her people. I am not asserting that in general patrilocal residence following promptly on marriage is due to purchase; in these northwestern tribes this seems to be the case. It is conceivable that they might have held that a man must furnish services before they would release the bride to him, but this was contrary to their feeling respecting wealth. Services were a poor substitute for material wealth. Even in those cases where temporary matrilocal residence did occur this sentiment was absent; it was simply customary practice. The Klallam sometimes resided with the wife's people for a short time; among the Wishram it was apparently the regular practice. The Tillamook had a curious alternation; first matrilocal, then patrilocal, each for a few days, settling down to matrilocal residence, which however they might change later. 171* 591

The Klamath conformed to the northwestern practice. Residence was normally patrilocal, the bride being brought at once to her husband's home; but, as with the Yurok and elsewhere, a man too poor to pay tendered services while living at his bride's home. The patrilocal habit was by no means rigid; matrilocal residence might set in from the outset if it was desired.

The relation of the Klamath to the northern tribes can best be brought out by pointing out their contrast to those to the south. Temporary matrilocal residence was the custom of a large part of north central California; Achomawi, Atsugewi, Maidu (northeastern, south-

*171 in conformity with northwestern views. The sense of obligation was [591] weakly developed; the levirate was a mere custom, the sororate rare; birth of heirs played no part in their scheme of things. In brief, the • [587] Klamath derived the sense of social standing based on wealth from [583] the northwestern center, and the mechanism of marriage purchase to effect it, but no more.

174 I am not inclined to indulge in an historical reconstruction of the northwestern marriage complex. But if it be in order, it seems better to suggest that the ancient, undifferentiated custom was the practice of mutual giving, subsequently formalized with the growth of concepts of wealth and rank on the Northwest Coast. The alternative is to hold that these attitudes and practices diffused from that center only after they attained full flower there. If this were so we should expect to find the specific forms of Northwest Coast procedure at a greater distance. I am very doubtful that ideas and sentiments diffuse as such, though I may have given that impression in some of the summary statements above. It seems rather that particular practices are imitated, and if but imperfectly copied or made rational in their new context, then alone do we say that merely the underlying idea has been borrowed.

*171 In the present case social stratification based on wealth had spread over a wide area; wife purchase with it. I conceive that members of 174 the imitating tribes observed the aggrandizement that went with 583 wealth and took occasion among their fellows to insist on a similar, and in their eyes proper, respect for themselves and their wealth 554 when opportunity offered. The spread of the marriage purchase custom 556 must have been one of the most effective mechanisms for the spread of the sense of rank. Boas has already made such a case for the Kwakiutl and their neighbors. By marriage with the northern tribes among whom privilege concepts were highly developed, the Kwakiutl obtained these privileges through their wives.[557] The mechanism is clearly transparent in the Klallam preference for marriages to the north.[558] We are not told this of other tribes, to be sure, but it appeals to me that marriage into foreign tribes where payment for their women was demanded would inevitably bring in its train the notion that these women were in some way superior to those at home. This view is not drafted from thin air; among the tribes of Puget sound, e.g., the women of the more northerly tribes consider them-

000 family, not that his sister-in-law belongs to him." NM: Woman may refuse to marry brother-in-law, saying she "does not want to die like [her] sister did." Not obligatory for man either.

3841. At, WT: Only if widower treated first wife well. NM: See note 3839.

587 3842. Kl, Mo, SE, AW, AE, WT, WS, NS: Dead woman's parents hire shaman to kill son-in-law,
756 if he refuses to marry one of deceased wife's
684 sisters. WM: Woman's parents hire men to kill son-in-law outright.

587 3844. Kl, SE: Usually, however, relative of
595 man marries latter's stepdaughter.

3852. Kl: Informant "had heard lots about this,
595 among [N] California tribes and up at Warm Springs--about man living with his sister-in-law--but not practiced among Kl." AE: Not es-
000 pecially disapproved. WT: Indulged in only by "loose" women, and generally disapproved.

3853. NS: Man sleeps with sister-in-law, only during brother's absence from home.

3855. NS: Not necessarily between namesakes only.

3856. SE: Extension of levirate also occurs; man may marry father's brother's wife, "to keep her in the family; he has to pay for his aunt, however, to give any children he may have by her status. But in outright levirate, gifts only given; levirate not always obligatory for man; "woman has to be good woman, to have treated dead husband well and pitched her face for him when he died, for his family to make strenuous efforts to keep her after his death." SW: Levirate more obligatory, for both man and woman concerned, than post-mortem sororate (see note 3839). WM: Day after funeral, when all relatives of dead man are crying, brother of deceased may ask widow for drink of water. If she gives it to him, they are considered as married from then on. Both widow and brother-in-law have blackened, pitched faces, and let pitch stay on until it wears off, but in event of speedy remarriage widow does not wear pitch necklace.

3857. SE: See preceding note.

3858. At: Widow may tell her brother-in-law she is going to marry another man; "All right," he says, and tells her to "take care of those children [by dead husband] good; be careful with them and let me know when they're sick."

[587 3860. Kl: But because levirate is so obliga-
684] tory for woman and for dead husband's brother, rule seldom if ever violated. However, see element 3973.

[587 3862. By hiring shaman to kill woman, for all
684] groups except WM, NS. WM: If woman refuses to give brother-in-law drink of water (see note 3856 WM) "then her brother-in-law or father-in-law get mad at her and try to kill her." NS: Woman shot with bow and arrow.

3866. SW: Kammatwa and Katiru groups intermediate between Shasta proper and Karok (see note 282) permit marriage of blood relatives; Shasta do not.

DOO run around, just like dogs. In old days women never ran around; they stayed home." SW: Husband may send wife home, and demand bride price be returned.

3960a. SW: Wife may return home, and her bride price need not be returned.

3961. Mo: Husband may send barren woman home to parents; "that's been done, lots of times; but if he loves her, he will keep her, and take another woman also as wife. SW: Barren wife not divorced, but her family must supply second wife free to her husband. WM: If woman barren, husband deserts her, often for another woman; does not bring this second wife home to live with first one; latter returns home to her parents.

3962. SW: Wife may leave husband, no return of bride price necessary.

3963. SW: No return of bride price if husband is aggressor.

3964. SW: If husband lazy, "after awhile wife returns home." If wife lazy, she is sent home and bride price must be returned. AE: If husband lazy or "mean," and woman returns to her family, her father or father's brother usually sends her back to her husband; tells her to come home "only in a good way, together with her husband." Daughters, when told this, usually return to husband. WT: If woman lazy, but if she stays home and behaves self, husband keeps her; but if she is "run-around" as well as lazy, husband turns her out of house.

3965. SW: If husband "mean," and beats wife, and wife returns home, first time she does so her parents send her back to her husband; second time she comes home for such reason she can stay; no return of bride price. AE: See note 3964. WM: Woman never fights back, if husband beats her, hits her with rock, but her brother or uncle may fight husband in her stead.

3966. SW: See notes 3960-3965. In all instances where repayment is mentioned above, such is necessary only if there have not been children born of union. But if 1 or more children have been born, money is not repaid (would ruin child's status), and either wife or husband may take charge of child.

3968. SW, At, AW: Boys usually stay with father, girl with mother's mother or grandmother. AW: "But hardly ever do this."

[586] 3972. Kl: Wife leaves her belongings in her husband's house. WT: Wife does not take her clothes, "because her husband has made them; she just takes clothes she has on." But anything she herself has made, such as baskets, she takes with her. WM: Woman takes clothes and baskets.

● [587] [688] 3973. Kl: If new husband does not pay before he marries woman, liable to be killed. AW: 6-10 strings of beads paid to widow's brother-in-law by her suitor. Brother-in-law then tells widow to marry suitor; if she demurs, he may threaten her with death. (Brother-in-law often more violent in demeanor toward widow than her husband ever was.) "The brother-in-law has a share in

000 that woman; he acts just like a boss toward her."

3975. WT: Also, in Upper Trinity subarea of Wintu, informant had heard of 1 instance of mother-in-law killing daughter-in-law after husband died. "The mother-in-law didn't want that woman to take another husband, so she killed her with a bone needle [dagger?]. She was sorry after she did it; but she didn't like the woman having another husband who would look just like her son; it would make her [mother-in-law] feel badly."

[587] 3976. In case there is no brother-in-law to ask.

3977. If there is no brother-in-law to receive the payment. AW: Sister-in-law may dispose of widow to more-distant male relative of dead husband also.

3980. SW: A divorce "puts a man and woman clear away from each other"; no payment rendered former husband.

562 3981. Kl: If man does not like his wife for
587 some reason, he announces, "Anyone who wants my
593 wife can take her, if they give me something. If you people don't want her, I'll kill her." The men discuss it; husband repeats the announcement, sets date when he will kill woman; some man finally takes her for wife, gives the husband something; "that's how they save a woman, sometimes." No one knows what trouble between husband and wife prompts man to do this, and man never tells; he doesn't beat his wife, he just sells her. Only done occasionally; when informant was boy such sales still taking place; informant had seen one couple separated this way. Woman not captive.°

000 Intercourse; promiscuity.--

3984. NF: Girl cries, fights husband, so girl's mother sleeps beside girl first night latter sleeps with husband.

3985. NF: Do not allow people to sleep lying on back "like dead people"; lie on side and "put their heart in hiding" so no evil will befall sleepers.

[152] 3987. Purse lips and make sound, "čk, čk,"
[192] repeatedly, close to baby's face. AW: Rub hands over baby's face or neck while making sound; same done between adults. AE: "Learned to make this sound from animals--badger, raccoon."

3988. SE: No virginity tests, but observe boy's actions around girls. AE: If girl's, boy's legs get "heavy" (tired) during girl's puberty dance, sign he or she is not virgin. Spectators watch to see whether this happens. WT: Can tell whether girl is virgin or not by shape of her abdomen, if firm, smooth, judge she is.

[548] 3989. Kl: Prostitution with payment recent
[178] custom only.

3990. WM: Especially at girl's puberty dance.

836 3991. Kl: Said to have been extremely rare; "girls never ran around; pretty hard to get a woman." Girl's parents wanted girl to marry man who could get her lots of fish, so she would eat

764 and nights, sweating; at end of this 5-day peri-
765 od widow can eat fish; "she's cleaned good, then."
262 SE: Or more. SW: 1 lunar month. WM: 3 lunar
months. MV: 6-7.

000 4251. MF: Drinks medicinal tea instead of water.

4253. Mo: Young widow stays in house "for few days" after husband's death. Older woman with children may have to go out to get wood. None of seclusion taboos enforced if it is necessary to get food for dependents. All widows however sweat twice daily for duration of food taboos. Final purification comes 1 year later.

[764] [765] 4254. Kl, Mo: In mourners' sweat lodge (see note 4247). SE: Mourner cannot come into living house if deermeat there; gives hunter bad luck. NF: Partial seclusion only; does not talk to any man during this period. NS: Stays in seclusion until necklace she is wearing breaks. NM: Stays in seclusion until she attends another funeral, usually in about 1 year. MV: Widow sometimes stays with mother-in-law; usually with her own mother.

4255. Mo: See note 4253. At: 2-3. NS: See note 4254.

4258. MF, NF, NM, MV: Widow makes baskets during period of seclusion, for post-burial ceremony (see elements 4354-4415).

[764] [765] 4261. Kl, Mo, SE, AW, WM, MF, NF, NS, MV: Shadowed by attendant.

4262. NF, NM, MV: Talks only in low voice. NM, MV: 2 women watch mourner, take her outside at night.

4264. MF, NF, NM, NS: See note 4258.

[765] [783] 4267. Kl: Or more. AE: 2-6 months. WM: Widow after death of husband sometimes builds and uses small steam-heated sweat house to remove contamination of disease from her arms, body.

4268. At: After 2-3 years. MF, NM: Ca. 1 year after funeral.

4270. WM: When woman about to remarry, takes pitch off 1 month before marriage.

4272. NF: Worn until burnt at group mourning ceremony, 2-3 years later. MV: Worn for ca. 1 year, then burnt at group mourning ceremony. At this burning young widows put small amount of pitch on face, also.

[764] [765] [587] 4273. Kl: 1-6 yrs. Mo: 2-3. SE: 6 mos. or longer. At: 2-3 yrs. AW: 1-2. WT: 2 mos. to 5 yrs. WS: 2-3 yrs. MM: 1-3. NF, NM, NS: 3 or more yrs. MV: 2-3.

4277. SE, SW, MV: Burn hair; all other groups cut hair. NM: Puts cuttings in gopher hole. At: "A man hardly does anything in mourning for his dead wife."

4281, 4283. AW: 3-4 months. MV: 4-5.

4286. Mo: 5-6 nights. MM: 1-2.

4295, 4296. SE: 1-2 days. AW, AE, WS: Immediately after funeral.

4296. MV: Bathes in medicated water, 4-5 months after funeral.

4299. MF: Put on pitch only. NF: Cut hair, put on pitch. NM: Cut hair only.

[Klamath Reservation]

Of all the societal
relationships, the government sought directly
to change only those within the family. It was clear that a nation 657*
that was soon to impose upon the Mormons the American, and 648*
not the Biblical family, would permit no special marital practices 595
among the Indians. Polygamy was banned, although not retroactively 177
for unions such as those of Allen David and Monchnkasgitk, 178
which had been contracted prior to January 1, 1870.
Some leaders themselves appear to have advocated the change in
a desire to emulate whites. In 1877, Gatschet noted that there
were still two or three polygamous men.[26] Since polygamy had [556]
been a mark of the affluent, the ban, like the emancipation of the
slaves that preceded it, served to erode the status of the traditional
chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals concerned. 622
In the legal code instituted when the court was established, 692
the consecration of marriage was made the function of 685
the head chief, to whom the groom was to pay a fee of five, three, 583
or two dollars or the same amount in horses, graduated according [643]
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] The traditional ritual [586]
of marriage still was being practiced by some families in the
1890's[28] but the gift exchanges between the families concerned
which set a public seal on the union were superseded, and the
controls exerted by the family over the couple were thereby
diminished. The effects of these and other changes were recognized
by Gatschet. "Matrimonial reverses . . . among the Klamath
[he declared] . . are one of the unavoidable consequences of
the gradual emancipation of the females from the former rule of
their brutal husbands through the advent of the whites, and also
of the obnoxious and corrupting neighborhood of the soldiers
at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independent 648*
of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587 •
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

FIFTEEN

Family and School

WHITES AND KLAMATH ON THE RESERVATION RECOGNIZED IN FAMILY 648*
ties a bond that might be useful as well in formal enterprises. 657*
Several leading businesses in Chiloquin relied in part upon con- 602
sanguinity and upon marital ties to recruit members and ensure 178
continuity of control. Similarly, among the Klamath, during the bidding for tracts of tribal property in the course of termination, members characteristically acted in kin groups to undertake purchases that were beyond the resources of a single individual. In primary relations among both groups, visiting patterns and the occasional appearance of extended family households betokened the continued strength of ties reaching beyond the nuclear family.

For the whites who had come originally from outside the [167]
reservation, kinship ties stretched to distant places and there [563]
were comparatively few relatives close at hand. Of the whites in Chiloquin in 1950, although fifty-six per cent had moved from a previous residence in Oregon, fewer than forty per cent came from the reservation, from Klamath Falls, or from southwestern Oregon. Only a handful had raised children and in turn had seen grandchildren being reared in the town.[1]

The Klamath, with many kinsmen still upon the reservation, [587] •
saw the network of relationship close at hand, however tangled
it might be by the intricacies [illegible] remarriage. To be sure, the [596]
extended family as a residential group was not prominent, for in Chiloquin there were but two such households and in Beatty one. The strength of the bonds manifested themselves in other ways. Tribal residents in the city of Springfield, in the Willamette Valley, several of whom asserted that they had originally moved away to escape the importunities of kinsmen, had made the move as nuclear families over a period of several decades. None-

[Klamath Reservation]

Within the
*648 reticulation of familial roles, the traditionally
*657 esteemed attributes had lost place. Age was no longer accorded
561 respect, for the wisdom of experience seemed irrelevant under
593 the new conditions, and in the environing society the emphasis
577 was upon youthful qualities. The premium upon industry as an
434 ideal for old and young alike had become submerged by the
178 golden flow of per capitas which rewarded equally the wastrel
177 and the unremitting toiler. Remarked one man wryly, "I can make more money raising Klamath than I can raising cattle."[3] Under these changes, paternal authority had declined sharply. "Why should I listen to you?" demanded one adolescent son of his father. "I've got just as much money saved up [in a compulsory trust fund] as you have!"

*648 By contrast, the status of the mother within the household
*657 had been enhanced. Housekeeping and child rearing constituted
562 concrete activities that possessed a high measure of continuity
434 with the past, of a type normally respected in her counterpart
177 in white society. Access to her own per capitas had raised the
178 economic standing of a wife to a par with that of her husband.
[623] The relative changes in local roles, together with the passage
of woman's suffrage in the nation at large, had become reflected in the increasing prominence of women in the debates of the General Council.

*648 The major point of contrast between white and tribal house-
*657 holds on the reservation was the relatively greater fluidity among
563 the Klamath, as reflected in the record of sequent marriages,
58 the figures for common-law unions, and the broken families. In this respect, Beatty did not differ significantly from Chiloquin. Interethnic marriages—those between a Klamath and a nontribal partner—were more stable than those contracted between tribal members.

*648 Household composition makes it clear that the traditional
*657 valuation of kin had by no means been entirely relinquished.
592 In a number of instances, Klamath, particularly women, had
587 taken in the children of collateral kin. Remarriage produced
[178] composite families, in which the couple reared not only their own children but the offspring of previous unions of one or both partners.

*648 Consequently, Klamath households exhibited a diversity of
*657 form, size, and composition, frequently characterized as well by
592
593

Grandma Williams: Female, Age 67

Background Data

*159
156 Understandably, it is difficult to find a match for a person like Weasel, par-
ticularly in the instance of a woman who occupies a similar status. The few
595 Klamath women who were like Weasel were not available for testing. Grandma
William's position is that of the mother of a large, disorganized nuclear family
733 like Weasel's, one marked by excessive drinking, violence, and promiscuity.
83 She is a vigorous, hearty, earthy old woman who has borne eight children by
three husbands. She is once divorced and twice widowed, her first husband
587 having died after three years of marriage, her third after thirty-five. She
completed six years of school, all that was available when she was a girl, and
871 she has lived and visited for extended periods in Washington state, Missouri,
178 California, and Mexico.

651 Grandma William's mother was a traditional Klamath wife and mother, and her father
for years an Agency Indian policeman. In her words, both her family of orientation
464 and her family of procreation have had "bad luck." This bad luck consists of numerous bouts with the law over acts of violence. Her father died in the Federal penitentiary where he was serving a life sentence for murder. Several of her sons have killed men in the past. One is reputed to have killed at least five, and he is now in a State institution. Her other children are noted for their violence, and local informants say of Grandma that they cannot understand how such "a wonderful, good old lady managed to produce so many worthless children."
577 Few feel that she deserves such a fate. Community acceptance of Grandma Williams
is based upon several attributes, her steady, hard work, her commitment to raising
177 a family, her devoutly Christian behavior, her espousal of dominant White values, and, especially, her hearty good humor. She has never accepted the guilt of either her father or her sons, maintains that they were falsely accused, and has worked steadily to secure her one son's pardon.

191 Grandma Williams was raised in a Klamath speaking household and acquired her
English in school. She is very proud of her education and maintains that chil-
871 dren today are not so well tutored in the 3 Rs as she was. She claims that "I
can just about out-spell, out-write, and out-figure all of my kids." This is by
593 no means the only aggressive, competitive attitude she maintains towards her
children, none of whom have ever quite lived up to her standards. In this res-
603 pect, Clifton was once able to witness her training a grandson, who was an alert,
spontaneous, active lad. The boy was made to be too polite and too formal, be-
867 haviors in keeping perhaps with urban middle-class society, but very much out of place on the reservation. All of her sons have maintained their main affilations with the local "cowboy" culture, but they are ridiculed for their efforts at riding and calf roping because of their obesity and clumsyness, none of them coming near, in physical type, to the slim hipped, pencil shaped cowboy ideal.
657 She is an excellent example of a woman who, early in the reservation period, was
carefully tutored by conscientious minister-teachers in inappropriate behaviors
871 and values, and who has attempted to transmit these to her children. It would
seem that she has produced over-trained, and mis-trained, hostile children, who
177 promptly discovered that regardless of their veneer of "culture" they were rejected from many local circles because of their Indianness.

*159 Grandma is a direct, forceful person, another Klamath woman with a sharp wit
157 (yet a less personal one than Aunt May's). She is quick to initiate inter-
changes and to attempt to knit together a strained situation. Yet her responses
156

*657 The removal of property interests in the marriage on the part
*648 of the natal families of the couple, together with the general
581 upheaval of society, brought to the fore the practice of common-
• 588 law marriage, previously an unusual form of union. In time, such
177 a marriage, if generally acknowledged as stable, was officially
178 termed an "Indian custom" marriage, and recognized by authorities and Indians alike. Many unions, however, were unstable, and genealogies reveal that then as now it was common to find individuals who had had as many as three mates. Indeed, the woman previously mentioned as refusing to marry her husband's brother subsequently consorted informally with her ranch foreman.

*657 Thus by the end of the period of its firmest control, the gov-
*648 ernment had altered the family in form to correspond to that
177 idealized in American society. It had done away with the special
593 status of slaves. Children were removed from the physical cus-
[567] tody of their parents and sent away to school, to be returned as adolescents at odds with the ways of their parents. These were individual measures, not calculated for their total impact. The approach to social, as to other aspects of change, was predicated upon the individual and upon the conjugal family. It failed to envisage the need to create bodies that would give strength and continuity to a reservation community.

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are exclusively 621
White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office outside [575]
the tribal structure, and although a high percentage have registered, very [794]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are frequently [651]
tax exempt, as have been their per capita payments. Simultaneously,
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chiloquin [674]
during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a reconstituted 648
"Klamath Tribe," with a corporate structure and assets to be administered 657
by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal supervision
has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual 619
Klamath have shown an equally noncommittal relationship to tribal affairs. Attendance
at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

Probably one-third of all Klamath women have
581 borne at least one child out of wedlock. At the same time, there is considerable
[848] out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-style" marriage, but all evidence leads to the interpretation that the style
[177] is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
[177] extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, *de facto* groupings
rather than *de jure*. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594] tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
434 industrious and to the most delinquent. Controls over the expenditure of
children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

Nell: Female, Age 33

Background Data

In contrast to Sparrow, much of Nell's behavior is disparaged and negatively 159*
sanctioned by the community, while she too must be located at the lower end of [156]
the status hierarchy. Nell got her first job when she was 18, and for the
last five years she has been working steadily as a clerk in the Agency. She [464]
is a high school graduate and has 2½ years of business school training. Except [874]
for being away at school and a short period of residence with one of her husbands in Oklahoma, she has lived all of her life on the reservation.

Nell was raised by her own parents on their ranch and is the second eldest of
nine children. Her earliest memories are of being fearful of domestic animals
and of preferring to be by herself, playing with her dolls. She seldom played
with her siblings or with other children, and her interest in dolls and making
and dressing paper dolls continued through her first marriage in her early
twenties. She felt that her mother always blamed her or the other girls for
everything, while her father favored his daughters. All of the children were [871]
sent away to boarding school, and most of their childhood was spent away from
home. By the age of 12, when home, Nell was busy with housework, cooking, baking, [857]
and caring for her younger siblings. In this large nuclear family there was an
extensive division of labor, with each assigned his or her specific tasks. Her [593]
parents never left their children with "sitters" or relatives. Their "caretaking"
activities are, perhaps, among the most consistent and extensive in the area,
with the exception of the boarding school. Nell received little direct instruction [868]
from her mother, and her closest adult woman companion was her grandmother.
Nell knows none of the Klamath language. Both her mother and her father were [191]
disturbed because Nell always wanted to be off by herself. When she was in
boarding school her parents visited her once or twice yearly, but they never wrote
her. Nell preferred her father, and when she grew up she felt that her mother
was not the kind of person she had thought she was. Nell feels that this may be
due to her own behavior. She received no direct sex training, and was 18 before [864]
she discovered the significance of her menses. Her first sexual experience was
at 8, when she was molested by a cousin.

Nell has always preferred to play with boys rather than with girls. Today she [626]
is socially isolated at her office, where none of the other women speak to her. [156]
She is equally isolated from her family, who rejected her and threw her out of
their house when she was 20, at which time she was pregnant by her first husband,
who had deserted her when he discovered her pregnancy. She has been married and [586]
divorced three times and has maintained a regular liaison with at least five
other men. She will go directly from one such liaison to another, with never [156]
more than a few days between men, and on several occasions some overlap. Occasionally
one of her ex-husbands or ex-lovers returns to live with her and attempts [588]*
to take up with her again. She has borne eight children, has had two miscarriages,
and at least one abortion. She cannot tolerate not having a man in the house
(it is her house maintained at her expense). Several of her children are technically
illegitimate and the paternity of at least one is in doubt. It is this [59*
sexual laxity which particularly brings down the ire of the community upon her. 56

Nell thinks of herself as an unfriendly person who would rather be left alone,
particularly by other women. She always waits until someone else makes the first
advance. It was therefore surprising to have her show up one day and request [124]
testing and advice. She was in trouble and she was convinced something was
wrong with her. The "presenting problem" was an unbearable load of shame, guilt,

Weasel: Male, Age 29

Background Data

In contrast to all other subjects Weasel's role in the reservation community 159*
is a totally negative, destructive one, largely that of a supposedly vicious [156]
criminal. He was born and raised on an economically un-productive ranch, which
for twenty years or more has been the location of continuous drinking parties.
Weasel was raised within a circle of a pack of older brothers, half-brothers, [593]
and step brothers, all of whom were bigger, stronger, and more capable than he.
His father has been an alcoholic for thirty years and has rarely worked or contributed [733]
much to the organization of the family, which as a co-residential [592]
household usually included more than a dozen persons. In all, Weasel had 17
full and part siblings, half of whom are now deceased, three directly as a result [165]
of drinking, three from acts of violence or car accidents.

Weasel's formal education ceased when he was 15, in the ninth grade, at which [871]
time he was arrested on a burglary charge. Since then he has spent six years
in reformatories or penal institutions. He was tested while in jail on an [674]
assault charge. Shortly thereafter he was found not-guilty, then re-arrested [697]
and sentenced on a different assault with a deadly weapon charge to three years
in the state penitentiary.

Weasel has repeatedly moved out of the circle of the family group, only to
fail "outside" and return to its sheltering arms. For a time Weasel was a [542]
professional boxer, but one without much skill or stamina. He never won a fight
and his face shows the evidence of the capabilities of his opponents. His
membership in this profession did not last long, and Weasel states, rather
proudly, that the Boxing Commission expelled him "For conduct unbecoming a
professional boxer." Weasel was once married (a common-law marriage, which [588]
for Weasel's primary reference groups is well sanctioned) but this lasted just [581]
16 weeks. During this period Weasel stayed sober, the longest time he has spent
without a drink since the age of 12. Weasel was consciously trying to reform [733]
himself, but now feels that he was a fool to ever try. Additionally, Weasel
has repeatedly made a circuit of nearby towns and cities either singly or in [156]
the company of a brother or friend. These visitations have more of the character [579]
of raids than anything else, and Weasel is usually arrested in one or another
place and either charged or shipped out of town. [697]

In addition to being a minor criminal Weasel is frequently also the scapegoat 159*
for the aggressions of stronger men than he. He constantly asks for trouble,
but has never given any evidence that he can back of his threats with appropriate 156
force. His successful acts of aggression have always been sneak attacks, [186]
or attacks on feeble old men or young boys. He seldom attempts to avoid the consequences of these actions, and, indeed, is frequently not able to do so, because of his extreme drunken condition. He seems to obtain some gratification from the minor prestige afforded his performances in these roles, but this gratification is highly personalized and is not recognized as appropriate by others. It may be that he has been attempting to build up his standing and reputation within his own circle by acting out the role of a "dangerous Indian," but it would seem that he has been singularly unsuccessful in this. One aspect of this behavior is his reputed skill with a knife. On two occasions he wanted to obtain vocational training, once as a barber, the other time as a butcher, both times implying that this would be a simple extension of his native talent.

585 After a month of marriage the couple visits the bride's former home,
593 accompanied by the groom's relatives, for a further exchange of gifts. Soon after this, the girl's father and his family reciprocate. Beyond this it is a matter of mutual solicitude; undoubtedly the visits grow less frequent as the passing years bring diverging interests. Later visits are of some duration, the couple even staying through the winter.

591 Marriage is normally patrilocal, but if a man is poor, or has no close relatives, he may take up residence with his wife's people. When a young wife is about to have her first child the couple return to her mother to stay until she is strong again. This must be the circumstance of temporary matrilocal residence as it ordinarily occurs elsewhere. First marriages among primitive peoples usually follow closely on a girl's nubility. The need for advice and care during this trying period of pregnancy and delivery, the natural solicitude of the mother, are surely the reasons for the frequency with which residence is temporarily matrilocal. It will be observed that this is formally prescribed as the proper procedure almost solely in cases of first marriage. There is no need to search for a more esoteric reason such as the older writers had, matrilinear grouping, maternal authority, and the demand that the young husband prove himself to the wife's family. Among the Klamath this is the rule only on the birth of a first child.

591 A series of terms describes the facts of residence. A man and his
wife in matrilocal residence are non-vocatively wuko'bŏks and sḳa'bŏks
593 respectively.[69] A woman with her husband's people is t!e'niwas.[70]
601 On separation a woman who returns to her former home is ko'stbŏmbli,
a man returning to his, wuko'tbŏmbli.

601 I was told at least that a child's spouse is treated like an own
child, that parent and child terms are used between them for there
606 are no parent-in-law taboos. This is the usage of intimacy; there are specific terms for parents-in-law. There is the familiar Indian usage of a term between the parents of a couple, "my child's parent-in-law."

582 Marriages occur any time during the year. There is no evidence suggesting their greater frequency during any season, nor any mating period[71]

---

[69] The latter term was given me at another time as meaning a newly married woman (probably the form ska'bŏkak was intended). This comes to the same thing. These two words apparently correspond to Gifford's wapake and kapake, earlier and later co-wife (Californian Kinship Terminologies, 42). Gifford's record is doubtless due to a misunderstanding; I enquired about these words and found that there are no terms for particular co-wives.

[70] Gatschet (2:608) gives teina, a young woman. The meanings are not incompatible but I believe mine to be correct.

[71] As among the Yurok (Kroeber, Handbook, 44).

159

subsequent career seems quite normal unless exception be made of his seven wives! 838 [622]

A woman named Co'pak lived like a man although she retained women's dress. She married a woman who lived with her a long time and finally died. She observed the usual mourning, wearing a bark belt as a man does at this time to prevent the back from growing bowed. She tried to talk like a man and invariably referred to herself as one.

Another woman still living has had relations with both women and men. She never adopted men's garb but told them that she was a man. She is today a common prostitute, an abnormal, irascible person. Those she lived with were all older women, not young girls. This practice is known as sawa'lînâa, to live as partners. They say of such: they have lots of partners, friends (anewă'ĕts doma' sawa' lînâa'sgltkt). Other Klamath of any standing have always avoided her and her women partners. She was never married to a man.

HOUSE GROUPS

It is now difficult to get evidence on household composition. Houses 342 vary in size, to judge by the existing pits, from twelve feet in diameter 592 to as much as thirty-five feet. The larger houses must have held a number of families and as many as ten or twelve persons. One described below had five families, numbering twenty.

The majority of the inmates of a house can usually trace some relationship. This is also true of most of the inhabitants of a settlement. For example, the village mo'giŋkünks had half a dozen earth-lodges, of which three held the families of two brothers and their father's male cousin. Residence is normally patrilocal. In the cases [591] which follow the connecting relatives are for the most part related in the first degree.

An earth-lodge on the lower Williamson river built about 1870, and measuring thirty feet in diameter, contained five men, their wives and children, whose respective portions of the house are shown in figure 4. This was known as the home of the shaman Boke's; the others were related to his wife.

1. Boke's, wife, and two children.
2. Lek!o'c, wife and two children.
3. Wokau'k!alls, a widower, whose two wives had been Molala sisters.[76]

---

[76] Their Molala names were Slowa' and A'li'ak.

1:Spier E-4,5 (1925-1926) 1930 NR10 Klamath NR10
(ca. 1860-1900)

special configuration of social relations most aptly described as a set of mutual obligations constraining the families of marriage contractants. The Klamath, by reason of their geographical position marginal to these, show the effects of this to only a moderate degree. 171 * 587

Postnuptial Residence

Residence after marriage was prevailingly patrilocal in the northwest, the bride proceeding at once to her husband's home. This held from Alaska to northwestern California; Tsimshian, Bella Coola, Kwakiutl, mainland Cowichan, Lillooet,[586] Klallam, Puget Sound Salish, Twana, Coos, Takelma, Hupa, and Yurok. The Yurok and Hupa cases indicate that this mode of residence is derived from the fact that brides were purchased; there if full payment could not be met, the husband had to be content with joining his wife who would not be given up by her people. I am not asserting that in general patrilocal residence following promptly on marriage is due to purchase; in these northwestern tribes this seems to be the case. It is conceivable that they might have held that a man must furnish services before they would release the bride to him, but this was contrary to their feeling respecting wealth. Services were a poor substitute for material wealth. Even in those cases where temporary matrilocal residence did occur this sentiment was absent; it was simply customary practice. The Klallam sometimes resided with the wife's people for a short time; among the Wishram it was apparently the regular practice. The Tillamook had a curious alternation; first matrilocal, then patrilocal, each for a few days, settling down to matrilocal residence, which however they might change later. 171 * 591 •

The Klamath conformed to the northwestern practice. Residence was normally patrilocal, the bride being brought at once to her husband's home; but, as with the Yurok and elsewhere, a man too poor to pay tendered services while living at his bride's home. The patrilocal habit was by no means rigid; matrilocal residence might set in from the outset if it was desired.

The relation of the Klamath to the northern tribes can best be brought out by pointing out their contrast to those to the south. Temporary matrilocal residence was the custom of a large part of north central California; Achomawi, Atsugewi, Maidu (northeastern, south-

---

*171 591 ern, and the foothill groups), Eastern and Northern Pomo. Thereafter it was not of necessity patrilocal, for residence might be continued with the woman's unit. Outright matrilocal habits appeared among the Sacramento Valley Maidu (although the majority of marriages were there patrilocal from the outset), Huchnom, and Yokuts. Southern California was again an area of patrilocal habits. Great Basin practice conformed with that of north central California; temporary matrilocal residence for Paviotso, Southern Paiute (?), Uintah Ute, Lemhi and Wind River Shoshoni. Northern Plains tribes were generally patrilocal: Crow, Gros Ventre, Assiniboin. Matrilocal residence as well occurred among the last two. Hidatsa indulge in temporary matrilocal residence, after which there is no fixed rule.

Summary

*171 554 556 We may now review the data detailed above. Sharply crystallized distinctions of rank and the importance of wealth in establishing them, wealth itself assuming real proportions, center in this area in the Kwakiutl and other northern tribes. Similar caste distinctions are traceable southward on the coast to the Alsea and Coos, and eastward not beyond the Wishram. Social distinctions based on wealth to the almost complete exclusion of other factors extend beyond these limits; in attenuated form to the Sinkyone and Yuki and perhaps beyond to the south, to the Klamath and Shasta, to the Middle Columbia Salish of eastern Washington. *171 583 431 Marriage by purchase had an even more extended distribution; from the same center it is traceable southward perhaps to Huchnom and Pomo, to the Southern Maidu, and eastward into the northern Plains, if my interpretation of the Crow, Assiniboin, and Hidatsa cases is justified. In the northwestern portions of this territory marriage by purchase is a function of the caste-wealth system; in the outlying regions, as among the Maidu on the one side and Nez Percé, Crow, etc., on the east, it would seem that we witness the spread of the purchase factor with little of these underlying concepts. It must be borne in mind that nowhere in this area are the marriage payments justly described as purchase; there is always a reciprocation of the gift. The express point is that marriage is contracted only by the making of such gifts.

*171 583 556 Wealth was very real, huge in quantity, north of the Columbia, and a correspondingly high value set for a marriage settlement, at least among the upper classes. Valuables and marriage values dwin-

dle beyond this limit, with a notable recrudescence of the latter on the 171 *
lower Klamath river. Part of the mechanism of its exchange in 583
marriage was a series of reciprocal visits, of potlatch character southward 556
to the Columbia, a more formal practice beyond.

Among the concepts underlying the practice of bride purchase 171 *
was the sense of mutual obligations of the contractants' families. This was avowed by the coastal tribes from British Columbia to northern California. It assumed the express forms of compulsory levirate and sororate and of the right to children. Further, the families were obligated to restore the marriage settlements if the marriage terminated unfortunately. The man's financial interest in the wife he (837)
had bought was evidenced by his ability to mulct damages from an adulterer or one even thought to be such.

The exogamy which appears in this area was not the prohibition 171 *
of marrying within the community, but an exogamy of practice. To 582
maintain caste, marriage must of necessity have frequently been with 554
persons of the same rank and wealth outside the village or tribe. This was undoubtedly more the circumstance in the upper strata of society. It is obvious then that the distribution of this practice coincides closely with that of sharp distinctions of caste and wealth. Beyond those tribes whose attitudes may be so characterized, there was a fringe of peoples who had taken over the custom without its antecedents. Such local exogamy has been noted as far southward as the Hupa, the Sacramento Valley Maidu, and as far eastward as the Nez Percé.

The habits of postnuptial residence seem to correspond closely 171 *
with the sense of purchase. It was patrilocal, the bride being taken 591 •
at once to her husband, in the coastal area southward to northern California. Some variability does indeed appear but this seems no more than the common circumstance of residence according to preference. The Wishram instance of regular temporary matrilocal residence is an anomaly.

The position of the Klamath with respect to this northwestern 171 *
marriage complex was that of a distinctly marginal group. Purchase 583
to maintain social standing was present but the values not fixed; 431
the actual amount changing hands, relatively small. A series of formal gift-bearing visits was prescribed, in which the bride's family returned more than they received, but there was no intentional rivalry in giving. The first visit was that of conducting the bride to the
groom as among all the southerly peoples. Residence was patrilocal 171 *
591

*171 in conformity with northwestern views. The sense of obligation was
• [591] weakly developed; the levirate was a mere custom, the sororate rare;
birth of heirs played no part in their scheme of things. In brief, the
[587] Klamath derived the sense of social standing based on wealth from
[583] the northwestern center, and the mechanism of marriage purchase to
effect it, but no more.

174 I am not inclined to indulge in an historical reconstruction of the northwestern marriage complex. But if it be in order, it seems better to suggest that the ancient, undifferentiated custom was the practice of mutual giving, subsequently formalized with the growth of concepts of wealth and rank on the Northwest Coast. The alternative is to hold that these attitudes and practices diffused from that center only after they attained full flower there. If this were so we should expect to find the specific forms of Northwest Coast procedure at a greater distance. I am very doubtful that ideas and sentiments diffuse as such, though I may have given that impression in some of the summary statements above. It seems rather that particular practices are imitated, and if but imperfectly copied or made rational in their new context, then alone do we say that merely the underlying idea has been borrowed.

*171 In the present case social stratification based on wealth had spread
over a wide area; wife purchase with it. I conceive that members of
174 the imitating tribes observed the aggrandizement that went with
583 wealth and took occasion among their fellows to insist on a similar,
and in their eyes proper, respect for themselves and their wealth
554 when opportunity offered. The spread of the marriage purchase cus-
556 tom must have been one of the most effective mechanisms for the
spread of the sense of rank. Boas has already made such a case for the Kwakiutl and their neighbors. By marriage with the northern tribes among whom privilege concepts were highly developed, the Kwakiutl obtained these privileges through their wives.[887] The mechanism is clearly transparent in the Klallam preference for marriages to the north.[888] We are not told this of other tribes, to be sure, but it appeals to me that marriage into foreign tribes where payment for their women was demanded would inevitably bring in its train the notion that these women were in some way superior to those at home. This view is not drafted from thin air; among the tribes of Puget sound, e.g., the women of the more northerly tribes consider them-

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10
Modoc NS17

[Klamath Reservation]

At the
center of concentric circles of concern stands
K the natal family.[16] In the myths, parents and offspring and
M siblings are bound by the strongest affective bonds: in trouble
593 they provide succor and in death, revenge. The obligation tran-
602 scends abstract ethical considerations. In real life, mutual re-
sponsibility reaches out to embrace the extended family, the
close consanguineal kindred linked through two or three genera-
K M tions. Although kinship terminology acknowledges equally re-
[601] lationships on the maternal and paternal sides, residence practices
[591] in general favor the latter. From close kinsmen on both sides
come the gifts that set the seal of approval upon the marriage of
a member; during his lifetime they share food with him in his
need, support him in his quarrels, and assist his avenger should
he be slain. At his funeral, it is they, together with friends of the
deceased, who are expected to place valuables upon the funeral
pyre.

K Beyond the sphere of immediate kindred and of friends lies
M the domain of neighbors and remote relatives. If more central
602 obligations tend to be principally a function of consanguinity,
621 and thus to be ascriptive in character, village relationships and
571 those outside are more frequently based upon performance.
K M Here enter those standards of behavior by which a person of
[577] good family may be confirmed in position, the poor but worthy
rise, and the ne'er-do-well sink in the public view. At the head
K of this loose and shifting status scale stand the shamans and
M 756 other influential men, the leaders of hamlet groups. On occasion
622 they may meet in an informal village council to concert decisions.
621 Yet the village, which in its spatial limits often blends with
554 adjacent settlements and which dissolves with the turn of the
seasons, can exert little constraint upon its members.

K The prestige of the leaders, the force of public opinion, and
M checks imposed by rival village interests hold the unruly in line.
62 The principle of self-help and the responsibility of kinsmen may
enlarge grievances to feuds if the differences are not soon ended,
and thus threaten the very being of the community. To counter
such fissive tendencies, leaders mediate disputes and exhort to
their fellow villagers the need to maintain harmony.

K Time may alter the membership of villages. Men frequently
M 621 seek wives in other communities; and there is considerable inter-
563 marriage between Klamath and Modoc and Klamath and Molala,
582

581 Probably one-third of all Klamath women have borne at least one child out of wedlock. At the same time, there is considerable
[848] out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177] style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
[177] extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, *de facto* groupings
rather than *de jure*. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organization
[594] of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obligatory
592 responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-father
592 frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly extreme
cases, had kitchen shelves which were partitioned off by individual ownership
of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with regard
to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
434 industrious and to the most delinquent. Controls over the expenditure of
children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

Slim: Male, Age 30

Background Data

Slim's case was selected so as to illustrate the situation of a regularly em- 159*
ployed, well liked and respected young male. He is currently employed as a [464]
laborer in a lumber mill, and in the past has worked as a carpenter, and in
heavy industries in the mid-west. He has ten years of formal schooling, obtained [463]
his 12th grade certificate by examination while in military service, and for [871]
one month studied commercial art in Portland. [701]

Slim was born into a large, influential kin group, one which for several genera- [619]
tions has provided much of the tribe's leadership. While his own father has
not been so influential in tribal politics, preferring to work his ranch in-
stead, Slim grew up in association with male relatives noted for their forth-
right independence and leadership, and within a family tradition of progressive-
ness and self-improvement. Slim's early life was spent in alternating periods
of residence with his own father and mother on their ranch, and with his father's [591]
mother in her cabin on the Sycan marsh. This association with "Grandma" was [603]
partly in response to the gradual disintegration of relations between his father
and mother, and partly the result of his father's desire to have "Grandma" teach [593]
him some of the old lore. His mother became increasingly erratic, unpredic-
table, and violent, finally leaving his father. Slim felt badly rejected by [153]
her and was never able to understnad why she would not accept his efforts to be
helpful. On the other hand, he was very close to his father and his grand-
mother. Today he recalls with satisfaction the many things these two persons
taught him, and dreams recurrently of being in the army, defending the reserva-
tion from attack, and checking in on the old lady to see if she is all right.
This dream is interesting because it expresses succinctly his style of relations
with superiors, for in the dream Slim asks permission of his squad leader to
leave, explains his reasons, then checks in on "Grandma," and returns to his duty.

After the 10th grade was completed, Slim quit school and worked on various ranches.
Early in the Korean war he consciously followed the model of an uncle, who was
a career soldier, and enlisted in the army. His service record was good, marred
only by what Slim feels were two justifiable periods of unauthorized absence,
and he voluntarily served with a combat unit in Korea. This army experience
considerably broadened Slim's horizons, and after his discharge he lived and
worked with an army buddy in the east for a year. Then Slim traveled and worked
in several places in the east and midwest. On two occasions his regular habits [961]
and good capacity for steady work were responsible for a promotion. Characteris-
tically, Slim enjoys this kind of reward, but he does not specifically strive
for advancement.

Slim has many skills, hobbies, and social graces. When young his father taught him to dig ditches, with the advice that this skill would always provide him with a job. He is an expert horseman and stock-keeper, and is a skilled hunter and woodsman who frequently guides his friends on hunting trips. He has learned carpentry, house-painting, and the operation of various industrial machines. More recently, he has turned to archery, sketching, and photography for hobbies to occupy his spare time. Then too, he is an amiable, jolly person who makes good company and who is well regarded as a friend. He is not married, and has never seriously considered marrying. He has had occasional sexual liaisons of a transitory nature, which he finds quite satisfying, and has been "going steady" for several years with an older woman, a person who is a grandmother in her own right.

159
838
[622]

subsequent career seems quite normal unless exception be made of his seven wives!

A woman named Co'pak lived like a man although she retained women's dress. She married a woman who lived with her a long time and finally died. She observed the usual mourning, wearing a bark belt as a man does at this time to prevent the back from growing bowed. She tried to talk like a man and invariably referred to herself as one.

Another woman still living has had relations with both women and men. She never adopted men's garb but told them that she was a man. She is today a common prostitute, an abnormal, irascible person. Those she lived with were all older women, not young girls. This practice is known as sawa'līnăa, to live as partners. They say of such: they have lots of partners, friends (anewă'ĕts doma' sawa' līnăa'sgītkt). Other Klamath of any standing have always avoided her and her women partners. She was never married to a man.

HOUSE GROUPS

It is now difficult to get evidence on household composition. Houses vary in size, to judge by the existing pits, from twelve feet in diameter to as much as thirty-five feet. The larger houses must have held a number of families and as many as ten or twelve persons. One described below had five families, numbering twenty. 342 592

The majority of the inmates of a house can usually trace some relationship. This is also true of most of the inhabitants of a settlement. For example, the village mo'giŋkŭnks had half a dozen earth-lodges, of which three held the families of two brothers and their father's male cousin. Residence is normally patrilocal. In the cases which follow the connecting relatives are for the most part related in the first degree. [591]

An earth-lodge on the lower Williamson river built about 1870, and measuring thirty feet in diameter, contained five men, their wives and children, whose respective portions of the house are shown in figure 4. This was known as the home of the shaman Boke's; the others were related to his wife.

1. Boke's, wife, and two children.
2. Lek!o'c, wife and two children.
3. Wokau'k!alls, a widower, whose two wives had been Molala sisters.[16]

---

[16] Their Molala names were Slowa' and A'li'nk.

342
592 4. Lo'lōklis, wife, and seven children.

5. Te!ōnte!ōn and his wife (childless).

The wives of Boke's (1) and Lo'lōklis (4) were sisters; Te!ōnte!ōn (5) was their brother. Leķ!o'c and Woķau'ķ!alis were distant cousins of this trio.

In front of this lodge stood another, a mat-covered house (wu'kĕ'plōķs), housing the mother and three sisters of Woķau'ķ!alis. This was only ten feet distant, measured about fifteen feet in diameter, and also had its entrance, this time at ground level, on the southeastern side facing the river. The inmates of both houses were gu'mbōtkni from the western side of Klamath lake with the exception of Lo'lōklis, a du'kwa man, who alone properly belonged in this locality.

592
352
353

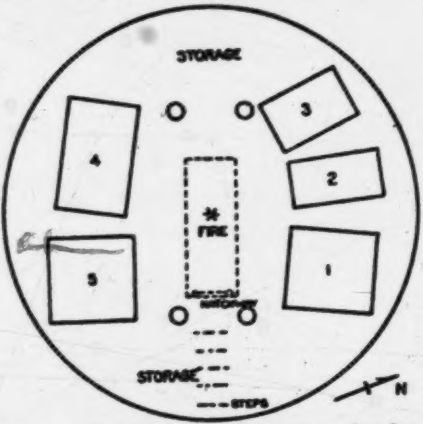

Fig. 4. Plan of an earth-lodge, showing the areas assigned to the beds of five families.

342
592 One earth-lodge in the same district was known as wĕwalāčķsumlo'ltmalōķs, old woman's earth-lodge. Its inmates were an old woman, her two daughters each in early life, the younger with three children, and an elderly woman, first cousin to the daughters, hence called older sister by them. The house was built especially for them.

342
595 Data on the arrangement of polygynous households are of the slightest. It is clear that all the wives occupy one house with their husband. Their beds are separate. This is true where their number is few, but in the case of Lzle'ks' seven wives, these were housed in two lodges. In one family of a man and three childless wives only one earth-lodge was used.

used;[378] then grass or pine boughs, covered with dirt, are heaped halfway up the side. 342 The outer mats are held in place by tying them along the edges to poles propped against the side of the house. The rope (pĕḳ'os) used for this is three strand, braided of grass or the outer layer of tule. In placing the mats, a space about two feet across is left at the top for a smoke hole, and another only three and a half feet high for a doorway. One has to stoop to enter. The door is a mat like that of the summer house; it is not weighted nor tied down.

Drying racks are not placed inside the houses. All fish and meat [251] are dried on racks near-by. [417]

Houses are not decorated, nor are the house posts carved or painted except by shamans. These may paint them with horizontal stripes, 342 alternately red and white. One informant had it that men's faces, snakes, lizards, and various other animals, not spirits, are painted on the posts, but I am doubtful. Shamans also hung stuffed bird and animal skins about the interior. [756] A wooden image and a stuffed crane skin are set up outside on the northern side of the hatchway, i.e., above the shaman's bed. 552 Houses are not given individual names, Yurok fashion, though the localizing tendency of the Klamath might have 171* found an outlet in this.

The fireplace (sne'lŭḳs) in the earth-lodge is in the middle of the 354 floor, between the four center posts and under the open hatchway. Neither a pit nor stones are used to confine the fire. Most of the time there is no fire on the hearth, only in the morning and evening; at other times the hatch is closed. A huge fire is built when it is nearly sundown, and after the mat is drawn across the opening the heat is so great that blankets may be dispensed with. [132] This despite the severe winters; at this altitude (4000 feet) lakes and streams are frozen solid. [133] Fires are usually made by piling short lengths of wood in log-cabin (crib-work) fashion to a height of eighteen inches. They cook when this is reduced to a bed of coals. A piece of rotten wood is ignited to carry fire from one place to another.

Cooking ordinarily takes place outside the dwelling in a dome- 343 shaped house (sti'nă'c) erected near-by. An earth-lodge on lower 252 Williamson river, for example, set some fifty yards from the stream, had its cooking lodge close to the bank. 592 All the women of the household prepare their food together, even where several families have joint tenancy. It is carried to the earth-lodge and there passed about

---

[378] Barrett gives the successive layers as made of "a kind of reed," triangular-stemmed tule, and circular-stemmed tule (*op. cit.*, 244).

343 as in "one big family." This is inevitably a matter of personal pref-
252 erence; some dwellings have two cooking lodges attached, the families
eating separately and sharing food only as friendship dictates. The
592 mortars and grinding slabs are kept in the cooking-lodge. The intro-
[177] duction of flour has wrought a change in these habits. Loaves of
bread are baked in the ashes in the earth-lodge itself. Flour is always
[262] shared among the inmates. I was assured that there was no earlier
custom resembling this.

264 But two meals a day are eaten, morning and evening. I was also
told that there is no regular period for meals. Visitors are given
574 something on their arrival, such as a little pond-lily seed, but no stress
is placed on this phase of hospitality. A sort of grace is said before
eating.

352 The entire floor of the earth-lodge or summer mat-house is carpeted
with mats except for the space within the four central posts. Thicker
piles of these for beds are placed all around the walls, but the best
352 locations are at the sides (*O*, fig. 19). Children might sleep in the
corners. People always sleep with their feet toward the fire, no
513 matter in what direction their heads then lie.[374]

Beds (slai'is) are of mats of various sorts. Rich people use tule, the twined mats (slai'is) being preferred to the sewn (st!ŏps). One or more of these laid on dry grass serves as a mattress, or they sleep directly on the grass. One or two more form the covering. The few who have them use grizzly bear, coyote, wolf, lynx (? slowa'), or deer pelts, or several *Bassariscus* (? slĕt) skins sewn together, for mattress and blanket (sa'walc). A blanket for a little child is made from the skin of a red fox, a stretched raccoon skin, or several marten skins sewn together. Blankets (called sŏlŭmtai') are also made of tule and cat-tail twined to produce a checkerboard decoration. Others are made of tules with the wing feathers of water fowl (pelicans, geese, swans, ducks, etc.) caught in one face. These are called lă'cdā-lap'ŏ'tᴇ, wing feathers (lac) put together. Another type of feather blanket (called ḳ'a'lyᴇ) is made of the dried skins of waterfowl twisted with a cord to form a fluffy rope. This is twined with cords inserted at intervals to form the blanket. Pillows (sᴇ'o'lhas) are a heap of grass, or anything else, even wood, but the wooden headrest of the lower Klamath river tribes is unknown. Gatschet records a sack stuffed with mallard duck down for a pillow.[375]

---

[374] I could find no notion that a sleeper is affected by moonlight.

[375] 1:144.

M
342 of the house head, whose bed is toward the front, while an old
352 lady or two, perhaps his widowed mother, sleeps toward the
513 back. Along the opposite wall range the sleeping mats of another
K family, sometimes one related to the house head. There are
M houses that hold more than two families and others that hold
• [592] only one. The very poor together with the aged who can no
K M longer make their way up and down the ladders must be content
342 to shiver out the winter in mat lodges.
888 735 Many of the people of our earth lodge, and the younger women
K now bringing in the food which hospitality dictates be offered
M the visitor[11] are of powerful frame—though of no more than
142 average height—and some tend to portliness.[12] They are scantily
K clad for this climate: both men and women clad in fringed fiber
M skirts and basketry caps, differing only in style. In the early
291 nineteenth century, a few would be wearing buckskin clothing
[177] and footwear of the style then being communicated down the
trade routes from the distant Plains across the Rockies and down
the Columbia. Those preparing to brave the weather outside
add tule leggings, woven tule sandals stuffed with dry grass, a
K mantle of skin or fiber, and fur mittens. Their hair is dressed in
M 302 braids, that of the men wrapped in the new fashion with strips
301 of otter fur. Both sexes wear necklaces of shells or stone beads,
ear pendants, and a dentalium shell thrust through the septum
K of the nose. Many have a flattened brow, cultivated in infancy
M upon the cradleboard; and several have designs on the face,
304 limbs, and body tattooed according to no particular pattern by
[142] rubbing charcoal into incisions or punctuations. The latter prac-
[177] tice, says Ray, was a recent importation from the Shasta and Pit
River neighbors of the Modoc.

K Morning in the winter village comes early for the older boys.
M Before sunup they are prodded out of bed by a father or grand-
512 father and sent for a roll in the snow, a plunge in the frigid black
[857] waters of the stream, and a run upon its banks. By the time the
sun climbs above the snow-laden trees, women have begun to
stir, arranging their hair, raking up the fire, lifting a baby on its
K cradleboard to nurse. In the cooking lodge, others are heating the
M [252] stones that, dropped into a basket of mush, will soon cause it
[415] to boil. The watertight cooking baskets are treasured, for they
[177] have come in trade or as loot from peoples to the south. Families

> cause he knew how to make the house and handle the saw and hammer. . . . I was glad because I could stay in a wood house and not a wikiup. Our rough house was wood all around and the roof was a regular roof. The roof was rough and tough. We had just one room. On one end of the house we had a stove. . . . [My mother] had a friend come over and help her cook on the stove. . . . We had tule mats in there because we couldn't get beds or other furniture. We had cracks all around. I was glad and rolled around on the mats. We didn't have two families in this home like in the wikiup. Just my family."

• [592]

As families began to cultivate individual farms, to fence their land, and to erect barns and other outbuildings, some homes began to approach in quality those of the white farmers in the surrounding region. And, as they did, the Indian houses came to reflect a widening span between persons in standard of living.

[Klamath Reservation]

K

circumscribed. Because the step involved a wholesale commitment, 657*
those bold enough to marry whites, as already noted, 648*
tended to pass out of reservation society. One or two women in 562
the early days sought to demonstrate they they could support 177
themselves as well as men were capable of doing, but they were 178
clearly exceptional.[18] K

Confronted by shifting social values, tribesmen on the reservation 657*
still could take assurance from a value acknowledged both 648*
by the whites and by their traditional culture. The high prestige 556
assigned to industry and to its material manifestation, wealth, 181
proved a common denominator upon which to rank the ability of 178
men engaged in new activities. In the new day, Plains garments, K
horses, and slaves were outmoded, and were replaced by a house [177]
and outbuildings, a fenced farm or ranch, wagons and buggies,
and plenty of livestock. K

Within this context, the family also changed as movements 657*
within the reservation, the construction of smaller frame dwellings, 648*
and the cultivation of individual farms reduced household 592 •
size to approximately that of a single conjugal family. Some idea 177
of the shift may be gained by comparing subsistence rolls from 178
the administration of Lindsay Applegate[19] with data from the K
end of the period. A summary of issues made in 1872-73 to heads 657*
of families of Klamath, Modoc, and Yahuskin Snakes lists 54 648*
families totaling 658 persons. The majority were from Klamath 592
Marsh, with some from Link River and Sprague River bands and 162
several Modoc. One is possibly Paiute. The other two pages K M
duplicate some of the individuals, listing Schonchin's band of 657
Modoc, some eight "houses" comprising 97 individuals; Ocheho's 648
band of Warner Valley Paiute, 17 "houses" and 161 persons; 592
Chocktoot's band of Paiute, 13 "houses" and 113 persons; and 162
the Sprague River band of Monchnkasgitk, 8 "houses" and 97
individuals. A tally made in 1866 by one Jackson Jones (Link
River Jack ?), "Chief of Ulalona," lists for the Link River band
22 men, 18 boys, 42 women, and 20 girls in five houses.[20]

An analysis of these three lists reveals interesting facts about K
the contemporary social groupings. Where the two censuses overlap, 657*
there is overall agreement, although the figures for individual 648*
households differ slightly. For the census of the Klamath at 592
large, the average household size is approximately 12 persons, 162

*657 and this corresponds fairly closely with averages from the listing
*648 of Upper End bands. Only the Link River tally is aberrant, with
592 an average of about 20, far above the figure to be obtained from
162 those Link River households included in the census of the tribe at
large. Since the tally was made in September, it may reflect the
open living conditions of that season.[21]

Household size ranges from 27 persons down to 2, the latter
*657 figure for the household of a widow. Households of known chiefs
*648 —taking as criterion a signatory to the treaty of 1864—are well
592 above the average, ranging generally between 22 and 15, with
622 only those of the Modoc, Schonchin, and the Paiute, Ocheho,[22]
162 falling below. However, as will be seen, chiefly households were
not the largest in absolute figures: those of some of their followers
exceeded them. The large households indicated here
[178] point to the continued presence of the extended family as a
residential group.

*657 By contrast, the census of Slabtown, a small settlement near the
*648 Agency occupied primarily by Agency employees in 1901, shows
592 13 households comprising house head, wife, and from three
162 children down to none, with an average of 1.4. In one family a
girl past school age, and in another a grown son, were among
the children. In addition to those children at home, the families
had others in school, in the same numerical range and with the
same average. The total family size ranged from 2 to 8, with an
average of 4.7. Because some of the family heads, perhaps all,
were young at this time, family size may thus have been somewhat
skewed.[23] Nonetheless, the contrast of these households
comprising conjugal families with those occupied by extended
families forty years earlier clearly demonstrates the residential
fractionation of the larger units.

*657 A seasonal mobility still characterized the Klamath family.
*648 Nickerson mentioned in 1884 that the heads of reservation families—from
166 one-half to two-thirds of the men—had been away for
the last four months, and added, "They generally take their
families with them on such occasions."[24] Similarly, in a predecessor
of Slabtown, over fifty families engaged in hauling logs on
sleds to the sawmill camped in tents in January to be near their
work.[25]

000 Of all the societal relationships, the government sought directly

The depression and the subsequent loss of mills through fire 648*
and economic distress stripped Chiloquin temporarily of many 657*
of her specialized services. By the time she had emerged from 184
the slump a decade after World War II, improved communica- 361
tions had enabled Klamath Falls, twenty times as large and only thirty miles away, to supplant Chiloquin in many functions which had previously been discharged locally. Nonetheless, in the course of recovery some services were regained. With an institutional complexity that far transcended that of Beatty, Chiloquin, an enclave of the state of Oregon within the federal jurisdiction of the reservation, offered tribal residents a foretaste of the life that lay beyond reservation boundaries. In 1958 more than thirty per cent of the entire tribal membership had mailing addresses there.

In examining the households of Beatty and Chiloquin, re- 648*
spectively 31 and 297 in number, it is convenient to distinguish 657*
two categories among those including tribal members. That 621
designated Interethnic is headed by a tribal member married to 184
a partner of another ethnic group, white, Mexican, alien Indian, 563
or other. The second, in which both partners are tribal members, 592
will be designated Tribal. The term Klamath will subsume both. [162]

Klamath households in the rural community of Beatty in 1959 comprised well over eighty per cent of the community, the remaining households being largely white. By contrast, in Chiloquin (1949-50) white households were twice the Beatty percentage; while Klamath households amounted only to little over half the population. The remaining ten per cent was made up of other minorities, Mexican, Negro, and Indian. Within the next decade continuing trends in Chiloquin increased the disparity, as white households gained at the expense of all other components.

The figures for Interethnic marriages harmonize with this picture of white preponderance in the larger community. When the total marital record is considered, including successive mates, it is seen that unions with whites comprise only slightly more than one-fifth of the total for reservation members, almost one-third for the Chiloquin segment, and well over three-quarters for a small sample of off-reservation Klamath.[10] Among the Interethnic households of Beatty, the non-Klamath partner was more frequently Indian than white, while in Chiloquin he was

*648
*657
184
621
563
• 592

generally white. When it is considered that in American society the husband maintains significant external relationships,[11] it seems significant that in both Chiloquin and Beatty in some three-fourths of the Interethnic households the husband was an outsider and the wife a Klamath.

ECONOMIC LIFE

*648
*657
621
434
464
162

From an economic standpoint, tribal members occupied a subsidiary position in reservation communities. Their participation in productive activities as a whole was small. In 1958, a sample of the reservation population showed the following economic profile: presently engaged in business or ranching, eighteen per cent; previous record of such experience, eleven per cent; no such experience, forty-eight per cent; no data, twenty-three per cent. The figures for those resident in Chiloquin showed, if anything, a lesser degree of direct participation. Available records on a small absentee sample (but one with a higher proportion of women) do not reveal a higher degree of economic experience. The figures are: presently engaged in business or ranching, seven per cent; previous record of such experience, twenty-one per cent; no such experience, seventy per cent; no data, two per cent.

*648
*657
434
454

The record of scanty business experience is in large measure a consequence of the steady flow of income from tribal timber. In 1950, the $800 per capita payments enabled a Klamath family of four to exceed the median income for all families in the county. Since they could also hunt and fish throughout the year, and many families did, their actual income was considerably higher. There was thus little incentive to work to supplement timber revenues. The Meriam committee, to be sure, had observed years before, in the course of their comprehensive study of Indian administration, that the Klamath per capitas were too small for investment and thus tended to be disbursed for current living expenses;[12] but it is also true that, lacking investment experience, tribal members who realized substantial sum from the sale of allotments too often treated them as windfalls to be squandered, rather than as capital capable of bringing further financial returns.

000 Comparison with the record of white performances places the

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

Within the
*648 reticulation of familial roles, the traditionally
*657 esteemed attributes had lost place. Age was no longer accorded
561 respect, for the wisdom of experience seemed irrelevant under
593 the new conditions, and in the environing society the emphasis
577 was upon youthful qualities. The premium upon industry as an
434 ideal for old and young alike had become submerged by the
178 golden flow of per capitas which rewarded equally the wastrel
177 and the unremitting toiler. Remarked one man wryly, "I can
make more money raising Klamath than I can raising cattle."[2]
Under these changes, paternal authority had declined sharply.
"Why should I listen to you?" demanded one adolescent son of
his father. "I've got just as much money saved up [in a compulsory trust fund] as you have!"

*648 By contrast, the status of the mother within the household
*657 had been enhanced. Housekeeping and child rearing constituted
562 concrete activities that possessed a high measure of continuity
434 with the past, of a type normally respected in her counterpart
177 in white society. Access to her own per capitas had raised the
178 economic standing of a wife to a par with that of her husband.
[623] The relative changes in local roles, together with the passage
of woman's suffrage in the nation at large, had become reflected
in the increasing prominence of women in the debates of the
General Council.

*648 The major point of contrast between white and tribal house-
*657 holds on the reservation was the relatively greater fluidity among
563 the Klamath, as reflected in the record of sequent marriages,
58 the figures for common-law unions, and the broken families. In
this respect, Beatty did not differ significantly from Chiloquin.
Interethnic marriages—those between a Klamath and a nontribal
partner—were more stable than those contracted between tribal
members.

*648 Household composition makes it clear that the traditional
*657 valuation of kin had by no means been entirely relinquished.
• 592 In a number of instances, Klamath, particularly women, had
587 taken in the children of collateral kin. Remarriage produced
[178] composite families, in which the couple reared not only their
own children but the offspring of previous unions of one or both
partners.

*648 Consequently, Klamath households exhibited a diversity of
*657 form, size, and composition, frequently characterized as well by
592
593

a weak differentiation of parental roles and the extension of 648*
surrogacy to grandparents or other kinsmen. In many instances, 657*
the father was either absent or aloof, and the chief burden of 592
child rearing fell upon the mother, who might shift it for several 593
hours or longer upon the slender shoulders of an older child. Among such families, parents often proved unpredictable, their excesses of affection and indulgence alternating with fits of anger, depression, and withdrawal. Rather than being consistently directed toward a program of training, parental behavior tended to be a response to a mood or an isolated element in the immediate situation. Even the admonitions of the elders, the traditional set speeches enjoining ideal behavior, frequently were made without reference to the immediate conduct of the child.

In children, this experience tended to generate a defensive 648*
isolation, a dependent craving which anticipated rebuff, and a 657*
marked hypersensitivity toward others concealed beneath an 592
outward manner of stoic indifference. One probable outcome 593
of childhood exposure such as this was the "guarded restraint" 155
which Clifton discerns as a marked characteristic of Klamath personality, an attribute which, it appears, lessens in severity only in old age.[3]

If there were few fixed and dependable social relationships 648* 657*
in many Klamath families, there likewise was little predictability 592
in daily routine. As Pierce notes, meals were rarely served at 593
fixed times or attended by the entire family. Instead, individuals [264]
ate when hungry. Children rarely had regular chores or bedtime.[4] [857]

It was in the training of children to become functioning members 648*
of society that the tribal families faced a central test of their 657*
effectiveness. Although it was not clear to what segment of that 592
society the children were to aspire, their elders were in agreement 593
in wishing well for them. Tribal orators, challenged upon 858
their personal aims, could disavow self-interest and strike a resonant chord by asserting that they were acting only for the good of their grandchildren. Adults, however dissatisfied they might be with their own achievement, might still hope to see a transcendent future for their sons and daughters. In the school, with its promise of equal opportunity to advance through merit, American society held out the means to implement that hope.

All too frequently, however, childhood experience in the 000

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

All too frequently, however, childhood experience in the
*648 event-centered activities of Klamath households, with their
*657 diffusely focused social expectations, clashed with school routine.
871 For many young Klamath, coming from such a background,
563 exposure to a clear-cut, hierarchial system which they entered
[155] from the bottom and to a sustained discipline proved stressful.
• [592] The conflict between family subculture and that represented by the middle-class teachers, felt as well by white children, was experienced more sharply by the Klamath, not alone because the disparity was often objectively greater in their case, but because it came to be invested with ethnic judgments.

That tribal parents differed from white parents in educational background and intellectual interests is evident; and the differences upon the reservation have tended to persist despite the fact that the Klamath have long been subjected, like whites, to compulsory education and that since 1926 they have attended county schools. A comparison of a small sample of tribal members in Chiloquin with other segments of the population revealed that no fewer than fifty-two per cent of Tribal house heads and thirty-nine per cent of Interethnic house heads had stopped their education at grade school. For white house heads, the corresponding figure was only twenty-two per cent.[5] In the use of the public library, a branch of the county system lodged in Chiloquin's city hall, the figures for adults show white, Interethnic, and Indian users far outstripping the Tribal; and while among the children Interethnic users fell close to the Tribal figure, the latter still lagged behind all others. With a few individual exceptions, data on the periodicals taken in the home and attendance at concerts in Klamath Falls showed a corresponding gap.

*648 Thus the school experience marked a grave discontinuity in
*657 the life of many tribal families, and particularly among those
871 in which both parents were Klamath. The stresses mounted,
155 however, in the transitional years of junior high school, during the seventh and eighth grades. The reasons are not far to seek. The schools, viewed by whites, Indians, and a minority of tribal members as an objective preparation for a life in which the demands for training were ever mounting, offered little incentive to children who were convinced that a ceaseless flow of per capita dividends gave them an assured income for life. Klamath parents

221 the warmth of the winter dwelling. There are
[592] usually two or three related families sharing a
single winter house; and evenings are spent in
[517] playing games, telling stories, or gossiping, as
well as in making baskets and manufacturing fish
[857] nets. Small children are not allowed outdoors
in the cold, but older ones go out some days to
slide on the ice or downhill on pieces of bark.

[524] Cat's cradle is a popular pastime engaged
in by both adults and children in the winter. The number of possible figures is great. Coyote, Skunk, Bear, Bullfrog's Tail, Owl's Eyes, Sunrise, Boy Running, and Man Chasing a Rabbit are but a few of the many that most individuals can make. Children learn how to make the figures from adults or from older children. However, if the children play at cat's cradle very often, the string is taken away with the comment, "You'll stretch the months if you do that so much." There is apparently no such restriction on adults.

In one version of string figures an adult fixes a loop in the string. A child is told to put his finger through the loop, which is then pulled tight around the finger; and he must tell his name before he can be released.

538 Every night throughout the winter months
[221] myths are told. They are never told in the summer or daytime lest the narrator age quickly. Most myths serve for amusement, not being regarded as especially sacred. Stories about Creator are taken somewhat more seriously than others. "You have to keep quiet and listen to them." It is from the Creator myths that children first learn about sacred beings.

There are many stories explaining the origin of local geographic features. Most of the myths have personified animal characters. There are a few tales that offer advice to the children. After stories about hunting or gathering, the teller may turn to the children and say, "If you want to be a good man (or woman), do like that."

In contrast to many other tribes there is very little formality connected with the telling of myths among the Klamath. In the evening an old man or woman starts to tell stories, and others gather around. Young adults never tell them because a storyteller begins to age rapidly. The children lie down to listen; they may request their favorites and are free to complain that the narrator is not telling the story right, if they do not like his particular version. A few old people are recognized as the best raconteurs.

Adults also listen to the stories and make requests. Certain characters are especially liked; and children often ask for tales about Little Weasel, Chipmunk, Coyote, and Skunk. Skunk is funny because he thinks himself very clever, but all his undertakings are fiascos. After a Skunk story, children are warned, "Don't be like that." A few stories, such as those about Owl, are told to frighten children into behaving. As the evening wears on, the children fall asleep one by one. Indeed, one of the main

581 Probably one-third of all Klamath women have
[848] borne at least one child out of wedlock. At the same time, there is considerable
out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177] style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
[177] extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, *de facto* groupings
rather than *de jure*. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594] tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
industrious and to the most delinquent. Controls over the expenditure of
434 children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are ex- 621
clusively White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office out- [575]
side the tribal structure, and although a high percentage have registered, very [194]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are fre-
quently tax exempt, as have been their per capita payments. Simultaneously, [651]
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chilo-
quin during a typical year arrests of tribal members amounted to 70 percent of [674]
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a recon- 648
stituted "Klamath Tribe," with a corporate structure and assets to be adminis- 657
tered by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal super-
vision has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual 619
Klamath have shown an equally noncommittal relationship to tribal affairs. Atten-
dance at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but
dirty joke, that one may hear the Klamath language used; but it is used as a [191]
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592•
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

Fidel: Male, Age 19

Background Data

*159
156 Fidel's case is that of a young man in the process of separating himself from
his family, yet without any clear sense of where he wants to go. He has never
[461] worked at any job, although he quit school in the 10th grade, when he was sixteen.
Except for 8 months residence in the San Francisco area with his family, and five
[871] school years spent in a Catholic boarding school, he has never lived away from
the reservation. He is the third eldest of six children. He presently lives at
[592] home, if the household which contains himself, his parents, and his younger sib-
[434] lings may be called that. As an unmarried minor approaching maturity, his tribal
income is administered by a trust officer who allocates to Fidel $110.00 monthly
[657] for spending money. Additionally, Fidel sends bills for various expenses to the
bank, which pays them. These arrangements have been in force for three years.

[733] Fidel's mother is a somewhat confused, defeated, semi-alcoholic who is very
reserved when sober and gay and promiscuous when drunk. His father is a Skagit
[582] Indian who has for years been steadily employed as a cat skinner for a logging
[648] company, which work keeps him away from home for months at a time. During the
logging slack season, his father is only occasionally at home. He is usually
[221] away hunting or fishing. When he is at home he is frequently drunk, and when
drunk characteristically assaults his wife and berates his children. The father
does not contribute to the income, the up-keep, or the conduct of household
[593] affairs. In recent years Fidel has defended his mother and the children from his
father, on several occasions has driven him from the house, and on one occasion
knocked him cold with a rifle butt. There is some doubt as to whether this per-
[848] son is actually Fidel's father, the doubt being due to his mother's promiscuity,
which is of long standing, and to Fidel's almost total rejection of him. Fidel's
*159 relations with his father illustrate his marked and extensive ambivalence towards
156 most personal relationships. He will call him or refer to him as "father" or
593 "dad" and in the next breath "uncle," at one moment praise his skill at hunting,
and the next deride him. Fidel cannot fully accept any relationship; he exhibits
the same ambivalence towards his mother, his siblings, his closest friends, girls,
and so on. Moreover, Fidel cannot undertake any course of action without doubt
and reservations. He can neither love nor hate fully.

Fidel's family life is marked by a complete lack of cohesion, cooperation, common
[421] activity, and common property. The major shared sentiment is an indifference to
one another. Each member occupies a part of the house where he keeps his be-
longings, and these are rarely shared. For example, Clifton once needed a rifle
for a hunting trip. It was borrowed directly from the father; Fidel could not
borrow it for him. A major source of difficulty is intra-family theft, which
engenders violent reactions. The mother is psychologically divorced from the
father, and strongly oriented towards her eldest, married daughter with whom
she spends much time.

*159 Fidel thinks of himself as a guide and skillful hunter, insofar as he thinks
156 of himself as anything. On several occasions he has been in trouble with the
law, usually for drag racing or drinking when a minor. He spends his time
[673] loafing about, watching TV, playing pool, fishing, hunting, visiting with his
buddies, and sleeping. He is seldom in bed before 1 AM, and equally seldom
[512] awake before two or three PM. His main ambition is to get out of the area, away
from his family, and off by himself. He has thought about studying art, which
may result from an identification with a friend who is doing so.

Weasel: Male, Age 29

Background Data

In contrast to all other subjects Weasel's role in the reservation community 159*
is a totally negative, destructive one, largely that of a supposedly vicious [156]
criminal. He was born and raised on an economically un-productive ranch, which
for twenty years or more has been the location of continuous drinking parties.
Weasel was raised within a circle of a pack of older brothers, half-brothers, [593]
and step brothers, all of whom were bigger, stronger, and more capable than he. [733]
His father has been an alcoholic for thirty years and has rarely worked or con-
tributed much to the organization of the family, which as a co-residential [592]•
household usually included more than a dozen persons. In all, Weasel had 17
full and part siblings, half of whom are now deceased, three directly as a re- [165]
sult of drinking, three from acts of violence or car accidents.

Weasel's formal education ceased when he was 15, in the ninth grade, at which [871]
time he was arrested on a burglary charge. Since then he has spent six years
in reformatories or penal institutions. He was tested while in jail on an [674]
assault charge. Shortly thereafter he was found not-guilty, then re-arrested [697]
and sentenced on a different assault with a deadly weapon charge to three years
in the state penitentiary.

Weasel has repeatedly moved out of the circle of the family group, only to
fail "outside" and return to its sheltering arms. For a time Weasel was a [542]
professional boxer, but one without much skill or stamina. He never won a fight
and his face shows the evidence of the capabilities of his opponents. His
membership in this profession did not last long, and Weasel states, rather
proudly, that the Boxing Commission expelled him "For conduct unbecoming a
professional boxer." Weasel was once married (a common-law marriage, which [588]
for Weasel's primary reference groups is well sanctioned) but this lasted just
16 weeks. During this period Weasel stayed sober, the longest time he has spent [581]
without a drink since the age of 12. Weasel was consciously trying to reform [733]
himself, but now feels that he was a fool to ever try. Additionally, Weasel
has repeatedly made a circuit of nearby towns and cities either singly or in [156]
the company of a brother or friend. These visitations have more of the charac- [579]
ter of raids than anything else, and Weasel is usually arrested in one or a-
nother place and either charged or shipped out of town. [697]

In addition to being a minor criminal Weasel is frequently also the scapegoat 159*
for the aggressions of stronger men than he. He constantly asks for trouble, 156
but has never given any evidence that he can back of his threats with appro-
priate force. His successful acts of aggression have always been sneak attacks, [186]
or attacks on feeble old men or young boys. He seldom attempts to avoid the consequences of these actions, and, indeed, is frequently not able to do so, because of his extreme drunken condition. He seems to obtain some gratification from the minor prestige afforded his performances in these roles, but this gratification is highly personalized and is not recognized as appropriate by others. It may be that he has been attempting to build up his standing and reputation within his own circle by acting out the role of a "dangerous Indian," but it would seem that he has been singularly unsuccessful in this. One aspect of this behavior is his reputed skill with a knife. On two occasions he wanted to obtain vocational training, once as a barber, the other time as a butcher, both times implying that this would be a simple extension of his native talent.

585 593 After a month of marriage the couple visits the bride's former home, accompanied by the groom's relatives, for a further exchange of gifts. Soon after this, the girl's father and his family reciprocate. Beyond this it is a matter of mutual solicitude; undoubtedly the visits grow less frequent as the passing years bring diverging interests. Later visits are of some duration, the couple even staying through the winter.

591 Marriage is normally patrilocal, but if a man is poor, or has no close relatives, he may take up residence with his wife's people. When a young wife is about to have her first child the couple return to her mother to stay until she is strong again. This must be the circumstance of temporary matrilocal residence as it ordinarily occurs elsewhere. First marriages among primitive peoples usually follow closely on a girl's nubility. The need for advice and care during this trying period of pregnancy and delivery, the natural solicitude of the mother, are surely the reasons for the frequency with which residence is temporarily matrilocal. It will be observed that this is formally prescribed as the proper procedure almost solely in cases of first marriage. There is no need to search for a more esoteric reason such as the older writers had, matrilinear grouping, maternal authority, and the demand that the young husband prove himself to the wife's family. Among the Klamath this is the rule only on the birth of a first child.

591 593 601 A series of terms describes the facts of residence. A man and his wife in matrilocal residence are non-vocatively wuko'bŏks and sḳa'bŏks respectively.[69] A woman with her husband's people is t!e'niwas.[70] On separation a woman who returns to her former home is ko'stbŏmbli, a man returning to his, wuko'tbŏmbli.

601 606 I was told at least that a child's spouse is treated like an own child, that parent and child terms are used between them for there are no parent-in-law taboos. This is the usage of intimacy; there are specific terms for parents-in-law. There is the familiar Indian usage of a term between the parents of a couple, "my child's parent-in-law."

582 Marriages occur any time during the year. There is no evidence suggesting their greater frequency during any season, nor any mating period[71]

---

[69] The latter term was given me at another time as meaning a newly married woman (probably the form sḳa'bŏkak was intended). This comes to the same thing. These two words apparently correspond to Gifford's wapake and kapake, earlier and later co-wife (Californian Kinship Terminologies, 42). Gifford's record is doubtless due to a misunderstanding; I enquired about these words and found that there are no terms for particular co-wives.

[70] Gatschet (2:698) gives teina, a young woman. The meanings are not incompatible but I believe mine to be correct.

[71] As among the Yurok (Kroeber, Handbook, 44).

fested by several tribes of northern California and in view of their 845 association with the weather and salmon on the Northwest coast. [171]* Neither of these attitudes appears among the Klamath. Nor is there any sympathetic bond between twins, nor is one of them destroyed at birth. Informants had never heard of triplets although they must occur in the usual biological proportions. Monsters are said always [766] to be born dead—perhaps the midwives see to that. Like the stillborn, they are said to receive the universal cremation, but it is more likely that they are secretly disposed of, like abortions.

847 The child of an adulterous union, if not palmed off on the husband, is aborted by pressing the abdomen heavily on a rock. Naturally this takes place in the seclusion of the brush. No medicines are in use for abortion. To abort is called hlso'ḳoga; infanticide, siu'ga.

842 How much of a disgrace barrenness is I do not know, but it does not lead to separation. To aid conception women grind a white shell[80] (lŏ'ḳtās) and drink it in water. Men do the same for impotence. A small dentalium shell (t'u'tas) is also used.

854 Klamath cradles show an interesting cultural amalgamation. The cradle for the newborn is the northern California sitting type; the carrying board for later use is identical with the oval wooden forms of the northern Basin.[81] Through western Oregon and Washington, along the line of contact of the Basin board with the wooden trough cradle of the Northwest Coast, both forms are used or else a modification of one toward the form of the other.

The basketry cradle (ḳwāls) for the first month or two of the baby's life is a trough with one rounded end on which the child sits. It [593] • is made by the mother of the expectant woman; woven of willow twigs, it measures eighteen inches in length. Its purpose is said to be to prevent the infant scratching its navel, with consequent illness, and to support its weak back. Its usefulness ended, it is thrown away.

The carrying board (swĕns) is made by the baby's father or a near kinsman. It is a flat board of oval outline, carved from a single piece of wood. The lower end is rather pointed so that it can be stuck into the ground while the mother is occupied. An unexpected feature is [562] that the sex of the infant is distinguishable from the shape of the

---

[80] This is flat, two inches long, and spotted. It may have been got from the whites.

[81] Barrett has it that the first cradle is of soft tules, followed by the sitting type of more rigid materials, with occasional use of the board (Material Culture, 257, pl. 14).

601 I have few data on kinship usages. A child's spouse is treated like an own child and freely called son or daughter. Reciprocally, parents-in-law are often addressed by parent terms. The spouses of grandchildren and of nephews and nieces are not related, nor are step-brothers and sisters. There is no joking relation.

593 The close bond between siblings and their families is attested by the opening of a tale:

> [539] Wiwi'aak had five fathers, who were the five sons of Wile'aḳaḳ. That is, one was his father, but the others were fathers because they were father's brothers. . . . .

PUBERTY AND MENSTRUAL CUSTOMS

881 [554] The puberty dance is held only for the daughters of chiefs and others of wealth. For a poor man's daughter the rites are curtailed to the most necessary observances. The celebration serves as an announcement of nubility: girls marry within a year or so of their dance.

881 535 The dance (yo'ḳ'ɛla) occupies five nights at the first menstruation and is repeated at the four subsequent periods. It seems doubtful that any but the socially pretentious carry out full five celebrations. During the day the girl goes alone to sleep in the brush at some distance, returning for the dance just before sundown. I am not certain that she then seeks supernatural power. At least the girl does not run about piling up rocks in lonely places as boys do.

The dancing may take place in the lodge or outside, perhaps according to the season. It is simple enough; the girl trots forward and backward in the same course facing the east all the while. She is supported on each side by a man or woman whose arms are linked in hers. As they tire others take their places but the girl must keep on throughout the night. These others are young or old, relatives or otherwise, as convenience dictates.

881 533 The singing is provided by a group of men and women who alone know the appropriate songs. These singers are in demand for every dance. They are paid by the girl's relatives, a horse apiece, a blanket for each man, a half-fathom of beads for the women, or an equivalent. Some are provided with rattles, poles to the upper ends of which bunches of dew claws are fastened, the butts of which they pound on the ground. At least the song leader has one; other informants spoke of two or three, of five men and five women, or of rattles for all.

900 that woman; he acts just like a boss toward her."

3975. WT: Also, in Upper Trinity subarea of Wintu, informant had heard of 1 instance of mother-in-law killing daughter-in-law after husband died. "The mother-in-law didn't want that woman to take another husband, so she killed her with a bone needle [dagger?]. She was sorry after she did it; but she didn't like the woman having another husband who would look just like her son; it would make her [mother-in-law] feel badly."

[587] 3976. In case there is no brother-in-law to ask.

3977. If there is no brother-in-law to receive the payment. AW: Sister-in-law may dispose of widow to more-distant male relative of dead husband also.

3980. SW: A divorce "puts a man and woman clear away from each other"; no payment rendered former husband.

562
587
593 3981. Kl: If man does not like his wife for some reason, he announces, "Anyone who wants my wife can take her, if they give me something. If you people don't want her, I'll kill her." The men discuss it; husband repeats the announcement, sets date when he will kill woman; some man finally takes her for wife, gives the husband something; "that's how they save a woman, sometimes." No one knows what trouble between husband and wife prompts man to do this, and man never tells; he doesn't beat his wife, he just sells her. Only done occasionally; when informant was boy such sales still taking place; informant had seen one couple separated this way. Woman not captive.

000 Intercourse; promiscuity.--

3984. NF: Girl cries, fights husband, so girl's mother sleeps beside girl first night latter sleeps with husband.

3985. NF: Do not allow people to sleep lying on back "like dead people"; lie on side and "put their heart in hiding" so no evil will befall sleepers.

[152]
[192] 3987. Purse lips and make sound, "čk, čk," repeatedly, close to baby's face. AW: Rub hands over baby's face or neck while making sound; same done between adults. AE: "Learned to make this sound from animals--badger, raccoon."

3988. SE: No virginity tests, but observe boy's actions around girls. AE: If girl's, boy's legs get "heavy" (tired) during girl's puberty dance, sign he or she is not virgin. Spectators watch to see whether this happens. WT: Can tell whether girl is virgin or not by shape of her abdomen, if firm, smooth, judge she is.

[548]
[178] 3989. Kl: Prostitution with payment recent custom only.

3990. WM: Especially at girl's puberty dance.

836 3991. Kl: Said to have been extremely rare; "girls never ran around; pretty hard to get a woman." Girl's parents wanted girl to marry man who could get her lots of fish, so she would eat

[Klamath Reservation]

At the
center of concentric circles of concern stands
K the natal family.[16] In the myths, parents and offspring and
M siblings are bound by the strongest affective bonds: in trouble
593 they provide succor and in death, revenge. The obligation tran-
602 scends abstract ethical considerations. In real life, mutual re-
sponsibility reaches out to embrace the extended family, the
close consanguineal kindred linked through two or three genera-
K M tions. Although kinship terminology acknowledges equally re-
[601] lationships on the maternal and paternal sides, residence practices
[591] in general favor the latter. From close kinsmen on both sides
come the gifts that set the seal of approval upon the marriage of
a member; during his lifetime they share food with him in his
need, support him in his quarrels, and assist his avenger should
he be slain. At his funeral, it is they, together with friends of the
deceased, who are expected to place valuables upon the funeral
pyre.

K Beyond the sphere of immediate kindred and of friends lies
M the domain of neighbors and remote relatives. If more central
602 obligations tend to be principally a function of consanguinity,
621 and thus to be ascriptive in character, village relationships and
571 those outside are more frequently based upon performance.
K M Here enter those standards of behavior by which a person of
[577] good family may be confirmed in position, the poor but worthy
rise, and the ne'er-do-well sink in the public view. At the head
K of this loose and shifting status scale stand the shamans and
M other influential men, the leaders of hamlet groups. On occasion
756 they may meet in an informal village council to concert decisions.
622 621 Yet the village, which in its spatial limits often blends with
554 adjacent settlements and which dissolves with the turn of the
seasons, can exert little constraint upon its members.

K The prestige of the leaders, the force of public opinion, and
M checks imposed by rival village interests hold the unruly in line.
62 The principle of self-help and the responsibility of kinsmen may
enlarge grievances to feuds if the differences are not soon ended,
and thus threaten the very being of the community. To counter
such fissive tendencies, leaders mediate disputes and exhort to
their fellow villagers the need to maintain harmony.

K Time may alter the membership of villages. Men frequently
M seek wives in other communities; and there is considerable inter-
621 563 marriage between Klamath and Modoc and Klamath and Molala,
582

*657 The removal of property interests in the marriage on the part
*648 of the natal families of the couple, together with the general
581 upheaval of society, brought to the fore the practice of common-
588 law marriage, previously an unusual form of union. In time, such
177 a marriage, if generally acknowledged as stable, was officially
178 termed an "Indian custom" marriage, and recognized by authorities and Indians alike. Many unions, however, were unstable, and genealogies reveal that then as now it was common to find individuals who had had as many as three mates. Indeed, the woman previously mentioned as refusing to marry her husband's brother subsequently consorted informally with her ranch foreman.

*657 Thus by the end of the period of its firmest control, the gov-
*648 ernment had altered the family in form to correspond to that
177 idealized in American society. It had done away with the special
• 593 status of slaves. Children were removed from the physical cus-
[567] tody of their parents and sent away to school, to be returned as adolescents at odds with the ways of their parents. These were individual measures, not calculated for their total impact. The approach to social, as to other aspects of change, was predicated upon the individual and upon the conjugal family. It failed to envisage the need to create bodies that would give strength and continuity to a reservation community.

[Klamath Reservation]

Within the
*648 reticulation of familial roles, the traditionally
*657 esteemed attributes had lost place. Age was no longer accorded
561 respect, for the wisdom of experience seemed irrelevant under
• 593 the new conditions, and in the environing society the emphasis
577 was upon youthful qualities. The premium upon industry as an
434 ideal for old and young alike had become submerged by the
178 golden flow of per capitas which rewarded equally the wastrel
177 and the unremitting toiler. Remarked one man wryly, "I can make more money raising Klamath than I can raising cattle."[2] Under these changes, paternal authority had declined sharply. "Why should I listen to you?" demanded one adolescent son of his father. "I've got just as much money saved up [in a compulsory trust fund] as you have!"

*648 By contrast, the status of the mother within the household
*657 had been enhanced. Housekeeping and child rearing constituted
562 concrete activities that possessed a high measure of continuity
434 with the past, of a type normally respected in her counterpart
177 in white society. Access to her own per capitas had raised the
178 economic standing of a wife to a par with that of her husband.
[623] The relative changes in local roles, together with the passage of woman's suffrage in the nation at large, had become reflected in the increasing prominence of women in the debates of the General Council.

*648 The major point of contrast between white and tribal house-
*657 holds on the reservation was the relatively greater fluidity among
563 the Klamath, as reflected in the record of sequent marriages,
58 the figures for common-law unions, and the broken families. In this respect, Beatty did not differ significantly from Chiloquin. Interethnic marriages—those between a Klamath and a nontribal partner—were more stable than those contracted between tribal members.

*648 Household composition makes it clear that the traditional
*657 valuation of kin had by no means been entirely relinquished.
592 In a number of instances, Klamath, particularly women, had
587 taken in the children of collateral kin. Remarriage produced
[178] composite families, in which the couple reared not only their own children but the offspring of previous unions of one or both partners.

*648 Consequently, Klamath households exhibited a diversity of
*657 form, size, and composition, frequently characterized as well by
592
593

a weak differentiation of parental roles and the extension of 648*
surrogacy to grandparents or other kinsmen. In many instances, 657*
the father was either absent or aloof, and the chief burden of 592
child rearing fell upon the mother, who might shift it for several 593
hours or longer upon the slender shoulders of an older child. Among such families, parents often proved unpredictable, their excesses of affection and indulgence alternating with fits of anger, depression, and withdrawal. Rather than being consistently directed toward a program of training, parental behavior tended to be a response to a mood or an isolated element in the immediate situation. Even the admonitions of the elders, the traditional set speeches enjoining ideal behavior, frequently were made without reference to the immediate conduct of the child.

In children, this experience tended to generate a defensive 648*
isolation, a dependent craving which anticipated rebuff, and a 657*
marked hypersensitivity toward others concealed beneath an 592
outward manner of stoic indifference. One probable outcome 593
of childhood exposure such as this was the "guarded restraint" 155
which Clifton discerns as a marked characteristic of Klamath personality, an attribute which, it appears, lessens in severity only in old age.[3]

If there were few fixed and dependable social relationships 648*
in many Klamath families, there likewise was little predictability 657*
in daily routine. As Pierce notes, meals were rarely served at 592
fixed times or attended by the entire family. Instead, individuals 593
ate when hungry. Children rarely had regular chores or bedtime.[4] [264] [857]

It was in the training of children to become functioning mem- 648*
bers of society that the tribal families faced a central test of their 657*
effectiveness. Although it was not clear to what segment of that 592
society the children were to aspire, their elders were in agree- 593
ment in wishing well for them. Tribal orators, challenged upon 858
their personal aims, could disavow self-interest and strike a resonant chord by asserting that they were acting only for the good of their grandchildren. Adults, however dissatisfied they might be with their own achievement, might still hope to see a transcendent future for their sons and daughters. In the school, with its promise of equal opportunity to advance through merit, American society held out the means to implement that hope.

All too frequently, however, childhood experience in the 000

given the family by neighbors as well as by the impersonal agents 648*
of society, while making little mention of any kinsmen beyond 657*
the immediate, two-generation family. Members of this category, 177
who objectively were least Indian genetically and who manifested 178
the highest measure of intermarriage with whites, were 184
the only ones to introduce racial comments in their responses. 125
This may well be taken as evidence of their sensitivity to a [571]
marginal condition. In treating intrafamilial roles, they saw a [829]
strong paternal figure (lacking in the protocols of the other two [593]
segments), but they viewed his authority as one against which the son repeatedly rebelled. Moreover, contrary to their own superior record of family stability, members of the Conformant category envisaged the marital bond as frequently threatened by feminine interlopers. Here again is an indication that the Conformant families, like the most acculturated among Vogt's Navaho veterans,[28] had achieved their condition only at the cost of gnawing anxiety.

By contrast, both of the remaining TAT segments tended to [602]
stress kinship, for in their protocols a greater reliance is placed upon grandparents and more remote kinsmen, with correspondingly less dependence upon friends, neighbors, or impersonal agents. Indeed, the Inframodal subjects tended to view the
latter with suspicion and outright hostility. In neither segment [593]
was the paternal role seen as prominent; and the mother instead occupied a central position, not disciplining, but strongly supporting her children. Sibling relations, which in the Conformant category had been seen as continuing through life, stood on a lower level among the intermediate subjects, who viewed the bond as existing only in childhood; and were negligible among the Inframodal segment. Similarly, the marital bond appeared to be conceived by Intermediate members as weak, being marked by a succession of casual liaisons, while the Inframodal saw strife between the couple, rather than outside interference, as disrupting the union.

By contrast with Conformant subjects, members of the other
two categories exhibited a far less realistic view of the conditions [829]
making possible achievement, but they did so in different ways. Those of the Intermediate segment seemed to see conformance as a necessary factor for success, although their behavioral record

KLAMATH CHILDHOOD AND EDUCATION [1]

By

MARION PEARSALL

INTRODUCTION

The communication of knowledge from one 121
generation to another is a subtle process in any
culture, and especially so among primitive
groups with no clearly defined and well formulated educational system. Any study of primitive education is, therefore, difficult to demarcate. In its broadest sense, education might
be defined as the formation of manners and
habits by means of instruction, by both physical
and moral discipline. The acquisition of all
attitudes, knowledge, and skills can be included
in education. A thorough investigation would
have to answer the question of where, when, and
how the individual acquires each item of his
adult personality.

Obviously, no complete picture of education
in any primitive group can be drawn after a
single season in the field. The present study
makes no pretense of being definitive. It is
our intent to show the gradual development of
the Klamath child from infancy to adulthood as
he receives physical, religious, and moral
training, as well as instruction in the food
gathering techniques and skilled crafts of his
culture. Undoubtedly many phases of the culture
have been slighted, but we have tried to show in
a general way the type of instruction and encouragement given the maturing child. Klamath 114
ethnography has been well known for years
through the works of Gatschet (1890), Coville
(1898, 1904), Dorsey (1901), Barrett (1910),
Spier (1930), Voegelin (1942), and others. For 128
that reason, the details of language, material

[text continues on top of p. 339-B]

BIRTH AND INFANCY

Parenthood with its attendant responsibilities 581
is not taken lightly by the average Klamath. 593 One gets married for the express purpose
of raising a large family, and the couple with
several strong sons and hardworking daughters is
highly respected in the community. A childless 842
couple, on the other hand, is looked upon with
contempt and pity. Barrenness is sometimes con-

---

[1] The present study is based on data collected for the University of California during a two-month stay on the Klamath Indian reservation in southern Oregon in the summer of 1947. Much of the material presented in this paper was gathered by Mrs. Betty T. Dasey, and the research represents our joint efforts. [122]

[p.340A]

842 hopes to have many sons, but the inevitable is accepted philosophically.

843 The sex of the child is not entirely left to chance, for certain traditional precautions are taken. A man does not cut wood while his wife is pregnant lest she have a girl. He may also hang a tiny bow and arrow in his house to assure the birth of a boy. If a girl is born, the opposite sex may be assured for the next child by turning over the afterbirth.

844 The arrival of the first child is of special significance.
[821] It is said that at this time there will be strong winds and thunder.[2] This
[787] is also a propitious time for a man to seek supernatural power in the mountains. In spite of the great importance attached to the birth of
[593] the first child there is nothing to indicate that he will be shown any favoritism. On the contrary, he will probably learn adult activities at an earlier age than his younger siblings and will be expected to assume a certain amount of responsibility in caring for younger children in the family.

At delivery, a soft pad is arranged to receive the child.[3] The umbilical cord is tied with the mother's hair and cut with an obsidian knife. The cord is buried when it drops off, or sometimes kept and wrapped in a piece of buckskin to be worn around the child's neck for luck. The navel is anointed with squirrel grease to hasten healing. As a general rule the afterbirth is disposed of at once by burial. Occasionally a woman throws the afterbirth away carelessly because she wishes to prevent future pregnancies.

846 The newborn baby is sponged off immediately with water, and the face and body are massaged and molded for the first time to conform to Klamath standards of beauty. He is kept beside the mother in the birth lodge during the four or five days of her seclusion. Once each day during this period the child is held over the heated rocks on which the mother lies, to insure his future health.

The infant is put to the breast a few hours after birth. The mother's nipples are squeezed and a hair worked around in them to start the
853 flow of milk. Thereafter the child is nursed whenever he cries. If the mother is unable to nurse her child, a wet nurse is called--generally a relative, but apparently any neighbor woman will do.

852 In many families presents are brought to the newborn child. A boy receives a tiny bow and arrow or small quiver, a girl a small digging stick or basket. These gifts are later hung from the hood of the child's cradleboard. As the presents are brought, a prayer or blessing is said "to encourage the child." Over a

[2] Spier (1930), p. 55. None of our informants mentioned this.

[14]

[3] The practices surrounding pregnancy, birth, and the care of the mother are described in detail by Spier, pp. 55 ff., and Voegelin (1942), elements 3007-3062.

867 terms for all his relatives, whether he has seen them yet or not. This is considered one of the most important things a child must learn.[8]

With the knowledge of kinship terms the child acquires certain attitudes toward his relatives, although patterns of behavior toward particular kin do not seem to be very clearly
[593] defined among the Klamath. Parents are re-
[603] spected and obeyed, as are grandparents though a
certain amount of indulgence and teasing is to
[604] be expected from the latter. Uncles and aunts
are shown considerable respect. Cousins call
[605] each other by sibling terms; those of opposite
sex play together freely when small but are told
that it is not proper to "play rough" with each other. Even small children learn that marriage between cousins is "a very bad thing," and that children from such an incestuous union will never live.

856 There is some effort to teach the child the names of objects by pointing to them and repeating the word, but he probably acquires more of his vocabulary simply by listening to adult conversation. There is no baby talk or any attempt to simplify words for the children. If the child mispronounces or misuses words, he is laughed at and corrected.

553 Children acquire their personal names in a casual manner at any time from birth to the age of five or six. There is no ceremony connected with naming, and some individuals receive two or three names which may all be in use at the same time. Names are, for the most part, of the nickname variety and refer to some personal mannerism or peculiarity.[9] In addition, some refer to spirits, birds, or animals. Names are given by the parents or other relatives. One person

[text continues on top of p. 342-B]

EARLY CHILDHOOD

857 By the time a child is three he begins to play with other children, parents encouraging group play. Children from all social strata play together. "After all, you can't keep kids apart." Children of chiefs or shamans are no
[848] different from the rest. Illegitimate children are looked down upon by the community as a whole, but they are not segregated from their age-mates.

[865] At first the youngsters are apt to start fights with each other, but the parents are usually on hand to stop rough play. A child who fights all the time brings disgrace to his family and especially to himself. He must play by himself for awhile. "Everyone knows he has been bad; no one likes him." He is ashamed and experiences great remorse when he is told he cannot play with other children.

Three- and four-year-olds find a variety of

[text continues on bottom of p. 342-B]

[8] See Spier, pp. 62-68, for a discussion of the Klamath kinship system.

[9] Naming customs and typical names are given by Spier, pp. 59-61, and Voegelin, elements 3306-3321.

[p.344B]

538 purposes of telling the stories seems to be to keep the children quiet and put them to sleep.

867 Concepts of etiquette and what constitutes a well brought up individual are clearly defined among the Klamath. Standards for proper behavior toward one's own family and toward other members of the tribe are taught at an early age. As soon as the child can understand what is said to him, he receives ethical advice from parents and others. Not only relatives but also other [887] adults may give advice. Elderly people are especially apt to counsel children.

> Old people start giving advice right away whenever they meet you. They tell you to be kind to everyone, don't brag, don't put yourself before anyone, work hard and you'll live a long time and be respected by everybody.

593 867 Either parent may take the responsibility of advising the children, but the father is generally stricter. In the early morning and at night, and "whenever everyone is gathered around and it is quiet" the father exhorts his children to be good and kind and to help others, demanding and receiving the attention of his youngsters for these harangues.

867 858 Since a well mannered child brings some prestige to his family, even a very small one is taught how to conduct himself before visitors; and the highest respect is shown to large families whose children are polite and well behaved.[16]

858 574 Visiting is a favorite pastime, especially in the fall after the winter house has been prepared. When visitors arrive, they are offered something to eat. At this point, the children are sent out to play; for "food will stick in the visitors' gullets if children stay around." Exemplary children learn to disappear without being told whenever visitors arrive.

867 264 Eating involves a few rules of etiquette for the young. Meals are not regular, and all are free to take food when there is any available. Ordinarily the family eats at least two meals a day, in the morning and again in the evening. The whole family eats together, and children are told to wait until the father has said a grace, holding a bit of food or water out toward the mountains, lake, and earth as an offering. If this were not done, the children might become ill.

Immediately afterwards all start eating. There is no particular seating arrangement. Children are required to sit quietly during the meal. "They would choke if they ran around or talked." Children are also told never to walk in front of anyone who is eating--a rule doubly important if the person is a shaman.

869 778 An important part of training consists in developing respectful attitudes toward the many sacred places in Klamath territory. Children

---

[16] See Spier, p. 91, for a few of the Klamath rules of etiquette.

581 Probably one-third of all Klamath women have
[848] borne at least one child out of wedlock. At the same time, there is considerable
out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177] style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
[177] extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, de facto groupings
rather than de jure. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594] tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
industrious and to the most delinquent. Controls over the expenditure of
434 children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

Individuated family relationships and the instability of the marriage tie have 593
other ramifications. Parental care-taking activities are minimal and are sometimes 855
non-existent. Given the pattern of drinking and partying, children are [581]
frequently abandoned to the care of a hired baby-sitter for days at a time, [181]
or to an older relative, or to an elder sibling. If the party occurs in the
household, children may temporarily be moved elsewhere, or they may simply be
left to shift for themselves. Thus at crucial developmental stages children may [603]
find their identification with parents broken by alternating periods of presence [155]
and absence, and their affections given over to an older sister (the picture of
the determined little twelve or thirteen year old "child-nurse" is a clear one)
or to a grandmother. When parents are present, Klamath children are usually
faced not only with minimal care and attention, but with indifference and aloofness.
The father especially is dissociated from significant relationships, and
both he and the mother are frequently given to unpredictable and alternating
fits of love and anger. Thus within the nuclear family, there is little experience [155]
with consistency in role relationships.

Thus the first years of life are spent by the Klamath child in a loosely bonded, [602]
amorphous household group, and he has some lesser, but important ties to other
kin. At age six the Klamath child attends a local public school. Reflecting 872
the incohesiveness of the family group, these children are accustomed to lax, 861
permissive controls of their behavior, and are not accustomed to confronting clear-cut,
specific, over-riding standards of conduct. At the same time they are not [593]
accustomed to maneuvering opposite a single, stable authority figure. Yet [181]
these children are characterized also by a dependent craving for affection and [155]
attention which does, initially, facilitate adjustment to the school milieu.
In contrast, they frequently anticipate rebuff. In later years the latter seems to
be the stronger inter-personal need, and the growing child becomes increasingly [156]
characterized by a kind of defensive isolation from close personal contacts.
This may be adequate training for participation in contemporary Klamath culture,
but it hampers and restricts adaptation to the larger society.

In many respects the values and skills learned within the household to not adequately 155
prepare the child even for school adjustment, with the requirement of 156
regularity and time-mindedness. Similarly, the daily routine within the household [871]
may be such as to impede the child's getting to school on time, or it may
throw the responsibility for attendance on very young children, or it may get
him there unfed and, by school standards, improperly clothed. At the same time
the child may have had recited for him, or he has surely overheard recounted,
the myth of Klamath racial inferiority. Too frequently this belief in inferiority
is assimilated as a segment of the growing child's self system, contributing
in turn to his acceptance of poor performance, to a bitter rebelliousness,
or to a destructive pride. The same experience reinforces the expectation
of rebuff, if this time somewhat more consciously. In fact, in later school [563]
years the Klamath adolescent does meet with informal racial barriers in the [582]
areas of courtship and dating, for the path to inter-marriage with local Whites
is not an easy one.

It is at this juncture, in early adolescence, that parental controls of the child 882
are almost totally relinquished. Made thus culturally independent, the child 156
may then enter high school and find that for the first time he has to compete 155
with his peers, for there are few social promotions in high school. Because he
is fully aware of his economic independence, and because of the other factors
cited, the pattern is for Klamath children then to find themselves propelled into
an adult status. The associated school phenomena at this juncture is a high [871]

Slim: Male, Age 30

Background Data

Slim's case was selected so as to illustrate the situation of a regularly employed, 159*
well liked and respected young male. He is currently employed as a [464]
laborer in a lumber mill, and in the past has worked as a carpenter, and in
heavy industries in the mid-west. He has ten years of formal schooling, obtained [463]
his 12th grade certificate by examination while in military service, and for [871]
one month studied commercial art in Portland. [701]

Slim was born into a large, influential kin group, one which for several generations [619]
has provided much of the tribe's leadership. While his own father has
not been so influential in tribal politics, preferring to work his ranch instead,
Slim grew up in association with male relatives noted for their forthright
independence and leadership, and within a family tradition of progressiveness
and self-improvement. Slim's early life was spent in alternating periods [591]
of residence with his own father and mother on their ranch, and with his father's
mother in her cabin on the Sycan marsh. This association with "Grandma" was [603]
partly in response to the gradual disintegration of relations between his father
and mother, and partly the result of his father's desire to have "Grandma" teach [593]●
him some of the old lore. His mother became increasingly erratic, unpredictable,
and violent, finally leaving his father. Slim felt badly rejected by [153]
her and was never able to understnad why she would not accept his efforts to be
helpful. On the other hand, he was very close to his father and his grandmother.
Today he recalls with satisfaction the many things these two persons
taught him, and dreams recurrently of being in the army, defending the reservation
from attack, and checking in on the old lady to see if she is all right.
This dream is interesting because it expresses succinctly his style of relations
with superiors, for in the dream Slim asks permission of his squad leader to
leave, explains his reasons, then checks in on "Grandma," and returns to his duty.

After the 10th grade was completed, Slim quit school and worked on various ranches.
Early in the Korean war he consciously followed the model of an uncle, who was
a career soldier, and enlisted in the army. His service record was good, marred
only by what Slim feels were two justifiable periods of unauthorized absence,
and he voluntarily served with a combat unit in Korea. This army experience
considerably broadened Slim's horizons, and after his discharge he lived and
worked with an army buddy in the east for a year. Then Slim traveled and worked
in several places in the east and midwest. On two occasions his regular habits [961]
and good capacity for steady work were responsible for a promotion. Characteristically,
Slim enjoys this kind of reward, but he does not specifically strive
for advancement.

Slim has many skills, hobbies, and social graces. When young his father taught him to dig ditches, with the advice that this skill would always provide him with a job. He is an expert horseman and stock-keeper, and is a skilled hunter and woodsman who frequently guides his friends on hunting trips. He has learned carpentry, house-painting, and the operation of various industrial machines. More recently, he has turned to archery, sketching, and photography for hobbies to occupy his spare time. Then too, he is an amiable, jolly person who makes good company and who is well regarded as a friend. He is not married, and has never seriously considered marrying. He has had occasional sexual liaisons of a transitory nature, which he finds quite satisfying, and has been "going steady" for several years with an older woman, a person who is a grandmother in her own right.

Susan: Female, Age 24

Background Data

156 *159 Unlike Slim, Susan is not so well liked or respected. The occasion for this is specific, an unsanctioned pregnancy during her last year in high school and a [848] more recent marriage to an entirely disreputable Mexican from Utah. This community evaluation is accentuated because of the very high respect in which her [582] own family is held. Everyone expected better of Susan.

[626] Susan has worked as a dishwasher in several cafeterias, both on and off the *459 reservation, and moved to Utah so as to take a practical nursing course. She found this training uncongenial, met and married her husband, and they returned [464] to the reservation when his small business failed. Susan is a high school graduate.

[874] Susan's mode of selecting a husband parallels that of her mother, who met her husband while hospitalized in New Mexico. Her father by birth is an Apache *159 Indian, and by cultural affiliation a southwestern United States Spanish-American. •593 Without doubt, he is the most autocratic, stern, demanding, rigid adult male on the reservation. Although a married woman with children of her own, Susan must ask her father's permission to use the telephone or to walk downtown. Her mother was Klamath and very well respected for her stable family life and for her active participation in many community activities. Susan was extremely close to her mother until her unexpected death several years ago. They were known as an inseparable pair and her mother never went out of the house without her. The mother's death was, perhaps, the major cause of Susan's failure to complete her nurse's training. Susan's illegitimate pregnancy in high school was a considerable shock to her mother and is, with her marriage, a continuing source of strain [155] with her father. Susan evidently feels that her behavior was a contributing cause for her mother's death. She made a death-bed promise to her mother that she would not be a loose girl and that she would marry and stay married to one man. It was shortly thereafter that she married and returned to the reservation to live with her father. There is much strain within this household, derived from the relations between father and son-in-law, and from Susan's unsuccessful efforts to serve two masters, for along with her marital relationship she evi-[626]dently was trying to act as a replacement for her deceased mother's role. At the same time her conduct has alienated her from the church, from family friends, and from the community.

*159 The contact with Susan was made via her father, who told her that she should cooperate. Her father's motivation in this was not, as may be supposed, the con-[124]viction that she needed testing because something was wrong with her, but in-[123]volved a more general sentiment. He felt somewhat honored to have an "educated man" visit his house and that such a contact was a good experience for his chil-[593]dren. Susan accepted this like an obedient, dutiful daughter. She came readily, with no indication of unwillingness, and relations with her were quite good, perhaps because of the strains of her marginal position and her need to talk with someone.

*159 Susan seemed an apathetic person whose feelings were dulled. If anything, her reactions were those of an over-trained, too obedient child. She was not very 157 responsive or active, and would seldom talk except to answer a direct question. Then she would, frequently with evident pain and anxiety, describe her feelings and situations tersely and haltingly. Susan clearly wants more than her life now gives her, but cannot define her present conflicts or see her way clear to

Nell: Female, Age 33

Background Data

159*
In contrast to Sparrow, much of Nell's behavior is disparaged and negatively
sanctioned by the community, while she too must be located at the lower end of [156]
the status hierarchy. Nell got her first job when she was 18, and for the
last five years she has been working steadily as a clerk in the Agency. She [464]
is a high school graduate and has 2½ years of business school training. Except [874]
for being away at school and a short period of residence with one of her husbands in Oklahoma, she has lived all of her life on the reservation.

Nell was raised by her own parents on their ranch and is the second eldest of
nine children. Her earliest memories are of being fearful of domestic animals
and of preferring to be by herself, playing with her dolls. She seldom played
with her siblings or with other children, and her interest in dolls and making
and dressing paper dolls continued through her first marriage in her early
twenties. She felt that her mother always blamed her or the other girls for
everything, while her father favored his daughters. All of the children were [871]
sent away to boarding school, and most of their childhood was spent away from
home. By the age of 12, when home, Nell was busy with housework, cooking, baking, [857]
and caring for her younger siblings. In this large nuclear family there was an
extensive division of labor, with each assigned his or her specific tasks. Her [593]
parents never left their children with "sitters" or relatives. Their "caretaking"
activities are, perhaps, among the most consistent and extensive in the area,
with the exception of the boarding school. Nell received little direct instruction from her mother, and her closest adult woman companion was her grandmother. [868]
Nell knows none of the Klamath language. Both her mother and her father were [191]
disturbed because Nell always wanted to be off by herself. When she was in
boarding school her parents visited her once or twice yearly, but they never wrote
her. Nell preferred her father, and when she grew up she felt that her mother
was not the kind of person she had thought she was. Nell feels that this may be
due to her own behavior. She received no direct sex training, and was 18 before [864]
she discovered the significance of her menses. Her first sexual experience was
at 8, when she was molested by a cousin.

Nell has always preferred to play with boys rather than with girls. Today she [626]
is socially isolated at her office, where none of the other women speak to her. [156]
She is equally isolated from her family, who rejected her and threw her out of
their house when she was 20, at which time she was pregnant by her first husband,
who had deserted her when he discovered her pregnancy. She has been married and [586]
divorced three times and has maintained a regular liaison with at least five
other men. She will go directly from one such liaison to another, with never [156]
more than a few days between men, and on several occasions some overlap. Occasionally one of her ex-husbands or ex-lovers returns to live with her and attempts [588]
to take up with her again. She has borne eight children, has had two miscarriages,
and at least one abortion. She cannot tolerate not having a man in the house
(it is her house maintained at her expense). Several of her children are technically illegitimate and the paternity of at least one is in doubt. It is this 159*
sexual laxity which particularly brings down the ire of the community upon her. 156

Nell thinks of herself as an unfriendly person who would rather be left alone,
particularly by other women. She always waits until someone else makes the first
advance. It was therefore surprising to have her show up one day and request [124]
testing and advice. She was in trouble and she was convinced something was
wrong with her. The "presenting problem" was an unbearable load of shame, guilt,

Weasel: Male, Age 29

Background Data

In contrast to all other subjects Weasel's role in the reservation community 159*
is a totally negative, destructive one, largely that of a supposedly vicious [156]
criminal. He was born and raised on an economically un-productive ranch, which
for twenty years or more has been the location of continuous drinking parties. [593]
Weasel was raised within a circle of a pack of older brothers, half-brothers,
and step brothers, all of whom were bigger, stronger, and more capable than he. [733]
His father has been an alcoholic for thirty years and has rarely worked or contributed
much to the organization of the family, which as a co-residential [592]
household usually included more than a dozen persons. In all, Weasel had 17
full and part siblings, half of whom are now deceased, three directly as a result [165]
of drinking, three from acts of violence or car accidents.

Weasel's formal education ceased when he was 15, in the ninth grade, at which [871]
time he was arrested on a burglary charge. Since then he has spent six years [674]
in reformatories or penal institutions. He was tested while in jail on an
assault charge. Shortly thereafter he was found not-guilty, then re-arrested [697]
and sentenced on a different assault with a deadly weapon charge to three years
in the state penitentiary.

Weasel has repeatedly moved out of the circle of the family group, only to
fail "outside" and return to its sheltering arms. For a time Weasel was a [542]
professional boxer, but one without much skill or stamina. He never won a fight
and his face shows the evidence of the capabilities of his opponents. His
membership in this profession did not last long, and Weasel states, rather
proudly, that the Boxing Commission expelled him "For conduct unbecoming a
professional boxer." Weasel was once married (a common-law marriage, which [588]
for Weasel's primary reference groups is well sanctioned) but this lasted just [581]
16 weeks. During this period Weasel stayed sober, the longest time he has spent
without a drink since the age of 12. Weasel was consciously trying to reform [733]
himself, but now feels that he was a fool to ever try. Additionally, Weasel
has repeatedly made a circuit of nearby towns and cities either singly or in [156]
the company of a brother or friend. These visitations have more of the character [579]
of raids than anything else, and Weasel is usually arrested in one or another
place and either charged or shipped out of town. [697]

In addition to being a minor criminal Weasel is frequently also the scapegoat 159*
for the aggressions of stronger men than he. He constantly asks for trouble, 156
but has never given any evidence that he can back of his threats with appropriate
force. His successful acts of aggression have always been sneak attacks, [186]
or attacks on feeble old men or young boys. He seldom attempts to avoid the
consequences of these actions, and, indeed, is frequently not able to do so,
because of his extreme drunken condition. He seems to obtain some gratification
from the minor prestige afforded his performances in these roles, but this
gratification is highly personalized and is not recognized as appropriate by
others. It may be that he has been attempting to build up his standing and reputation
within his own circle by acting out the role of a "dangerous Indian,"
but it would seem that he has been singularly unsuccessful in this. One aspect
of this behavior is his reputed skill with a knife. On two occasions he wanted
to obtain vocational training, once as a barber, the other time as a butcher,
both times implying that this would be a simple extension of his native talent.

Grandma Williams: Female, Age 67

Background Data

*159
156 Understandably, it is difficult to find a match for a person like Weasel, particularly in the instance of a woman who occupies a similar status. The few
[593] Klamath women who were like Weasel were not available for testing. Grandma
William's position is that of the mother of a large, disorganized nuclear family
[733] like Weasel's, one marked by excessive drinking, violence, and promiscuity.
[83] She is a vigorous, hearty, earthy old woman who has borne eight children by
three husbands. She is once divorced and twice widowed, her first husband
[587] having died after three years of marriage, her third after thirty-five. She
[871] completed six years of school, all that was available when she was a girl, and
she has lived and visited for extended periods in Washington state, Missouri,
[178] California, and Mexico.

[657] Grandma William's mother was a traditional Klamath wife and mother, and her father
for years an Agency Indian policeman. In her words, both her family of orientation
[464] and her family of procreation have had "bad luck." This bad luck consists of numerous bouts with the law over acts of violence. Her father died in the Federal
penitentiary where he was serving a life sentence for murder. Several of her
sons have killed men in the past. One is reputed to have killed at least five,
and he is now in a State institution. Her other children are noted for their
violence, and local informants say of Grandma that they cannot understand how
such "a wonderful, good old lady managed to produce so many worthless children."
[577] Few feel that she deserves such a fate. Community acceptance of Grandma Williams
is based upon several attributes, her steady, hard work, her commitment to raising
[177] a family, her devoutly Christian behavior, her espousal of dominant White values,
and, especially, her hearty good humor. She has never accepted the guilt of
either her father or her sons, maintains that they were falsely accused, and
has worked steadily to secure her one son's pardon.

[191] Grandma Williams was raised in a Klamath speaking household and acquired her
English in school. She is very proud of her education and maintains that children
[871] today are not so well tutored in the 3 Rs as she was. She claims that "I
can just about out-spell, out-write, and out-figure all of my kids." This is by
[593] no means the only aggressive, competitive attitude she maintains towards her
children, none of whom have ever quite lived up to her standards. In this respect,
[603] Clifton was once able to witness her training a grandson, who was an alert,
spontaneous, active lad. The boy was made to be too polite and too formal, be-
[867] haviors in keeping perhaps with urban middle-class society, but very much out of
place on the reservation. All of her sons have maintained their main affiliations
with the local "cowboy" culture, but they are ridiculed for their efforts at
riding and calf roping because of their obesity and clumsyness, none of them
coming near, in physical type, to the slim hipped, pencil shaped cowboy ideal.
[657] She is an excellent example of a woman who, early in the reservation period, was
carefully tutored by conscientious minister-teachers in inappropriate behaviors
[871] and values, and who has attempted to transmit these to her children. It would
seem that she has produced over-trained, and mis-trained, hostile children, who
[177] promptly discovered that regardless of their veneer of "culture" they were rejected from many local circles because of their Indianness.

*159 Grandma is a direct, forceful person, another Klamath woman with a sharp wit
157 (yet a less personal one than Aunt May's). She is quick to initiate inter-
156 changes and to attempt to knit together a strained situation. Yet her responses

Fidel: Male, Age 19

Background Data

*159
156 Fidel's case is that of a young man in the process of separating himself from
his family, yet without any clear sense of where he wants to go. He has never
[461] worked at any job, although he quit school in the 10th grade, when he was sixteen.
Except for 8 months residence in the San Francisco area with his family, and five
[871] school years spent in a Catholic boarding school, he has never lived away from
the reservation. He is the third eldest of six children. He presently lives at
[592] home, if the household which contains himself, his parents, and his younger sib-
lings may be called that. As an unmarried minor approaching maturity, his tribal
[434] income is administered by a trust officer who allocates to Fidel $110.00 monthly
[657] for spending money. Additionally, Fidel sends bills for various expenses to the
bank, which pays them. These arrangements have been in force for three years.

[733] Fidel's mother is a somewhat confused, defeated, semi-alcoholic who is very
reserved when sober and gay and promiscuous when drunk. His father is a Skagit
[582] Indian who has for years been steadily employed as a cat skinner for a logging
[618] company, which work keeps him away from home for months at a time. During the
logging slack season, his father is only occasionally at home. He is usually
[221] away hunting or fishing. When he is at home he is frequently drunk, and when
drunk characteristically assaults his wife and berates his children. The father
does not contribute to the income, the up-keep, or the conduct of household
*[593] affairs. In recent years Fidel has defended his mother and the children from his
father, on several occasions has driven him from the house, and on one occasion
knocked him cold with a rifle butt. There is some doubt as to whether this per-
[848] son is actually Fidel's father, the doubt being due to his mother's promiscuity,
which is of long standing, and to Fidel's almost total rejection of him. Fidel's
*159 relations with his father illustrate his marked and extensive ambivalence towards
156 most personal relationships. He will call him or refer to him as "father" or
593 "dad" and in the next breath "uncle," at one moment praise his skill at hunting,
and the next deride him. Fidel cannot fully accept any relationship; he exhibits
the same ambivalence towards his mother, his siblings, his closest friends, girls,
and so on. Moreover, Fidel cannot undertake any course of action without doubt
and reservations. He can neither love nor hate fully.

Fidel's family life is marked by a complete lack of cohesion, cooperation, common
[421] activity, and common property. The major shared sentiment is an indifference to
one another. Each member occupies a part of the house where he keeps his be-
longings, and these are rarely shared. For example, Clifton once needed a rifle
for a hunting trip. It was borrowed directly from the father; Fidel could not
borrow it for him. A major source of difficulty is intra-family theft, which
engenders violent reactions. The mother is psychologically divorced from the
father, and strongly oriented towards her eldest, married daughter with whom
she spends much time.

*159 Fidel thinks of himself as a guide and skillful hunter, insofar as he thinks
156 of himself as anything. On several occasions he has been in trouble with the
law, usually for drag racing or drinking when a minor. He spends his time
[673] loafing about, watching TV, playing pool, fishing, hunting, visiting with his
buddies, and sleeping. He is seldom in bed before 1 AM, and equally seldom
[512] awake before two or three PM. His main ambition is to get out of the area, away
from his family, and off by himself. He has thought about studying art, which
may result from an identification with a friend who is doing so.

159*
156
593•
[871]

Fidel quit school because of what he defines as "family trouble," and this failure is probably equally due to his lack of support and training at home, as well as from the mildly hostile, indifferent posture he maintains. He expresses bitter contempt for his family, for the filthy house, for the lack of regular hours, and for the frequent squabbles. His isolation from this group is adequately measured by his lack of knowledge of the interests and affiliations of family members. His contempt for them is balanced by his father's derogatory, competitive attitude towards his son and his mother's indifference. Fidel stands thus, mildly hostile, ambivalent, and infinitely bored, at the brink of independent adulthood.

analysis of 53 Klamath Rorschachs and 33 Thematic Apperception Tests, with 128
additional evidence derived from participant observation and life history data [127]
(Clifton 1960). Moreover, the assessment agrees, in large part, with the ob-
servations and conclusions of other field workers working independently. The
significant point is that Levine, working blind from records of persons he has
never observed has reinforced and expanded upon previous evaluations of Klamath
character.

A second hypothesis about the Klamath which arises from our study — an hypothesis 121
of which we are less certain when compared with the observation that they are
a people who may be viewed as guarded and restrained — is the finding that "in 157
the total kin network the influence of the male is weak..." and "whether or not 562
there is a male attached to the household group, the wife-mother is usually the
power figure." This finding, based on the anthropological data, is theoreti- [156]
cally congruent, almost startlingly so, with the fact that the more imaginative,
creative, rich — healthy, if you will — Klamath Rorschach records were produced
by the women in the sample, while the men's records were typically stereotyped
and constricted, and often unrealistic, disorganized or suspicious. The statis- [127]
tical comparisons (Clifton 1960) as well as the individual Rorschach analysis
(Chapter III) convey this impression very clearly. [128]

The importance of these findings can be viewed profitably in the light of con- 121
temporary psychoanalytic theory, especially in relation to the concepts of iden-
tification and modeling in child development. The theory holds that the child
identifies with, i.e., adapts the characteristics, attitudes, and values, of his
parents because he envies them; they are the powerful people who receive the
rewards and gratifications which he is denied. In classical psychoanalytic theory,
the boy is said to identify with the father because the father is the power figure
in the family and receives the love of the mother. Although Freud never was as
content with his psychology of women as he was with the Oedipus Complex, pre-
sumably similar processes account for feminine psychology. The classical Oedipus [128]
Complex has been modified in order to integrate more satisfactorily with cross-
cultural data, and it is in this more flexible framework that the present re-
sults can be understood best.

In those societies in which the father is not a stable, respected member of the 121
family the process of identification is not as straightforward: the growing boy
does not want to be like his weak father; he cannot identify with an absent
father figure; yet he is biologically unable to be like his mother. The theory
holds that his identification as a person will not be well integrated or complete.
In the Klamath family, the mother is the stable figure, the one who commands the 121
boy's respect. Since a consistent and integrated identification is needed for a 156
healthy development of the ego, we are not surprised to find that the males in
our Klamath sample show signs of poor ego structure. The women, on the other 562
hand, come off much better and one may hypothesize that they are able to make a
more integrated identification with the wife-mother figure in the Klamath family. 593

It may be necessary for a well-stated theoretical position to distinguish between 121
two qualities of the parent which are confounded in the present discussion: sta-
bility of the model on the one hand and the extent to which the parent receives
rewards, on the other. The general theoretical position, however, states that
those societies in which the father is more stable, receives more of the respect
and material reward, or is more powerful will be societies in which the boys can
establish their roles more readily. On the other hand, in groups like the Klamath, 121
in which the father is weak or absent, we can expect to see signs of role conflict, 156
562
593

121

156 vague identification and, since it is largely through identification that the
562 super-ego is established, weak super-egos.

593 It has been suggested that what we have called guarded restraint may be a "front"
121 maintained only when Klamath are interacting with whites. The point is that
156 guarded restraint may be another name for the extreme suspicion and reserve of
156 many enclaved or colonized minority groups vis-a-vis representatives of the
177 dominant culture (Underhill 1960). It cannot be denied that, in fact, reserve
[171] and suspicion do characterize much of the relationship between Klamath and Whites,
but the reserve and restraint which so characterize Klamath persons is not solely a function of such situations. We agree that guarded restraint is one important consequence of acculturative contacts, but the evidence of observation and life histories clearly indicate that this is a personality attribute manifest in many
[829] situations exclusive of the presence of outsiders. Life history subjects, for
example, speak of the "Indianness" of their parents, meaning precisely an aloof, reserved style of interaction. Many other informants verbalize reactions to the endemic if latent suspiciousness of Klamath life. Thus guarded restraint is not purely an observer construct with a referent limited to the test situation. Certainly, a measure of reserve and suspicion may serve utilitarian functions when interacting with strangers, but the same characteristic makes strangers out of neighbors.

121 Underhill's suggestion does raise the issue of a broader connection between
156 guarded restraint and the impact of acculturation. If there is such an association then we should expect to find these attributes widely distributed among
177 other acculturated populations, especially those which have been exposed to the
171 imposition of external political and administrative controls, and deculturation
or detribalization. That there may be some validity to this hypothesis is sugges-
157 ted by the fact that attempts to communicate our findings to observers with experience among other acculturated populations frequently evoke memories of similarity in character. What we have called guarded restraint has been suggested as characteristic of the contemporary Southern Ute (Stewart 1961) and especially the Mountain or Towoac Ute (Canan 1961), and of the Cree, Northern Athabascan, and Eskimo (Heinrich 1961). In each instance there are differences, but differences which seem to play upon a common theme.

Personality attributes analogous to what we have called guarded restraint have repeatedly been discerned among other more or less acculturated North American Indian populations. Thus Barnouw describes the Wisconsin Chippewa as emotionally isolated, suspicious of outsiders, and fearful of expressing emotions overtly (Barnouw 1950: 22-23). Klopfer's analysis of Chippewa Rorschachs suggests that "...the individual is under pressure to become as emotionally independent of his environment as possible, and to expect very little from others." (Barnouw 1950: 27). The Ojibwa have been described as emotionally restrained, suspicious, and anxious (Hallowell 1955: 350). Hallowell's interpretation of these characteristics is that they constitute persistent aboriginal components of Ojibwa character structure. In a similar fashion, the Native-Oriented Menomini have been described by Spindler as a group characterized by a non-defensive reduction of emotional display, whose perception is narrowed to only a very selective portion of their environment, and who are further characterized by a non-manipulatory passivity. Outside of the presumed character structure of the Eastern Woodlands, the most widely distributed "aboriginal" characteristics of North American Indians, generally, are given by the Spindlers as non-demonstrative emotionality, great reserve, individual autonomy, and a generalized fear of the world as dangerous (Spindler and Spindler 1957: 148).

his wife, then I remove (him); no longer chief remains he.

NOTES.

[177] **58–62.** The legal practices, regulations, and ordinances given here by a subchief of the Klamath Lake tribe are observed by all the chiefs, and are apparently fashioned after American models. The principle which seems to guide most of the judicial decisions of the chiefs, is given in one (59, 20. 21) of these regulations: "If a chief makes law like white people, that will be right."* This article is composed of three parts:

Part I. List of the chiefs acting as judges on the reservation in 1877.

Part II. Legal customs governing the Klamath Lake people.

Part III. Instances of application of these legal customs; amount of fines, terms of imprisonment, etc. These are the "*novellæ*" of Klamath legislation.

58, 1–3. P'lú, Lilu, and some other headmen mentioned here have signed the treaty of Oct. 14, 1864.

[563] [657] **58, 4.** Móatuash. There are only two Pit River *families* living on the whole reservation.

58, 8. Tcháktot belongs to the Yahúskin tribe of Snake Indians. Cf. Ind. Aff. Report 1873, p. 324.

[193] **58, 10 etc.** The future tense employed in these behests, regulations and defenses recalls the French future used in an impressive manner instead of the imperative: *tu ne tueras point, tu ne déroberas point.*

58, 10. shlí-uapk shash. The pronoun shash has here almost the force of a reciprocal pronoun, for the meaning of the sentence is: "do not shoot at people of your own tribe." The same is true of sas in palluápk sas, 58, 10; 58, 13 (twice); pálla shash, 61, 14.

[194] **58, 10.** ksaggayuapkámeni is pronounced as one word, as the removal of the accent from the syllable -uápk demonstrates; and so in many of the following verbs standing in the future tense. For the sake of clearness, I have preferred to resolve these forms graphically into their component elements.

[192] [193] **58, 11.** wátsam, etc. The possessive wátsam stands here instead of the instrumental case watsátka through attraction from wännikísham. Tchíkla here means to ride away on another's horse, the horse being missed by his owner.

---

[*] Dave Hill introduces himself in the first person as chief; but many of these decisions can be given by the headchief only, not by any of the subchiefs, to whose number Dave Hill belonged. The Modocs at Yáneks claim to observe these regulations; the Snake Indians do not.

*539 221 All these different kinds of sacks or bags were originally made of bulrush-stalks (tule) 192 and the táyash was made of straw.

415 74, 11. k̲aítua nû kä'ila. The sense is incomplete. Probably sháyuakta is left out: "I do not know of any in the whole country", kiila often standing for käilatat.

192 74, 14. áwalues. There are several islands in the shallow waters of the vast extent of Klamath Marsh, but only *one* is meant here.

103 74, 15. wö'ns ílktsat. They submerge their dug-outs at several places on the beach, where they are certain to find them in the next wókash-season.

501 74, 17. pi'la wí'hla (or píla wíllash) contains perhaps a proper name of a locality, 103 or stands in connection with Tóilkat, "at the Rail-Pyramid"; wílhaslash means top, apex. The stations from the "Ford" to "Bird's Lookout" are passed by the tribe when they return home with the lily-seed harvest-crop. "They drop the rifle" is: they take a rest. All these localities are either on the open waters of Klamath Marsh or on Williamson River, which forms its outlet.

484 75, 1. iwí-idsha wókash. The distance between Klamath Marsh and the Williamson 492 River is from 20 to 25 miles, and horses carrying wókash can make it in one day. The next day they return to carry another load.

482 75, 2. nátoks waítuapk: we will lie over one day to let our horses rest, or recover from the swellings on their backs. Nátoks stands for nát toks.

829 75, 5. klá-ads is probably a kind of wild prunes. See Dictionary: kĕlátch.

192 75, 8. wídsika íwam. "Some are economical with their own berries, and prefer not to scatter them in the hands of others"; íwam, huckleberry, has become the generic term for all berries, and i-umä'mi is "*berry-season*".

346 75, 11. spû'klish here means the large communal sweat-house; it is used frequently for dances and kshiuwál*χ*ishtat, contr. kshiû'l*χ*ishtat might stand instead of spúklishtat.

75, 11. papiä'na, vocalic dissimilation for papa-éna; derived from pán, to eat.

193 75, 13. atí'sh etc. "Heap ye up that hay in two stacks, which must have a lengthy, long-stretching, and not a high, cone-shaped form!" For heaping up long stacks one verb is here used, and another for making the high, round ones.

marrying lived.

Wakák tsik sa tchía, k̲á-i ní tû'mĕnat.
How since they have lived, not I learnt.

NOTES.

[178]
[837]

Matrimonial reverses like the one given in this narrative are by no means uncommon among the Klamaths of the present day. They are one of the unavoidable consequences of the gradual emancipation of the females from the former rule of their brutal husbands through the advent of the whites, and also of the obnoxious and corrupting neighborhood of the soldiers at Fort Klamath.

*539 593 77, 1. The name Púl is pronounced in very different ways, and most people think it is the English name Ball; Póluk is Pú'l hû'k; tchía, "lived", would be preferable to t'shín in this connection.

[192] 77, 2. 3. kă'tsa, kétsa properly means to cast away; here: to abandon, leave; almost identical with wutódsna occurring below, 78, 2.

77, 4. săwána sas: he did not give many horses for her to her parents.

78, 8. pállank sas. This shash properly refers to Pámpi and his family, for Púl's wife took the dug-out canoe of Pámpi and rowed with it to the soldiers. This was in the northeastern part of Upper Klamath Lake, and occurred in the winter of 1876–'77.

[103] 78, 13. É-ustat is the location of the old agency buildings at Kohásbti, in northeast corner of Upper Klamath Lake.

[192] 78, 14. hí'-i. On that occasion Ball left his wagon in the midst of the woods; hi, hí-i means "on the ground".

[657] [692] [697] 78, 15. nă'ulχa sha pă'n. About the middle of September 1877 a strong escort of Indians brought Ball and his wife to the "law-house" at the Klamath agency to be tried by the chiefs. A delay of several days occurred before he was confronted with the judges, and during the time he was imprisoned at the "skúkum-house", a strong log cabin at the agency serving as jail. He is still a very young man, and on being brought there he was allowed to ride on horseback with a rifle on his shoulders. His father is an Indian from the Spokane tribe, and Spúkăn is his name.

[192] 78, 16. sχókta, to pay a fine; to be fined (by the chiefs). See: "Legal Customs", 62, 5.

another figure, known only as "The One Below," to represent the 648*
Devil. This figure appears in a Klamath version of the Garden 657*
of Eden recorded by Gatschet[29]—a tale no longer recalled today. 776
The identification of Gmukamps with God is strengthened in 177
Indian eyes by his mythical foster-parentage of the hero, Aisis. 178
As one Modoc, a fundamentalist preacher, has put it:

> you know, Gmukamps and Aisis—that's nothing but God and Jesus. The Indians knew the story of the Bible, but they were ignorant in those days. They thought that the lakes they performed their miracles around were the Klamath lakes; they didn't know it was really the Sea of Galilee.[30]

Looking back over the entire field of change from the last 657*
decades of the nineteenth century, the observer could discern 648*
major acculturative trends. The Klamath who entered upon the 177
treaty had already undergone pervasive, though largely un- 178
directed modification. Thereafter, they were subjected to a consistent policy of change which, despite defects in execution, outside interference, and an intervening war, was maintained for well over a generation. Within this frame, a reservation culture had taken shape, embodying a synthesis of white and Indian lifeways. By the middle of the next century, only a handful of tribesmen would be left who could report from direct knowledge events of pretreaty days; the remaining elders would be products of the synthesis.

Measured by the indexes which the Bureau employed to
register progress, the advance was evident. When that formula- [464]
tive period was ended, a large number of the Klamath were [511]
productively engaged in work of "civilized" character, and their
material wants had come to approximate those of their white
neighbors. Many were conversant, and a few literate, in English, [191]
and their numbers were increasing steadily. The extended family, [212]
at least among the progressive, had made way for the more [596]
mobile and assimilable conjugal family. In the schools, a new [594] •
generation was being trained to embrace as natural and desirable [871]
a way of life which the Church, in turn, commended as good to old and young alike. Expectations seemed to lie within the grasp of those willing to work to achieve them.

Beneath the surface upon which these changes could be traced, [571]
however, lay cleavages and disconformities as yet unfathomed

*648 divided into three segments as nearly equal in size as possible.[24]
*657 The symmetrical cuts resulted in a Conformant segment, pre-
177 vailingly law-abiding in record, almost twice as large as the In-
178 framodal category at the other end, which consisted of these
184 persons with the highest record of violations. The Intermediate
125 membership was slightly larger than that of the Conformant.[25]

The characteristics of each of these categories, when contrasted, tend to confirm statements made previously. Members of the Conformant segment were least Indian biologically and included the highest proportion of women. They seem to have come from comparatively smaller families and, with the Intermediate subjects, seem to have received far more adequate parental care than did the Inframodal category. Educational achievements are less distinctive, reflecting the compulsory nature of schooling on the reservation, but again the Inframodal segment lags behind the others in school grade completed. In the measure of engagement in business or ranching and in record of money management, the distinctions are decisive, with the Conformant category far outstripping its fellows and the Inframodal segment at the bottom. Finally, in both the percentage of those married and living with spouse and family as well as in the stability of residence the same order is seen.

In the second part of the study, the thirty Klamath subjects who had given Dr. Clifton responses to the Murray Thematic Apperception Test (TAT)[26] were assigned by judgment to the three segments, the protocols of each category being treated together by a method of analysis previously employed in examining Klamath mythology.[27] When all of the modern TAT segments were combined and contrasted with the myths, the responses were seen to reflect changes which had in fact taken place through time. Thus a trend toward a universalistic outlook
[602] was reflected, along with lessened attention to the ramifications
[594] of kinship, a reduction of the family itself to nuclear form, and
[554] a concurrent diversification of role relationships toward individ-
[571] uals acting impersonally as employer, policeman, doctor, or
teacher. A secularization of life may also be reflected by the scant consideration of religion in the modern protocols.

[571] When the modern TAT segments were compared, the Conform-
ant subjects were seen to place a strong emphasis upon support

[Klamath Reservation]

000 For the recency of separation of the Modoc, see Gatschet (1890), Pt. 1, pp. 13, 14, n.13, 1.

5. See Sapir, reprinted in Mandelbaum (1951), pp. 169-78.

K M [114] [161] 6. Mooney (1928), p. 18, gives a value for the Klamath of 800 and for the Modoc, 400 persons. Kroeber (1925), p. 320, sets the combined figure at 2,000 and estimates that the Klamath have always numbered more than twice the Modoc population. Spier (1930), p. 5, reaches total figures in agreement with Kroeber. Kroeber (1939), pp. 136-38, reverts to Mooney's values in estimating tribal densities.

7. For the latter, chiefly Barrett (1910), Coville (1897, 1904), Curtin (1912), Curtis (1924), Dorsey (1901), Gatschet (1890), Kroeber (1925), Powers (1877), Ray (1963), and Spier (1930), the last two being the most important sources, respectively, for Modoc and Klamath.

8. Anastasio (1955). The changing societal constellations each directed toward a common task also resemble the "structural poses" described by Gearing (1962), for the eighteenth-century Cherokee, with the difference that the social groups entering into the constellations among the Klamath and Modoc are, by comparison, far more diffuse and less well defined.

9. Spier (1930), p. 13, site 6.

10. See Spier (1930), p. 15, site 23. The settlement size follows Spier.

11. As the Klamath pungently express it, "They even divide up a flea." Barker (1963), pp. 162-63.

K [648] [625] 12. An Agent once requested waiver of the stipulation that Indian police must stand five feet eight inches in height, since few Klamath men could qualify.

13. Dorsey (1901), p. 21.

14. Quoted in Pearsall (1950), pp. 348 ff. For details of wokas preparation, see Coville (1904).

15. Spencer (1956), pp. 77 ff. From time to time, I heard much the same speech directed by this woman to the boy, aged twelve. As Spencer remarks, at no time did his immediate actions give occasion for her harangue. She was, however, much concerned over some of his associates.

K M [594] 16. The term "natal family" is employed as a more graceful alternative to the conventional "family of orientation," to denote the nuclear unit into which the individual is born and within which he is reared. For similar reasons, I have preferred the term "marital family" to denote the "family of procreation," a similar entity seen from the vantage of the married partners who stand at its head. See Murdock (1949), p. 13, for a discussion of the original terms.

581 Probably one-third of all Klamath women have
borne at least one child out of wedlock. At the same time, there is considerable
[848] out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-style"
[177] marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
but are sometimes extended to other consanguinal and affinal kin. Occasionally
596 there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
extremely loose, and the extended group is rarely a residential unit, which
[177] aboriginal Klamath extended families were. These are, thusly, de facto groupings
rather than de jure. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organization
[594] of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obligatory
592 responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-father
592 frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly extreme
cases, had kitchen shelves which were partitioned off by individual ownership
of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with regard
to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
industrious and to the most delinquent. Controls over the expenditure of
434 children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

539 he was nowhere to be seen. They thought he must have died. After a long
time he began to talk, throwing water on the rocks. When he was quite ready
he came out and walked to his own people. He had beated the shamans.

One informant completed the humorous tale of the lizard who killed five grizzlies with the comment, "He was braver than Tci'lokin."

622 Chiefs are wealthy. All informants gave the same term, lŏ'ki, for
rich man and chief, and when asked for the rich men named the chiefs.
556 They own many slaves; other people may have slaves, but many have
• 595 none. Some chiefs have a number of wives. Lɛle'ks had seven at one
time, not slaves, but one a Modoc, the others native. This, the largest
[567] marrige group known, argues considerable wealth. Lɛle'ks was accus-
[439] tomed to make frequent trips to northern tribes with captives to
exchange for horses. Everything points to the rise in wealth of these
men as dating only from the comparatively recent period of contact
with the northern tribes. Up to that time at least shamans rivaled
[756] chiefs in wealth.

622 A chief becomes such primarily by his leadership in war. When
a group is gathered preparatory to war, chiefs address them and under their guidance war leaders, prominent, brave, and wealthy, are agreed on. Chiefs themselves are among the war leaders and no one alone captains the party. Chiefs make a point of engaging prominent adversaries in the forefront of battle. In addition to their other qualities, it is assumed that they are brave, unexcitable, and able to do without sleep.

Under the circumstances there can hardly be inheritance of chieftainship, largely because it is not an office to be regulated by definite succession. A chief's relative may be chosen as war leader, but not of necessity. Since wealth figures, it may be that at least the possibility of succession is heritable, but a man who is personally disqualified will not be considered. Pat Kane's paternal grandfather was a chief at du'kwa; further vision experiences had made him a good gambler but no shaman. But his son did not succeed because he was not competent and, in addition poor, nor has Pat any pretensions. On the death of Lɛle'ks, his son Solomon was passed over as lacking caliber, and in reservation days Alan David, previously a minor figure, was recognized in his place. Their relationship is unknown. My informants did not know whether the fathers of any of the chiefs named above had been chiefs before them.

[565] The Klamath have no feeling of class stratification as on the
Columbia river and northward. A chief is a leader and nothing more.

585 177 of any such sentiments. It also seems that the reciprocal visits by which the marriage is consummated, with their exchange of presents, is a reflection at a distance of the Northwest Coast potlatch, perhaps its most southerly extension.

582 Beyond the ability to pay, the choice of a mate is restricted only by kinship. No relative of any degree may be married; the children, they contend, will not survive. Common residence is for example no bar to marriage. Step-brothers and sisters, being unrelated, are free to marry even though they have grown up together. Several men now living here married their step-sisters. Sibling terms are not used between step-siblings, though they have half-brothers and sisters in common.

There is no village exogamy despite the relationship of most co-villagers. Yet there is a great deal of shifting residence especially among the several settlements of each division. Marriage within or without the tribelet is immaterial. Such evidence as exists however suggests that the tendency is for marriage within the subdivision. The data are few but summarize in this fashion:

Husband	Wife					
	ä'ukekni	du'kwakni	gu'mbötkni	iu''laloŋkni	Modoc	Molala
ä'ukekni	8	1	......	1	1	1
du'kwakni	......	1	1	......	......	......
gu'mbötkni	......	......	1	......	......	2
iu''laloŋkni	......	2	......	1	......	......

Of the ä'ukekni marriages among themselves, two above were with co-villagers, I have no data for other endogamous marriages.

Explicitly the data are the following: Pat Kane's father and his paternal grandparents were du'kwakni, his mother and her parents gu'mbötkni. These tribelets are more closely linked than with the others. His father lived at the time of his marriage at wudö'kän, a gu'mböt village north of Klamath lake; his mother with her people lived at sle'taksi just across Seven Mile creek. Pat himself was born and grew up at mo'giŋkŭnka, the du'kwa village at the mouth of Williamson river. His father's sisters married a man at iu''laloŋs on Klamath falls.

Tom Lang's father was white; his mother lived at iu''laloŋs. Both her parents were also iu''laloŋkni; her mother was related to Modoc and Shasta.

Nancy Phillips is ä'ukekni, born at k'taidi on Williamson river. Her father was ä'ukekni although he lived at du'kwa. His mother was of the du'kwakni. Nancy's mother was ä'ukekni of k'taidi village; her parents in turn both ä'ukekni, the father from k'taidi also, the mother from glä'tepał'is on the opposite river bank.

[595] The chief Lale'ks had seven co-wives; four, ä'ukekni, one each, du'kwakni and Modoc, and one from ne''luksi hence probably iu''laloŋkni. Two of the

á'ukckni were sisters from his own settlement on Williamson river above 582
bzsükse'was, a third was from that town, and the fourth from glä'tspak'is, a 595
mile or so down river. His daughter by the Modoc wife was counted á'ukckni;
while living at k'taidi she married an á'ukckni of Yainax.

A gu'mböt man, Woḳau'k!alls, married two Molala sisters.

Girls usually marry within a year or so after puberty, which is 584
marked, at least among the well-to-do, by a big dance. Betrothals
may have been arranged while the couple were yet pre-adolescent,
presents having been exchanged by the families. They are expected
to carry out the agreement after the girl's dance, payments being
made again. Should one of them die another match may be arranged
with the same family, but not of necessity. Poor and rich alike
arrange such betrothals.

How far great disparity of age occurs I do not know, but it does [582]
happen that an older man marries a young girl. A shaman for
instance may be given a daughter by a man too poor to reward him [756]
otherwise.

But it must not be thought that there is no choice. On the contrary,
the majority of marriages follow the desire of the couples.
Elopements take place and although the levirate is the rule, much 583
depends on the widow's willingness. Yet a girl's consent is not necessary.
Despite her protests she may be carried to her husband's home. 587
If she runs home she is almost invariably taken back again. That she
would be driven to suicide is doubtful; one informant never heard of [762]
such a thing; another stated she would hang herself and in this event
her parents had to return the gifts of the groom.

An orphan girl of du'kwa lived with her mother's brother. She was married 583
against her will to a man of k'taidi. She clung to the ladder of the earth-
lodge but they pulled her away and dragged her up-river to k'taidi. Next 159
morning she ran home and never went back. Nothing had been paid for her
at the time but she was given in return for valuables contributed to the
cremation of a relative of hers some time before by her husband's relatives.
Immediately after this she married a man at Klamath marsh; whether payment
was then made is not remembered.

Elopements occur but payment is so much insisted on as a sign 583
of respectability that parents guard their daughters with great care.
This is at least true where the family wealth makes a suitable payment
imperative. It is unthinkable that a chief's daughter should be per-
mitted to enter an unceremonious, clandestine union. The poor and 834
forward have little to lose. Modest demeanor is expected of a girl.

The number of plural wives depends on wealth; hence chiefs have 595 more than others. From my notes I glean two instances of two wives, [622] another of three. The wives in both bigamous cases were sisters. The greatest number known was the case of the chief Lᴇle'ks, who had at one time seven wives, two of them sisters.[72] I have described their derivations above. These women bore him many children. Whether the wives are sisters is a matter of complete indifference. To have two wives is called la'bwewa'nsgĭtkt (lit., two females), three ᴇnda'nwewa'nsgĭtkt, and so on. Collectively the wives may be referred to as sĭpkska'ltk; they call each other p'tcĭki'p. Plural wives are paid for, but whether there is reciprocal visiting I do not know. Slaves [567] are also taken to wife. Polyandry is unthinkable to the Klamath; it would be adulterous.

Barrenness is as usual a reason for taking a second wife, but not 595 always. 842 Pat's maternal uncle had a barren wife. He kept her throughout his life and never took another. The case of three wives noted above was one in which there were no children; the children of this family always died in infancy, I was told. Whether this implied that two of the three were barren, I do not know. One word, ts'e'do, means a sterile man or woman.

The sororate is not obligatory on the death of a wife, nor is there 587 any notion that a girl must marry an older sister's husband when she comes of age.[73] It is thought better to marry a deceased wife's sister, and from her family's point of view it is evidence that they care for the husband when they provide another daughter. There is however no feeling that they are under compulsion to make good the loss he sustained because of his marriage payments. A bereaved person waits a year or more before remarrying. The second wife has to be paid for like the first, but the amount is less. Again this depends on the man's affluence. The sororate is called spĭno'la, the sister, [601] spĭ'nuwĭp, i.e., sibling-in-law when the spouse is dead (cf. spĭnu', to cremate, spĭ'nuks, cremation place).

The levirate is customary but not obligatory. It is desirable to keep a woman in the family, especially one with children. This is perhaps nothing more than an expression of household solidarity, for

---

[72] Gatschet states ten, but I am certain there were not more than seven, at least at one time (2:126).

[73] There is just a suggestion. When asked for the kinship term used by a woman for her sister's husband, my informant gave the term for husband, but [601] somewhat in confusion corrected herself with the woman's term for brother-in-law.

342
592 4. Lo'löklis, wife, and seven children.

5. Tc!öntc!ön and his wife (childless).

The wives of Boke's (1) and Lo'löklis (4) were sisters; Tc!öntc!ön (5) was their brother. Lek!o'c and Wokau'k!alis were distant cousins of this trio.

In front of this lodge stood another, a mat-covered house (wu'kĕ'plöks), housing the mother and three sisters of Wokau'k!alis. This was only ten feet distant, measured about fifteen feet in diameter, and also had its entrance, this time at ground level, on the southeastern side facing the river. The inmates of both houses were gu'mbötkni from the western side of Klamath lake with the exception of Lo'löklis, a du'kwa man, who alone properly belonged in this locality.

592
352
353

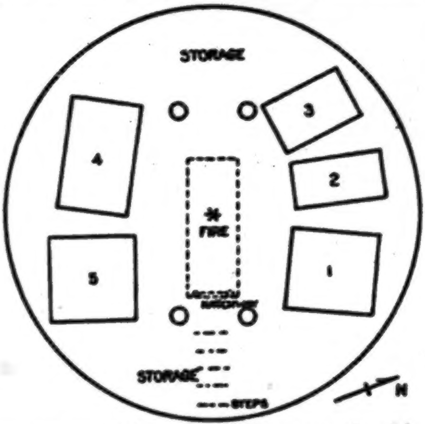

Fig. 4. Plan of an earth-lodge, showing the areas assigned to the beds of five families.

342
592 One earth-lodge in the same district was known as wĕwalăĕksumlo'ltmalöks, old woman's earth-lodge. Its inmates were an old woman, her two daughters each in early life, the younger with three children, and an elderly woman, first cousin to the daughters, hence called older sister by them. The house was built especially for them.

342
595 Data on the arrangement of polygynous households are of the slightest. It is clear that all the wives occupy one house with their husband. Their beds are separate. This is true where their number is few, but in the case of Lzle'ks' seven wives, these were housed in two lodges. In one family of a man and three childless wives only one earth-lodge was used.

000 family, not that his sister-in-law belongs to
him." NM: Woman may refuse to marry brother-in-law, saying she "does not want to die like [her] sister did." Not obligatory for man either.

3841. At, WT: Only if widower treated first wife well. NM: See note 3839.

3842. Kl, Mo, SE, AW, AE, WT, WS, NS: Dead
587 woman's parents hire shaman to kill son-in-law,
756 if he refuses to marry one of deceased wife's
684 sisters. WM: Woman's parents hire men to kill
son-in-law outright.

587 3844. Kl, SE: Usually, however, relative of
● 595 man marries latter's stepdaughter.

3852. Kl: Informant "had heard lots about this,
595 among [N] California tribes and up at Warm
Springs--about man living with his sister-in-law--but not practiced among Kl." AE: Not es-
000 pecially disapproved. WT: Indulged in only by
"loose" women, and generally disapproved.

3853. NS: Man sleeps with sister-in-law, only during brother's absence from home.

3855. NS: Not necessarily between namesakes only.

3856. SE: Extension of levirate also occurs; man may marry father's brother's wife, "to keep her in the family; he has to pay for his aunt, however, to give any children he may have by her status. But in outright levirate, gifts only given; levirate not always obligatory for man; "woman has to be good woman, to have treated dead husband well and pitched her face for him when he died, for his family to make strenuous efforts to keep her after his death." SW: Levirate more obligatory, for both man and woman concerned, than post-mortem sororate (see note 3839). WM: Day after funeral, when all relatives of dead man are crying, brother of deceased may ask widow for drink of water. If she gives it to him, they are considered as married from then on. Both widow and brother-in-law have blackened, pitched faces, and let pitch stay on until it wears off, but in event of speedy remarriage widow does not wear pitch necklace.

3857. SE: See preceding note.

3858. At: Widow may tell her brother-in-law she is going to marry another man; "All right," he says, and tells her to "take care of those children [by dead husband] good; be careful with them and let me know when they're sick."

[587] 3860. Kl: But because levirate is so obliga-
[684] tory for woman and for dead husband's brother,
rule seldom if ever violated. However, see element 3973.

[587] 3862. By hiring shaman to kill woman, for all
groups except WM, NS. WM: If woman refuses to
[684] give brother-in-law drink of water (see note
3856 WM) "then her brother-in-law or father-in-law get mad at her and try to kill her." NS: Woman shot with bow and arrow.

3866. SW: Kammatwa and Katiru groups intermediate between Shasta proper and Karok (see note 282) permit marriage of blood relatives; Shasta do not.

[226-A]

M
787 as their human instrument; by contrast in the Klamath phrasing
756 they are the shaman's "helpers."

K However differently they construe the degree of individual
M access to the sources of power, both peoples recognize that
787 human accomplishments are contingent upon it. Thus even those
K who have not secured a song appeal to the powers by prayer
M [782] in the sweathouse. Because success is seen as a reward for virtu-
[772] ous striving and likewise as a token of supernatural aid, the
universe appears basically to be a moral order.

K In human society, success has its outward manifestations. The
M annual round of the food quest, the unremitting demands of the
181 progression of plant and animal harvests, set a premium upon
461 industry. "Work hard, so that people will respect you," is a theme
that runs through the counsels of the elders and the periodic
K exhortations of headmen. The leading men are exemplars of this
M 461 virtue, and the wealth they have thus amassed permits them to
556 maintain several wives, while their generosity attracts a follow-
• 595 ing. Aboriginally, the difference between these men and the
K common tribesmen is less than it will presently become, yet a
M contrast is already apparent. Only the daughters of prominent
622 men undergo the most elaborate form of the puberty dance. In
556 war, a leader is chosen in part because of the lavishness of his
[881] panoply. After death, when the body is cremated, that of a man
[701] of property is likely to be decked with many valuables con-
[764] tributed by those wishing to honor his memory. In myth, the
[538] man of prowess is depicted as possessing shamanlike foreknowl-
[256] edge. These heroes do not bustle about their affairs but send
out emissaries on their business. Theirs is the restraint of power
in reserve, for when the time is ripe they move inexorably to
K the destruction of their foe. That quality is well delineated in
622 the deed recounted of the historic Klamath chief, Chiloquin:
539

> Old chief Chiloquin was quite a man, short but very strong. He was a *chief!* One time people were fighting; they were fighting all the time. *He* didn't care; he just slept there in his tent. Then about evening, he woke up. He says to his wife, "Bring me some water to wash my face." And when he had washed his face, he says, "Bring me some food and something—some coffee—to drink." And when he had eaten and drunk, he said, "Bring me my horse." And he took his weapons and got on his horse, and *all alone* he beat them. He was a wonderful man!

> told him about the Holy Spirit that was to come to the whole 175
> world and visit its remotest parts. When he came back from the 648
> Dalles he told his people about it but found them groping in [797]
> perfect darkness. . . . They would not believe him and told him he lied. He had watched long for the coming of the Holy Spirit and had never doubted that he should see him. He had heard Mr. Meacham talk for many days. . [and] now he saw that he was not like other men and knew that he must be the Holy Spirit come at last to bring gracious gifts for all tribes. . . ."

Others—and they were to become more influential—lived for 175
some time with whites and became convinced that the best 177
policy for the Klamath was one of peace. They included Lileks, 648
who in the course of the trading excursions to the north dwelled 622
for several years at The Dalles and was exposed there, no doubt, to the examples of authority set by whites as well as by the Columbia River tribes themselves. Another was Dave Hill, who, starting about 1859, lived approximately five years in Oregon City. Allen David, later to succeed Lileks as head chief in reservation days, was "well versed in the ways of the white man, from travel among the Willamette settlement." Another was Charley Preston who, like Hill, had spent five years at Oregon City, working for white farmers and had become "quite civilized and learned many of the white man's ways. He returned to his tribe and became a headman. . . ."[17]

Men such as these became the leaders of a "peace party" among the Klamath, and their views achieved dominance in the 175
growing centralization of power among the Klamath. Lileks may 159
have consolidated the ascendancy he presently achieved as head 622
of this group by marriages beyond his tribelet: to the four wives [595] •
from his own, Klamath Marsh, division, he added one each from the Lower Williamson and Klamath Falls groups, as well as one from the Modoc. From the Columbia he or a contemporary [177]
brought back new "laws," which included the institution of [681]
flogging as punishment for murder or for persistent quarreling. In one instance, ascribed by Spier, with some question, to prereservation days, when two men of the Lower Williamson River tribelet slew a Klamath Falls man, Lileks had them haled to Klamath Marsh, where each was beaten five times.[18]

When, in 1858, it was indicated that Klamath and Rogue 175
648

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one
who had obstructed Agency-sponsored reforms, but had left the
membership of the lesser chieftaincies intact. It is clear that
administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693
executive role to constitute a court, while a sheriff, chosen from
among the Indians, together with constables, one per chief, were
to maintain order. Chiefs, somewhat extralegally, soon began to
assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at
all, advising them that the object of the law is to *protect* the
people and not to *oppress* them."[19] Soon thereafter, he reduced
the court to a membership of only seven chiefs and set its sessions
at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622
against property (arson), together with what can only be con- [68]
sidered redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585]
were to be confirmed before the principal chief, who was to [643]
receive a fee; the bride price was not to be returned on the [586]
desertion of the husband; while the court might order the sepa-
ration of an irreconcilable couple. Monogamy alone was per- [595] •
missible.[21]

Thus, not only were the chiefs given new and different powers,

*657
*648 tunities of the reservation. As they moved away, they extended
563 Indian experience into the midst of frontier society. During the
167 allotment period they in turn enlarged reservation perspectives.

*657 The majority of the interbreed children that appeared upon
*648 the early reservation, then, were the product of temporary or
563 unstable unions and appeared as fatherless children. The annual
162 reports are unrealistic as to their number. In 1885, for example,
it was claimed that there were only 12 interbreeds in the total population of 919,[9] although to judge from later censuses, the number must have been several times as great.

*657 One of the long-range results of this intercourse was to reduce
*648 somewhat the difference in physical appearance that separated
563 the Indians from the surrounding population. Another—and more
[144] immediate—consequence, however, was to raise the divisive issue
[848] of illegitimacy among the Indians themselves and to introduce
[602] into the tribal body individuals who could claim only maternal
kinsmen. Thus, one Klamath recalls his father, a stage driver in Klamath Falls, as a drunkard whom his mother finally left. The family returned to his maternal grandparents, in whose care the boy grew up. His mother subsequently married a man who ran a logging camp at Pelican Bay, a hard worker and good hunter who treated the boy well. Nonetheless, throughout his life he bore an animus against his father and in part against the heritage he represented.[10]

*657 Interracial unions were encouraged, not only by a dearth of
*648 white women but by an early preponderance of women among
563 the Klamath and by regulations which put an end to polygamy.
162 The early imbalance between the sexes was striking. The figures
• [595] supplied by Captain Kelly for the adult Klamath in 1864 give a
sex ratio of no more than 0.47.[11] Those for the Link River band two years later areonly a little higher for the adults, 0.52, although the overall figure is 0.64, since boys and girls are in approximate balance.[12]

[164] Neither sex-linked disease nor the practice of selective infanti-
[847] cide is known to have occurred among the Klamath, and the most
probable explanation must be sought among such factors as differential exposure to rigorous training, warfare, and vicissitudes of the food quest, as well as to possible emigration of single men. O. C. Applegate, the only Agent to comment upon the im-

Of all the societal
relationships, the government sought directly
to change only those within the family. It was clear that a nation 657*
that was soon to impose upon the Mormons the American, and 648*
not the Biblical family, would permit no special marital practices 595
among the Indians. Polygamy was banned, although not retro- 177
actively for unions such as those of Allen David and Monchn- 178
kasgitk, which had been contracted prior to January 1, 1870.
Some leaders themselves appear to have advocated the change in
a desire to emulate whites. In 1877, Gatschet noted that there
were still two or three polygamous men.[26] Since polygamy had [556]
been a mark of the affluent, the ban, like the emancipation of the
slaves that preceded it, served to erode the status of the tradi-
tional chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals con- 622
cerned. In the legal code instituted when the court was estab- 692
lished, the consecration of marriage was made the function of 685
the head chief, to whom the groom was to pay a fee of five, three, 583
or two dollars or the same amount in horses, graduated according [643]
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] The traditional ritual [586]
of marriage still was being practiced by some families in the
1890's[28] but the gift exchanges between the families concerned
which set a public seal on the union were superseded, and the
controls exerted by the family over the couple were thereby
diminished. The effects of these and other changes were recog-
nized by Gatschet. "Matrimonial reverses . . . among the Klamath
[he declared] . . are one of the unavoidable consequences of
the gradual emancipation of the females from the former rule of
their brutal husbands through the advent of the whites, and also
of the obnoxious and corrupting neighborhood of the soldiers
at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independ- 648*
ent of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

773 times over them or by blowing at them, an act which is supposed to impart
776 life.

CONCLUDING WORDS.

128 The limited space allowed for this ethnographic sketch forces me to
suppress the larger part of the matter for the present and to relegate it to a
future volume. A few points characteristic of the two tribes may, however,
be added on the last page of this Report.

614 The Klamath Indians are absolutely ignorant of the gentile or clan
171 system as prevalent among the Haida, Tlingit, and the Eastern Indians of
582 North America. Matriarchate is also unknown among them; every one is
free to marry within or without the tribe, and the children inherit from the
595 father. Although polygamy is now abolished, the marriage tie is a rather
586 loose one. This tribe is the southernmost one of those that flatten their
304 infants' skulls, this practice continuing about one year only after birth.

764 Cremation of the dead has been abolished since 1868, though during
the Modoc war these Indians burned several of their dead. The custom of
suppressing the personal names of the dead is rigidly kept up at the present
178 time. Art never had any encouragement or votaries among the Klamaths,
769 and the only objects seen that could be regarded as art products were a
531 few rock paintings and a head-board on a grave near the Agency buildings,
532 which was painted in the Haida style and represented a human face
flattened out to the right and left. Some baskets are artistically formed.
285 As there is no clay to be found on or near the reservation, pottery could
323 never become an art among these Indians. Their songs and poetry are also
artless, but nevertheless instructive, and several songs have beautiful tunes
533 that should be preserved. The musical and sonorous character of the language
538 fits it well for poetic composition; but a national poetry, to be of
success, would not have to adopt the rhyme as a metrical factor. Alliteration,
assonance, or the prosody of the ancients would be more suitable to
this upland language, with its arsis and thesis, than the artificial schemes
which poets are devising for the modern European tongues. Who will be
the first to teach the Muses the Klamath language?

*539 Hä' ī kä'liak híshuaksh ná-änds sätólakuapk, hû'k tchīsh híssuaks

hishtcháktanuapk, tánkt mish nī skuyû'shkuapk, ampkáak ī hishû'kat;
should quarrel, finally from you I shall separate (her), or else ye may kill each other;

*539 58, 15. shetcháktanuapk stands for the more common form: shitcháktanuapk.

622 692 58, 16. nánuktua shéshatuish m'na: "all what your husband has transferred to your parents to obtain your hand"; m'na stands for hishuáksham. Cf. 61, 8.

193 192 59, 7. mish, *you, to you*, is often used in this article for málash, málsh, *ye, to ye*, in allocutions to two or more persons. This is a way of expressing what may be called the "inclusive plural of the second person". This mode of speaking is observed in m's lápuk, 59, 7; lápuk mish, 59, 7. In the same manner i stands for ât, 59, 8: i sissók-uapk, if ye whip each other; also 60, 22.

59, 9. i mî stands for mish mi.

59, 17. hă k̲úi gí'uapk: if he should fail to do his duty; 59, 10. hă tídsh gí'uapk: if he does his duty well; nanuktuánta: in every respect.

59, 22. í'χaks mí: what you may win by betting on the horses engaged in the race.

60, 2. kă'lish is the objective case of kă'liak, kéliak, "not having", the simple form of which, without -ak, would be kă'li or kă'liu (kă'li hû).

583 60, 11. túma wátch gitk. The horses have, of course, to be transferred to the parents of the bride and not to any of the chiefs.

231 60, 12. wátch. The horses owned by the Klamath Lake and Modoc people are valued from 20 to 25 dollars each; they descend from the hardy, enduring race of Cayuse ponies, and were originally obtained by bartering commodities with the Columbia River Indians at the Dalles, Oregon.

192 193 60, 15. wátch spuní'-uapka; wátch refers to *one* horse only, for the verb spuní', to transfer, is used of one (living) object only; shäwána is: to give *many* objects. "Not even one horse your wife has to give to you, if she leaves you; but if you leave her, you must give her several."

60, 17. láp snawă'dshla. Polygamy was abolished by the headmen of the tribe shortly after the establishment of the reservation, and this ruling was one of the greatest benefits ever conferred upon that tribe by the progress of civilization. 177 595 But those who had several wives then were not compelled to dismiss all but one, and so in 1877 two or three men were still polygamists. The irascible and excitable disposition of the Modoc and Klamath females must have produced many chin-music intermezzos with their husbands at the time when polygamy was predominant.

61, 3. K̲á-i mí'sh etc. In this paragraph, in: k̲í'tgik, káktak, hémkanktgik, gitkik, the terminal k contains the abbreviated gi, which joined to the foregoing nû, n means 193 *I said*. The construction runs as follows: Hû'nk ni gi k̲á-i mish k̲í'tgi; nánuktuanta káktak gi píla m's n hû'nk hémkanktki gi; nă'-ulakt gí'tki i snawă'dshash tchí'sh káktak gi pil. K̲á-i etc.

61, 6. tchik. This particle does not mean *if*, but cannot be rendered *here* (and below) with a more appropriate word. It is identical with tchĕk, *then*. A subordinate clause is here expressed by a co-ordinate one. Cf. 61, 9. 10. 12. 62, 4.

192 193 61, 6. któktatska: "we clip their hair in every instance", is the distributive form of któtchka, któtaka, occurring in 58, 16.

61, 9. Tsúi etc. This inverted sentence has to be construed as follows: Tsúi tchish násh híshuaksh wutódshish snawă'dsh m'na pă'n hû'nk snúkp'la, tsúi nă'-ulĕkan etc.

another figure, known only as "The One Below," to represent the 648*
Devil. This figure appears in a Klamath version of the Garden 657*
of Eden recorded by Gatschet[29]—a tale no longer recalled today. 776
The identification of Gmukamps with God is strengthened in 177
Indian eyes by his mythical foster-parentage of the hero, Aisis. 178
As one Modoc, a fundamentalist preacher, has put it:

> you know, Gmukamps and Aisis—that's nothing but God and Jesus. The Indians knew the story of the Bible, but they were ignorant in those days. They thought that the lakes they performed their miracles around were the Klamath lakes; they didn't know it was really the Sea of Galilee.[30]

Looking back over the entire field of change from the last 657*
decades of the nineteenth century, the observer could discern 648*
major acculturative trends. The Klamath who entered upon the 177
treaty had already undergone pervasive, though largely un- 178
directed modification. Thereafter, they were subjected to a consistent policy of change which, despite defects in execution, outside interference, and an intervening war, was maintained for well over a generation. Within this frame, a reservation culture had taken shape, embodying a synthesis of white and Indian lifeways. By the middle of the next century, only a handful of tribesmen would be left who could report from direct knowledge events of pretreaty days; the remaining elders would be products of the synthesis.

Measured by the indexes which the Bureau employed to
register progress, the advance was evident. When that formula- [464]
tive period was ended, a large number of the Klamath were [511]
productively engaged in work of "civilized" character, and their
material wants had come to approximate those of their white
neighbors. Many were conversant, and a few literate, in English, [191]
and their numbers were increasing steadily. The extended family, [212]
at least among the progressive, had made way for the more [596] •
mobile and assimilable conjugal family. In the schools, a new [594]
generation was being trained to embrace as natural and desirable [871]
a way of life which the Church, in turn, commended as good to old and young alike. Expectations seemed to lie within the grasp of those willing to work to achieve them.

Beneath the surface upon which these changes could be traced, [571]
however, lay cleavages and disconformities as yet unfathomed

[Klamath Reservation]

FIFTEEN

[P. 205]

Family and School

WHITES AND KLAMATH ON THE RESERVATION RECOGNIZED IN FAMILY 648*
ties a bond that might be useful as well in formal enterprises. 657*
Several leading businesses in Chiloquin relied in part upon con- 602
sanguinity and upon marital ties to recruit members and ensure 178
continuity of control. Similarly, among the Klamath, during the bidding for tracts of tribal property in the course of termination, members characteristically acted in kin groups to undertake purchases that were beyond the resources of a single individual. In primary relations among both groups, visiting patterns and the occasional appearance of extended family households betokened the continued strength of ties reaching beyond the nuclear family.

For the whites who had come originally from outside the [167]
reservation, kinship ties stretched to distant places and there [563]
were comparatively few relatives close at hand. Of the whites in Chiloquin in 1950, although fifty-six per cent had moved from a previous residence in Oregon, fewer than forty per cent came from the reservation, from Klamath Falls, or from southwestern Oregon. Only a handful had raised children and in turn had seen grandchildren being reared in the town.[1]

The Klamath, with many kinsmen still upon the reservation, [587]
saw the network of relationship close at hand, however tangled
it might be by the intricacies of remarriage. To be sure, the [596] •
extended family as a residential group was not prominent, for in Chiloquin there were but two such households and in Beatty one. The strength of the bonds manifested themselves in other ways. Tribal residents in the city of Springfield, in the Willamette Valley, several of whom asserted that they had originally moved away to escape the importunities of kinsmen, had made the move as nuclear families over a period of several decades. None-

581 Probably one-third of all Klamath women have
borne at least one child out of wedlock. At the same time, there is considerable
[848] out-marriage, and while Klamath and local White unions are not frequent, numerous
tribal members have married off the reservation, to Whites, to other Indians,
[563] and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177] style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
•596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
[177] extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, de facto groupings
rather than de jure. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594] tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
industrious and to the most delinquent. Controls over the expenditure of
434 children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

Aunt May: Female, Age 58

Background Data

*159
[156] Like Carrie, Aunt May's social position is marginal to Klamath and White segments of the community, and she occupies a position of leadership, although
[184] hers is of a more informal variety. She has 8 years of formal education, but in her words, has been learning all her life. She has been married four times.
[871] Two marriages were broken by the death of a spouse, one by divorce, and the
[586] fourth, to a White wage worker, to whom she has been married 20 years. One of the tragedies of her life is that she has never been able to conceive, but she
[842] has made up for this biological failing by formal and informal adoptions of numerous children, four of whom she had for at least for three years, and one,
[597] an adolescent boy, since birth.

Unlike many of the other subjects, Aunt May is a town girl, although she has spent some time on a ranch in her youth and would now prefer to live in the
[756] country. When she was young she seriously considered becoming a Shaman, and was closely identified with one of the surviving "Indian Doctors," but she became dissatisfied with the prospects of this role. Yet she remained ambitious and
[874] wanted something more for her life than the "other Indians" were getting. She took up with a white woman who put her to work and trained her as a seamstress.
[759] She became an accomplished mid-wife and frequently will answer to the query if she knows a certain party, "Do I know him? Why, I cut his umbilical cord with
[857] a pair of my nail scissors." When a small girl she held the role of a "child nurse" and more or less raised the remainder of her siblings. In recent years
*159 she was literally dragged from her home by a group of white ladies who wanted
156 her to attend their church, a church, which as a girl, on Sunday mornings she had stood outside, wishing she could enter. She is the social center of gravity
177 for two large but separate circles of Klamath and Whites. She is one of the
184 few Klamath women with whom elite White ladies will associate, and with them her position is so esteemed and secure that an invitation to her house is highly
[794] valued. For her Klamath friends, relatives, and "pick-up" relatives (i.e., persons she has taken to her bosom as her own flesh) she is a confidant, an ad-
[608] visor, and an out-spoken critic. She is out-spokenly critical of many patterns
*159 of contemporary Klamath life, particularly excessive drinking and disordered
156 family life. "When I was a young woman I just stopped drinking. It was making a mess of my life. I didn't want to be a wet blanket, though. I still went to
[273] dances and all. What happened was that I told the boys that I had broken my glass." Aunt May's home today is one built with her share of tribal income,
[353] spotlessly clean, well furnished and homey. Every room of the house has its walls and corners covered with mementos and souvenirs, each of which is associated with a treasured memory of a particular person and association. It is noteworthy that these memories are her personal property and do not include her
[571] husband or adopted son. Most of her current social contacts are with Whites, for although other Klamath visit in her home, she never visits in theirs, because she does not want to get involved in their arguments.

[157] Aunt May is an extremely assertive woman whose tongue is too often sharp and biting, but every criticism is immediately followed by an effort to soften a person up, reflecting her extreme sensitivity to personal relationships. Perhaps, like Carrie, this strong joking behavior constitutes an appropriate social role. Aunt May is equally sensitive to the reactions of others to her and she will call friends to task for imagined snubs. In public she sits erect and quiet, yet attentive to all that is going on about her, and with great care

585 After a month of marriage the couple visits the bride's former home,
593 accompanied by the groom's relatives, for a further exchange of gifts. Soon after this, the girl's father and his family reciprocate. Beyond this it is a matter of mutual solicitude; undoubtedly the visits grow less frequent as the passing years bring diverging interests. Later visits are of some duration, the couple even staying through the winter.

591 Marriage is normally patrilocal, but if a man is poor, or has no close relatives, he may take up residence with his wife's people. When a young wife is about to have her first child the couple return to her mother to stay until she is strong again. This must be the circumstance of temporary matrilocal residence as it ordinarily occurs elsewhere. First marriages among primitive peoples usually follow closely on a girl's nubility. The need for advice and care during this trying period of pregnancy and delivery, the natural solicitude of the mother, are surely the reasons for the frequency with which residence is temporarily matrilocal. It will be observed that this is formally prescribed as the proper procedure almost solely in cases of first marriage. There is no need to search for a more esoteric reason such as the older writers had, matrilinear grouping, maternal authority, and the demand that the young husband prove himself to the wife's family. Among the Klamath this is the rule only on the birth of a first child.

591 A series of terms describes the facts of residence. A man and his
593 wife in matrilocal residence are non-vocatively wuko'bŏks and sḳa'bŏks
respectively.[69] A woman with her husband's people is t!e'niwas.[70]
601 On separation a woman who returns to her former home is ko'stbŏmbli,
a man returning to his, wuko'tbŏmbli.

601 I was told at least that a child's spouse is treated like an own
606 child, that parent and child terms are used between them for there are no parent-in-law taboos. This is the usage of intimacy; there are specific terms for parents-in-law. There is the familiar Indian usage of a term between the parents of a couple, "my child's parent-in-law."

582 Marriages occur any time during the year. There is no evidence suggesting their greater frequency during any season, nor any mating period[71]

---

[69] The latter term was given me at another time as meaning a newly married woman (probably the form sḳa'bŏkak was intended). This comes to the same thing. These two words apparently correspond to Gifford's wapake and kapake, earlier and later co-wife (Californian Kinship Terminologies, 42). Gifford's record is doubtless due to a misunderstanding; I enquired about these words and found that there are no terms for particular co-wives.

[70] Gatschet (2:698) gives tcina, a young woman. The meanings are not incompatible but I believe mine to be correct.

[71] As among the Yurok (Kroeber, Handbook, 44).

The number of plural wives depends on wealth; hence chiefs have more than others. From my notes I glean two instances of two wives, another of three. The wives in both bigamous cases were sisters. The greatest number known was the case of the chief Lɛle'ks, who had at one time seven wives, two of them sisters.[77] I have described their derivations above. These women bore him many children. Whether the wives are sisters is a matter of complete indifference. To have two wives is called la'bwewa'nagɪtkt (lit., two females), three xnda'nwewa'nagɪtkt, and so on. Collectively the wives may be referred to as sɪpkaka'ltk; they call each other p'tclki'p. Plural wives are paid for, but whether there is reciprocal visiting I do not know. Slaves are also taken to wife. Polyandry is unthinkable to the Klamath; it would be adulterous. 595 [622] [567]

Barrenness is as usual a reason for taking a second wife, but not always. Pat's maternal uncle had a barren wife. He kept her throughout his life and never took another. The case of three wives noted above was one in which there were no children; the children of this family always died in infancy, I was told. Whether this implied that two of the three were barren, I do not know. One word, ts'e'do, means a sterile man or woman. 595 842

The sororate is not obligatory on the death of a wife, nor is there any notion that a girl must marry an older sister's husband when she comes of age.[78] It is thought better to marry a deceased wife's sister, and from her family's point of view it is evidence that they care for the husband when they provide another daughter. There is however no feeling that they are under compulsion to make good the loss he sustained because of his marriage payments. A bereaved person waits a year or more before remarrying. The second wife has to be paid for like the first, but the amount is less. Again this depends on the man's affluence. The sororate is called spɪno'la, the sister, spɪ'nuwɪp, i.e., sibling-in-law when the spouse is dead (cf. spɪnu', to cremate, spɪ'nuks, cremation place). 587 [601]

The levirate is customary but not obligatory. It is desirable to keep a woman in the family, especially one with children. This is perhaps nothing more than an expression of household solidarity, for

---

[77] Gatschet states ten, but I am certain there were not more than seven, at least at one time (2:126).

[78] There is just a suggestion. When asked for the kinship term used by a woman for her sister's husband, my informant gave the term for husband, but somewhat in confusion corrected herself with the woman's term for brother-in-law. [601]

561	After the birth of the first child	skote		sko'ksip
562	Woman who has lost one child			K'lehála[19]
	After the death of a child	telö'kalatk		lëpklä'ķs
	Widower, widow	telima'atk		wë'aultk
	Old man, woman	tel'kla		wilä'ëķs
	Old person		k'mútcha[19,20]	

To misuse these terms disparingly is an insult; e.g., to call an old man wa'köntk or skote.

Kinship Terms

601 The peculiarities of the Klamath kinship system are to be found in the groupings of relatives in the parental and grandparental generations with correlative terminology in the two descending generations. That is, the classification is made not only on the basis of generation but regularly according to the sex of the connecting relative. Thus grandparents are distinguished as they are father's or mother's parents, and the classification appears reciprocally distinguishing a son's from a daughter's children. Again great-grandparents are either a grandfather's or a grandmother's parents and these terms are used reciprocally. Father's siblings are distinguished from the mother's and correlatively fraternal from sororal nephews and nieces. Similarly grandfather's and grandmother's siblings are separately termed and correspondingly the grandchildren of brother and sister. The connecting relatives whose sex is significant in these classifications are father and mother for the avuncular relatives and grandparents, the grandparents in their generation and the one anterior, and brother and sister for the two descending generations derived from them.

It appears further that this whole scheme revolves about the use of separate terms for siblings by male and female speakers. By extension then a father's brother differs from a mother's brother just as a man's brother differs from a woman's brother, and so on. The nepotic relatives are thought of in terms of the siblings, the avuncular relatives as siblings of the parents, and the granduncle-aunt as siblings of the grandparents.

Add verbal reciprocity as the universal usage between those two generations apart and the Klamath have four kinds of grandparent-grandchild and four kinds of granduncle-aunt—grandnephew-niece. It is consistent with this that, while the sex of the individual addressed

---

[20] Hence the name of the culture hero Kmú'kámps, old one.

is important in the parents' and grandparents' generation, sex is of no consequence among grandchildren, nephew-niece, or grandnephew-niece. The status is determined as a brother or sister of some connecting relative, or through a brother or sister, and in the latter cases the sex of the person addressed cannot matter.

There are some particulars in which this system is not consistent. Thus one would expect from the above that there would be only four terms for siblings, a division only on the basis of the sex of the speaker and that of the person addressed. But in addition age distinctions are made although not consistently. Thus a single term means a younger sibling, but it is not applied to a man's younger sister. Nor is this distinction reflected in the correlative groupings.

For the rest, there are terms for father, mother, son, and daughter, and all cousins (parallel and cross) of the speaker's generation are siblings. Hence parents' parallel and cross-cousins are avuncular relatives. Relatives beyond this all in the collateral lines are indiscriminately "cousins."

Among relatives by marriage, we note a single term for a sibling-in-law of the opposite sex. Men and women use different terms for siblings-in-law of the same sex. The husbands of two sisters and the wives of two brothers have a term in common: this reflects the sororate and levirate. The levirate appears again in a single term for step-mother and father's brother's wife. Correlative groupings which might follow from these forms of marriage do not occur.

The list of kinship terms follows. All are vocative so far as I know. This list was obtained independently of Gifford's and Gatschet's published lists; cases of conflict were later resolved by discussion with the informants.[81] [114]

p'ti'sōp, father.
p'ki'sōp, mother.
ke'elga, step-father (Gifford, a man's step-child. He also gives as meanings, mother's sister's husband and wife's sister's child, for both of whom I found no terms).
p'sa'sip, step-mother; mother's co-wife; father's brother's wife (Gifford adds a woman's step-child and husband's sister's child, but the latter is doubtful).

These groupings follow from the sororate and levirate which are practiced.

wänä'k, son.
bä'ēp, daughter.

---

[81] Gifford, Kinship, 41–43.

blü'ksip, father's father; a man's son's child.
ptlä'wip, father's mother; a woman's son's child.
pkla'sip, mother's father; a man's daughter's child.
pklo'lip, mother's mother; a woman's daughter's child.

Gifford obtained these forms with the diminutive suffix—pak *for young* grandchildren, Gatschet and I without.

tcüteül, grandfather's mother; a woman's son's grandchild.
wa'wiks, grandmother's mother; a woman's daughter's grandchild. (Gatschet gives this term as great-grandparent, Gifford as mother's grandmother and a woman's granddaughter's child, which are included in my meaning.)
p'teopteolip (from Gifford), father's grandmother; a woman's grandson's child.

p'se'yip, father's brother.
p'ko'djip, father's sister; a woman's brother's child.
bloko'tcip, mother's brother.
p'sa'kip, mother's sister.

All parents' parallel and cross-cousins and half-siblings are included in these avuncular terms.

p'a'ktis, a man's brother's child.
bötega'lip, a man's sister's child.
mako'klöp, a woman's sister's child.

These apply as well to half-siblings' children and those of parallel and cross-cousins.

baba'kip, grandfather's brother; a man's brother's grandchild.
blülo'cip, grandfather's sister; a woman's brother's grandchild.
koko'i (Gifford gives p'kuyip), grandmother's brother; a man's sister's grandchild. (This was also obtained specifically as reciprocal between a man and his father's mother's brother.)
bligi'p, grandmother's sister, a woman's sister's grandchild.

Possibly there are separate terms for these granduncles and aunts corresponding to the distinctions of paternal and maternal relatives in other generations. It is evident that the cross and parallel cousins of the grandparents are included in these terms. *For example*, in the genealogy below, bligi'p is reciprocal between a man and his mother's mother's mother's sister's daughter, as well as between a man and his father's mother's sister.

tkä'unöp, a man's older brother.
tö'piyüp, younger brother; a woman's younger sister.
tobö'kcip, a man's sister.
p'a'nip, a woman's older brother.
p'ta'lip, a woman's older sister.

Half-brothers and sisters and all parallel and cross-cousins are called by these sibling terms, including the children of parents' half-siblings. It is possible that cousins in the nearest collateral lines are called siblings as well (that is, children of parents' parallel and cross-cousins, who are themselves called by avuncular terms), but it is more probable that the following term, p'o'mdjip, is used.

p'o'mdjip, cousin, i.e., any distant relative. (In the genealogy below this is used by a man for his maternal grandmother's sister's daughter's son.)

hi'cwöks, husband (lit., man). I also recorded a form smbu'cnip, which may mean something else.
snĕwä'ĕte, wife (lit., woman).

hosa'pk̦!öp (Gifford gives ceplugict), a child's parent-in-law (i.e., mutual parents-in-law). (Gifford gives the usage of hosa'pk̦!öp as rare).
pkäsip, son-in-law (note: this should not be confused with pk!a'sip).
pte'döp (or wūnö'kgūmanēwä'ētc, lit., son's wife), daughter-in-law.
ko'spöks, a man's parent-in-law.
pto'tk!öp, a woman's parent-in-law.

Gifford notes the suffix -gewitk used in reference to the parent-in-law and child-in-law, but not in address, when the connecting relative is dead.

mū'lgüp, a man's sister-in-law; a woman's brother-in-law.

My informant gave hl'ewöka, husband, for a woman's sister's husband, but in evident confusion hastened to correct herself. Such a usage would be consistent with the sororate which they practice.

p'tco'küp, a man's brother-in-law.
p'ala'mip, a woman's sister-in-law.
p'tc!lkip, wife's sister's husband; husband's brother's wife; co-wife.

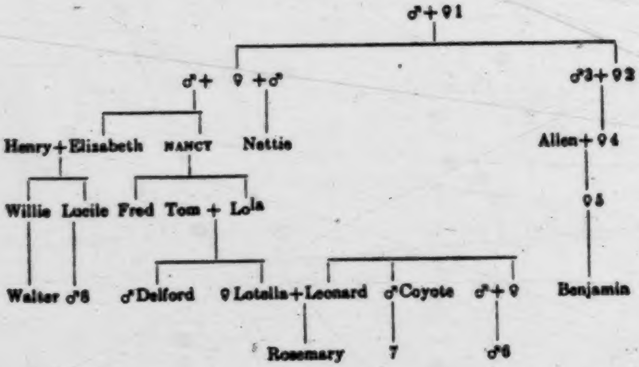
This classification follows from the levirate and sororate. There seems to be no term corresponding to this for a wife's brother's wife and a husband's sister's husband.

spī'nuwip, sibling-in-law when the connecting relative is dead (cf. spinu', to cremate). (I did not obtain this for a man's brother-in-law, but as no other term was recorded the use seems implied.)
ba'ocīp, father's sister's husband; wife's brother's child.
p'k̦!o'mkīp, mother's brother's wife; husband's sister's child (possibly mother's sister's husband but I doubt it because my informant at first denied that there is any term).

There are no corresponding terms for husband's brother's child nor, I presume, for wife's sister's child. The latter corresponds to the absence of a term for mother's sister's husband. The reciprocal of the first is p'sa'sip; this is given by Gifford for husband's brother's child. Evidently the feeling for verbal reciprocity is so strong that his informant gave the term, although, as will be seen by the genealogy below, there is no term for this child.

sna'mūks, relative.

GENEALOGY



1: Spier E-4,5 (1925-1926) 1930
(ca. 1860-1900) NR10 Klamath NR10

• 601 Nancy calls 1, p'ḳlo'līp; 2, p'sa'līp; 3, no term; Elizabeth and 4 (both older), p'ta'līp, who reciprocate with tö'piyäp; Nettie (younger), tö'piyäp, who reciprocates with p'ta'līp; Allen, Henry, mö'lgäp, who answer mö'lgäp; Henry (since Elizabeth died), spi'nuwip, and he calls her the same; Willie and 5, maḳo'ḳlöp, who call her p'sa'līp; Walter, Benjamin, bilgi'p, and they call her the same; Rosemary, wa'wiks, and she reciprocates; Henry's siblings and father's brother's son, no terms.

Lola calls Elizabeth, p'sa'līp.

Delford calls Lucile, p'sa'līp; 8, p'o'mdjīp.

Lotella calls 6, p'ḳlo'mkip; 7 (sex not stated), no term.

*601 *171 The Klamath system resembles many others in this region, as I have previously pointed out.[92] In general structure it belongs to the class I have called the Mackenzie Basin type, the distinguishing feature of which is the classification of both cross and parallel cousins as siblings. This is common to a group of tribes extending from the lower Columbia river through eastern California and adjacent Nevada nearly to the Colorado river, and also in northwestern California. In the following table are listed all cases of the classification of relatives identical with that of the Klamath. This gives a somewhat different impression. The greatest number of identical categories are common to Achomawi, Atsugewi, Southern Maidu, Northern Paiute (Paviotso), and Washo; tribes lying consecutively southward of the Klamath, with only Northern Maidu omitted. There can hardly be any doubt of a common historic cause for this much of their terminologies.

The Klamath system is set off from these, however, by the peculiarities noted below. There is no exact parallel to the Klamath use of four separate terms for parent's siblings, with reciprocal usage between father's sister and a woman's brother's child. As Gifford has pointed out,[93] the use of four terms for these relatives is the most widespread type of grouping in California, but in the majority of cases these terms are not used for parent's siblings alone. Four individual terms not used for other relatives (save sometimes for step-parents and spouses of parents' siblings) are used by tribes on the Columbia, in northwestern and eastern California; Chinook, Wishram, Hupa, Whilkut, Wiyot, Atsugewi, Northern Yana, all Maidu groups, Northern Paiute, Washo, Northeastern Mono, Yauelmani, Yaudanchi, and Paleuyami. None of these have the peculiar reciprocal usage of the Klamath.

---

[92] Spier, Distribution of Kinship Systems, 77. Numbers preceding tribal names in the table below refer to the maps of this paper.

[93] *Op. cit.*, 142.

1: Spier E-4,5 (1925-1926) 1930
(ca. 1860-1900) NR10 Klamath NR10

601 •

As Gifford has also noted,[94] the Klamath use of four special self-reciprocal terms for grandparents' siblings is unique. The general custom is to class them with the grandparents.

The Klamath terminology for siblings is exceptional: five terms, viz., man's sister, woman's older sister, woman's older brother, man's older brother, younger sibling (for all except man's sister). The usual grouping in this region is by four terms (older and younger brother, older and younger sister) regardless of the speaker's sex.

---

[94] *Ibid.*, 134.

• 601 I have few data on kinship usages. A child's spouse is treated like an own child and freely called son or daughter. Reciprocally, parents-in-law are often addressed by parent terms. The spouses of grandchildren and of nephews and nieces are not related, nor are step-brothers and sisters. There is no joking relation.

593 The close bond between siblings and their families is attested by the opening of a tale:

> [539] Wiwi'aak had five fathers, who were the five sons of Wile'aḳaḳ. That is, one was his father, but the others were fathers because they were father's brothers. . . . .

PUBERTY AND MENSTRUAL CUSTOMS

881 [554] The puberty dance is held only for the daughters of chiefs and others of wealth. For a poor man's daughter the rites are curtailed to the most necessary observances. The celebration serves as an announcement of nubility: girls marry within a year or so of their dance.

881 535 The dance (yo'ḳ'ɛla) occupies five nights at the first menstruation and is repeated at the four subsequent periods. It seems doubtful that any but the socially pretentious carry out full five celebrations. During the day the girl goes alone to sleep in the brush at some distance, returning for the dance just before sundown. I am not certain that she then seeks supernatural power. At least the girl does not run about piling up rocks in lonely places as boys do.

The dancing may take place in the lodge or outside, perhaps according to the season. It is simple enough; the girl trots forward and backward in the same course facing the east all the while. She is supported on each side by a man or woman whose arms are linked in hers. As they tire others take their places but the girl must keep on throughout the night. These others are young or old, relatives or otherwise, as convenience dictates.

881 533 The singing is provided by a group of men and women who alone know the appropriate songs. These singers are in demand for every dance. They are paid by the girl's relatives, a horse apiece, a blanket for each man, a half-fathom of beads for the women, or an equivalent. Some are provided with rattles, poles to the upper ends of which bunches of dew claws are fastened, the butts of which they pound on the ground. At least the song leader has one; other informants spoke of two or three, of five men and five women, or of rattles for all.

At the center of concentric circles of concern stands
K the natal family.[16] In the myths, parents and offspring and
M siblings are bound by the strongest affective bonds: in trouble
593 they provide succor and in death, revenge. The obligation tran-
602 scends abstract ethical considerations. In real life, mutual responsibility reaches out to embrace the extended family, the close consanguineal kindred linked through two or three genera-
K M tions. Although kinship terminology acknowledges equally re-
• [601] lationships on the maternal and paternal sides, residence practices
[591] in general favor the latter. From close kinsmen on both sides come the gifts that set the seal of approval upon the marriage of a member; during his lifetime they share food with him in his need, support him in his quarrels, and assist his avenger should he be slain. At his funeral, it is they, together with friends of the deceased, who are expected to place valuables upon the funeral pyre.

K Beyond the sphere of immediate kindred and of friends lies
M the domain of neighbors and remote relatives. If more central
602 obligations tend to be principally a function of consanguinity,
621 and thus to be ascriptive in character, village relationships and
571 those outside are more frequently based upon performance.
K M Here enter those standards of behavior by which a person of
[577] good family may be confirmed in position, the poor but worthy rise, and the ne'er-do-well sink in the public view. At the head
K M of this loose and shifting status scale stand the shamans and
756 other influential men, the leaders of hamlet groups. On occasion
622 they may meet in an informal village council to concert decisions.
621 Yet the village, which in its spatial limits often blends with
554 adjacent settlements and which dissolves with the turn of the seasons, can exert little constraint upon its members.

K The prestige of the leaders, the force of public opinion, and
M checks imposed by rival village interests hold the unruly in line.
62 The principle of self-help and the responsibility of kinsmen may enlarge grievances to feuds if the differences are not soon ended, and thus threaten the very being of the community. To counter such fissive tendencies, leaders mediate disputes and exhort to their fellow villagers the need to maintain harmony.

K Time may alter the membership of villages. Men frequently
M seek wives in other communities; and there is considerable inter-
621 marriage between Klamath and Modoc and Klamath and Molala,
563

they kill	in spring time;	the Modocs	also	assume,	sage-hens	the fish	to swim up stream	invite,	therefore	not	they kill (them).

NOTES.

*539 171 I. What is contained in these short items refers equally to the Klamath Lake and to the Modoc people, although those contained under I. were obtained from various informants belonging to the former chieftaincy.

[192] 133, 2. páka to howl, bark; pák'la to howl repeatedly, to howl for a while; pák'luipka to howl for a while in the distance towards somebody.

[177] [231] 133, 4. 5. The cat and the chicken being but recently introduced among these tribes, this superstition must have been transferred to them from other animals. By inversion, the words tchíkin gû'lu, *the hen*, appear here widely separated from each other.

[192] 133, 6. K̲ú-i tchămlûk has to be resolved into: k̲ú-i tchē mál (for málash) hú'k: "bad then for you this is!" Cruel fights will follow.

133, 7–11. This story is not clearly worded, but we are taught by it how these Indians are conversing among each other with laconic breviloquence. An Indian living in the vicinity has heard the whining of the dog which means death to his owner. He goes there, shoots the man and takes to his heels. A relative of the murdered man comes up and is mistaken by others for the murderer. They deprive him of his wife, his property and his liberty; he becomes a madman on account of the injustice done to him.

[825] 134, 1. 2. The raven (k̲ák̲) is supposed to be a bird of fatal augury, because he was seen devouring the flesh of dead Indians. Compare: General *Note* on page 130.

[202] 134, 4. kíukayunk. They adjust a rag or piece of skin to a pole and stick out that improvised *flag* on the top of the lodge to notify neighbors that they had a dream last night and desire an interpreter for it.

[525] [825] 134, 5. One of the legs of a dead black tmélhak-squirrel is cut off and laid under the gaming-disk or the pá'hla to insure luck to the player.

134, 7–12. Tcháshásh etc. This is a fragmentary extract of a scurrilous skunk-myth, which I have not been able to obtain in full from my informant, the Modoc chief Johnson, who speaks the Klamath dialect. This myth is well known through the whole of Oregon, for parts of it are embodied in a popular and melodious song of the Mólale tribe, whose ancient home is the country east and southeast of Oregon City and Portland.

134, 7. 8. mák̲laks nánuk is the direct object of hushtsóga; the skunk killed them by his stench.

[601] 134, 9. tû'paks stands for tû'pakshash; túpakship, abbreviated túpaksh, is properly the younger sister, as called by or with reference to an elder brother, while pa-ánip

*539 171 is the elder sister, called so by or with reference to a younger brother. Two other terms exist for the relative age of sisters among themselves.

601 134, 11. pátkalp'le. The myth adds, that the eagle got up again at dinner-time and that after washing the face he took a nap before taking his sister home.

525 777 II. These items were all obtained in the Modoc dialect from J. C. D. Riddle. Many of the articles mentioned as gamblers' amulets are supposed to bring good luck to the gambler on account of their *scarcity*, which must have made them more interesting to the aboriginal mind than other objects of a brighter exterior.

192 134, 13. ntággal, ndákal: to find accidentally; shléa: to find, generally, after a search. vumí' is to hide away either on one's own person or in the ground.

134, 16. 18. tídsh tínχa is to succeed, to be lucky; without tídsh in: hûtoks tínχantko gi, that man is lucky.

411 134, 17. shtáp is a black arrow-head made of obsidian, a volcanic rock found in several places in these highlands.

135, 1. hä'-atoka is formed from hä toks with intercalation of the declarative particle a.

192 193 825 135, 3. k'le-ugtki-uápkasht is a periphrastic conjugational form composed of giuápkasht, of the verb gi, and of k̲'lé-utka, the usitative of k̲'léwi, to cease, stop, terminate; -utka has turned into -ugt- by metathesis. Literally: "would habitually cease to be in the Pit River." mhû', the grouse, is called by the Klamath Lakes tmû'.

REFLECTIONS OF EVERY-DAY LIFE

MONOLOGUES IN THE KLAMATH LAKE DIALECT BY JOHNSON, CHIEF OF THE MODOCS

K̲á-i	mish	nû	ó-it	nû	tidsä'wa	nté-ish,	shliútuk	mä'makla	pá-uk	shlínk
Not	you	I	to let have	I	like	(my) bow,	for shooting	ducks	to eat	killing (them)

ndektí'shtka.	Tidsä'wa	k̲á-i	mish	úya,	tû	génuapka	úyamnank	nté-ish
with arrows.	I like	not	to you	to give (it),	over there	I will go	taking along	bow and arrows

gé-u,	hishlátsanuapka.	Yó-ishi!	tatála	k̲ä'gi,	k̲á-i	shláa	tatákni	yû'lχ;
my,	(and) will amuse myself by shooting.	Are lost!	right (ahead)	they are not,	not	I found (them)	where	they went down;

yó-ishin,	mā'ns	k̲á-ika.	Únds	mbúsant	pēn	k̲áyakuapk.
they are lost,	for a long time	I searched.	Some-time	to-morrow	again	I will look out (for them).

Shikútchipk	tchiká	kĕmutsátk;	undsĕ'ks	séwanuapk	pátki	giúga
Walks on stick	an old	decrepit (man);	some time	I will give (him)		to eat

méhiess;	yuyálks	tsi	pá-uk	hûn	tchē'k	tídsh	kí'-uapk.	Kí'shtchipk	huk
trout;	being poor	thus	through eating	of it	then	at ease	he will feel.	Comes to me	this

snéwedsh;	oní'sh	kíäm	shéwant	í;	tû'm	nû'sh	shewantamnuápka	sáwalktko
woman;	to her	fish	you may give;		plenty	to me	she will continue to give	having received presents.

Kámp'kuk	k̲éliak	pásh	tiä'ma.	Undsē't	kátchkal	pa-uápk	gé-utala	steínash.
The indigent	without	food	is hungry.	By and by	tobacco	I will chew		to my heart's content.

(252) AC: "wa·l"—it is good also. (253) My mother always used to find it somewhere, I don't know how long it thus was. (254) They were this big, here. (255) However, [they] were long, tapering, that "wa·l." (256) It tasted good. (257) I do not know it, I never followed her around long ago, when she dug that kind. (258) But she dug [for roots] knowing everything. (259) I do not know it, that "wa·l" thus. 539* 124 [173] [262]

(260) PO: Its name is all I know. (261) They told [about it] in myths for [us].

(262) AC: It tasted just thus. (263) It was very good thus. (Interruption, and the machine was turned off.)

(264) PO: . . . , "ksegi·." (265) Why would they say that? (266) "He 'ksegi·' me," as [they said].

(267) AC: Here, close by, I am deaf now!

(268) PO: "ksegi·"—why would they say that, "He 'ksegi·' me," as [they said].

(269) AC: When he lived with me. (270) If I would live with you, there at your place, then you would say, "She always 'ksegi·' me." (271) Thus you would say.

(272) AC: Then there is one more even, just about like it. (273) "nčegi·."

(274) PO: Didn't I [tell] you so! (275) "nčegi·!"

(276) AC: "nčegi·," that is one even. (277) "Now I will take offence [i.e., "nčegiwapk"] at him." (278) "Now [I] will quarrel [with him]. (279) For a long time I ignored him, but now I take offence. (280) So now I will take offence."

(281) PO: How did you [say] it first? (282) How would I say it, if you lived with me?

(283) AC: "ksegi·."

(284) PO: (That last one means I never paid any attention for a long time, but I will now, take offence to what this other person says and quarrel with them or fight with them or whatever.) So I know it for the first time, having become so old. (Interruption.)

PB: What is a "pča·sip"?

(285) PO: Which is that something—Grandfather [mother's father] and Grandfather [father's father]? (286) On the father's side, or perhaps on the mother's side? [601]

(287) AC: Yes, he is on the mother's side, that "pča·sip." (288) And he is on the father's side however, the "bloksip." (289) The "pq̓oli·p" is

[TEXT CONTINUED ON PAGE 175]

539*
124
[601]

the woman on this side, the "pḱa·sip." (290) And the "bloksip," [the woman on that side is the] "pĺe·wip"—now they are that many. (291) On this side they are two each.

PB: And what is a "pḱo·nip"?

(292) PO: "pḱo·nip," what is that? (293) How is he related, he whom they call "pḱo·nip"?

(294) AC: The "pḱo·nip" is a brother [woman's elder brother]. (295) He [they?] would be my "ḱoḱo·nip." (Great uncle.) (?)

(The conversation was carried on in English at this point, mostly about friends from the old days.)

(296) PO: . . . And how was he called, with whom she lived—whom she lived with?

(297) AC: No, she just lived with him for a little while. (298) Something herself, even being something to each other—they were some sort of relation to each other. (300) He considered [her] father an uncle [mother's brother], his absent one.

(301) PO: Yes, I thought so.

(The conversation reverted to English and drifted to a recollection of a personal experience from Mrs. Ohles' childhood. The machine was turned off during this time and was only turned on again when she returned to Klamath.)

(302) PO: . . . And she was sick with something for a long time. (303) And she was gone a long time, gone a long time. (304) So she was supposed to be gone only three days, and she was gone much longer, because she was sick. (305) And then he left us [lit. "fell off of us"], that (Proper name). (306) Then he returned, and sickness attacked, him next. (307) Then Mama having come back, she took us back to Bligh, toward Bligh. (308) What do they call Bligh in Klamath?

(309) AC: "Blay." (310) It is on this side of the mountain.

K M draws upland Klamath, Modoc, and Paiute and gives to the
226 nearby settlement, the easternmost of the permanent villages of
103 the Klamath, the name, "Sucker-fishery." Others make their way
498 K to stone weirs, built, it is said, by Gmukamps himself, or to the
M lakes to fish with a variety of dip nets, gill net baskets, the two-
226 pronged harpoon and the multibarbed spear. At night, men set
forth in canoes upon the lake to fish by torchlight. Set lines are
K put out infrequently. While the men catch the fish—suckers,
M [251] salmon, and trout—their wives work ceaselessly, splitting them
and laying them in the sun to dry.

K Released from the protracted confinement to the winter settle-
M ments, tribesmen eagerly renew bonds with relatives and friends
221 from other villages. Related families may rendezvous to travel
222 together down to the fisheries and set up their lodges side by
[571] side. Then, as spring advances and the runs of suckers and
[602] salmon abate, the fishing settlements break up and parties of
[226] two or three families fan out along the flats and meadows to dig
[103] roots: the succulent camas, the nutlike ipos, yans, and the arrow-
root for which Chewaucan Marsh is named. In the watery flats
they seek the roots of tule and cattail; elsewhere they pick wild
K celery and mosses. There are the eggs of swan and other water-
M fowl to gather; trout in the streams to be caught; and for the
22 Modoc, antelope and mountain sheep to hunt. At this time, some
[361] areas are occupied that at other times are too cold or barren.

K If there is danger of hostile attack, the parties coalesce; and
M 22 under all circumstances they maintain a wary lookout. In the
726 north small bands make cautious excursions into the upper valley
of the Deschutes, watchful for raiding parties of Cayuse, Nez
K Percés, Warm Springs, and Paiute. Toward the east, Sycan and
M Chewaucan marshes are dug over by Klamath and Paiute. Fré-
222 mont once found the latter tract furrowed as if it had been
252 plowed. In many places the stone-lined earth ovens in which
camas and other vegetal foods were baked for winter storage
can still be seen.

K As the long summer days wear on, the pond-lily seeds, known
M as wokas, begin to ripen on the marshes, and once more the
221 people draw together. The Modoc congregate especially along
222 648 Tule and Lower Klamath Lake, while some join the Klamath
on Wokas Marsh. Many Klamath, together with a few Modoc

At the center of concentric circles of concern stands
K the natal family.[18] In the myths, parents and offspring and
M siblings are bound by the strongest affective bonds: in trouble
593 they provide succor and in death, revenge. The obligation tran-
• 602 scends abstract ethical considerations. In real life, mutual responsibility reaches out to embrace the extended family, the close consanguineal kindred linked through two or three genera-
K M tions. Although kinship terminology acknowledges equally re-
[601] lationships on the maternal and paternal sides, residence practices
[591] in general favor the latter. From close kinsmen on both sides come the gifts that set the seal of approval upon the marriage of a member; during his lifetime they share food with him in his need, support him in his quarrels, and assist his avenger should he be slain. At his funeral, it is they, together with friends of the deceased, who are expected to place valuables upon the funeral pyre.

K Beyond the sphere of immediate kindred and of friends lies
M the domain of neighbors and remote relatives. If more central
602 obligations tend to be principally a function of consanguinity,
621 and thus to be ascriptive in character, village relationships and
571 those outside are more frequently based upon performance.
K M Here enter those standards of behavior by which a person of
[577] good family may be confirmed in position, the poor but worthy rise, and the ne'er-do-well sink in the public view. At the head
K M of this loose and shifting status scale stand the shamans and
756 other influential men, the leaders of hamlet groups. On occasion
622 they may meet in an informal village council to concert decisions.
621 Yet the village, which in its spatial limits often blends with
554 adjacent settlements and which dissolves with the turn of the seasons, can exert little constraint upon its members.

K The prestige of the leaders, the force of public opinion, and
M checks imposed by rival village interests hold the unruly in line.
62 The principle of self-help and the responsibility of kinsmen may enlarge grievances to feuds if the differences are not soon ended, and thus threaten the very being of the community. To counter such fissive tendencies, leaders mediate disputes and exhort to their fellow villagers the need to maintain harmony.

K Time may alter the membership of villages. Men frequently
M seek wives in other communities; and there is considerable inter-
621 563 582 marriage between Klamath and Modoc and Klamath and Molala,

acceptance was rapid. They will serve as a simple introduction to 648* 657*
the programs as a whole and to some of the underlying factors. 177

Clothing and Names

An individual's acceptance of white clothing and names affected only himself. 177
Consequently, it waited less upon consensus 291
than did the assumption of a reservation political order, a change- 657*
over to farming, or even the decision to build a house in the new fashion. Moreover, both clothes and names, external manifestations of a new status, were supplementary to those already worn. Their addition to the stock already on hand did not at first require that native counterparts be discarded. The same eagerness shown toward Plains-type garments was now exhibited toward those new, prestigeful novelties: the blankets, trade cloth, and surplus military uniforms issued as part of the treaty annuities.

Although some of the first trade flannel was made into banners,[2] a monthly report of 1872 notes that it was being "cut into dresses for the old women and calico [is] purchased for lining."[3] A photograph of Dave Hill and Tecumseh, two Agency employees, taken in Washington in 1875,[4] shows them impeccably clad in the fashion of the day. It is unlikely that their garb could have been matched among the men on the reservation, yet the easy availability of men's clothing in the form of surplus uniforms gave men an advantage over their wives in the attainment of the new mode. For lack of suitable models, women's clothing lagged, but by 1877 the Agent could state, "The women try to imitate the fashion of dress, and many show a commendable neatness in their apparel. They adorn themselves in many instances with native styles of ornament; but they generally couple with this cleanliness of person and dress; but all, both men and women, adopt and seem to prefer the American style of dress."[5]

Along with their easy acceptance of the new clothing, the 657*
Klamath also "readily" agreed to cut their hair.[6] This was a 177
significant step, for close-cropped hair was worn only by 602 •
mourners, and to wear the hair in this fashion at another time might bring on a bereavement. Here the example of the whites
may have provided encouragement for the step. Moreover, the 657*
whole sphere of funerary practices was undergoing change; some 177 764

*657
*648 tunities of the reservation. As they moved away, they extended
563 Indian experience into the midst of frontier society. During the
167 allotment period they in turn enlarged reservation perspectives.

*657 The majority of the interbreed children that appeared upon
*648 the early reservation, then, were the product of temporary or
563 unstable unions and appeared as fatherless children. The annual
162 reports are unrealistic as to their number. In 1885, for example,
it was claimed that there were only 12 interbreeds in the total population of 919,[9] although to judge from later censuses, the number must have been several times as great.

*657 One of the long-range results of this intercourse was to reduce
*648 somewhat the difference in physical appearance that separated
563 the Indians from the surrounding population. Another—and more
[144] immediate—consequence, however, was to raise the divisive issue
[848] of illegitimacy among the Indians themselves and to introduce
• [602] into the tribal body individuals who could claim only maternal
kinsmen. Thus, one Klamath recalls his father, a stage driver in Klamath Falls, as a drunkard whom his mother finally left. The family returned to his maternal grandparents, in whose care the boy grew up. His mother subsequently married a man who ran a logging camp at Pelican Bay, a hard worker and good hunter who treated the boy well. Nonetheless, throughout his life he bore an animus against his father and in part against the heritage he represented.[10]

*657 Interracial unions were encouraged, not only by a dearth of
*648 white women but by an early preponderance of women among
563 the Klamath and by regulations which put an end to polygamy.
162 The early imbalance between the sexes was striking. The figures
[595] supplied by Captain Kelly for the adult Klamath in 1864 give a
sex ratio of no more than 0.47.[11] Those for the Link River band two years later areonly a little higher for the adults, 0.52, although the overall figure is 0.64, since boys and girls are in approximate balance.[12]

[164] Neither sex-linked disease nor the practice of selective infanti-
[847] cide is known to have occurred among the Klamath, and the most
probable explanation must be sought among such factors as differential exposure to rigorous training, warfare, and vicissitudes of the food quest, as well as to possible emigration of single men. O. C. Applegate, the only Agent to comment upon the im-

Family and School

WHITES AND KLAMATH ON THE RESERVATION RECOGNIZED IN FAMILY 648*
ties a bond that might be useful as well in formal enterprises. 657*
Several leading businesses in Chiloquin relied in part upon consanguinity 602 •
and upon marital ties to recruit members and ensure 178
continuity of control. Similarly, among the Klamath, during the bidding for tracts of tribal property in the course of termination, members characteristically acted in kin groups to undertake purchases that were beyond the resources of a single individual. In primary relations among both groups, visiting patterns and the occasional appearance of extended family households betokened the continued strength of ties reaching beyond the nuclear family.

For the whites who had come originally from outside the [167]
reservation, kinship ties stretched to distant places and there [563]
were comparatively few relatives close at hand. Of the whites in Chiloquin in 1950, although fifty-six per cent had moved from a previous residence in Oregon, fewer than forty per cent came from the reservation, from Klamath Falls, or from southwestern Oregon. Only a handful had raised children and in turn had seen grandchildren being reared in the town.[1]

The Klamath, with many kinsmen still upon the reservation, [587]
saw the network of relationship close at hand, however tangled it might be by the intricacies of remarriage. To be sure, the [596]
extended family as a residential group was not prominent, for in Chiloquin there were but two such households and in Beatty one. The strength of the bonds manifested themselves in other ways. Tribal residents in the city of Springfield, in the Willamette Valley, several of whom asserted that they had originally moved away to escape the importunities of kinsmen, had made the move as nuclear families over a period of several decades. None-

*648 theless, analysis showed that they aggregated two extended
*657 families together with one other nuclear family unrelated to
• 602 either. The earlier arrivals had attracted relatives, but they had
178 been selective, encouraging some and in at least one instance giving the cold shoulder to a kinsman deemed undesirable, when he paid them an exploratory visit. For their part, they were scrupulous in choosing compatible relatives to visit on their occasional brief returns to the reservation.

[736] That kinship bonds, selectively utilized, were still in force is shown not only by such action as the bidding for tribal tracts, but in the assumption of responsibility for the care of children from a broken home. Although choice was exercised among relatives, and the uncongenial among close kindred might be passed over in favor of more distant, but more compatible, relations, the principle first evoked was that of consanguinity. In the majority of instances, primary reliance was placed upon parents and children, upon siblings, grandparents, and grandchildren.

*648 Among kinsmen, there was an enlargement of the sphere of
*657 individual, at the expense of common, property. At times it took
602 bizarre extremes. In one adult household, for example, each
421 member's foodstuffs were separately stored and even individually
177 cooked; and each independently purchased his supply of the
178 wood to be burned in a common stove. There was evident in family interdependence what might be termed a pecuniarization of relationships, a conversion of traditional reciprocal obligations into the common denominator of coin. Already evident in the early days of allotment, it had grown with time, taking on as it did a onesidedness that was increasingly dysfunctional. Money could be extracted by the importunate from kinsmen still sensi-
[888] tive to the charge of stinginess. The aged, dependent upon their children for tenderness, were often likely to be besieged by their requests for "loans" from lease and per capita checks, and once those funds were dissipated, might then be left without enough to maintain themselves. Some families, like the ranchers previously described, were beginning to resist such demands, but for those still immersed in tribal society, refusal was difficult.

*648 The weakening of kin bonds entailed the disappearance of
*657 feud groups, entities that formerly had drawn principally upon
602
578
177
178

kinship loyalties and that had provided relatively stable focal 648*
interests about which allegiances might cluster. The anonymous 657*
destruction of property as a time-honored method of exacting 602
personal revenge remained even in the last days of the reserva- 578
tion, when the jacklight shooting of a cow was construed as the 178
malicious act of a foe. Distrust thus engendered was likely in 177
turn to lead to a search for potential allies, especially among kinsmen and cronies. Local legend in Chiloquin still recounts the memorable gunfight between two tribal families in the days before its incorporation, one firing from the railway depot while the other entrenched itself in the family hotel. At the first few shots the stationmaster, a newcomer to town, was flushed from the depot; and when the fusillades were stilled he left town, never to return.

As law and order became more firmly established over the reservation, and extended families, their members scattered on separate allotments and among the reservation towns, became
dispersed, retaliatory obligations declined. In the end, feudatory 648*
alignment left their mark chiefly in a continued reluctance of 657*
former opponents to drink together or otherwise associate. The 602
drinking cliques, with their stable membership cores, reflected 578
these antipathies: three decades after the gunfight mentioned 273
above, the families involved still did not consort together. Only 178
one person, and she an affinal, had crossed the line. 177
[573]

Indeed, the violence of more recent years, as remarked, lay far less between families than it did within them, for many of the quarrels that precipitated assaults arose in the course of drinking parties, and thus antagonized persons who were accustomed to associate together. Although there was a degree of mobility in the membership of such parties, and clashes at times might involve a visitor, many instances of homicide arose out of family disputes. That the tensions thus vented were generated by the changes in familial roles seems at least partially true, to judge by an examination of court cases; but they were affected indirectly by other segments of the psychosocial system, such as the relations with whites. Such disputes, however, could only weaken the family, and that at a time when family solidarity had become a less imperative need.

Within the reticulation of familial roles, the traditionally 000

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 divided into three segments as nearly equal in size as possible.[24]
*657 The symmetrical cuts resulted in a Conformant segment, pre-
177 vailingly law-abiding in record, almost twice as large as the In-
178 framodal category at the other end, which consisted of these
184 persons with the highest record of violations. The Intermediate
125 membership was slightly larger than that of the Conformant.[25]

The characteristics of each of these categories, when contrasted, tend to confirm statements made previously. Members of the Conformant segment were least Indian biologically and included the highest proportion of women. They seem to have come from comparatively smaller families and, with the Intermediate subjects, seem to have received far more adequate parental care than did the Inframodal category. Educational achievements are less distinctive, reflecting the compulsory nature of schooling on the reservation, but again the Inframodal segment lags behind the others in school grade completed. In the measure of engagement in business or ranching and in record of money management, the distinctions are decisive, with the Conformant category far outstripping its fellows and the Inframodal segment at the bottom. Finally, in both the percentage of those married and living with spouse and family as well as in the stability of residence the same order is seen.

In the second part of the study, the thirty Klamath subjects who had given Dr. Clifton responses to the Murray Thematic Apperception Test (TAT)[26] were assigned by judgment to the three segments, the protocols of each category being treated together by a method of analysis previously employed in examining Klamath mythology.[27] When all of the modern TAT segments were combined and contrasted with the myths, the responses were seen to reflect changes which had in fact taken place through time. Thus a trend toward a universalistic outlook
[602] was reflected, along with lessened attention to the ramifications
[594] of kinship, a reduction of the family itself to nuclear form, and
[554] a concurrent diversification of role relationships toward individ-
[571] uals acting impersonally as employer, policeman, doctor, or
teacher. A secularization of life may also be reflected by the scant consideration of religion in the modern protocols.

[571] When the modern TAT segments were compared, the Conform*ant subjects* were seen to place a strong emphasis upon support

given the family by neighbors as well as by the impersonal agents 648*
of society, while making little mention of any kinsmen beyond 657*
the immediate, two-generation family. Members of this category, 177
who objectively were least Indian genetically and who mani- 178
fested the highest measure of intermarriage with whites, were 184
the only ones to introduce racial comments in their responses. 125
This may well be taken as evidence of their sensitivity to a [571]
marginal condition. In treating intrafamilial roles, they saw a [829]
strong paternal figure (lacking in the protocols of the other two [593]
segments), but they viewed his authority as one against which the son repeatedly rebelled. Moreover, contrary to their own superior record of family stability, members of the Conformant category envisaged the marital bond as frequently threatened by feminine interlopers. Here again is an indication that the Conformant families, like the most acculturated among Vogt's Navaho veterans,[28] had achieved their condition only at the cost of gnawing anxiety.

By contrast, both of the remaining TAT segments tended to [602]
stress kinship, for in their protocols a greater reliance is placed upon grandparents and more remote kinsmen, with correspondingly less dependence upon friends, neighbors, or impersonal agents. Indeed, the Inframodal subjects tended to view the
latter with suspicion and outright hostility. In neither segment [593]
was the paternal role seen as prominent; and the mother instead occupied a central position, not disciplining, but strongly supporting her children. Sibling relations, which in the Conformant category had been seen as continuing through life, stood on a lower level among the intermediate subjects, who viewed the bond as existing only in childhood; and were negligible among the Inframodal segment. Similarly, the marital bond appeared to be conceived by Intermediate members as weak, being marked by a succession of casual liaisons, while the Inframodal saw strife between the couple, rather than outside interference, as disrupting the union.

By contrast with Conformant subjects, members of the other
two categories exhibited a far less realistic view of the conditions [829]
making possible achievement, but they did so in different ways. Those of the Intermediate segment seemed to see conformance as a necessary factor for success, although their behavioral record

[Klamath Reservation]

*648 *657 619 641 Tribal membership was, as we have seen, only one of several political roles in which Klamath might participate, and in some measure it lay athwart the others. Citizenship in the United States, granted generally to American Indians in 1924, affiliation with state, county, and municipality: these political memberships are explicit in character, conditional upon the fulfillment of stated requirements and with the exercise of well-defined rights. Superficially, tribal membership appears to possess a similar character. In the admission of new members, both the establishment of qualifications and the decision upon individual candidates rested with the Tribe, though subject to review by the Bureau of Indian Affairs. Applicants had to be of Klamath parentage on at least one side, and those of one-quarter or more Klamath heritage were automatically admitted upon application. In 1945 a clause was added permitting adoption of members of one-sixteenth heritage, contingent upon assurances that they would reside upon the reservation and participate in tribal activities.

In practice, Indian heritage of any sort, and not merely that stemming from the Klamath Tribe, was reckoned in; and token assurances of participation and residence have conventionally [161] [162] been accepted. Of the final enrollment of 2,133 tribal members, 86 fell within the category of one-sixteenth quantum. Of these, 12 dwelt on the reservation and another 12 in Klamath Falls, the remaining 62 residing at some distance from the seat of tribal government. Once enrolled, members have not been subject to review, save when their original qualifications were called into question.

In a membership that was not conditional upon performance, [602] [621] the Tribe had a great deal in common with such ascriptive entities as the family and ramified kin, the traditional tribe, and the broad regional communities into which the latter had tended to cluster.

Family loyalties have been at once strong and selective. At times, they have provided continuities of interest within a single [602] line. Here, for example, were the Rev. Jesse Kirk, himself the son of a treaty signatory, and his sons, Clayton, Seldon, and Jesse Lee; here old chief Monchnkasgitk, and his sons, Harrison and Henry Brown; here Judge William Crawford, his wife, Eliza, and their son, Wade; here Henry Jackson, his half-brother, Ike, and the latter's son, Boyd Jackson.

While the political strength of a family is seen not only in the 648*
succession of interest but in a propensity for members of a family 657*
to vote *en bloc*, this is far from invariably true. The schism 619
separating Jesse Kirk from his half-brother, Joseph, is one promi- 602•
nent instance—and by no means the only one—to the contrary. [665]
In fact, alignment within the family and extended kin has often [578]
been modified by contending considerations.

Nonetheless, for some leaders the solidarity of family some- 648*
times took precedence over impartiality in the discharge of office. 657*
One tribal council member is quoted as defending his action 661
favoring certain enrollments by the explanation ". . . that since 602
two children were his niece's children, he felt that it was his duty 619
to guard the interests of his minor relatives."[8] Political leaders, seeking to emphasize the purity of their motives, needed to go no further in justification than to declare that they sought only the welfare of their grandchildren.

Although intermarriage and alternative associations have long 648*
overlaid clear identification with the several peoples who had 657*
entered into the treaty, such affiliations have continued to exert 563
political force, however greatly diminished in recent years. In 621
turn, they related to the two broad communities on the reserva- 619
tion. The Lower End remained predominantly Klamath, while Modoc, Paiute, as well as a number of Klamath and Pit River, comprised the Upper End community some forty miles away.
Even after the closing of the subagency at Yainax, the populations [184]
of Sprague River and Beatty continued to reflect the special character of the eastern reservation.

In turn, the relatively easier access of the Lower End to out- [177]
side influences—a subject already reviewed in discussing modern tribal demography—superimposed the effects of differential acculturation and intermarriage upon the traditional subtribal
allegiances that distinguished the two Ends. Difficulty of travel 648*
along the road from the Agency to Yainax had given rise to the 657*
practice, long maintained, of holding separate councils at each 621
place. Thus at the two Ends there had developed political com- 665
munities responsive to their own local leaders. Harrison Brown, 619
in 1931, played upon a familiar theme when he recognized in Wade Crawford, a leader from the Lower End ". . . a young man who is not a full-blood, who is trying to stir up trouble, and we

581 Probably one-third of all Klamath women have
[848 borne at least one child out of wedlock. At the same time, there is considerable
out-marriage, and while Klamath and local White unions are not frequent, numerous
[563 tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588 hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177 style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591 notation of the existence of an extended family, but in all cases the bonds are
[177 extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, de facto groupings
rather than de jure. They arise out of special needs and do not have sufficient
[626 status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594 tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422 group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181 Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
industrious and to the most delinquent. Controls over the expenditure of
434 children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

Individuated family relationships and the instability of the marriage tie have 593
other ramifications. Parental care-taking activities are minimal and are sometimes 855
non-existent. Given the pattern of drinking and partying, children are [581]
frequently abandoned to the care of a hired baby-sitter for days at a time, [181]
or to an older relative, or to an elder sibling. If the party occurs in the
household, children may temporarily be moved elsewhere, or they may simply be
left to shift for themselves. Thus at crucial developmental stages children may [603]
find their identification with parents broken by alternating periods of presence [155]
and absence, and their affections given over to an older sister (the picture of
the determined little twelve or thirteen year old "child-nurse" is a clear one)
or to a grandmother. When parents are present, Klamath children are usually
faced not only with minimal care and attention, but with indifference and aloofness.
The father especially is dissociated from significant relationships, and
both he and the mother are frequently given to unpredictable and alternating
fits of love and anger. Thus within the nuclear family, there is little experience [155]
with consistency in role relationships.

Thus the first years of life are spent by the Klamath child in a loosely bonded, [602]
amorphous household group, and he has some lesser, but important ties to other
kin. At age six the Klamath child attends a local public school. Reflecting 872
the incohesiveness of the family group, these children are accustomed to lax, 861
permissive controls of their behavior, and are not accustomed to confronting clear-cut,
specific, over-riding standards of conduct. At the same time they are not [593]
accustomed to maneuvering opposite a single, stable authority figure. Yet [181]
these children are characterized also by a dependent craving for affection and [155]
attention which does, initially, facilitate adjustment to the school milieu.
In contrast, they frequently anticipate rebuff. In later years the latter seems to
be the stronger inter-personal need, and the growing child becomes increasingly [156]
characterized by a kind of defensive isolation from close personal contacts.
This may be adequate training for participation in contemporary Klamath culture,
but it hampers and restricts adaptation to the larger society.

In many respects the values and skills learned within the household to not adequately 155
prepare the child even for school adjustment, with the requirement of 156
regularity and time-mindedness. Similarly, the daily routine within the household [871]
may be such as to impede the child's getting to school on time, or it may
throw the responsibility for attendance on very young children, or it may get
him there unfed and, by school standards, improperly clothed. At the same time
the child may have had recited for him, or he has surely overheard recounted,
the myth of Klamath racial inferiority. Too frequently this belief in inferiority
is assimilated as a segment of the growing child's self system, contributing
in turn to his acceptance of poor performance, to a bitter rebelliousness,
or to a destructive pride. The same experience reinforces the expectation
of rebuff, if this time somewhat more consciously. In fact, in later school [563]
years the Klamath adolescent does meet with informal racial barriers in the [582]
areas of courtship and dating, for the path to inter-marriage with local Whites
is not an easy one.

It is at this juncture, in early adolescence, that parental controls of the child 882
are almost totally relinquished. Made thus culturally independent, the child 156
may then enter high school and find that for the first time he has to compete 155
with his peers, for there are few social promotions in high school. Because he
is fully aware of his economic independence, and because of the other factors
cited, the pattern is for Klamath children then to find themselves propelled into
an adult status. The associated school phenomena at this juncture is a high [871]

867 terms for all his relatives, whether he has seen them yet or not. This is considered one of the most important things a child must learn.[8]

With the knowledge of kinship terms the
child acquires certain attitudes toward his
relatives, although patterns of behavior toward
particular kin do not seem to be very clearly
[593] defined among the Klamath. Parents are re-
[603] spected and obeyed, as are grandparents though a
certain amount of indulgence and teasing is to
be expected from the latter. Uncles and aunts
[604] are shown considerable respect. Cousins call
each other by sibling terms; those of opposite
[605] sex play together freely when small but are told
that it is not proper to "play rough" with each
other. Even small children learn that marriage
between cousins is "a very bad thing," and that
children from such an incestuous union will
never live.

856 There is some effort to teach the child the names of objects by pointing to them and repeating the word, but he probably acquires more of his vocabulary simply by listening to adult conversation. There is no baby talk or any attempt to simplify words for the children. If the child mispronounces or misuses words, he is laughed at and corrected.

553 Children acquire their personal names in a casual manner at any time from birth to the age of five or six. There is no ceremony connected with naming, and some individuals receive two or three names which may all be in use at the same time. Names are, for the most part, of the nickname variety and refer to some personal mannerism or peculiarity.[9] In addition, some refer to spirits, birds, or animals. Names are given by the parents or other relatives. One person

[text continues on top of p. 342-B]

EARLY CHILDHOOD

857 By the time a child is three he begins to
play with other children, parents encouraging
group play. Children from all social strata
play together. "After all, you can't keep kids
apart." Children of chiefs or shamans are no
[848] different from the rest. Illegitimate children
are looked down upon by the community as a
whole, but they are not segregated from their
age-mates.

[865] At first the youngsters are apt to start fights with each other, but the parents are usually on hand to stop rough play. A child who fights all the time brings disgrace to his family and especially to himself. He must play by himself for awhile. "Everyone knows he has been bad; no one likes him." He is ashamed and experiences great remorse when he is told he cannot play with other children.

Three- and four-year-olds find a variety of

[8] See Spier, pp. 62-68, for a discussion of the Klamath kinship system.

[9] Naming customs and typical names are given by Spier, pp. 59-61, and Voegelin, elements 1306-1321.

581 Probably one-third of all Klamath women have
borne at least one child out of wedlock. At the same time, there is considerable
[848] out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177] style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
but are sometimes extended to other consanguinal and affinal kin. Occasionally
596 there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
extremely loose, and the extended group is rarely a residential unit, which
[177] aboriginal Klamath extended families were. These are, thusly, *de facto* groupings
rather than *de jure*. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594] tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
industrious and to the most delinquent. Controls over the expenditure of
434 children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

Individuated family relationships and the instability of the marriage tie have 593
other ramifications. Parental care-taking activities are minimal and are sometimes 855
non-existent. Given the pattern of drinking and partying, children are [581]
frequently abandoned to the care of a hired baby-sitter for days at a time,
or to an older relative, or to an elder sibling. If the party occurs in the [181]
household, children may temporarily be moved elsewhere, or they may simply be
left to shift for themselves. Thus at crucial developmental stages children may [603]
find their identification with parents broken by alternating periods of presence
and absence, and their affections given over to an older sister (the picture of [155]
the determined little twelve or thirteen year old "child-nurse" is a clear one)
or to a grandmother. When parents are present, Klamath children are usually
faced not only with minimal care and attention, but with indifference and aloofness.
The father especially is dissociated from significant relationships, and
both he and the mother are frequently given to unpredictable and alternating
fits of love and anger. Thus within the nuclear family, there is little experience [155]
with consistency in role relationships.

Thus the first years of life are spent by the Klamath child in a loosely bonded, [602]
amorphous household group, and he has some lesser, but important ties to other
kin. At age six the Klamath child attends a local public school. Reflecting 872
the incohesiveness of the family group, these children are accustomed to lax, 861
permissive controls of their behavior, and are not accustomed to confronting clear-cut,
specific, over-riding standards of conduct. At the same time they are not [593]
accustomed to maneuvering opposite a single, stable authority figure. Yet [181]
these children are characterized also by a dependent craving for affection and
attention which does, initially, facilitate adjustment to the school milieu. [155]
In contrast, they frequently anticipate rebuff. In later years the latter seems to
be the stronger inter-personal need, and the growing child becomes increasingly [156]
characterized by a kind of defensive isolation from close personal contacts.
This may be adequate training for participation in contemporary Klamath culture,
but it hampers and restricts adaptation to the larger society.

In many respects the values and skills learned within the household to not adequately 155
prepare the child even for school adjustment, with the requirement of 156
regularity and time-mindedness. Similarly, the daily routine within the household [871]
may be such as to impede the child's getting to school on time, or it may
throw the responsibility for attendance on very young children, or it may get
him there unfed and, by school standards, improperly clothed. At the same time
the child may have had recited for him, or he has surely overheard recounted,
the myth of Klamath racial inferiority. Too frequently this belief in inferiority
is assimilated as a segment of the growing child's self system, contributing
in turn to his acceptance of poor performance, to a bitter rebelliousness,
or to a destructive pride. The same experience reinforces the expectation
of rebuff, if this time somewhat more consciously. In fact, in later school [563]
years the Klamath adolescent does meet with informal racial barriers in the [582]
areas of courtship and dating, for the path to inter-marriage with local Whites
is not an easy one.

It is at this juncture, in early adolescence, that parental controls of the child 882
are almost totally relinquished. Made thus culturally independent, the child 156
may then enter high school and find that for the first time he has to compete 155
with his peers, for there are few social promotions in high school. Because he
is fully aware of his economic independence, and because of the other factors
cited, the pattern is for Klamath children then to find themselves propelled into
an adult status. The associated school phenomena at this juncture is a high [871]

Slim: Male, Age 30

Background Data

Slim's case was selected so as to illustrate the situation of a regularly em- 159*
ployed, well liked and respected young male. He is currently employed as a [464]
laborer in a lumber mill, and in the past has worked as a carpenter, and in
heavy industries in the mid-west. He has ten years of formal schooling, obtained [463]
his 12th grade certificate by examination while in military service, and for [871]
one month studied commercial art in Portland. [701]

Slim was born into a large, influential kin group, one which for several genera- [619]
tions has provided much of the tribe's leadership. While his own father has
not been so influential in tribal politics, preferring to work his ranch in-
stead, Slim grew up in association with male relatives noted for their forth-
right independence and leadership, and within a family tradition of progressive-
ness and self-improvement. Slim's early life was spent in alternating periods [591]
of residence with his own father and mother on their ranch, and with his father's
mother in her cabin on the Sycan marsh. This association with "Grandma" was [603]
partly in response to the gradual disintegration of relations between his father
and mother, and partly the result of his father's desire to have "Grandma" teach [593]
him some of the old lore. His mother became increasingly erratic, unpredic-
table, and violent, finally leaving his father. Slim felt badly rejected by [153]
her and was never able to understnad why she would not accept his efforts to be
helpful. On the other hand, he was very close to his father and his grand-
mother. Today he recalls with satisfaction the many things these two persons
taught him, and dreams recurrently of being in the army, defending the reserva-
tion from attack, and checking in on the old lady to see if she is all right.
This dream is interesting because it expresses succinctly his style of relations
with superiors, for in the dream Slim asks permission of his squad leader to
leave, explains his reasons, then checks in on "Grandma," and returns to his duty.

After the 10th grade was completed, Slim quit school and worked on various ranches.
Early in the Korean war he consciously followed the model of an uncle, who was
a career soldier, and enlisted in the army. His service record was good, marred
only by what Slim feels were two justifiable periods of unauthorized absence,
and he voluntarily served with a combat unit in Korea. This army experience
considerably broadened Slim's horizons, and after his discharge he lived and
worked with an army buddy in the east for a year. Then Slim traveled and worked
in several places in the east and midwest. On two occasions his regular habits [961]
and good capacity for steady work were responsible for a promotion. Characteris-
tically, Slim enjoys this kind of reward, but he does not specifically strive
for advancement.

Slim has many skills, hobbies, and social graces. When young his father taught him to dig ditches, with the advice that this skill would always provide him with a job. He is an expert horseman and stock-keeper, and is a skilled hunter and woodsman who frequently guides his friends on hunting trips. He has learned carpentry, house-painting, and the operation of various industrial machines. More recently, he has turned to archery, sketching, and photography for hobbies to occupy his spare time. Then too, he is an amiable, jolly person who makes good company and who is well regarded as a friend. He is not married, and has never seriously considered marrying. He has had occasional sexual liaisons of a transitory nature, which he finds quite satisfying, and has been "going steady" for several years with an older woman, a person who is a grandmother in her own right.

Grandma Williams: Female, Age 87

Background Data

*159
156 Understandably, it is difficult to find a match for a person like Weasel, particularly
in the instance of a woman who occupies a similar status. The few
[595] Klamath women who were like Weasel were not available for testing. Grandma
William's position is that of the mother of a large, disorganized nuclear family
[733] like Weasel's, one marked by excessive drinking, violence, and promiscuity.
[83] She is a vigorous, hearty, earthy old woman who has borne eight children by
three husbands. She is once divorced and twice widowed, her first husband
[587] having died after three years of marriage, her third after thirty-five. She
[871] completed six years of school, all that was available when she was a girl, and
she has lived and visited for extended periods in Washington state, Missouri,
[178] California, and Mexico.

[657] Grandma William's mother was a traditional Klamath wife and mother, and her father
for years an Agency Indian policeman. In her words, both her family of orientation
[464] and her family of procreation have had "bad luck." This bad luck consists of numerous
bouts with the law over acts of violence. Her father died in the Federal
penitentiary where he was serving a life sentence for murder. Several of her
sons have killed men in the past. One is reputed to have killed at least five,
and he is now in a State institution. Her other children are noted for their
violence, and local informants say of Grandma that they cannot understand how
such "a wonderful, good old lady managed to produce so many worthless children."
[577] Few feel that she deserves such a fate. Community acceptance of Grandma Williams
is based upon several attributes, her steady, hard work, her commitment to raising
[177] a family, her devoutly Christian behavior, her espousal of dominant White values,
and, especially, her hearty good humor. She has never accepted the guilt of
either her father or her sons, maintains that they were falsely accused, and
has worked steadily to secure her one son's pardon.

[191] Grandma Williams was raised in a Klamath speaking household and acquired her
English in school. She is very proud of her education and maintains that children
[871] today are not so well tutored in the 3 Rs as she was. She claims that "I
can just about out-spell, out-write, and out-figure all of my kids." This is by
[593] no means the only aggressive, competitive attitude she maintains towards her
children, none of whom have ever quite lived up to her standards. In this respect,
*[603] Clifton was once able to witness her training a grandson, who was an alert,
[867] spontaneous, active lad. The boy was made to be too polite and too formal, behaviors
in keeping perhaps with urban middle-class society, but very much out of
place on the reservation. All of her sons have maintained their main affiliations
with the local "cowboy" culture, but they are ridiculed for their efforts at
riding and calf roping because of their obesity and clumsyness, none of them
coming near, in physical type, to the slim hipped, pencil shaped cowboy ideal.
[657] She is an excellent example of a woman who, early in the reservation period, was
carefully tutored by conscientious minister-teachers in inappropriate behaviors
[871] and values, and who has attempted to transmit these to her children. It would
[177] seem that she has produced over-trained, and mis-trained, hostile children, who
promptly discovered that regardless of their veneer of "culture" they were rejected
from many local circles because of their Indianness.

*159 Grandma is a direct, forceful person, another Klamath woman with a sharp wit
157 (yet a less personal one than Aunt May's). She is quick to initiate inter-
156 changes and to attempt to knit together a strained situation. Yet her responses

[p.342A]

867 terms for all his relatives, whether he has seen them yet or not. This is considered one of the most important things a child must learn.[8]

With the knowledge of kinship terms the child acquires certain attitudes toward his relatives, although patterns of behavior toward particular kin do not seem to be very clearly [593] defined among the Klamath. Parents are respected [603] and obeyed, as are grandparents though a certain amount of indulgence and teasing is to [604] be expected from the latter. Uncles and aunts are shown considerable respect. Cousins call [605] each other by sibling terms; those of opposite sex play together freely when small but are told that it is not proper to "play rough" with each other. Even small children learn that marriage between cousins is "a very bad thing," and that children from such an incestuous union will never live.

856 There is some effort to teach the child the names of objects by pointing to them and repeating the word, but he probably acquires more of his vocabulary simply by listening to adult conversation. There is no baby talk or any attempt to simplify words for the children. If the child mispronounces or misuses words, he is laughed at and corrected.

553 Children acquire their personal names in a casual manner at any time from birth to the age of five or six. There is no ceremony connected with naming, and some individuals receive two or three names which may all be in use at the same time. Names are, for the most part, of the nickname variety and refer to some personal mannerism or peculiarity.[9] In addition, some refer to spirits, birds, or animals. Names are given by the parents or other relatives. One person

[8] See Spier, pp. 62-68, for a discussion of the Klamath kinship system.

[9] Naming customs and typical names are given by Spier, pp. 59-61, and Voegelin, elements 3306-3321.

585 After a month of marriage the couple visits the bride's former home,
593 accompanied by the groom's relatives, for a further exchange of gifts.
Soon after this, the girl's father and his family reciprocate. Beyond this it is a matter of mutual solicitude; undoubtedly the visits grow less frequent as the passing years bring diverging interests. Later visits are of some duration, the couple even staying through the winter.

591 Marriage is normally patrilocal, but if a man is poor, or has no close relatives, he may take up residence with his wife's people. When a young wife is about to have her first child the couple return to her mother to stay until she is strong again. This must be the circumstance of temporary matrilocal residence as it ordinarily occurs elsewhere. First marriages among primitive peoples usually follow closely on a girl's nubility. The need for advice and care during this trying period of pregnancy and delivery, the natural solicitude of the mother, are surely the reasons for the frequency with which residence is temporarily matrilocal. It will be observed that this is formally prescribed as the proper procedure almost solely in cases of first marriage. There is no need to search for a more esoteric reason such as the older writers had, matrilinear grouping, maternal authority, and the demand that the young husband prove himself to the wife's family. Among the Klamath this is the rule only on the birth of a first child.

591 A series of terms describes the facts of residence. A man and his
593 wife in matrilocal residence are non-vocatively wuko'bŏks and sḳa'bŏks
respectively.[69] A woman with her husband's people is t!e'niwas.[70]
601 On separation a woman who returns to her former home is ko'stbŏmbli,
a man returning to his, wuko'tbŏmbli.

601 I was told at least that a child's spouse is treated like an own
child, that parent and child terms are used between them for there
606 are no parent-in-law taboos. This is the usage of intimacy; there are specific terms for parents-in-law. There is the familiar Indian usage of a term between the parents of a couple, "my child's parent-in-law."

582 Marriages occur any time during the year. There is no evidence suggesting their greater frequency during any season, nor any mating period[71]

---

[69] The latter term was given me at another time as meaning a newly married woman (probably the form ska'bŏkak was intended). This comes to the same thing. These two words apparently correspond to Gifford's wapake and kapake, earlier and later co-wife (Californian Kinship Terminologies, 42). Gifford's record is doubtless due to a misunderstanding; I enquired about these words and found that there are no terms for particular co-wives.

[70] Gatschet (2:698) gives tcína, a young woman. The meanings are not incompatible but I believe mine to be correct.

[71] As among the Yurok (Kroeber, Handbook, 44).

C

000 3867. Mo: "Honorable" form of marriage, but practiced mostly by poorer people; wealthy persons pay for bride. SW: Permissible, but not formalized.

3868. AW: Done occasionally, but "don't like it; it's no good marrying that way; there's no sense to it."

Exogamy; postnuptial residence; kinship avoidances.--

3874. See element 2619. NM: Local group exogamy practiced, but seemingly neither preferred nor obligatory. Men take wives from Chicago Park, Nevada City groups; do not intermarry with Colfax or Mooretown (MF) groups.

3875. MV: Man usually takes his wife from village other than his own.

582 3877. Kl: Local group endogamy permissible, but "can't take wife from near-by neighbor's house, even if woman unrelated to man; have to take wife from house at least 1 mile away, and rather take wives from farther off."

3878. No rule, among any of groups, forbidding intertribal marriages.

3879. "Often practiced" may be putting case too strongly. However, number of intertribal marriages, as revealed in genealogies of informants (all of whom were between 60-90 years old themselves) was rather surprising. See section on Informants, this study. Kl: Intertribal marriages of Kl with Mo, Warm Springs Sahaptin commented upon by informant.

000 3880-3882. MM: Applies to child-betrothal marriages.

3883, 3884. MM: Applies to simple form of marriage in which couple merely live together.

3890. AW, WS, MM: 1-2 months.

3891. Before birth of first child, couple usually go to wife's parents' home and birth hut is made for woman near her parents' house.

● [606] 3901. Kl, Mo, SE, SW: Taboo attenuated; Kl: man accords mother-in-law same respect he accords his own mother. At, AW, AE, WT, WM, WS, MM, MF, NF, NM, NS, MV: Taboo important; marked.

3919. At: If mother-in-law talks to son-in-law, bear will "chew up" son-in-law; he will never be seen again. Same applies to conversation between father-in-law, daughter-in-law. WT: If do not observe taboos, mother-in-law will have bad luck; rattlesnake will bite her, or grizzly devour her, or she will be killed by enemies or burnt. MV: "Observe [these taboos] for love of son-in-law; think world of son-in-law; think so much of him that mother-in-law won't look at him."

3921. All items listed under mother-in-law, son-in-law taboos inquired about in field for father-in-law, daughter-in-law. AW: Taboos similar, except that whereas perhaps only "1 man out of 200" may violate taboo against marrying his mother-in-law it is not matter for much disapproval if under some circumstances woman marries her father-in-law after her husband's death.

KLAMATH CHILDHOOD AND EDUCATION[1]

by

MARION PEARSALL

INTRODUCTION

128 culture, social and political organization are not described here except in their effect on
124 education. Wherever particular items are mentioned, we specifically asked our informants for a description, even though they had been described in previous ethnographies. Such accounts may thus be taken as corroborating earlier evidence unless otherwise specified in the text.

131 The Klamath reside in their old territory
178 in southern Oregon, but the aboriginal way of life has long since disappeared. Today they are
241 farmers and ranchers, but a considerable part of
233 the earlier culture remains alive in the memories of a few oldsters. Our seven informants
178 (4 men and 3 women) were all in their late seventies or eighties and had participated in the last phases of the aboriginal culture as
115 children. It is regrettable that it was necessary to reconstruct childhood training from the reminiscences of elderly individuals. Doubtless much of the material represents the ideal rather than the actual pattern of education. The ideals do, however, give a definite insight into what was considered important in the upbringing of children, whether these standards were always maintained or not. Since there is little or nothing in the early literature on this subject, there is no way of comparing impressions received from old people who are admittedly looking back to "the good old days" with impressions of objective eyewitnesses to the old ways as they were really practiced.

BIRTH AND INFANCY

Barrenness is sometimes considered cause for divorce. Since the blame
842 seems to fall most commonly on the woman, her husband's parents may suggest that he send her
586 away and get a wife who can provide him with children. Ordinarily, though, the parents-in-
606 law are more lenient with a barren woman.

842 Most Klamath express a preference for boys. A variety of reasons are offered, the most common being that boys are less bother than girls. "Girls are always getting into trouble, and you just raise them for someone else because they go off to their husbands when they get married."[2] Once the child is born, however, there seems to be no special favoritism shown to boys. One

Aunt May: Female, Age 58

Background Data

*159
[156] Like Carrie, Aunt May's social position is marginal to Klamath and White seg-
ments of the community, and she occupies a position of leadership, although
[184] hers is of a more informal variety. She has 8 years of formal education, but
in her words, has been learning all her life. She has been married four times.
[871] Two marriages were broken by the death of a spouse, one by divorce, and the
[586] fourth, to a White wage worker, to whom she has been married 20 years. One of
the tragedies of her life is that she has never been able to conceive, but she
[842] has made up for this biological failing by formal and informal adoptions of
numerous children, four of whom she had for at least for three years, and one,
[597] an adolescent boy, since birth.

Unlike many of the other subjects, Aunt May is a town girl, although she has
spent some time on a ranch in her youth and would now prefer to live in the
[756] country. When she was young she seriously considered becoming a Shaman, and was
closely identified with one of the surviving "Indian Doctors," but she became
dissatisfied with the prospects of this role. Yet she remained ambitious and
[874] wanted something more for her life than the "other Indians" were getting. She
took up with a white woman who put her to work and trained her as a seamstress.
[759] She became an accomplished mid-wife and frequently will answer to the query if
she knows a certain party, "Do I know him? Why, I cut his umbilical cord with
[857] a pair of my nail scissors." When a small girl she held the role of a "child
nurse" and more or less raised the remainder of her siblings. In recent years
*159 she was literally dragged from her home by a group of white ladies who wanted
156 her to attend their church, a church, which as a girl, on Sunday mornings she
had stood outside, wishing she could enter. She is the social center of gravity
177 for two large but separate circles of Klamath and Whites. She is one of the
184 few Klamath women with whom elite White ladies will associate, and with them
her position is so esteemed and secure that an invitation to her house is highly
[794] valued. For her Klamath friends, relatives, and "pick-up" relatives (i.e., per-
sons she has taken to her bosom as her own flesh) she is a confidant, an ad-
[608] visor, and an out-spoken critic. She is out-spokenly critical of many patterns
*159 of contemporary Klamath life, particularly excessive drinking and disordered
156 family life. "When I was a young woman I just stopped drinking. It was making
a mess of my life. I didn't want to be a wet blanket, though. I still went to
[273] dances and all. What happened was that I told the boys that I had broken my
glass." Aunt May's home today is one built with her share of tribal income,
[353] spotlessly clean, well furnished and homey. Every room of the house has its
walls and corners covered with mementos and souvenirs, each of which is asso-
ciated with a treasured memory of a particular person and association. It is
noteworthy that these memories are her personal property and do not include her
[571] husband or adopted son. Most of her current social contacts are with Whites,
for although other Klamath visit in her home, she never visits in theirs, be-
cause she does not want to get involved in their arguments.

[157] Aunt May is an extremely assertive woman whose tongue is too often sharp and
biting, but every criticism is immediately followed by an effort to soften a
person up, reflecting her extreme sensitivity to personal relationships. Per-
haps, like Carrie, this strong joking behavior constitutes an appropriate social
role. Aunt May is equally sensitive to the reactions of others to her and she
will call friends to task for imagined snubs. In public she sits erect and
quiet, yet attentive to all that is going on about her, and with great care

K M 609 In such a sphere, and in relations with strangers beyond, the myths picture encounters fraught with possible danger. They may be initiated by a trucial period which endures until, by proper guest-host behavior, by a claim of kinship or on the other hand by an act of aggression, the issue of “friend or foe” is K M [574] precipitated. Hospitality dictates that one receive and feed the stranger, though a visiting kinsman brings a gift of food or otherwise repays the kindness. If, however, hostility is decided upon, it rarely becomes open: instead, both sides proceed indirectly, under the guise of amicability, and employ followers or auxiliaries to encompass the destruction of the other. It is here that the prescient qualities of the hero, his access to assistants and to supernatural forces, are decisive.[19]

K 648 In ethnographic reality, the outer limits of society are marked by the boundaries of common speech. Beyond this, the Klamath maintain amity with the Molala, intermittent friendship and hostility toward the Warm Springs and other Columbia River Sahaptin, who sometimes raid them, and toward the Paiute; inveterate hostility toward the Takelma of the upper Rogue and other peoples west of the Cascades; and a predatory aggressiveness toward the Pit River and Shasta to the south, whom they increasingly raid for slaves and loot.

K M 571 156 [838] The horizons of such a society are not wide. With the exception of the shaman, a part-time specialist, each man and each woman has much the same skills and knowledge as his fellows. The aberrant individual can do no more than assume the dress and behavior of the other sex, ascribing his action to supernatural dictate. The transient forms of the community and the informal constraint it imposes, the paucity of activities that demand concerted action, go hand in hand with a permissiveness in the individual. When this takes aggressive form, it may threaten the very fabric of society.

K M 754 571 152 682 The covert expression of hostility is likely to invest relations beyond the natal family with fear and mistrust. Revenge can take the form of murder from ambush, sorcery to engender the illness or death of the enemy, or the stealthy destruction of his property.[20] One frequent cause of open slayings, and of the feuds that ensue, is suspicion that a shaman has brought about the death of one's kinsman. Commonly, such charges are leveled

WAR

72 Leader has totem animal, bird. Painting of contestants according to totem. Men taken prisoners in war; enslaved. Compensation for slain amounts to more than victim's or victim's mother's bride price. Compensation paid before dance of settlement; at end of dance.

CYCLE OF LIFE

Birth

844 Pit, small hole dug in preparation for child-
birth. Animal medicine to aid childbirth. Navel
cord cut with bone, cane knife. Cord buried in
ashes. Cord thrown in bush, stream. Mother
baked in pit. Mother uses drinking tube.
Father lies down, after birth of child. Father
uses drinking tube. Milk teeth thrown toward
moon; backward; over pregnant woman; over house.
845 Twins liked; one killed, only if of opposite
847 sex, incest theory. Abortion accomplished by
taking animal, vegetable medicines, massaging
with hot stones. Infanticide practiced on all
illegitimate, deformed children, twins; infant
killed by sitting upon, drowning, abandoning.

Puberty and Menstrual Observances

881 Girls' puberty rites.--Private seclusion: held for group of related, unrelated girls. Held outside in ceremonial enclosure. Girl sits, lies on curtained couch, bed platform, heated pit. Girl sits, lies face down. Girl's blankets given attendant(s). Girl abstains from food completely. Meals limited to once a day; girl eats after others. All liquids taboo. 4-day increase in food taboos after first period. Food taboos enforced limited number of subsequent periods. Food taboos not enforced after first period. Girl chews deer-fat pellets. Girl fed in pit. Does own cooking. Uses bone drinking tube. No sleeping. Girl avoids all people. No visitors. Scratcher yew wedge, horn. Girl scratches head with fingers. Delousing by self. Mud plastered on hair. Girl makes flower garlands. All join girl in running. Girl travels at night. Girl uses blanket, rabbit-skin blanket, mat wool head covering. Girl wears woodpecker scalp, shell, brush, flower crown headband; brush visor. Hair hangs over face. Girl stands at wall covered. Hair worn done up; braided with goat's wool. Hair dressed by self. Bangs cut at end of ceremony. Face painted white; all colors; sun painted on fore-

773 times over them or by blowing at them, an act which is supposed to impart
776 life.

CONCLUDING WORDS.

128 The limited space allowed for this ethnographic sketch forces me to suppress the larger part of the matter for the present and to relegate it to a future volume. A few points characteristic of the two tribes may, however, be added on the last page of this Report.

614 The Klamath Indians are absolutely ignorant of the gentile or clan
171 system as prevalent among the Haida, Tlingit, and the Eastern Indians of
582 North America. Matriarchate is also unknown among them; every one is free to marry within or without the tribe, and the children inherit from the
595 father. Although polygamy is now abolished, the marriage tie is a rather
581 loose one. This tribe is the southernmost one of those that flatten their
304 infants' skulls, this practice continuing about one year only after birth.

764 Cremation of the dead has been abolished since 1868, though during the Modoc war these Indians burned several of their dead. The custom of suppressing the personal names of the dead is rigidly kept up at the present
178 time. Art never had any encouragement or votaries among the Klamaths,
769 and the only objects seen that could be regarded as art products were a
531 few rock paintings and a head-board on a grave near the Agency build-
532 ings, which was painted in the Haida style and represented a human face flattened out to the right and left. Some baskets are artistically formed.
285 As there is no clay to be found on or near the reservation, pottery could
323 never become an art among these Indians. Their songs and poetry are also artless, but nevertheless instructive, and several songs have beautiful tunes
533 that should be preserved. The musical and sonorous character of the lan-
538 guage fits it well for poetic composition; but a national poetry, to be of success, would not have to adopt the rhyme as a metrical factor. Alliteration, assonance, or the prosody of the ancients would be more suitable to this upland language, with its arsis and thesis, than the artificial schemes which poets are devising for the modern European tongues. Who will be the first to teach the Muses the Klamath language?

624 fire at ceremony; totem. Female dance managers.
Fire tender appointed by crier. Judge. Moieties
615 lacking; lineages lacking, except possibly among
613 AE.

WAR

72 Leader has totem animal, bird. Painting of contestants according to totem. Men taken prisoners in war; enslaved. Compensation for slain amounts to more than victim's or victim's mother's bride price. Compensation paid before dance of settlement; at end of dance.

CYCLE OF LIFE

Birth

844 Pit, small hole dug in preparation for child-
birth. Animal medicine to aid childbirth. Navel
cord cut with bone, cane knife. Cord buried in
ashes. Cord thrown in bush, stream. Mother
baked in pit. Mother uses drinking tube.
Father lies down, after birth of child. Father
uses drinking tube. Milk teeth thrown toward
moon; backward; over pregnant woman; over house.
845 Twins liked; one killed, only if of opposite
847 sex, incest theory. Abortion accomplished by
taking animal, vegetable medicines, massaging
with hot stones. Infanticide practiced on all
illegitimate, deformed children, twins; infant
killed by sitting upon, drowning, abandoning.

Puberty and Menstrual Observances

881 Girls' puberty rites.--Private seclusion: held for group of related, unrelated girls. Held outside in ceremonial enclosure. Girl sits, lies on curtained couch, bed platform, heated pit. Girl sits, lies face down. Girl's blankets given attendant(s). Girl abstains from food completely. Meals limited to once a day; girl eats after others. All liquids taboo. 4-day increase in food taboos after first period. Food taboos enforced limited number of subsequent periods. Food taboos not enforced after first period. Girl chews deer-fat pellets. Girl fed in pit. Does own cooking. Uses bone drinking tube. No sleeping. Girl avoids all people. No visitors. Scratcher yew wedge, horn. Girl scratches head with fingers. Delousing by self. Mud plastered on hair. Girl makes flower garlands. All join girl in running. Girl travels at night. Girl uses blanket, rabbit-skin blanket, mat wool head covering. Girl wears woodpecker scalp, shell, brush, flower crown headband; brush visor. Hair hangs over face. Girl stands at wall covered. Hair worn done up; braided with goat's wool. Hair dressed by self. Bangs cut at end of ceremony. Face painted white; all colors; sun painted on fore-

through the rock, had only a narrow way between them to allow 103
passage along the shore. On a point of rocks on the hill above stands 131
a cremation pile. A hillock west of the bay is called lalau'ḳ!ŏt, flat, 361
for the many flat rocks on top. The opposite point of the river mouth also has a settlement, called tc!a'tc!ŏmsi, for some unidentified bird.

57, wĕḳă'ĕls, fallen tree, is a settlement of moderate size on the shore a mile west of the river mouth, now intersected by the road.

58, wut!ana'kŏḳs, a low gap, and 59, iup!a'tŏna, end place, are summer sites respectively at the ends of a little marsh (now drained) on the west side of the lake.

60, woḳsa'lks, lily seed (wokas) picking place, is a summer camp [222]
on the north shore of Wokas marsh. When leaving in the fall it is
customary to sink the canoes at the edge of the marsh, hide the grinding [501]
slabs in the juniper thicket, and pack by a regular trail to [415]
dĕ'ktcŏŋks, whence they return to the winter villages.

61, dĕ'ktcŏŋks, netting place, is a camp site on the west shore of [226]
Klamath lake opposite Buck island. Midway between this site and the island is a favorite place for catching fish at night with a triangular scoop net. The point Skillet Handle is called iuwa''lɪ, end of a point, and a flat-topped mountain west of Wocus bay, seolŏpǵĭs.

62, sa'stĭtḳa'wals, Shasta stand on end, is Squaw point where a few [823]
Klamath falls people might be found in winter. There are holes in the rocks here in which they pound to make the wind blow, pounding in those on the south side, for instance, to bring a south wind.

TRIBAL SUBDIVISIONS

The Klamath are not a single political entity. There are four or 101
possibly five subdivisions or tribelets, each occupying a distinct dis- 619
trict, and practically autonomous. This is separatism of the familiar Californian order. Nevertheless, the cohesion rising from a common dialect, common culture, and a uniform reaction against all non-tribesmen, which on occasion leads to jointly taking the field against them, produces a tribal solidarity resembling that of the Plains people.

The separatism is immediately clear in any discussion with them. They invariably reserve the modern name Klamath for the Klamath marsh—Williamson river division; all others are Klamath only by extension. The groups are readily defined by the districts they

101 • 619 occupy, the names of which they bear; this, despite the lack of any sharp geographic division, rivers or ranges, such as we should expect to figure in political separatism. There are only three or four miles of open, unoccupied country between the middle Williamson river group and that at the river mouth, for instance, or between the latter and the northernmost outposts of the Klamath falls people about Modoc point. The cases of doubtful divisions really stress this point. Kowa'edi on the lake shore may belong with the middle Williamson division; though only three miles away over a low range of hills, it is somewhat isolated. Similarly the Sprague river settlements toward Yainax, usually included in the same group, are in quite a different district.

721 619 [171] The third feature pointing to their separatism is the frequent feuds between them. It is quite clear that these involve the tribelets; they never occur between the settlements of a single division. The point will be clearer if we contrast Yurok sentiments. There feuds are between the towns or with only a group of kinsmen within a town, and at most when several towns are involved in a joint cause, it appears rather that kinsmen and their friends have been drawn in.[24]
[567] Further, feuds are carried on much as warfare with foreigners; property is destroyed, women and children enslaved. Such slaves can be retained indefinitely or sold again. We may wonder however if they are not restored when a settlement is bought, or at most retained only to even the score in lives.

The identity of these groups resolves itself solely into such aspects of group consciousness. There is no political mechanism within the group. When it comes to war with outsiders, each group can act for itself, others may join if they wish. At the other extreme, the towns
[621] are not sharply separated. A town is probably in large part a body of relatives, although not so clearly so that towns are exogamous. In short, the tribelet is a body with a community of interest which hardly extends to the Klamath as a whole.

115 197 184 Only one informant, Pat Kane, suggested dialectic and cultural differentiation. The dialect groupings he gave are purely geographic. He also assigned shamanistic tricks, medical practices, and games to the several divisions, which all other informants emphatically denied. I could observe no linguistic differences and Gatschet recorded none.

000 The subdivisions or tribelets are:

---

[24] Kroeber, Handbook, 49.

The subdivisions or tribelets are:

I. ä'ukckni, the people of Klamath marsh and middle Williamson river, the Klamath proper. Evidently the Sprague river people are included here; there is some doubt, but I am even more doubtful whether there were settlements as far away on Sprague river as Yainax in pre-reservation times. 101 131 619 •

II. kowa'cdikni, those of a village of that name on Agency lake. They may be ä'ukckni.

III. du'kwakni, on the delta of Williamson river. These are more closely affiliated with the Pelican bay people than with ä'ukckni.

IV. gu'mbötkni, those of Pelican bay and the marsh to the north.

V. iu'' laloŋkni, the people of Klamath falls (Link river) and the eastern shore of Klamath lake.

The names are those of the districts they occupy with the suffix -kni, those of, people of: ä'ukei, Klamath marsh; du'kwa, the district about the mouth of Williamson river; gu'mböt, Pelican bay, possibly taking its name from Rocky point; iu'' laloŋᴇ, on the end, the village at the outlet of the lake into Link river.

It is now difficult to get a true estimate of the size of these groups. 361 The ä'ukckni count twenty-nine or more settlements, half of the total; 162 of the others iu'' laloŋkni have thirteen, gu'mbötkni seven or more, du'kwakni five, and kowa'cdikni, one. The towns vary considerably in size, yet this mere count agrees closely with the populational proportions as my several informants phrased them. The ä'ukckni are by far the largest group, perhaps as large as all the others together. Nancy Phillips recalls the large number of children who played [115] together at gu'mböt, Pelican bay. At this place the settlements do form a large compact group. Next in order she places the du'kwa group, then those clustering about iu'' laloŋᴇ at Klamath falls, and goyᴇmske'ᴇgis on Williamson river. The settlements on Williamson river are small and scattered, but she places their joint population above the gu'mbötkni. The iu'' laloŋkni were comparatively few despite their large territory. Of the ä'ukckni more lived at Klamath marsh even in winter than on Williamson river. The huge size of a single site, du'' Ilk̦ūt, bears this out.

Consonant with their unequal size is it that the principal chief, at 619 least in early reservation days, was the principal chief of the ä'ukckni; 622 all others were distinctly subordinate in prestige. According to one informant, himself a du'kwa man, the ä'ukckni are the highest people. [829] Kᴇmū'kūmps, the culture hero, made them first, best, and strongest; later he made the others.

WARFARE AND FEUDS

721 Klamath warfare is deserving of the name in contrast to the conflicts
of the northern Californian tribes. Raids are carried into
foreign parts for plunder, slaves, and revenge, and received in turn.
No single town or tribelet is alone concerned: warriors are drawn
[171] from the Klamath at large. This is in marked contrast to the Yurok
and their neighbors, e.g., whose foreign wars seem but an extension
of the private quarrels that set town against town, and in which the
large body of Yurok may remain neutral. Warfare is here not mere
retaliation, murder for murder, but is engendered by patriotic motive
and tangible benefits.

There can be little doubt that the Klamath attitude is due to their
contact with tribes of warlike habit to the north and east. Raids from
that direction had to be met and countered. The interesting circumstance
is that the Pit river people were under a similar compulsion
but apparently made no effort to cope with the raids by reciprocating.
So far as I can learn they never ventured against the Klamath despite
their equivalence or even superiority of numbers. The cause for the
difference seems to be that the Klamath had reason to raid; slaves and
[437] plunder were important to them. There was a market for these
articles at the Dalles with much-coveted horses to be had in return.
[231] The Achomawi had no such outlet. I would not underestimate the
difference in tribal solidarity, which may have been entirely lacking
[619] among the Achomawi, but the suggestion is that such solidarity may
in this instance be a function of a common cause against a common
enemy. The Klamath had their share of internecine warfare.

648 Besides the close bond with the Modoc, normally friendly relations
are maintained with the Molala across the Cascades, the Wätä'nkni
(Warm Springs people) of the Deschutes, and the Wishram-Wasco
648 at the Dalles. Warfare is directed toward all other directions. Raids
are exchanged with the Shasta several days' journey down the Klamath
721 river, the Upland Takelma on the Rogue river, and the Northern
[231] Paiute (Snake) of the desert to the east. The Klamath fight the
Kalapuya and take horses from the Warm Springs Indians.[26] Since
horses were obtained by them, raids may be expected of the Ya'mökni
two hundred or more miles away; northerners generically, but in this

---

[26] Gatschet, 1:16.

connection the Sahaptins of the Columbia and the Cayuse seem 648
meant.[86] Both Ya'mŏkni and Shasta made slaves among the Klamath. 721
How infrequent were these raids may be judged by the circumstance [567]
that my informants independently mentioned the half-dozen recorded
years ago by Gatschet, and no others.

The Pit river people, possibly only the Achomawi, may alone be
raided with impunity. Reciprocity on their part would lead them
only into the intervening territory of the hostile Modoc, who may well
have served the Klamath as a buffer. For their part the Klamath were [567]
stimulated by the lucrative traffic in slaves established with the Columbia
river tribes, and the majority of captives were by all accounts Pit
river people. Gatschet writes of these raids as a regular occurrence. 114
"In April and May the Klamath Lakes and Modocs would surround 437
the camps, kill the men, and abduct the women and children to their
homes, or sell them into slavery at the international bartering place 567
at The Dalles"; and again, "the Lake men enslaved many every
spring time."[87] To be sure, consonant with Kroeber's view,[88] raiding [231]
was undoubtedly accelerated by the appearance of the horse in the
north. Contacts were then more rapid, and the beast itself became
an important and desirable article to possess. But there can be no 567
doubt that the practice of taking slaves on Pit river was already
established. This is not only implied in the informants' statements,
but it must be kept in mind that slaves were an important element in
the society of the Wishram, Wasco, and their down-river neighbors.
This means that the Klamath were not only turning to slave-taking
as a lucrative traffic, but that slave-holding as indicative of social
distinction was becoming their habit by imitation.[89]

How frequently the Klamath made war as a whole is unknown. It 721
seems doubtful that concerted action was frequent. Perhaps large- 567

---

[86] Henry Renier, an old settler, told me of such a raid up the Deschutes 619
about 1876.

[87] *Op. cit.*, 1:lix, 19.

[88] Handbook, 319.

[89] While the Klamath do not distinguish among the Pit river peoples raided, Kniffen's recent account of the Achomawi (Achomawi Geography) makes it clear that Klamath and Modoc descended most frequently on Achomawi settlements north of the Pit and also crossed it to Atsugewi territory in Hat Creek and Dixie valleys. The Achomawi proper about Fall river were subject to continual attack; the Hewisedawi, south of Goose lake, and the Astariwawi, near them on the Pit, bore the brunt. The Atsugewi divisions, Atsuge (Hat creek) and Aporige (Dixie valley), were also freely raided. The Atwamsini, on the middle Pit, and the Kosalektawi, on the extreme headwaters of the river, were reached much less frequently. The other groups of Achomawi were free from attack probably by reason of their inaccessibility; the Ilmawi, Itsatawi, and Madesi at the western end of their range, and the Hammawi on the extreme east.

721 [619] [567] scale expeditions were undertaken only after the slave traffic was established on an extensive scale. On one occasion at least all the chiefs were at a dance preparatory to going to war: this implies that all the tribelets were engaged. All the tribelets joined similarly in a raid for revenge against the Upland Takelma. It is said that the Klamath marsh division (ä'ukekni), by far the largest group, always extended the invitation for war, but I doubt that this is literally so. It is true that they led in aggressions just prior to reservation days, but this seems because of the initiative of their chief Lele'ks, the most prominent ever known, who was singularly interested in the slave trade for his personal advantage.

726 628 Internecine warfare is probably as significant as that with foreigners, for quarrels and blood feuds are quite common. Feuds exist between the several subdivisions, not within them, evincing a solidarity which but rarely extends to the tribe. Thus the du'kwakni of the mouth of Williamson river are known to have taken action against members of each of the four other divisions, even the gu'mbötkni of Pelican bay with whom they are closely linked. There are cases of reciprocated action by each of the five against the others indiscriminately. Yet Pat Kane stated that the lesser divisions avoided conflict with the ä'ukekni. Yet there is the case of his own people, du'kwakni, fighting with an ä'ukekni settlement. Nancy Phillips said it was true that she knew of no cases involving gu'mbötkni or iu''lalo̧kni (southern lake people) with ä'ukekni, but this does not mean they would not fight. I think it hardly likely that the others are awed by the numbers of the ä'ukekni, for the feuds are essentially between groups of relatives alone. Yet others besides relatives might be induced to join.

721 628 A characteristic circumstance initiating a feud is the murder of a man residing with a wife of another tribelet. Ten or twenty of his male relatives take canoe and demand the delivery of the murderer or satisfaction from his relatives in the form of women, slaves, beads, dentalia, etc. The parley (ndĕ'na) is held from a safe distance at the top of their voices. Instead of acceding, the offenders may offer fight. But an effort is usually made to reach an agreement by offering payment. They may forestall retaliation by dispatching as a go-between (gaḳö'ḳwa) a relative of the offended group who is paid for his trouble, a canoe, a shirt, net, skin armor, or a woman's dress. If they have neither women nor money to offer, they give nets, weapons, anything, even to the last things they have. If no amicable adjustment can be reached they resort to fight. Even though the score be evened

(ca. 1860-1900) NR10 Klamath NR10

177 At least one minor element, assigned by tradition to this period,
535 was derived from another direction; the notched rattle used in war
534 and scalp dances in imitation of the Upland Takelma.

Direct contact was opened with the Upper Chinook at the Dalles
only after 1800. By this time Snake raids had dispossessed the
174 Sahaptins of central eastern Oregon, driven them north of the
648 Columbia, and cleared the south bank of that stream by scattering
Cayuse-Molala east and west. Direct contact quite across Oregon
brought the Klamath in touch with the great trading center at the
Dalles and revealed to them the superior and stimulating cultures of
the Chinookan tribes and the semi-Plains groups from above on the
Columbia.

174 The whole rise of the chiefs, the growth of social stratification
177 based on wealth, the concern with slave-holding, all seem to date from
this time. Wealth began to be considerable: its form was new: horses
[556] and slaves. Chiefs grew in wealth and prominence over shamans.
The basis of their selection changed in some degree from war to wealth.
[622] Slave-raiding to the south increased in frequency: the booty was
[721] carried to Warm Springs and the Dalles.

It is doubtful if the material differences in wealth and slave-holding
[567] existed prior to 1800. Shamans were dominant over chiefs
and were but slightly more wealthy than the majority. The historic
174 tribal subdivisions were in existence, the village groups and their distribution
177 established, and the basic social relations, as reflected in kinship
terminology for example, much as we know them. Marriage may
[756] well have been by purchase, but possibly without the pseudo-potlatch
[622] custom of reciprocal visiting. Material culture was prevailingly
southern Plateau in aspect, and religious practices, while more north
[619] Californian, had already some impress of the Northwest Coast.

[583] Is there a Lutuamian culture province? I am doubtful. Kroeber
has somewhat hesitatingly posited one, set off by a certain distinctiveness
101 from that phrasing of Northwest Coast culture found localized on
the lower Klamath river, and favoring rather the Basin and Plateau,
105 to which the Klamath country lies open.

114 "The Lutuamian culture or subculture, as represented by the
Klamath and Modoc, corresponds well with this setting. It reveals
some specializations, such as its wokas and tule industries, that are
obviously founded on peculiar environment. There are some northwestern
influences, but rather vague ones. The basis of the culture
is perhaps central Californian, with certainly some Great Basin or

to say nothing of captured women from Shasta, the Achumawi K M
and Atsugewi of the Pit River region, Paiute, and the tribes 621
beyond the Cascades. Among the Modoc, the villages of the band 582
called *gumbatwas* are said to be composite in membership, including 563
Modoc, Klamath, Pit River, and Shasta; and those of the
Upland Klamath consist of Klamath with some Modoc and
Paiute elements.[17]

Allegiance with the village may be partial. If an attack is to K
be launched, war leaders can find recruits only among those men M 621
with proclivity for fighting and an attraction toward the leader. 628
On the other hand, feuds may ignite attacks that are restricted 581
to the family groups concerned. While the myths reveal currents 701
of hostility between affinals, in real life marriage acts to extend
the ramifications of support, often into other communities.

Beyond the village lies the tribelet, an entity that recognizes its K
being in a territorial name and in a common cause in feuds with M 619 •
other tribelets. In its virtual autonomy this unit marks an extreme K
in band organization within the larger tribe, a quality that was 619
reduced by subsequent tribal integration. For the Klamath there
are six tribelets (see map): (1) The Klamath Marsh people,
who outnumber all the others together; (2) the tiny Agency
Lake group; (3) those of the lower Williamson River; (4) the
Pelican Bay tribelet; (5) the Klamath Falls group; and (6) the
Upland Klamath of the Sprague River valley. The Modoc comprise M
three main groups: (7) that of Lower Klamath Lake, extending 619
to Tule Lake (the *gumbatwas* mentioned above); (8)
those clustered upon the lower Lost River; and (9) the eastern
tribelet, with settlements dispersed as far as Goose Lake. No K
firm evidence exists that these local territorial units are distinguished M
by either language or culture, although, as already 619
mentioned, at least two are of composite origin. Each tribelet 726
seems to have gained a tenuous cohesion through a common
recognition of the worth of several prominent headmen. Between K
tribelets there is sometimes war. Under their formidable leader, 619
Kokdinks, the Williamson River group attacked in turn villages 726
of each of the other lower Klamath tribelets, including that at
Pelican Bay, to which they considered themselves related; and
the prolonged war ended only when the Upland Klamath leader,
Monchnkasgitk, a kinsman, first joined, then slew Kokdinks.[18]

K

M
175 1850. Aggressions by Northern Paiute bands led to similar large-
178 scale forays into the country east of Silver and Summer lakes.
726 The almost endemic condition of warfare and the enlarging
K scale of operations, together with the lucrative trade in booty,
M 175 brought about the emergence of a chiefly class, the members of
726 which based their power upon eminence in war and possession
182 of wealth, including slaves.[10] Their successes attracted followers,
622 and common interest as well as kinship prompted them at times
565 to cement alliances with shamans.

556 756 Thus they drew into their hands coercive powers of no mean
[754] weight, for, as Henry Blow observed, "this [shamanistic] power
was used by the chiefs to get rid of rivals and there are some of
us old enough to remember of doctors being paid to kill certain
persons and of their foretellings of the exact day they would
die."[11]

K The rise of the chiefs helped to knit together tribal loyalties.
M 175 A war party formerly consisted of only those among the able-
178 bodied men who were inclined to fighting, but a successful leader
622 increasingly transcended tribelet parochialism, drawing followers
● 619 from diverse hamlets and villages across the Klamath country.
628 As warfare became a way of life, the occasional allegiance ren-
726 dered while in the field became an enduring acknowledgment
of worth.

K In the growing eminence of the new leadership, hereditary
622 principles may have been operative. Chiloquin mentions his
175 father as having been a chief on Klamath Marsh, his own brother
as a subchief, and a sister as a chief. The father of Dave Hill,
a rising young war leader, was a village chief; while Allen David,
later head chief in reservation days, was the brother of Captain
George, a Klamath Lake chief. That family eminence was not
essential, however, is shown by the personal history of Lileks,
K [838] of good—but not chiefly—background. Lileks was a transvestite
in his youth until a supernatural experience vested him with the
power that was to lead him to be head chief of the Klamath.[12]

K A minor factor in these developments may have been the
195 interest of the whites in the centralization of tribal power, in
643 order that they might deal more effectively with responsible
648 leaders. In 1844, Elijah White, then Sub-agent for Indian affairs
177 met with some Klamath and Molala who had ridden into the

Political Changes

K
*648 UNDER THE TREATY OF 1864, THREE INDIAN GROUPS, DIFFERING IN
*657 size and degree of internal cohesion, were brought together to
• 619 form a single polity. The Klamath, under Lileks and Chiloquin,
622 had achieved some measure of chiefly centralization in the decades immediately preceding the treaty, but band cleavages were still very real. Principal among these was that which separated the Upland Klamath of Monchnkasgitk from the Lakeside tribelets. The Yahuskin Snakes at that time seem to have been closely linked to the Upland band, and in early reservation times were numbered among the adherents of its chief.

M
643 The Modoc not only showed a lesser degree of political inte-
648 gration than did the Klamath but were disputing over the nomi-
657 nal office of head chief. The position of the aging Schonchin was precarious; for Steele in 1864, after treating with him as representative for his tribe, had presided over the election which was widely construed as providing a successor. In the treaty with Huntington, Schonchin was again treated as head man,[1] but less than a year later it was reported that "the Modoc Indians are very much dissatisfied and have deposed their head chief who signed the treaty of friendship with the Whites, because of his doings in the premises." The officer relaying the information to Huntington at the same time offered the support of the army "to sustain the chief and bring the Indians to terms by force."[2] The revolt was short-lived, nor, judging by Schonchin's later actions, is it probable that the military were needed. He and his followers came on the reservation for the first distribution of annuities in 1867, but Captain Jack and John Schonchin, together with their adherents, remained in their homeland in the Tule Basin, which they understood to have been reserved to them in the treaty with Steele.[3]

SEVEN

[P.95]

Social Change

WITHIN LESS THAN TEN YEARS AFTER THE RESERVATION HAD BEEN 648*
established, two communities had developed. The one at the 657*
Lower End was composed primarily of Klamath, with a small 361
number of freed slaves. Yainax was far less homogeneous. Near
the subagency were the Upland Klamath and the Modoc, while
some ten miles beyond lay Paiute Camp. With the beginning
of stock raising, the fine grazing lands of the Upper End drew
Klamath from the Agency side.[1] The Klamath Marsh settlements,
formerly the area of densest concentration, had been
abandoned as a winter residence in favor of warmer localities
about Upper Klamath Lake. Although O. C. Applegate later [731]
intimated the move was caused by losses from smallpox and other
introduced diseases,[2] the general advantages of proximity to
Agency and Fort may also have recommended it. Settlements on
the Lower End now clustered about the Agency and upon the
lower course of Williamson River. Only a scattering of houses
extended along the Sprague as far as Lilu's seat at Kawumkan
Springs, approximately ten miles above its mouth.[3] Beyond that
point, almost thirty miles intervened between the two communities.

In their settlements, former foes were brought together: Pelican 657*
Bay and other bands on the Williamson, Klamath and Walpapi 648*
at Yainax. Band affiliations, which rested on kinship and 621
long association, continued to be strong for some time even within 619 •
the new settings. Thus members of the Pelican Bay band sometimes 177
shared foodstuffs, and the claim that their parents stemmed 178
from the same tribelet long provided a bond strong enough to
enable one person to borrow from another. By the end of the
period, however, band identities had been largely relinquished
as peoples intermingled. In their place developed ties of varying

*657 strengths reflecting emergent neighborhoods; common employ-
*648 ment at the Agency, or as freighters and as work crews; shared
621 church interests; and, with time, friendships formed at school.
• 619 The growing importance of the adjacent white settlements and
177 the administrative colonies at the Agency and at Yainax set in
178 relief the larger community of the Indian reservation.

*657 Klamath relationships with members of the Agency staff seem
*648 to have been restricted largely to those demanded by their official
duties. Their scanty numbers would in any case have made contact with them infrequent for the great body of the population, and the whites tended to maintain a closed community in their social relationships. An important exception to the general social insulation were some of the more acceptable members of the families of Indian employees, who were sometimes hired as help and thus received a conditional entrée to the houses of whites. Off the reservation, special protector-employer roles seem to have been assumed by such men as Sykes Worden, contractor and post trader at Fort Klamath, O. C. Applegate, and several others.

By far the most unhindered contacts were made at Fort Klamath. The freedom of the individual from social constraint in the early days is evinced in the situation John Meacham found.

> Certain Indian women [he remarked] . . . had established several habitations in the vicinity of the Agency. They were in the habit of hanging around the office, the quarters, private houses and other buildings of the Agency, losing no opportunity of insinuating themselves into the presence of the employes. They were saucy, impudent and lewd in the extreme.

He therefore placed the post off limits for women unless they had legitimate business, an order that "met with the hearty approval of the Indian men and the faithful observance of the women."[4] The practice was not stopped, however, and Dyar, who tried to institute a pass system to control the traffic, noted that "soldiers are in the habit of frequently visiting the Indian camps below this point—sometimes remaining over night."[5]

*657 Native marital practice posed no very great obstacle to a white
*648 who wished to consort with an Indian woman. In the nature of
563 things many of these unions were casual, but others possessed a
more permanent character, though often common law in form. Indignant settlers in the Klamath Valley circulated a petition in

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 *657 423 were allotted land under the provisions of the act of May 27, 1902,[14] they were usually assigned tracts adjacent to those of their parents. The total for some families aggregated 800 to 1000 acres; and in 1914 there were several with over twice that amount.[15]

In design, the conditions of allotment differed from those governing homesteading. The homesteader was ordinarily an adult, head of a family, or single adult, or veteran of war service. By contrast the allottee was any individual on the tribal rolls.[16] For adult allottees, the condition of competency, as demonstrated in homesteading by residence and improvements made upon the tract, formed no part of the legal requirement. In practice, it was called into issue only at the instance of the Agent, or Superintendent, largely as a contingency upon the leasing of land or the award of a share in tribal trust funds. Thus, after the amendment of 1891 permitted leasing, O. C. Applegate wrote regarding the possible allotment of one Indian, "If he secures land, he can lease it for a term of years, after the approval of his allottment [sic], provided that he should not care to reside permanently upon it." To another person, Edson Watson, a later Superintendent, wrote, "When an allotting agent arrives and you should not or would not select land [for your child], then I would select for him." It is clear that another off-reservation allottee, Modoc Nancy, had never even seen her allotment.[17] The acquisition of a tract of land was clearly construed as a right acquired by virtue of tribal membership.

*648 *657 423 •619 Who, indeed, were tribal members? It is recalled today that during the council called to consider the General Allotment Act, some of the older leaders, principally Monchnkasgitk and Lilu, opposed the division of tribal lands, and when they lost this point they objected to the inclusion of any Indian with white forebears. Jesse Kirk, whose wife accordingly would have been excluded, defiantly stated that he would leave the reservation, and he was joined by the interbreed, William Crawford. Rather than lose such men, lifelong residents of the reservation, who came of respected family and were conversant in Klamath, the opposition withdrew their protests. However, the point was maintained for such whites as John Corbell, who was married to a tribal member and who had been adopted into the tribe.[18]

648*
657*
423
619

Indeed, for some time after the passage of the act, the details of membership had not been worked out. As late as 1892, the Assistant Commissioner was writing, "No final decision has been rendered on the question of the status of half-breeds or mixed-bloods, as regards their right to take lands and receive other benefits with the tribes with which they claim to belong."[19] By the time that allotment was well under way at Klamath, the matter had been resolved in their favor. While Indians not residing upon a reservation might receive an allotment upon the public domain, it became the practice to encourage them to take up land upon the reservation. A vigorous campaign was mounted to ensure that all who had legitimate claims should be allotted before the surplus lands were opened. In a characteristic letter, O. C. Appleton wrote one woman:

> I am of the opinion that you and the relatives you mention are all right. *Blood* is what we must depend upon to decide who has rights upon the reservation. If you have Klamath blood or Modoc blood in your veins you are entitled to lands upon the reservation and to have your children in school here.[20]

A policeman was dispatched to Yreka and other points in Northern California in search of persons "who have rights on the Klamath Indian Reservation."[21] Reservation residents were encouraged to invite eligible relatives to write to the Agent and to make application.

Candidates for admission to the tribal rolls were obliged to submit affidavits of their affiliation with enrolled members. Emery could write to Capt. J. W. Siemens of Klamath Falls:

> . . . as I understand it, your wife is a member of this tribe and she and your children are justly entitled to allottments [sic]. If you will furnish this Office with the full name of your wife, together with those of your children, I will instruct the clerk to place them on the census roll.[22]

This procedure was highly irregular. The evidence was customarily submitted to a tribal council for consideration.

One such council of "the people of Klamath Reservation" was called by Petet for the consideration of six named persons and others who might present themselves for admission. Of the six, four were admitted, in addition to Frank Riddle, the white husband of Winema of Modoc War fame.[23]

3:Stern E-4,5 (1949-1957) 1965 NR 10 Klamath NR 10

[Klamath Reservation]

*648 The qualifications argued by a council in 1908 included con-
*657 ditions of family relationship and tribal association. Of two
423 applicants considered favorably only the circumstances of re-
619 lationship was cited. "The council," ran the findings, "was of the
623 opinion that both of these Indians are related to the Indians of this reservation, and are entitled to allotment and enrollment here."

In denying the application of another on behalf of her children, failure to associate was the main ground given: ". . . to the best of our knowledge and belief," the council stated, "as Amelia Skeen does not associate and affiliate with the Indians on the Klamath reservation, . . . her children are not entitled to enrollment and allotment. . . ." The claims of Amelia Skeen were later accepted when a number of tribal members traced out their relationship with her.[24]

Meanwhile, the Superintendent expressed his own opinion. Forwarding the statements of a council that had found two Indians entitled to membership, Wilson observed:

> Neither of these Indians have come forward and made any affidavits in their favor, setting forth their rights here, nor furnished any affidavits from other Indians that they are entitled, as I am informed in other Office letters is required by your Office.

He added that one of the Indians was already allotted on the Warm Springs Reservation.[25] On the other hand, he recommended allotment of the three children by a former wife of an Umpqua Indian now married to an enrolled member. The council refused to admit them, despite favorable affidavits of six local Indians. Wilson himself cited the regular school attendance of the children as a point in their favor. They were finally enrolled and allotted.[26]

A general reading of cases shows that the council was disposed to give greater weight to evidence of association than to relationship, and that the Superintendent tended to reverse the order of importance. In the official view, all Indians were to be allotted either on the reservation or on the public domain. O. C. Applegate, indeed, labored for a time under the impression that "Halfbreeds cannot hold allotment on the public domain," and he urged all eligible to take up land on the reservation.[27] Even when persons affiliated with tribal members had already secured

648*

allotments on the public domain, Applegate advocated that they 657*
relinquish them in favor of tracts upon the reservation.[28] 423

For tribal members, the enrollment of outsiders was often 619•
objectionable; although opposition was less to their being [623]
granted allotments upon the reservation than to admitting them to equal shares in the tribal funds. By the terms of the McLaughlin Agreement of 1901 settling boundary claims, over a half-million dollars had been entered to tribal credit, part of which then became available to tribal members in per capita payments. As Applegate wrote to one off-reservation member, "there are a good many who would like to see people who do not live on the Reservation cut off from all benefits of the Treaty."[29]

In 1903, Applegate had estimated that there were "about 185 nonresidents, a number of them allottees though not residing on the reservation—with them are about 80 children of school age, many of whom are attending white schools."[30]

Analysis of the annuity payments from trust shares sent out 648*
between November, 1907, and January, 1908, reveals interesting 657*
characteristics of the nonresident membership. Omitting shares 619
to 13 students (8 girls, 5 boys) at off-reservation schools, payments went to 6 married couples, in which both parties were enrolled members, and to 39 women and 14 men either single or married to nonenrolled spouses. In addition, shares were sent to these adults for a total of 51 children. Children's shares were sent to 4 married, enrolled couples, to 14 enrolled mothers, and to only 2 enrolled fathers. While other explanations are plausible, the figures are highly suggestive of a preponderance of off-reservation marriages between Indian women and white men.

From the point of view of geographical distribution, the off- 648*
reservation population is also of interest. The table below, which 657*
excludes scholars sent away to government schools, presents the 162
salient features:

CALIFORNIA		20
South	5	
North (including San Francisco)	15	
OREGON		88
Southern Coast	4	
Klamath Basin	66	

K
visited by a large delegation of Klamath, headed by Henry 648*
Wilson, member of the tribal council, who wished to send the 657*
Superintendent to Washington on a number of issues, of which 162
the first was that "we have heard that the Modoc Indians are to 423
come back here and get lands and money the same as we do; M
we do not like that and want our side explained to you. . . ."[36] 648
Later that year, the Superintendent certified 16 Modoc for 657
allotment, observing however, "I do not believe that Congress 162
intended to simply let the Modocs return and get allotments and 423
then return to Oklahoma to live. This is, however, exactly what some of them intend to do."[37]

Allotment thus brought back to the reservation persons who had already made extensive adjustment to the larger society. Applegate, indeed, asserted that "nearly all of these people who have been allotted lands have become residents of the reservation,"[38] but the figures already reviewed show a sizable number remaining away. Despite the fact they did not in any other way identify their interests with the reservation community, they received equities in lands and in the undivided tribal fund.

Finally, the right of tribal members to allotment was affected by the closure of the rolls. The original allotments had been made in 1895 and were resumed in 1909. At that time, however, considerable discontent was generated by the exclusion of all children born after April 15, 1910. Those born later, although tribal members and as such retaining an equity in tribal property, did not receive a share of land. Their parents agitated for two years to have allotments issued to them. Although they were granted permission to select tracts on behalf of their children, it was with the understanding that their choice would have no legal status. Meanwhile, the Bureau opposed allotments for these new members. Not until the Yamsay Judgment of 1938, with the successful conclusion of the Military Road suit, were funds set aside by the Klamath Tribe for in-lieu payments of $1,500 to each unallotted member.

K
In this manner, then, allotments were made. To qualify, an 648*
individual had to be a tribal member, born before the terminal 657*
date in 1910. Membership was determined at times by the tribal 619*
council, at times by the Agent, employing a standard that M 648
wavered between the two criteria of proven kinship and habitual 657
619
423

K
*648 association and residence. The membership thus construed in-
*657 cluded not alone the reservation peoples, but the absentee
619 Modoc and those who had severed their connections with the
423 reservation.

M
648 The ambiguities thus introduced might have been avoided in
657 part had the allotment program maintained some of the pro-
619 visions of an early allotment plan outlined in 1871 by Com-
423 missioner E. S. Parker. By its terms, residence and association taken together were to be made the primary criteria. Whites or interbreeds married to tribal women, who resided with them upon the reservation, and who had been adopted into the tribe might be allotted. Indian women married to whites and living off the reservation forfeited that right, and the children of Indian women living in common-law relations with whites were to receive a share of land only if they moved back to the reservation.[29] It should be remarked, however, that this principle would only have been effective in preventing absentee ownership had residence also been required of heirs. Otherwise, in the first generation the allotments would have been treated like an inherited property. That, indeed, was their fate under the administration of the Dawes Act.

Once allotted, an Indian had a new status. His allotment could be fenced and it could be leased. The results of his industry, together with anticipated lease funds made many a man a good risk for advances in merchandise and foodstuffs.
K Citizenship lay within his grasp, involving with it a changing
M jurisdiction under law and bringing about a restive reappraisal
[641] of the sometimes autocratic rule of the Superintendent.

K
The original intent of the act had been to transform the
+648 Indians into yeomen-farmers. That 160 acres of grazing land
on the upper reservation was an economically practicable unit
+657 had been doubted by Nickerson, and the subsequent experience
423 of at least one white rancher with long experience in the same
311 area tends to confirm that judgment. At the same time, when several members of a family possessed adjoining tracts, the acreage might be adequate. In later times at least there were complications. Remarked Wilson in 1909:

> . . . the allotting was not made as it should have been made. An Indian will be allotted in Modoc Point district and perhaps

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

reserved for Indian cattlemen was ample, and that indeed the 648*
tribe was losing between $6,000 and $8,000 a year on land with- 657*
held for their use but not grazed. "Even this, he went on to say, 423
"did not seem to satisfy a number of Indians, and as a result the 427
tribal council recently [1926], passed a resolution to close the 563
range next year." He recommended that the Bureau disapprove 311
the tribal action.[122] During the remainder of his tenure, the issue of leasing the tribal range recurred at least twice more; and it arose from time to time to plague his successors.[123]

The desire to convert equal access to tribal resources into a pro 648*
rata share of rentals found a counterpart in such measures as 657*
those involving tribally supported programs for lumber. The lum- 313
ber mills operated for years by the Agency had been partially intended to supply materials for building houses and barns, but by 1908 only the mill at Yainax remained, and the Indians were no longer bringing in enough logs to keep the sawyer busy.[124]

With the establishment of sawmills on the reservation, the government mill drew less and less traffic. It was moved to a new location in 1927, but although there was no commercial sawmill within twenty miles, business was not measurably improved.[125] By 1930 it functioned only a short period each year for those members who wished to haul their own logs and pay twenty per cent of the lumber to defray milling expenses. Reported Arnold:

> During the past two years a few disgruntled Indians who do not avail themselves of the opportunity of obtaining lumber through their own efforts have objected to its operation on the theory that is being operated at the expense of the tribe for the benefit of a few of the Indians. Due to this criticism, the future of the sawmill is uncertain.

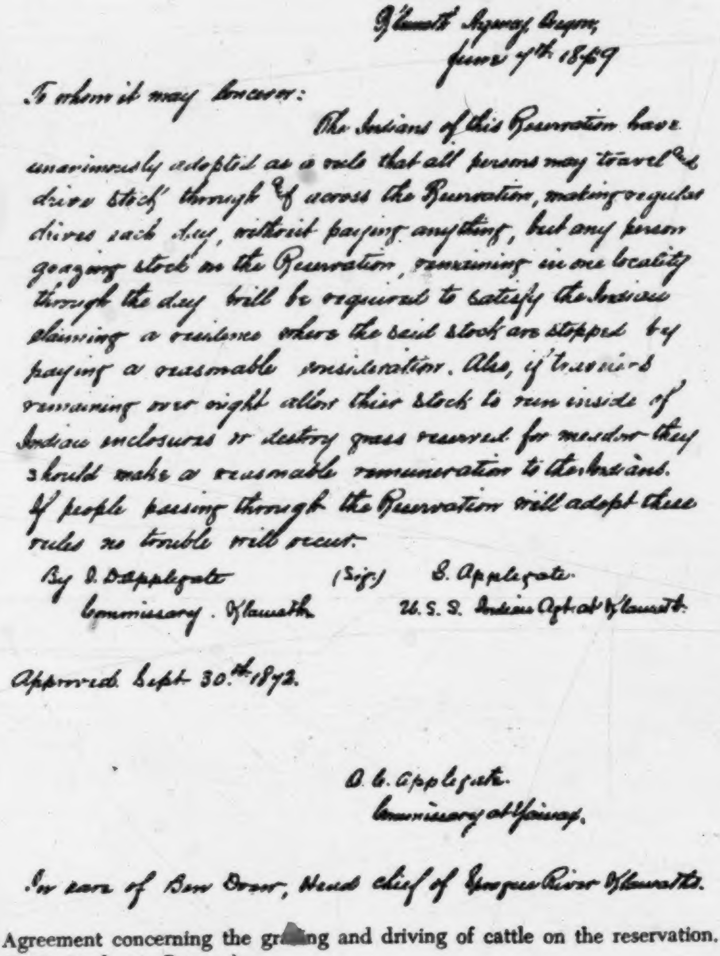
Soon thereafter the mill was closed.[126]

These were some of the expectations among the Indians created 648*
by increasing contact with a free-enterprise system. Individuals 657*
came to see that tribal membership entailed not only the restric- 619 •
tions imposed by Agency regulation but pecuniary returns as well. [177]
Those members dwelling off the reservation discovered that they could realize their pro rata share of tribal income without being subjected to supervision in expending it. Moreover, insofar as the Superintendent was willing and able to take decisions into

*648 *657 • 619 his own hands, Indians frequently became emancipated from responsibility to any strictly tribal body.

Exclusion of children born after a given date in 1910 gave rise to an unpropertied membership both on and off the reservation. With the return to the reservation of some acculturated members, often the product of intermarriage with whites, the outlook of

*648 *657 675



Klamath Agency Oregon,
June 7th 1869

To whom it may concern:

The Indians of this Reservation have unanimously adopted as a rule that all persons may travel & drive stock through & across the Reservation, making regular drives each day, without paying anything, but any person grazing stock on the Reservation, remaining in one locality through the day will be required to satisfy the Indians claiming a residence where the said stock are stopped by paying a reasonable consideration. Also, if travelers remaining over night allow their stock to run inside of Indian enclosures or destroy grass reserved for meadow they should make a reasonable remuneration to the Indians. If people passing through the Reservation will adopt these rules no trouble will occur.

By I. D. Applegate (Sig.) L. Applegate.
Commissary. Klamath U. S. S. Indian Agt at Klamath.

Approved Sept 30th 1872.

O. C. Applegate.
Commissary at Yainax.

In care of Bow Dow, Head chief of Sprague River Klamaths.

Agreement concerning the gr[illegible]ng and driving of cattle on the reservation. (O. C. Applegate *Papers.*)

the local populace became increasingly diverse. In view of the 648* original plan for the sale of surplus lands, it is not surprising 657* that members, particularly those who had not received allotments, 619 • sought lands upon the tribal domain. Public interest came to be interpreted in two ways: the older view—compatible with aboriginal tenure—of equal opportunity of use, contended against the new outlook, which regarded the member's interest as a pro rata share of the monies from rental. The latter viewpoint, which in time prevailed, minimized the individual's direct concern in exploitation of tribal resources and, together with the income that gave him economic independence and the paternal Agency supervision, liberated him from major responsibilities. In the limbo into which reservation society was thrust, its constituent units continued to erode; and the administration, which had planned to transform them, now found them so weakened that it had to bear the major task of regulating the conduct of tribal members. Tribal members, finding that the chief restraint upon their conduct was wielded by the Agency, increasingly rebelled.

[Klamath Reservation]

THIRTEEN

[P. 185]

Modern Klamath: Demography and Economy

ALTHOUGH THEY LACK THE DRAMA OF CULTURAL CONFRONTATION, 648* the years since the barriers of the reservation crumbled have 657* been eventful ones for the Klamath, and deserve minute study. 619 • The wealth of material makes such a treatment inappropriate, 177 and recommends instead a summary approach. Viewed as a 178 whole, a half-century of change has been marked by progression, with no major discontinuities. Geographically, physically, culturally, and socially, the Klamath lost special attributes they had once shared; yet, held together by a joint history, through participation in a tribal government, and by interest in a tribal estate held in common, they retained their identity as Klamath. This was a period in which, compared to the dominant society, the Klamath passed into a condition of reduced power, unable even to control the tribal assets save through a veto, constituting an ethnic minority in the communities where they resided, even within the reservation.

One of the indexes of latterday Klamath diversity has been 648* their geographic distribution. At the turn of the century, approxi- 657* mately ten per cent of the tribal membership resided off the reservation.[2] By 1955 the number had mounted to over forty per cent; and three years later, after termination, it exceeded fifty per cent of the Tribe. As had been true earlier, the absentee members were grouped concentrically about the reservation. Perhaps a quarter of their number resided within Klamath County in towns adjacent to the reservation. Outside the county, they were scattered throughout areas of southern Oregon and northern California where Klamath had long had ties. Along the

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 Pacific Coast, tribal members lived in urban centers as well: in
*657 the cities of the Willamette Valley, in Portland, where about a
hundred dwelled, in Seattle to the north and Sacramento and
San Francisco to the south. Beyond this area and eastward to
the Atlantic Coast the number dropped sharply, although there
were tribal members as far distant as Massachusetts. Only a
handful of the absentee members lived on other reservations.[3]
• [619] Tribal families residing in the same city demonstrated little tendency to form a compact ethnic enclave.

*648 Within the reservation, tribal members in the Lower End
*657 communities of Chiloquin, Modoc Point, and Klamath Agency
489 were almost half again as numerous as those in the Upper End
[491] towns of Sprague River and Beatty.[4] (See map of Klamath
Indian Reservation.) Travel between the Lower End and Klamath Falls, the largest city in the county and its administrative seat, was relatively easy by comparison with the Upper End, and the advantage remained even after a market road was constructed linking the latter directly with the county seat. As a result, Beatty and Sprague River long had closer ties with such towns on the eastern periphery as Bly, Bonanza, and Lakeview, far smaller communities than Klamath Falls, and correspondingly less complex from an institutional standpoint.

*648 During the first years of the termination program, between
*657 the publication of the provisional and final rolls of the Tribe, the
16 change of address of tribal members reflected the migration
currents. Within the reservation, movement ran from smaller to larger communities. Between the reservation and the outer world, the records show almost three times as many Klamath departing as returning. Those leaving the reservation were drawn to cities, rather than the rural countryside or the smaller towns. Although the rate of movement had accelerated in those days, the trends hold true for the entire postallotment period.

A survey of the motives which at an earlier time had brought Klamath to Chiloquin and to Klamath Falls shows that consumer values ranked high. A few had come to seek jobs, particularly to the county seat, for the narrow range of opportunities on the reservation offered little choice. Others left the reservation to escape what they regarded as the stultification of reservation life or the demands upon the ambitious made by the claims of kins-

the Beatty Roping Club, an organization that sponsored a local 648*
rodeo, with white, Klamath, and Indian members from the 657*
reservation and its environs. Another, an Agency employee until 621
his transfer to the Lower End, was active in organizing a youth 563
program. In Beatty in 1959, informal discussion still sufficed to decide common issues; and such men as these could marshal support to implement decisions. In the entire town, two deputy sheriffs, an arm of the county, were the sole embodiments of officialdom.[5]

Chiloquin, by contrast, was a larger and more complex community, having a formal municipal structure headed by a mayor and a council of six aldermen, along with a recorder-police judge and a treasurer. It hired a town marshal, ran an elementary and high school under the aegis of the county and state, operated sewage and water systems, owned a municipal tavern, and supported a volunteer fire department.

Not surprisingly, within this community principal economic interests were often aligned in the control of political power. Such devices as the massing of supporters to control party caucuses and interim appointments to fill vacancies on the council have enabled such interests to provide continuity of representation. With the exception of the treasurer, the elective offices for years were filled by men. Until 1957, they were invariably held by whites. In that year, when awareness of incipient termination had drawn together some tribal members, a group of Klamath succeeded in voting into office as alderman the Indian wife of a well-respected tribal member.

Leadership recruitment in Chiloquin was directed toward those individuals who had shouldered responsibility in such civic activities as the drives for Community Chest and Red Cross. Only one-third of the white families were actively represented in one or more such ventures. Among tribal families, however, the proportion was far smaller: certainly it lay below one-tenth of those resident in Chiloquin. The reasons were not far to seek. For one, the civic activities involved were quasisocial in character, and the low participation of Klamath reflected
their social isolation within the community. Again, their own
political orientation was rather toward the Tribe than to the [619]
affairs of towns which they identified with the dominant society.

*648 *657 Although tribal members in Chiloquin lagged little behind their
621 white neighbors in registering to vote (1958), their concern was
563 less with local than with national issues.[*]
641 A second aspect of Indian citizenship was the support of local
619 government through payment of taxes. Since all property held
666 in trust or restricted status by the government, together with
*648 income derived from such property, was exempt from taxation,
*657 many tribal members occupied an unusual position among their
641 fellow citizens. The effect was particularly felt by the county and
651 local communities, which were heavily dependent upon property taxes. For years, Klamath County sought to secure funds from the government to compensate it for the trust lands within its boundaries, which were served by county roads, sheriffs, courts, and schools. Johnson-O'Malley funds finally provided money in lieu of taxes to support the schools; to these the Klamath Tribe on occasion added funds for special purposes, but the other causes were unavailing.

In Chiloquin, officials resented the action of one Superintendent, who advised tribal residents that any property bought within the city with funds in trust or restricted status might be restored to corresponding status, even though it had been owned in fee simple when purchased. Such house lots were thus removed from the tax rolls and, although benefited by sewers and other municipal improvements, could not be levied for their support. It was not commonly recognized by white citizens of
[563] Chiloquin that a number of tribal members paid taxes regularly upon property held in fee simple and that a multitude of indirect taxes fell as heavily upon tribal consumers as upon their fellow citizens. Rather, the image was that of a people exempt from financial responsibility toward the support of local institutions from which they benefited. Though a distortion, like many other parts of the stereotype, this evaluation nonetheless contained a substantial kernel of truth.

If truth be told, the citizens of Chiloquin were no more disposed to pay taxes than American citizens anywhere, and indeed they were somewhat less inclined to do so than those elsewhere in Oregon. In 1951-52, the millage rates of Chiloquin were by far the lowest among the organized communities of Klamath

*648 formal occasions in the General Council in a demonstration of
*657 decorative oratory; and there it might also serve a speaker to
177 shut out a heckler who knew only English. In such a session, a
178 member in the audience, although fluent in English, might de-
191 mand the services of an interpreter for the purpose of underscoring his Indian status. Similar functions were served when Klamath was spoken in the presence of whites. The ability to shift from one language to another, or from one behavioral modality to another, was akin to the behavior which Polgar has described in the "biculturation" of Fox children.[21]

*648 In the latter days of the reservation, there were few occasions
*657 when tribal members came together for traditional events, and
177 the sessions of the General Council constituted the main remain-
178 ing tribal gathering. Such individuals as our old friend mentioned
623 above had their closest and most continuous relations with chil-
• 619 dren and grandchildren, who by no means shared their outlook.
571 On the occasional visits of their aged peers, these elders exchanged memories and expressed common concerns which were as much the product of the parallel roles they then performed in their respective families as of the time in which they had grown up.

*648 Such accommodation as there has been to American culture has
*657 not only changed through time with alterations in the state of
177 Klamath and American cultures; but at any single time, Klamath
178 have drawn diversely from what was available. Thus, the small
number of families in Chiloquin that have attained a measure
184 of social acceptance by whites of middle or high status have done so by manifesting the appropriate life style. In so doing, unless they are able deftly to shift role-orientations, being now Klamath, now white, they have had to sacrifice close relations with their kin. "Some of my family I never see any more," remarked one such woman, "and I don't want to see them." They often forbade their children to play with undesirable tribal children. Insistence upon household neatness, fastidious emphasis upon personal cleanliness, punctuality, and adherence to self-standards usually accompanied these attitudes.

Inframodal behavior among Klamath in turn has by no means been random in form, but has approximated already established patterns in the dominant culture; often combining them in ways

[P.236]

The Tribal Government

* 648 FOR NEARLY FIFTY YEARS FOLLOWING ALLOTMENT, THE KLAMATH
* 657 tribal government constituted the formal instrument for arriving
• 619 at common objectives, the ultimate guardian against encroach-
646 ments upon Klamath treaty rights, and the corporate symbol of Indian status. Its form and operations sensitively reflected the interplay of continued efforts by the Bureau of Indian Affairs to mold Indian life and the Indian reaction to those efforts. They gave evidence as well of the diversity of opinion which presently arose among tribal members as to the future in which they wished to live.[1]

[423] Central to the importance of the tribal government was the considerable wealth over which it presided: at the close of allotment, tribal property amounted to over 860,000 acres of land, roughly three-fourths of it in prime timber, owned corporately by some 1,150 members. By contrast, the Umatilla reservation, in the northeast section of the state, in 1908 possessed fewer than 2,000 acres in unallotted tribal lands for a comparable (893) membership.

*648 The principal body of the tribal organization was the General
*657 Council, a successor to those sessions convened on occasion in
646 times past to discuss matters of common concern. Such *ad hoc*
623 councils had formerly been found useful to the federal government for mustering a representative Indian body; but with the development of an executive body, the General Council also emerged as a more regular entity. Like its predecessors, it was
[562] originally composed of all the men of the Tribe; after the pas-
[177] sage of the Nineteenth Amendment, the women were added to their number.

*648 Since the highly rationalized bureaucracy of the government
*657 found the occasional councils too unwieldly to handle the in-
646

[Klamath Reservation]

Tribal membership was, as we have seen, only one of several
*648 *657 •619 641 political roles in which Klamath might participate, and in some measure it lay athwart the others. Citizenship in the United States, granted generally to American Indians in 1924, affiliation with state, county, and municipality: these political memberships are explicit in character, conditional upon the fulfillment of stated requirements and with the exercise of well-defined rights. Superficially, tribal membership appears to possess a similar character. In the admission of new members, both the establishment of qualifications and the decision upon individual candidates rested with the Tribe, though subject to review by the Bureau of Indian Affairs. Applicants had to be of Klamath parentage on at least one side, and those of one-quarter or more Klamath heritage were automatically admitted upon application. In 1945 a clause was added permitting adoption of members of one-sixteenth heritage, contingent upon assurances that they would reside upon the reservation and participate in tribal activities.

In practice, Indian heritage of any sort, and not merely that stemming from the Klamath Tribe, was reckoned in; and token assurances of participation and residence have conventionally
[161] [162] been accepted. Of the final enrollment of 2,133 tribal members, 86 fell within the category of one-sixteenth quantum. Of these, 12 dwelt on the reservation and another 12 in Klamath Falls, the remaining 62 residing at some distance from the seat of tribal government. Once enrolled, members have not been subject to review, save when their original qualifications were called into question.

In a membership that was not conditional upon performance,
[602] [621] the Tribe had a great deal in common with such ascriptive entities as the family and ramified kin, the traditional tribe, and the broad regional communities into which the latter had tended to cluster.

Family loyalties have been at once strong and selective. At times, they have provided continuities of interest within a single
[602] line. Here, for example, were the Rev. Jesse Kirk, himself the son of a treaty signatory, and his sons, Clayton, Seldon, and Jesse Lee; here old chief Monchnkasgitk, and his sons, Harrison and Henry Brown; here Judge William Crawford, his wife, Eliza, and their son, Wade; here Henry Jackson, his half-brother, Ike, and the latter's son, Boyd Jackson.

While the political strength of a family is seen not only in the 648*
succession of interest but in a propensity for members of a family 657*
to vote *en bloc*, this is far from invariably true. The schism 619 •
separating Jesse Kirk from his half-brother, Joseph, is one prominent 602
instance—and by no means the only one—to the contrary. [665]
In fact, alignment within the family and extended kin has often [578]
been modified by contending considerations.

Nonetheless, for some leaders the solidarity of family sometimes 648*
took precedence over impartiality in the discharge of office. 657*
One tribal council member is quoted as defending his action 661
favoring certain enrollments by the explanation ". . . that since 602
two children were his niece's children, he felt that it was his duty 619
to guard the interests of his minor relatives."[8] Political leaders, seeking to emphasize the purity of their motives, needed to go no further in justification than to declare that they sought only the welfare of their grandchildren.

Although intermarriage and alternative associations have long 648*
overlaid clear identification with the several peoples who had 657*
entered into the treaty, such affiliations have continued to exert 563
political force, however greatly diminished in recent years. In 621
turn, they related to the two broad communities on the reservation. 619
The Lower End remained predominantly Klamath, while Modoc, Paiute, as well as a number of Klamath and Pit River, comprised the Upper End community some forty miles away.
Even after the closing of the subagency at Yainax, the populations [184]
of Sprague River and Beatty continued to reflect the special character of the eastern reservation.

In turn, the relatively easier access of the Lower End to outside [177]
influences—a subject already reviewed in discussing modern tribal demography—superimposed the effects of differential acculturation and intermarriage upon the traditional subtribal
allegiances that distinguished the two Ends. Difficulty of travel 648*
along the road from the Agency to Yainax had given rise to the 657*
practice, long maintained, of holding separate councils at each 621
place. Thus at the two Ends there had developed political communities 665
responsive to their own local leaders. Harrison Brown, 619
in 1931, played upon a familiar theme when he recognized in Wade Crawford, a leader from the Lower End ". . . a young man who is not a full-blood, who is trying to stir up trouble, and we

*648 *657 621 want to set him aside, as he does not understand what we want. . . . I am one of the full-blood Klamath leaders," he continued, "and I don't want any trouble with the government."[9]

665 • 619 In the factional struggle marking the final generation of tribal government, Wade Crawford and his wife, Ida, drew their principal strength from the Lower End and the absentee membership; while many of the leaders opposing them, including Harrison Brown, Levi Walker, Boyd Jackson, and later Jesse Lee Kirk, hailed from the Upper End and found their major strength there. Despite exceptions and progressive weakening, the dichotomy was long a working reality, of which the loyalty of the Paiute to Boyd Jackson was only the most signal of many expressions.

A review of tribal minutes over the last half-century reveals a striking faithfulness in the voting of the most prominent adherents of those leaders. It seems clear that out of factionalism small but stable parties were beginning to emerge, to which, however, the large body of tribal members remained uncommitted. It was upon his immediate followers that a leader relied for support in raising funds or carrying a point to the undecided. At the same time, his image drew dimension from the character, as well as the number, of his adherents. That the personal image was still important, and that loyalties were not invoked in terms of issues alone, is seen by the personal denigration which took place between factional opponents and by the identification of each partisan group with its leader in the phrase, "He's a Crawford—or Jackson—man."

*648 *657 665 619 The professional politician had come to dominate the ranks of leaders. It was not simply that industry in the management of one's private affairs held less significance in a world made equal by the flow of per capitas. The tasks confronting the new leaders also were different. It was no longer sufficient to provide aid out of one's pocket and offer sage advice in public gatherings. The new leader must be prepared to devote most of his time to political matters. He must concern himself with the administrative duties of the tribal office, to prolonged negotiation with Bureau personnel and with the officials and private individuals representing the interests of neighboring whites. On occasion, there were the delegations to Washington. Daily, there were the chores to be undertaken for constituents in the fence-mending that was

integral to the maintenance of power. Tribal leadership had be- 648*
come a full-time job, requiring its own set of special talents. The 657*
rewards offered were considerable, not only those of power and 665
prestige, but in per diem fees and in the funds advanced on 619 •
occasion by followers and—persistent rumor had it—by outside
interests as well.

The rise of the new leaders did not entirely spell the eclipse
of the old. Even in the last decade of tribal government, a senior [646]
member of the executive was James Johnson, a wealthy stockman
from the Lower End. Another man, Seldon Kirk, one of the three
politically prominent sons of Jesse Kirk, worked as a carpenter
for the Agency, and was therefore sometimes accused of being
a pawn of the administration. He took up the guerdon from his
brother, Clayton, and later came to exemplify a moderate position
in his own right, even in the last, turbulent days of the Tribe.
Until his retirement, he served as permanent chairman of the [646]
General Council, then was succeeded by his brother, Jesse Lee.
The example of Seldon Kirk in turn brought onto the political
scene several younger men, like him occupying the middle
ground, and concerned only peripherally with the party building
activities of the professional politicians.

Tribal government thus developed along the intersection of an informal, particularistic political system and a counterposed, highly rationalized bureaucracy; and the emergence of the new leaders was merely one of the consequences. Within the frame so defined, the leaders were beset with the party-political[10] task of marshaling support for their programs. It was hazardous to trust alone to appeals to reason, for the issues were often complex and difficult to interpret for a wary electorate. Since the number of his devoted adherents was inadequate to carry the day, the practical politician had resort to a supplementary arsenal of tactical devices. It was at this level that political acculturation proved to have been most pervasive.

In he first instance, a leader might sometimes seek to mobilize support by playing upon a popular cause. Often this took the form of a defense against an outsider. A claim against the government, attacks upon the Bureau, particularly in the person of the Superintendent,[11] the repulse of intrusions upon the tribal domain by white commercial or sporting interests: these issues

*648 *657 665 •619 might be exploited instrumentally to broaden the base of appeal. Other devices entailed the manipulation of particularistic loyalties. Politicians from the less populous and ethnically more diverse Upper End endeavored to retain districting, whereby the members of the executive body were elected in equal numbers by each End; and they also sought to preserve communal representation, which ensured that each of the traditional subtribal groups, Pit River and Paiute, as well as Modoc and Klamath, would find a place in that body. These measures were opposed as a matter of course by Crawford, the Lower End leader; but it was he in turn who had been responsible for the election in 1927 in which only the Lower End took part, thus creating a second tribal council and precipitating the Bureau's demand for a tribal constitution.

*648 *657 665 619 646 666 The tactics employed to control voting were diverse. In general elections, Jackson favored restriction of voting to polling places located on the reservation, against attempts by his rival to secure absentee balloting, a measure that would swell the response from his off-reservation constituency. For General Council meetings, Jackson sought to continue the practice of alternating their site between the Ends, and for those held at the Agency he provided stages at tribal expense to transport members from the Upper End.

Seating within the General Council was conventionally by faction, a device that provided an easy check upon voting regularity, although the chairs along the wall afforded a retreat for the less partisan. Jackson further favored a standing vote,[12] while Crawford, particularly while he was out of power, called instead for a secret ballot. Each side on occasion exercised the boycott to prevent the mustering of a quorum when the issue was likely to go against it,[13] and Crawford also resorted to the filibuster, under cover of which his forces might withdraw in order to attain the same end. Each also strove, when he no longer controlled the executive body, to route business instead through the General Council.

*648 *657 665 619 661 In the recruitment of a following, leaders found many occasions to render personal services, appointing the faithful to tribal positions, serving as advocate in their favor, sponsoring the enrollment of their children as tribal members, or advancing them

money from the tribal fund set aside for the purpose. Interlocking 648*
memberships of the Executive Committee, the Enrollment 657*
Committee, and the Loan Board made those bodies the apex of 665
tribal power. If the first-named was the central body, and important 619•
particularly in relations with agencies beyond the Tribe, the 661
other two were no less essential in the administration of patronage. [646]
[647]

The Tribal Loan Board had been established to preside over 648*
a fund set aside from the Yamsay Judgment of 1938, by which the 657*
issue of the Military Road had finally been settled. The fund had 619
been designed to provide capital advances for tribal members, 452
many of whom found bankers reluctant to lend to them. Although 647
loans were supposed to be applied only to improvements, it became common practice to spend them merely as an anticipation of the next per capita. When the Bureau called a halt to its operations in 1955, the Board had out on loan approximately a half-million dollars, or the equivalent of almost $250 per member, and a collector had to be engaged to recover a sizeable portion of it.[14]

The Enrollment Committee was the third seat of power. Admission 648*
of one's children to tribal membership was eagerly 657*
sought, and not alone for reasons of sentiment. Once he was a 619
tribal member, a child was vested with a pro-rata share of the 647
undivided tribal estate, amounting at the time of termination to 434
some $43,500. In addition he qualified to receive the per capita dividends that, subject to Agency restriction, were commonly drawn upon to defray current family living expenses.

Despite—and sometimes because of—these tactical measures, 648*
by which partisan leaders strove to bind them, many tribal 657*
members were driven into abstention by the bitter contentions 646
that marked the final generation of tribal life. Although hundreds 619
flocked to the luncheon set out at tribal expense in the Council Hall for those attending the General Council, morning meetings failed so frequently to draw a quorum that they were discontinued; and even afternoon sessions sometimes could not muster one hundred adults from among the thronging diners to transact tribal business. When they did come, they were often in holiday mood, frequently interrupting speakers, and exhibiting a keen appreciation for lengthy, eloquent, and often irrelevant harangues

3:Stern E-4,5 (1949-1957) 1965 NR 10 Klamath NR 10

[Klamath Reservation]

*648 *657 646 • 619 in the Klamath language.[15] In this setting, the chairman and principal leaders sought with great difficulty to operate under Robert's Rules of Order. Council minutes record numerous instances in which many of those present cast no vote.

In this, as in other political contexts, the observer could sense what some members admitted readily: a reluctance to commit themselves to decisions that might lead to dangerous consequences on either side. As in their dealings with the Agency, individuals accepted as a right what those controlling the executive had to offer, and declined to be bound thereby. Factional charge and innuendo had so sapped confidence in the Klamath leadership that interviews conducted in the course of termination revealed that all but one of the respondents (118 in all) favored a management plan administered by unknown trustees over an organization headed by their own members.[16]

It was not, however, factionalism alone that was at the root of the uncertainty. [178] The long dependence of individuals upon per capitas, and the corresponding lack of experience in pursuing a livelihood, understandably enough made many wary of any change that might threaten the economic niche in which they dwelt. Moreover, on many of the more complex issues involving property their very lack of experience made them easily swayed by irrelevancies. [666] Not infrequently, Seldon Kirk, when presiding over a vote of the General Council, would query, "I wonder how many of you know what you were voting for?"—and, calling for a reballoting, would see the issue solidly reversed.

*648 *657 619 If they were uncertain in the exercise of their power, tribal members nonetheless felt a strong need to display it. Real and fancied acts of coercion had left a legacy of alienation, to which the impersonal bureaucratic operation of the Agency only added. In a span during which tribal membership had done little more than double, the Agency staff had swelled from an early 5 members to an ultimate figure of 139, some twenty-five times as great. With expansion, the Agency program had become compartmentalized, each division taking on a life of its own and growing endlessly ramified. Bureaucratization, together with the frequent turnover in the upper echelons of administration, led to increasing impersonalization of relations. Subtly, the training of Klamath

3:Stern E-4,5 (1949-1957) 1965 NR 10 Klamath NR 10

[Klamath Reservation]

had come to be restricted to those agencies formally responsible 648* for their education. 657*

Thus, in the supervision of Klamath resources, the Agency 619 • preferred the short-range goals of prudence and efficiency over the distant one of training individuals. As if to underscore the generally alien character of the Agency staff, officials had pre- [571] ferred to fill jobs earmarked for Indians with skilled persons from other reservations; and even those Klamath who were hired seemed to take the side of the government and refused, for the most part, to make exceptions for their kin and friends. Thus, the dependence implicit in Agency control was often rendered more distasteful because its operations were not conducted under those relaxed and particularistic contexts so much valued by Klamath in interpersonal relationships. And, as in ethnic relations, the irritations seemed to stick longer in the memory than those of pleasanter character.

To the special qualities of Klamath factionalism there was 648* added the independence conferred by the institution of the tribal 657* attorney and the Washington delegation. Although tribal gov- 693 ernment had originally been envisioned as the lowest link in a 619 chain running upward through the Bureau to the head of state, during the superintendency of Oliver Applegate the Klamath had forged an alternative linkage. The tribal attorney, whose retention had often been justified as providing independent counsel when claims were pressed against the government, was also expected to provide advice in areas in which the Bureau already had the duty of counsel. In such instances as the negotiating of timber contracts and in long-range planning for the tribal future, he thus furnished an expertise apart from that offered as a matter of course by the Bureau.

Although the greater part of tribal business was in fact con- 648* ducted directly through the Agency, pending claims and legisla- 657* tion under consideration by Congress drew delegations on annual 619 pilgrimage to the Capitol to present the tribal viewpoint. Through the years, veteran Klamath delegates came to establish informal understandings, not alone with their own representatives and senators, but with those from other states who shared similar political outlooks. Since those legislators were often also influen-

*648 tial in controlling Bureau programs and appropriations, tribal
*657 delegations formed an instrument of power the mere awareness
• 619 of which undoubtedly tempered ordinary intercourse between Bureau and Tribe.

*648 In turn, the knowledge that the final decisions were made in
*657 distant Washington endowed local politics with an aspect remote
619 from reality. Congressmen, mindful of the right of the citizen to
665 be heard, began to be treated to the spectacle of official delegates comprising members of both factions, who argued among themselves before committee hearings, each claiming to represent the position of "the Klamath people." If a tribal politician was defeated for a place on the delegation, he had only to raise funds from supporters in order to make his way to the capital. Enlisting the aid of long-time legislative allies, he would then secure a hearing every whit as attentive as that accorded the official representatives of the Tribe. In the words of Wade Crawford, uttered after a local defeat in 1947:

> I can be outvoted, that doesn't mean one thing to me. . . . There are 400 Congressmen and 96 Senators, and I'm going to talk to each man that will give me five minutes. People ought to understand who Congress is. Anybody can go. You don't have to be an official delegate, you can go as an individual."

*648 Since Washington had become the seat of decision, local con-
*657 sensus was rendered largely superfluous, and tribal affairs de-
619 scended to a level of wrangling and petty maneuver. Nonetheless,
major issues were being debated, concerned with no less a
421 subject than the disposal of the tribal estate and the consequent transformation of the Tribe itself. Because Bureau administration was prominently involved in the handling of tribal or personal property, any attempt to secure release from federal trusteeship was customarily addressed first to the freeing of tribal resources. In 1900, the Board of Indian Commissioners, hailing the changes anticipated from allotment, had called for the pro rata apportionment among members of any undivided tribal funds, the retention of which, they contended, merely served to perpetuate the Indian problem. They continued:

> A law of this character would enable us all to see some reasonable limit of time to special Indian laws and special Indian administration. It would put an end to the expectation of per-

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

petual inheritance and new claims through an indefinite number 648*
of generations, by people who may claim a fraction of Indian 657*
blood and therefore a share in undivided Indian tribal funds.[18] 619
421

THE COURSE OF TERMINATION

It was toward the ending of a special status that reservation 648*
leaders were soon to address themselves. They began shortly after 657*
the closing of the allotment rolls in 1910, when, in opposition to 423
the designs of some whites to open up the surplus lands to home- 619
steading, tribal members countered with the suggestion that they be parceled among tribal members. Later, those "final settlement" proposals came to envisage the sale of the lands and the allocation of the funds thus realized in pro rata shares to members, an act that would have the effect of bringing the Tribe itself to an end.[19] Final settlement in the early years drew widespread endorsement from tribal leaders, among whom its chief advocate was Judge Levi Walker.

In 1929, Wade and Ida Crawford, then in Washington as tribal delegates, with the active assistance of Secretary of the Interior Ray L. Wilbur drew up an alternative plan, calling for the establishment of a tribal corporation to take over and manage tribal assets. This unauthorized proposal—which, as Ostrom suggests,[20] in some measure foreshadowed provisions that were to appear in the Indian Reorganization Act of 1934—won tribal support only with difficulty against the opposition raised by adherents of the final settlement bill. Although both bills continued to be pressed in Congress, neither made headway.

In 1933, Crawford was appointed Superintendent of the Klamath Reservation by his friend, the reformer John Collier, the new Commissioner of Indian Affairs. The legacy of opposition which Crawford bore into office united with his conduct while there to bring about his removal for cause four years later. Although as Superintendent he advocated endorsement of the Indian Reorganization Act, it was rejected by the Tribe. In time he too came to denounce it, for his experience as administrator of the reservation had prejudiced him against the competence of the Klamath to manage their own estate. Instead, he sought for the time only to circumscribe what he deemed to be federal and tribal extravagance, while gradually maturing his plans for the

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 pro rata apportionment of the tribal assets. Toward this end, he
*657 turned increasingly for support toward the absentee membership.

423 Thus it was that in 1945, returned to Washington as a delegate,
• 619 Crawford sought passage of a bill that combined some of the
*648 aims of the final settlement proposals with federal purchase of
*657 the tribal tracts, which would then be established as national
423 forests, and with the liquidation of other properties. This met
619 opposition from the dominant tribal party, by this time under the
665 leadership of Boyd Jackson, Dice Crain, and Jesse Lee Kirk. In successive versions, the proposed legislation was the subject of hearings conducted both in Washington and on the reservation. As an outcome of suggestions made then, Supt. Bert. G. Courtright prepared a trial bill permitting voluntary withdrawal of competent members, each of whom was to be paid a portion of his share in the tribal estate. A shift of political winds now swept Crawford, who became the chief proponent of this bill, back into political ascendancy.

*648 At this juncture, Seldon Kirk, the respected chairman of the
*657 General Council, intervened to secure establishment of an extra-
642 ordinary special committee of those "who believe in the per-
619 petuation of the Klamath Reservation." Among the eight members, in addition to Kirk himself, were Jackson and several of his adherents. The committee drew up a new constitution for the Tribe, designed to provide a structure satisfactory for self-government over a proposed transition of two decades. It was adopted in 1950, but only after being linked with the voluntary withdrawal bill; and thus for a time both parties rested satisfied.
*648 From a long-range view, it is noteworthy that Crawford had
*657 turned from a plan for an enduring tribal cooperative to one
619 directed to the piecemeal withdrawal of members who wished to sever tribal connections. In their turn, the former advocates of final settlement had become the champions for the preservation of the tribal body.

Further attempts by Crawford to amend the voluntary withdrawal bill and other circumstances delayed action on it until 1953, by which time the government had embarked upon a program seeking to terminate federal supervision over a number of Indian reservations. Chief among them was that at Klamath, for which terms were proposed similar to those outlined for the

timber-rich Menominee.[21] Crawford and Jackson, examining the 648*
federal proposal, which envisaged a private corporation, jointly 657*
concluded that such an arrangement would be uneconomic for 619 •
the Tribe under Oregon law, and in its place advocated a tribal
cooperative. This harmony between factional leaders seemed [665]
highly suspect to tribesmen long attuned to discord; and they
rejected the proposal.

Eager for a resolution, congressional forces now brought pres- 648*
sure upon the Bureau, which produced another draft of the 657*
proposal and, under similar pressure,[22] the factional leaders were 619
brought to a compromise in the final hours of the 1954 session. 423
Enacted as Public Law 587, the legislation provided that mem- 665
bers might elect either to withdraw, receiving their pro rata share of tribal property, or remain in a surviving economic entity. Thereafter, as it became apparent that the unanticipated size of the withdrawing body was likely to remove large tracts of timber from sustained-yield management, thus plunging the Klamath Basin into a cycle of "boom and bust," various bodies, both public and private, began tardily to intervene. Since the legislation had favored their position, the Crawford forces adamantly opposed any changes whatsoever, while Jackson and Jesse Lee Kirk were equally zealous in endorsing any amendment that promised to better the position of the remaining members.

In the latter days of the termination program, as they approached the election that was to mark the personal decision to withdraw or remain, there emerged among tribal members a new coalition of moderates, seeking a position independent of the factions. The Klamath Information and Education Office, established by the State Department of Education under the Termination Act, had encouraged tribal members to come together to explore together the issues posed by the Act, so that they might cast their votes more intelligently. The Reservation Discussion Group that resulted included in its membership individuals who had long held aloof from the partisan struggle, together with younger moderates holding secondary tribal posts. The coalition now entered the lists and, in one of the last formal elections held by the General Council, scored impressive gains. They lacked a clear-cut program, however, and soon after their victory their group was sundered. Within the remaining members, however,

*648 members of the Discussion Group remained influential. More
*657 significantly, perhaps, for the long run, they began to employ
• 619 their newfound unity in fund-raising enterprises in Chiloquin,
423 and thus took an initial step in creating a new civic image for
665 the Klamath.

*648 When the vote was held, over seventy per cent of the tribal
*657 membership elected to withdraw, the government purchasing
619 their land and creating from it the Winema National Forest. Of
666 the other voters, the majority did not directly elect to enter into
423 the trust under which the U.S. National Bank has since been managing their joint resources. In this last decisive moment, they returned no ballot at all, and thus were automatically included among the remaining members. The outcome of the vote was in part an expression of confidence among the Klamath in their ability to handle their own affairs, in a measure a rejection of any continued trust status, colored with the anticipation of realizing a large sum—approximately $43,500 per person. However, so complex were the issues and so heavily were they beclouded at the time of voting by contending claims and interpretations, that it is doubtful whether many members could in fact specify all the considerations which guided their final decision.

668 In the period since the enactment of termination in 1954, the Klamath became increasingly receptive toward inclusion within the broader rubric of what Mead has termed "American Indian nationality," and have begun to participate in pan-Indian affairs.[23] Membership in the National Congress of American Indians, participation in American Indian Days at Sheridan, Wyoming,[24] sponsorship of the All-Indian Invitational Basketball Tournament in Chiloquin and of an American Indian Beauty contest held in conjunction with it: these were only some of the more concrete manifestations. Although pan-Indianism has been growing, the receptivity on the part of the Klamath seems keyed to their needs in the crisis that confronted them. Threatened with the loss of the tribal body that had symbolized their collective heritage, they repaired to others which enabled them to preserve their identity. Those who would see the termination vote as an election by the majority of tribal members to become completely assimilated into the larger society must reckon in the significance of this neo-nativist movement.

[Klamath Reservation]

EFFECT OF TERMINATION

After some ninety years of existence, the federal government 648* brought to an end the Klamath Indian reservation. At Menom- 657* inee, which was terminated at the same time, the reservation 619 • became a county and the tribal body, converted into a corpora- [171] tion, was to continue the management of tribal timber and other assets.[25] The decision at Klamath was otherwise. With the closing of the tribal rolls, there was no longer succession to membership in the Klamath Tribe; and although the body of remaining members under trust was to be designated by the same title, it also had a closed membership and—if its members did not elect to end it sooner—would expire with the death of the last of the individuals who had entered it at termination.

The movement for termination of Indian tribes formed part 000 of a broad revolt against the philosophy of the New Deal, a movement which gained strength in the latter years of the Truman administration and reached full power in the first years of the Eisenhower presidency. In a campaign directed against what was conceived to be an encroaching statism, it was seen as repugnant for the Bureau of Indian Affairs to maintain an indefinite paternalistic supervision over the lives of a racial segment of the American citizenry. By some, the Indian Reorganization Act of 1934 was reckoned a misguided effort to maintain an existence for Indians separate from the main currents of American life. The view drew adherents from those who saw in reservations, as in national parks and forests, bureaucratic restraint of free enterprise. They hailed an administration pledged at once to give greater opportunity to the Indians and to a "businesslike" conduct of government that would prune unnecessary waste from the management of national affairs.

Clearly, the decision to alter the status of the Klamath was 648* not an isolated one—witness House Concurrent Resolution 108 657* of the 83rd Congress—and the solution that was proposed, the 619 devolution of responsibility to local agencies, formed part of a national shift in policy.[26] One must add that the Klamath had long been among the tribes considered particularly eligible for release from federal supervision. Yet it is clear, and the details have been related elsewhere,[27] that under legislative pressure

*648 Bureau officials at times distorted or even suppressed data that
*657 reflected unfavorably upon the competence of the Klamath to
• 619 fend for themselves. These elided data were swiftly discovered when the Termination Act had been passed and the Bureau faced the difficult task of treating individual tribal members. Though the programming of termination was handled capably at the local level, the original legislation was so defective that two major amendments, together with several lesser ones, were required to supplement and remedy it; and lawsuits, already mounted or threatened by tribal members, over alleged omission of rights from its provisions may stream in its wake for years.

The immediate consequence of termination for a major part of the Klamath people has been an exchange of private for federal trusteeship. A large number have chosen to forego any
[434] further common management of their assets. A number of adults,
[429] both among remaining members and those who withdrew, were placed under guardianship or involuntary trusteeships as having demonstrated incompetence to handle their own affairs. Among adults, they comprised 14.4 per cent of those living on the reservation and 12.7 per cent of absentee members. Since that time, a substantial but undetermined number of individuals not under personal trust have exhausted the funds they received, and some have turned to kinsmen for assistance. The large body of minors, both on and off the reservation was placed under trust. By the terms of a recent court ruling, upon reaching majority they are to receive their funds without further demonstration of competence.

In all, no less than 48.9 per cent of the tribal membership were deemed to require protection under provisions of the Termination Act, while an additional 13.6 per cent, deemed competent, elected to remain under the group trust operated by the United States National Bank. Another 18.3 per cent were absentee members, of whom only a very few, with allotments or other assets in trust or restricted status, were subjected to federal supervision. It was the remaining 15.1 per cent of the membership (the deceased have not been figured in), constituting persons dwelling on the reservation who elected to withdraw, that correspond to the legislative image of the deprived yet competent Indian.

[429] [434] The slight character of the change with reference to those

under personal trust or guardianship is indicated by the "state- 648*
ment of principles" contained in the agreement between the 657*
Secretary of the Interior and the banks that administer the 619 •
private trusts. This stipulates that the beneficiary is to be en- 429
couraged and assisted in obtaining a satisfactory education and 434
is to be aided in gaining employment or engaging in other business activity. As the trust officers of those banks were soon to discover, the banks have assumed a role which closely resembles that previously exercised by the government.

A similar effect may be seen in the relations of the remaining Klamath to the U.S. National Bank, which as trustee administered their undivided assets, including a segment of the former tribal timber. An executive committee continues to represent them in their dealings with the bank, but it is accorded only nominal consultation in the conduct of the trust. Bank officials clearly consider their primary obligation to lie with the prudent adminis-
tration of the estate. Similarly, while willing to employ Klamath [464]
in minor positions, the bank has found most of them unsatisfactory. Tribal members insinuate that the bank is giving contracts for farm work to whites to whom it has made loans. In brief, antipathies formerly vented against the Bureau are now directed against the bank.

In this manner, the reservation, the Agency rule, and the 648*
Klamath Tribe have come to an end together. 657*

[P.259]

Conclusion

THE ADMINISTRATION OF THE KLAMATH TRIBE UNDER THE PROVISIONS 648*
of the Treaty of 1864 comprised a program of directed change, 657*
paralleling in its general features the relationships of the United 171
States government with diverse other Indian peoples. Because a
common policy lay behind the administration of Indian affairs,
the history that unfolded at Klamath was similar at many points
to developments on other reservations. Since, however, unique
characteristics of Klamath culture entered into the equation, and
common events were locally mediated, that policy had different
effects in execution.

Within the spectrum of American Indian cultures, it was important 648*
that the tribes brought upon the Klamath reservation 657*
were unacquainted with agriculture, but had some knowledge of, 241
and esteem for horse-herding; that while they lacked traditions 233
of large-scale political organization, they placed a premium upon 619 •
industry and the acquisition of material wealth. These attributes, 181
while by no means unique, were distinctive in their combination; 177
and they gain significance when seen from the perspective of 178
the policy objectives of the government. Similarly, the circumstance
that many individuals had already undergone extensive
acculturation beyond the Klamath country provided the early
Agents with native allies already won over to the prospects of
change.

Even the application of a common policy exhibited special 648*
features. Two instances should illustrate the point. The recognition 657*
of the tribal claim to a large domain, together with the [423]
retention of surplus lands after allotment, laid the basis for a [619]
corporate wealth equaled by only a few other reservation peoples. [434]
Later, the rejection of the Indian Reorganization Act during the
Collier administration placed the Klamath among a minority of

*648 surveillance; they have then had to make their peace in another
*657 community. In other instances, measures—for example, early
177 sawmills, drought cattle, loan funds—designed by the administration to be instrumental in helping the Indians to attain distant goals of betterment, were diverted by tribal recipients to provide short-range benefits. Such action, present even in early times, became more pronounced as disillusionment set in; and organized forms of opposition were also added. In a formal character, there
• [619] was an insistence upon the prerogatives that marked tribal identity. Hence the highly emotional attachment to treaty rights, in however altered form hunting and fishing may be exploited; to the tribal government, however criticized its incumbents; and to the self-preserving myth of the past.

*648 There is, however, another side to the Klamath reaction which
*657 is to be seen in the anomic aspects of the life of Intermediate and
177 Inframodal segments of those dwelling in Chiloquin—although
182 this behavior was not limited to that city. Within Chiloquin,
184 those persons manifest many of the traits that Leighton terms
156 disintegrative: a high frequency of broken homes, of hostility, crime, and delinquency; weak development of associations, recreation, communication, and leadership.[8] For the community as a whole, their effect is accurately characterized by his term. At the same time, their behavior had acquired such substantial predictability that the city fathers had come to rely upon it in the form of revenues from the municipal tavern and fines and trusty labor, for a considerable portion of the municipal budget. Under these circumstances, one might fairly say that a stabilized cultural pluralism existed.

*648 A situation like this cannot fail to leave psychological marks,
*657 and indeed Clifton,[9] observing that "there is very little evidence
177 to suggest, unequivocally, that guarded restraint was a dominant
156 component of aboriginal character structure," considers that attribute to be largely a reaction to the complex unpredictabilities of the reservation. Indeed, the Klamath reaction has striking
[171] parallels in the "hostile dependence" of the Sioux[10] and the "valuation group alienation" of the Aleut;[11] and it bears close resemblance to the situation described for the Ojibway by James,[12] who sees the personality traits he analyzes to have their source in the immediate context of white-Ojibway relations.

Adapted from a map prepared by Otis H. Johnson. (From Johnson, 1957.)

648 Most Klamath live in one or another of the several
towns and settlements on the reservation, or else they have settled elsewhere,
361 in Portland, Salem, Eugene, in California, in Alaska, in the Midwest, or along
[167] the Atlantic seaboard. In 1955 the Tribe had 2118 members, and of these 40
percent lived away from the reservation (Stern & Swanson 1960). Partly because
[619] of the recent progress of the termination of federal supervision of the reserva-
tion, by this date the percentage of members residing off the reservation has
[161] probably increased. In fact, for years there have been numerous "tribal mem-
[619] bers" with no experience whatsoever of reservation life.

648 Throughout the years of White contact inter-marriage and inter-breeding have
144 been frequent. Today, more than 70 percent of the Tribe's members are, gene-
tically, less than one-half "Indian," and less than one sixth are "full-bloods."
[171] Many are indistinguishable in appearance from their White neighbors, as most are
not easily distinguished in dress and language.

175 The isolation of the early reservation period was soon removed by the influx
177 of White settlers, who at first took up farms and started towns near the fringes
of the reservation. Through inter-marriage and through the consequences of
[361] allotment of land to individual Klamath, many Whites were soon residing within
the reservation's boundaries, either on the lands of a spouse, or on land bought
[423] or leased from tribal members. Another source of change were the ever present
efforts of Agency officials to make over aboriginal ways, and later, the rapid
[657] growth of the lumber industry and the development of full fledged frontier com-
munities were also important sources of acculturative influences. In quick
[726] succession the Klamath experienced a period of armed conflict (the Modoc War of
[786] 1872-73), a religious revivalistic movement such as that which swept the plains
area, extensive governmental planning and intervention, the allotment of land
in severalty, and a growing participation in the cash economy. Because aboriginal
[181] Klamath values had stressed achieved status for those who worked to accumulate
[556] wealth and property, for some Klamath the early period of contact provided in-
creased opportunities, and there was a group of men who for a time were effective
[436] entrepreneurs. It was through such personal efforts and through the "easy money"
had from private sales or the leasing of agricultural lands, from pro rata shares
of boundary settlements, and from per capita payments for sales of tribal timber
that the Klamath made the transition to a money economy.

648 The participation in and contribution of the Klamath to the economy of the region
is a significant point of interchange between Klamath and White, and one with
[313] many ramifications. In considerable measure, the local timber industry prospers
[423] or slumps, depending on the allotted cut in the tribal forest. Similarly,
local merchants are somewhat dependent upon the assured income of tribal mem-
[434] bers, as they are upon the purchases of mill workers, fallers, and cat-skinners.
The major town on the reservation, Chiloquin, obtains the largest share of its
[632] revenue from sales at a municipally owned beer-hall and from the fines and for-
[251] feited bails paid by visitors to the city jail, both of which establishments are
patronized largely by Klamath.

648 In other aspects of community life the participation of Klamath is perhaps best
621 characterized as that of passive spectators. Many Klamath have come to have a
sense of being aliens in the heterogeneous local culture, although there is a
563 small assimilated minority.

[571] Thus Klamath may interact as equals in card rooms and pool hall, and are met
with a stereotyped "friendliness" in interactions in stores and on the street.
However, the great majority live in intimate interdependence separate from the
main currents of White social life. White ethnic exclusiveness is reflected

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are ex- 621
clusively White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office out- [575]
side the tribal structure, and although a high percentage have registered, very [194]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are fre-
quently tax exempt, as have been their per capita payments. Simultaneously, [651]
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chilo- [674]
quin during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a recon- 648
stituted "Klamath Tribe," with a corporate structure and assets to be adminis- 657
tered by a trustee, or they had the choice of withdrawing and of receiving a
pro rata share of tribal assets. In a later election, about 77 percent of the 619
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal super-
vision has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual 619
Klamath have shown an equally noncommittal relationship to tribal affairs. Atten-
dance at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions
and more temporary "shack-jobs." Probably one-third of all Klamath women have [588]

Slim: Male, Age 30

Background Data

Slim's case was selected so as to illustrate the situation of a regularly employed, 159*
well liked and respected young male. He is currently employed as a [464]
laborer in a lumber mill, and in the past has worked as a carpenter, and in
heavy industries in the mid-west. He has ten years of formal schooling, obtained [463]
his 12th grade certificate by examination while in military service, and for [871]
one month studied commercial art in Portland. [701]

Slim was born into a large, influential kin group, one which for several generations [619]●
has provided much of the tribe's leadership. While his own father has
not been so influential in tribal politics, preferring to work his ranch instead,
Slim grew up in association with male relatives noted for their forthright
independence and leadership, and within a family tradition of progressiveness
and self-improvement. Slim's early life was spent in alternating periods
of residence with his own father and mother on their ranch, and with his father's [591]
mother in her cabin on the Sycan marsh. This association with "Grandma" was [608]
partly in response to the gradual disintegration of relations between his father
and mother, and partly the result of his father's desire to have "Grandma" teach [593]
him some of the old lore. His mother became increasingly erratic, unpredictable,
and violent, finally leaving his father. Slim felt badly rejected by [153]
her and was never able to understnad why she would not accept his efforts to be helpful. On the other hand, he was very close to his father and his grandmother. Today he recalls with satisfaction the many things these two persons taught him, and dreams recurrently of being in the army, defending the reservation from attack, and checking in on the old lady to see if she is all right. This dream is interesting because it expresses succinctly his style of relations with superiors, for in the dream Slim asks permission of his squad leader to leave, explains his reasons, then checks in on "Grandma," and returns to his duty.

After the 10th grade was completed, Slim quit school and worked on various ranches.
Early in the Korean war he consciously followed the model of an uncle, who was
a career soldier, and enlisted in the army. His service record was good, marred
only by what Slim feels were two justifiable periods of unauthorized absence,
and he voluntarily served with a combat unit in Korea. This army experience
considerably broadened Slim's horizons, and after his discharge he lived and
worked with an army buddy in the east for a year. Then Slim traveled and worked
in several places in the east and midwest. On two occasions his regular habits [961]
and good capacity for steady work were responsible for a promotion. Characteristically,
Slim enjoys this kind of reward, but he does not specifically strive
for advancement.

Slim has many skills, hobbies, and social graces. When young his father taught him to dig ditches, with the advice that this skill would always provide him with a job. He is an expert horseman and stock-keeper, and is a skilled hunter and woodsman who frequently guides his friends on hunting trips. He has learned carpentry, house-painting, and the operation of various industrial machines. More recently, he has turned to archery, sketching, and photography for hobbies to occupy his spare time. Then too, he is an amiable, jolly person who makes good company and who is well regarded as a friend. He is not married, and has never seriously considered marrying. He has had occasional sexual liaisons of a transitory nature, which he finds quite satisfying, and has been "going steady" for several years with an older woman, a person who is a grandmother in her own right.

[Klamath Reservation]

At the center of concentric circles of concern stands
K the natal family.[16] In the myths, parents and offspring and
M siblings are bound by the strongest affective bonds: in trouble
593 they provide succor and in death, revenge. The obligation tran-
602 scends abstract ethical considerations. In real life, mutual responsibility reaches out to embrace the extended family, the close consanguineal kindred linked through two or three generations.
K M Although kinship terminology acknowledges equally re-
[601] lationships on the maternal and paternal sides, residence practices
[591] in general favor the latter. From close kinsmen on both sides come the gifts that set the seal of approval upon the marriage of a member; during his lifetime they share food with him in his need, support him in his quarrels, and assist his avenger should he be slain. At his funeral, it is they, together with friends of the deceased, who are expected to place valuables upon the funeral pyre.

K Beyond the sphere of immediate kindred and of friends lies
M the domain of neighbors and remote relatives. If more central
602 obligations tend to be principally a function of consanguinity,
621 and thus to be ascriptive in character, village relationships and
571 those outside are more frequently based upon performance.
K M Here enter those standards of behavior by which a person of
[577] good family may be confirmed in position, the poor but worthy rise, and the ne'er-do-well sink in the public view.
K At the head of this loose and shifting status scale stand the shamans and
M other influential men, the leaders of hamlet groups. On occasion
756 they may meet in an informal village council to concert decisions.
622 Yet the village, which in its spatial limits often blends with
621 adjacent settlements and which dissolves with the turn of the
554 seasons, can exert little constraint upon its members.

K The prestige of the leaders, the force of public opinion, and
M checks imposed by rival village interests hold the unruly in line.
• 62 The principle of self-help and the responsibility of kinsmen may enlarge grievances to feuds if the differences are not soon ended, and thus threaten the very being of the community. To counter such fissive tendencies, leaders mediate disputes and exhort to their fellow villagers the need to maintain harmony.

K Time may alter the membership of villages. Men frequently
M seek wives in other communities; and there is considerable inter-
621 marriage between Klamath and Modoc and Klamath and Molala,

101 occupy, the names of which they bear; this, despite the lack of
619 any sharp geographic division, rivers or ranges, such as we should
expect to figure in political separatism. There are only three or four miles of open, unoccupied country between the middle Williamson river group and that at the river mouth, for instance, or between the latter and the northernmost outposts of the Klamath falls people about Modoc point. The cases of doubtful divisions really stress this point. Kowa'edi on the lake shore may belong with the middle Williamson division; though only three miles away over a low range of hills, it is somewhat isolated. Similarly the Sprague river settlements toward Yainax, usually included in the same group, are in quite a different district.

721 The third feature pointing to their separatism is the frequent feuds
619 between them. It is quite clear that these involve the tribelets; they
never occur between the settlements of a single division. The point
[171] will be clearer if we contrast Yurok sentiments. There feuds are
between the towns or with only a group of kinsmen within a town, and at most when several towns are involved in a joint cause, it appears rather that kinsmen and their friends have been drawn in.[24]
[567] Further, feuds are carried on much as warfare with foreigners;
property is destroyed, women and children enslaved. Such slaves can be retained indefinitely or sold again. We may wonder however if they are not restored when a settlement is bought, or at most retained only to even the score in lives.

The identity of these groups resolves itself solely into such aspects of group consciousness. There is no political mechanism within the group. When it comes to war with outsiders, each group can act for itself, others may join if they wish. At the other extreme, the towns
[621] are not sharply separated. A town is probably in large part a body
of relatives, although not so clearly so that towns are exogamous. In short, the tribelet is a body with a community of interest which hardly extends to the Klamath as a whole.

115 Only one informant, Pat Kane, suggested dialectic and cultural
197 differentiation. The dialect groupings he gave are purely geographic.
He also assigned shamanistic tricks, medical practices, and games to
184 the several divisions, which all other informants emphatically denied.
I could observe no linguistic differences and Gatschet recorded none.

000 The subdivisions or tribelets are:

and thus threaten the very being of the community. To counter
such fissive tendencies, leaders mediate disputes and exhort to
their fellow villagers the need to maintain harmony.

K Time may alter the membership of villages. Men frequently
M seek wives in other communities; and there is considerable inter-
621 marriage between Klamath and Modoc and Klamath and Molala,
563
582

to say nothing of captured women from Shasta, the Achumawi K M
and Atsugewi of the Pit River region, Paiute, and the tribes 621 •
beyond the Cascades. Among the Modoc, the villages of the band 582
called *gumbatwas* are said to be composite in membership, in- 563
cluding Modoc, Klamath, Pit River, and Shasta; and those of the
Upland Klamath consist of Klamath with some Modoc and
Paiute elements.[17]

Allegiance with the village may be partial. If an attack is to K
be launched, war leaders can find recruits only among those men M 621
with proclivity for fighting and an attraction toward the leader. 628
On the other hand, feuds may ignite attacks that are restricted 581
to the family groups concerned. While the myths reveal currents 701
of hostility between affinals, in real life marriage acts to extend
the ramifications of support, often into other communities.

Beyond the village lies the tribelet, an entity that recognizes its K
being in a territorial name and in a common cause in feuds with M 619
other tribelets. In its virtual autonomy this unit marks an extreme K
in band organization within the larger tribe, a quality that was 619
reduced by subsequent tribal integration. For the Klamath there
are six tribelets (see map): (1) The Klamath Marsh people,
who outnumber all the others together; (2) the tiny Agency
Lake group; (3) those of the lower Williamson River; (4) the
Pelican Bay tribelet; (5) the Klamath Falls group; and (6) the
Upland Klamath of the Sprague River valley. The Modoc com- M
prise three main groups: (7) that of Lower Klamath Lake, ex- 619
tending to Tule Lake (the *gumbatwas* mentioned above); (8)
those clustered upon the lower Lost River; and (9) the eastern
tribelet, with settlements dispersed as far as Goose Lake. No K
firm evidence exists that these local territorial units are distin- M 619
guished by either language or culture, although, as already 726
mentioned, at least two are of composite origin. Each tribelet
seems to have gained a tenuous cohesion through a common
recognition of the worth of several prominent headmen. Between K
tribelets there is sometimes war. Under their formidable leader, 619
Kokdinks, the Williamson River group attacked in turn villages 726
of each of the other lower Klamath tribelets, including that at
Pelican Bay, to which they considered themselves related; and
the prolonged war ended only when the Upland Klamath leader,
Monchnkasgitk, a kinsman, first joined, then slew Kokdinks.[18]

[Klamath Reservation]

SEVEN

[P.95]

Social Change

WITHIN LESS THAN TEN YEARS AFTER THE RESERVATION HAD BEEN 648*
established, two communities had developed. The one at the 657*
Lower End was composed primarily of Klamath, with a small 361
number of freed slaves. Yainax was far less homogeneous. Near
the subagency were the Upland Klamath and the Modoc, while
some ten miles beyond lay Paiute Camp. With the beginning
of stock raising, the fine grazing lands of the Upper End drew
Klamath from the Agency side.[1] The Klamath Marsh settlements,
formerly the area of densest concentration, had been
abandoned as a winter residence in favor of warmer localities
about Upper Klamath Lake. Although O. C. Applegate later [731]
intimated the move was caused by losses from smallpox and other
introduced diseases,[2] the general advantages of proximity to
Agency and Fort may also have recommended it. Settlements on
the Lower End now clustered about the Agency and upon the
lower course of Williamson River. Only a scattering of houses
extended along the Sprague as far as Lilu's seat at Kawumkan
Springs, approximately ten miles above its mouth.[3] Beyond that
point, almost thirty miles intervened between the two communities.

In their settlements, former foes were brought together: Pelican 657*
Bay and other bands on the Williamson, Klamath and Walpapi 648*
at Yainax. Band affiliations, which rested on kinship and 621•
long association, continued to be strong for some time even within 619
the new settings. Thus members of the Pelican Bay band sometimes 177
shared foodstuffs, and the claim that their parents stemmed 178
from the same tribelet long provided a bond strong enough to
enable one person to borrow from another. By the end of the
period, however, band identities had been largely relinquished
as peoples intermingled. In their place developed ties of varying

*657 strengths reflecting emergent neighborhoods; common employment
*648 at the Agency, or as freighters and as work crews; shared
• 621 church interests; and, with time, friendships formed at school.
619 The growing importance of the adjacent white settlements and
177 the administrative colonies at the Agency and at Yainax set in
178 relief the larger community of the Indian reservation.

*657 Klamath relationships with members of the Agency staff seem
*648 to have been restricted largely to those demanded by their official
duties. Their scanty numbers would in any case have made contact with them infrequent for the great body of the population, and the whites tended to maintain a closed community in their social relationships. An important exception to the general social insulation were some of the more acceptable members of the families of Indian employees, who were sometimes hired as help and thus received a conditional entrée to the houses of whites. Off the reservation, special protector-employer roles seem to have been assumed by such men as Sykes Worden, contractor and post trader at Fort Klamath, O. C. Applegate, and several others.

By far the most unhindered contacts were made at Fort Klamath. The freedom of the individual from social constraint in the early days is evinced in the situation John Meacham found.

> Certain Indian women [he remarked] . . . had established several habitations in the vicinity of the Agency. They were in the habit of hanging around the office, the quarters, private houses and other buildings of the Agency, losing no opportunity of insinuating themselves into the presence of the employes. They were saucy, impudent and lewd in the extreme.

He therefore placed the post off limits for women unless they had legitimate business, an order that "met with the hearty approval of the Indian men and the faithful observance of the women."[4] The practice was not stopped, however, and Dyar, who tried to institute a pass system to control the traffic, noted that "soldiers are in the habit of frequently visiting the Indian camps below this point—sometimes remaining over night."[5]

*657 Native marital practice posed no very great obstacle to a white
*648 who wished to consort with an Indian woman. In the nature of
563 things many of these unions were casual, but others possessed a
more permanent character, though often common law in form. Indignant settlers in the Klamath Valley circulated a petition in

The depression and the subsequent loss of mills through fire 648*
and economic distress stripped Chiloquin temporarily of many 657*
of her specialized services. By the time she had emerged from 184
the slump a decade after World War II, improved communications 361
had enabled Klamath Falls, twenty times as large and only thirty miles away, to supplant Chiloquin in many functions which had previously been discharged locally. Nonetheless, in the course of recovery some services were regained. With an institutional complexity that far transcended that of Beatty, Chiloquin, an enclave of the state of Oregon within the federal jurisdiction of the reservation, offered tribal residents a foretaste of the life that lay beyond reservation boundaries. In 1958 more than thirty per cent of the entire tribal membership had mailing addresses there.

In examining the households of Beatty and Chiloquin, respectively 648*
31 and 297 in number, it is convenient to distinguish 657*
two categories among those including tribal members. That 621 •
designated Interethnic is headed by a tribal member married to 184
a partner of another ethnic group, white, Mexican, alien Indian, 563
or other. The second, in which both partners are tribal members, 592
will be designated Tribal. The term Klamath will subsume both. [162]

Klamath households in the rural community of Beatty in 1959 comprised well over eighty per cent of the community, the remaining households being largely white. By contrast, in Chiloquin (1949-50) white households were twice the Beatty percentage; while Klamath households amounted only to little over half the population. The remaining ten per cent was made up of other minorities, Mexican, Negro, and Indian. Within the next decade continuing trends in Chiloquin increased the disparity, as white households gained at the expense of all other components.

The figures for Interethnic marriages harmonize with this picture of white preponderance in the larger community. When the total marital record is considered, including successive mates, it is seen that unions with whites comprise only slightly more than one-fifth of the total for reservation members, almost one-third for the Chiloquin segment, and well over three-quarters for a small sample of off-reservation Klamath.[10] Among the Interethnic households of Beatty, the non-Klamath partner was more frequently Indian than white, while in Chiloquin he was

*648 generally white. When it is considered that in American society
*657 the husband maintains significant external relationships,[11] it
184 •621 seems significant that in both Chiloquin and Beatty in some three-
563 fourths of the Interethnic households the husband was an out-
592 sider and the wife a Klamath.

Economic Life

*648 From an economic standpoint, tribal members occupied a
*657 subsidiary position in reservation communities. Their participa-
621 tion in productive activities as a whole was small. In 1958, a
434 sample of the reservation population showed the following eco-
464 nomic profile: presently engaged in business or ranching, eigh-
162 teen per cent; previous record of such experience, eleven per cent; no such experience, forty-eight per cent; no data, twenty-three per cent. The figures for those resident in Chiloquin showed, if anything, a lesser degree of direct participation. Available records on a small absentee sample (but one with a higher proportion of women) do not reveal a higher degree of economic experience. The figures are: presently engaged in business or ranching, seven per cent; previous record of such experience, twenty-one per cent; no such experience, seventy per cent; no data, two per cent.

*648 The record of scanty business experience is in large measure
*657 a consequence of the steady flow of income from tribal timber.
434 In 1950, the $800 per capita payments enabled a Klamath family
of four to exceed the median income for all families in the county.
454 Since they could also hunt and fish throughout the year, and many families did, their actual income was considerably higher. There was thus little incentive to work to supplement timber revenues. The Meriam committee, to be sure, had observed years before, in the course of their comprehensive study of Indian administration, that the Klamath per capitas were too small for investment and thus tended to be disbursed for current living expenses;[12] but it is also true that, lacking investment experience, tribal members who realized substantial sum from the sale of allotments too often treated them as windfalls to be squandered, rather than as capital capable of bringing further financial returns.

000 Comparison with the record of white performances places the

as well by envious whites. Indeed, prominent among the local 648*
advantages which white residents stated bound them to Chilo- 657*
quin were the advantages offered by the reservation for hunting 224
and fishing. At the same time, the whites tended to regard those 226
pursuits as no more than recreational avocations; and if the 181
Klamath were sometimes credited with inherent aptitudes for the chase, they were also looked down upon for devoting so much time to "play," and for ignoring, as many did, the white canons of sportsmanship.

Conflicting viewpoints were likewise evinced in the relation- 648*
ships of tribal members seen as consumers. While there were 657*
wide differences in actual behavior both among and between 571
whites and Indians, relationships came often to be governed by
stereotypes. This was particularly so in the larger communities, [621] •
in instances in which individuals were not personally known to [184]
each other.

Those relationships were in fact strongly conditioned by the 648*
peculiar status of the tribal members who relied upon per capitas 657*
for their income. Few Klamath on the reservation had ever 434
banked money, and the absence of a bank in Chiloquin since the 571
depression, or in any other reservation town, made necessary 452
the institution of a credit system.[13] Since much Indian property [453]
was held in trust by the government, which thus could not be advanced as security, merchants had to rely heavily upon a knowledge of the individual in advancing credit. Reservation stores resorted to a credit system to compete with the businesses in Klamath Falls, and through a more intimate acquaintance with tribal members could assess the risk more skillfully than those—particularly the newcomers—in the county seat. At the same time, the expense of operating such a system was one of the factors in advancing prices in reservation stores. Thus merchants, who not infrequently did their own private shopping in Klamath Falls, were galled to see tribal customers, whom they had carried on credit, patronizing competitors in the larger city as soon as they had received their per capitas.

In attempting to collect outstanding debts, merchants could 648*
not count upon the Superintendents, but had to resort to moral 657*
suasion and threaten to cut off further credit. Some Superinten- 434
dents did assist in bringing pressure to bear upon delinquent 452

> I might call attention to the fact that at the last election in 648*
> Klamath County a trust patented Indian was elected Justice of 657*
> the Peace, and a fee patented Indian was elected Constable of 641
> the Beatty District on the Klamath reservation. It seems a rather [693]
> unusual situation when a trust patented Indian can preside as a judge over a court and pass sentence on other people and at the same time question the same court's jurisdiction over him.[8]

Nor was this all. Federally regulated land on the reservation [625]
was off bounds for officers of the law from city, county, and state; yet in 1947 there were only two special Indian officers and two deputies to enforce law and order over almost one million acres of reservation. It was physically impossible for them to follow up all cases, and consequently they could not deal effectively with the misdemeanors of delinquents or with truancy from the county schools.

In the 1920's, soon after the opening of the reservation, towns 648*
such as Chiloquin were faced with the influx of a mobile popu- 657*
lation in which the unmarried "timber beast" was prominent. 621 •
Roistering and violence occasionally assumed major proportions, 625
and law enforcement broke down at first. Within the first three 563
years after its incorporation in 1926, Chiloquin witnessed no 674
less than twelve appointments to the position of town marshal. At times the Superintendent, concerned over the effect upon the Indians, intervened, delivering an ultimatum or sending in his officers to restore order. His jurisdiction, in turn, was also limited: When Arnold brought pressure to bear upon Chiloquin authorities to close down gambling in the pool halls and card rooms, the gamblers merely shifted their operation to Bly, just over the eastern boundary of the reservation, and the same procedure had to be repeated by state and local officials there.

The interdependence of law enforcement on state lands and 648*
reservation was emphasized during the depression. In 1931, when 657*
logging on the reservation—and with it tribal income—had been 641
temporarily reduced by Washington, a tribal leader, Wade 625
Crawford, succeeded in securing a congressional cut in the [651]
administrative budget of the Agency, which from about 1924 had been supported out of tribal revenue. Since the budgetary allocation for law enforcement then became inadequate, the federal officers left, until there remained only a constable and an

*648 Indian officer, both at Beatty. Thereupon, Chiloquin's marshal
*657 and his deputy also resigned, asserting that enforcement under
641 those conditions was too difficult—and too dangerous, to boot.
625 The county, which had already barred tribal members from the county jail, now took the position that, short of a government request, its courts would try no more Indian cases. Crawford
[692] countered with a proposal that the Court of Indian Offenses be reinstituted, while other leaders fell back upon that time-honored solution, the United States cavalry. Several months passed before funds were found to restore the reservation staff to normal strength.[4]

*648 Within the interlocking jurisdictions of the reservation and
*657 the reservation community, Klamath came to play out the role
641 of citizen as a voter, a taxpayer, and the object of legal control.
571 In small towns such as Chiloquin and Sprague River, relationships were primary in character, dominated by face-to-face relationships. Within the special environment of the reservation, with the vast potential of its unexploited resources, something of a western frontier tradition was preserved, with emphasis placed upon individualism and a high premium set upon voluntaristic action in concerting effort.

*648 These conditions were nowhere better evident than in Beatty.
*657 In this little community, with fewer than one hundred fifty
• 621 members, leadership was furnished by a few individuals and
563 action was highly informal. Perhaps the most influential person was a white storekeeper, a resident in the community for almost four decades, who had on occasion donated land and cash for worthy causes, who presided over a credit system, and who was much respected by the older tribal members. Among the latter, a leading spirit was the widow of his brother-in-law, who could be counted upon to act with him. His store was a frequent gathering place and the debating ground of the "hot stove league," where tribal politicians from the Upper End were often to be found. Another local leader was a young white, married to a tribal member, who farmed along the Sprague and in his spare time was a vigorous preacher in the Assembly of God Church.

Indians from other reservations, also married to Klamath, provided specialized leadership. One was prominent in the affairs of

the Beatty Roping Club, an organization that sponsored a local 648*
rodeo, with white, Klamath, and Indian members from the 657*
reservation and its environs. Another, an Agency employee until 621 •
his transfer to the Lower End, was active in organizing a youth 563
program. In Beatty in 1959, informal discussion still sufficed to decide common issues; and such men as these could marshal support to implement decisions. In the entire town, two deputy sheriffs, an arm of the county, were the sole embodiments of officialdom.[5]

Chiloquin, by contrast, was a larger and more complex community, having a formal municipal structure headed by a mayor and a council of six aldermen, along with a recorder-police judge and a treasurer. It hired a town marshal, ran an elementary and high school under the aegis of the county and state, operated sewage and water systems, owned a municipal tavern, and supported a volunteer fire department.

Not surprisingly, within this community principal economic interests were often aligned in the control of political power. Such devices as the massing of supporters to control party caucuses and interim appointments to fill vacancies on the council have enabled such interests to provide continuity of representation. With the exception of the treasurer, the elective offices for years were filled by men. Until 1957, they were invariably held by whites. In that year, when awareness of incipient termination had drawn together some tribal members, a group of Klamath succeeded in voting into office as alderman the Indian wife of a well-respected tribal member.

Leadership recruitment in Chiloquin was directed toward those individuals who had shouldered responsibility in such civic activities as the drives for Community Chest and Red Cross. Only one-third of the white families were actively represented in one or more such ventures. Among tribal families, however, the proportion was far smaller: certainly it lay below one-tenth of those resident in Chiloquin. The reasons were not far to seek. For one, the civic activities involved were quasisocial in character, and the low participation of Klamath reflected their social isolation within the community. Again, their own political orientation was rather toward the Tribe than to the affairs of towns which they identified with the dominant society. [619]

[Klamath Reservation]

*648
*659 Although tribal members in Chiloquin lagged little behind their
• 621 white neighbors in registering to vote (1958), their concern was
563 less with local than with national issues.[8]

641 A second aspect of Indian citizenship was the support of local
619 government through payment of taxes. Since all property held
666 in trust or restricted status by the government, together with
*648 income derived from such property, was exempt from taxation,
*657 many tribal members occupied an unusual position among their
641 fellow citizens. The effect was particularly felt by the county and
651 local communities, which were heavily dependent upon property taxes. For years, Klamath County sought to secure funds from the government to compensate it for the trust lands within its boundaries, which were served by county roads, sheriffs, courts, and schools. Johnson-O'Malley funds finally provided money in lieu of taxes to support the schools; to these the Klamath Tribe on occasion added funds for special purposes, but the other causes were unavailing.

In Chiloquin, officials resented the action of one Superintendent, who advised tribal residents that any property bought within the city with funds in trust or restricted status might be restored to corresponding status, even though it had been owned in fee simple when purchased. Such house lots were thus removed from the tax rolls and, although benefited by sewers and other municipal improvements, could not be levied for their support. It was not commonly recognized by white citizens of [563] Chiloquin that a number of tribal members paid taxes regularly upon property held in fee simple and that a multitude of indirect taxes fell as heavily upon tribal consumers as upon their fellow citizens. Rather, the image was that of a people exempt from financial responsibility toward the support of local institutions from which they benefited. Though a distortion, like many other parts of the stereotype, this evaluation nonetheless contained a substantial kernel of truth.

If truth be told, the citizens of Chiloquin were no more disposed to pay taxes than American citizens anywhere, and indeed they were somewhat less inclined to do so than those elsewhere in Oregon. In 1951-52, the millage rates of Chiloquin were by far the lowest among the organized communities of Klamath

[Klamath Reservation]

Tribal member-
*648 ship was, as we have seen, only one of several
*657 political roles in which Klamath might participate, and in some
619 measure it lay athwart the others. Citizenship in the United
641 States, granted generally to American Indians in 1924, affiliation
with state, county, and municipality: these political memberships are explicit in character, conditional upon the fulfillment of stated requirements and with the exercise of well-defined rights. Superficially, tribal membership appears to possess a similar character. In the admission of new members, both the establishment of qualifications and the decision upon individual candidates rested with the Tribe, though subject to review by the Bureau of Indian Affairs. Applicants had to be of Klamath parentage on at least one side, and those of one-quarter or more Klamath heritage were automatically admitted upon application. In 1945 a clause was added permitting adoption of members of one-sixteenth heritage, contingent upon assurances that they would reside upon the reservation and participate in tribal activities.

In practice, Indian heritage of any sort, and not merely that stemming from the Klamath Tribe, was reckoned in; and token assurances of participation and residence have conventionally
[161] been accepted. Of the final enrollment of 2,133 tribal members,
[162] 86 fell within the category of one-sixteenth quantum. Of these, 12
dwelt on the reservation and another 12 in Klamath Falls, the remaining 62 residing at some distance from the seat of tribal government. Once enrolled, members have not been subject to review, save when their original qualifications were called into question.

In a membership that was not conditional upon performance,
[602] the Tribe had a great deal in common with such ascriptive en-
[621] tities as the family and ramified kin, the traditional tribe, and
the broad regional communities into which the latter had tended to cluster.

Family loyalties have been at once strong and selective. At times, they have provided continuities of interest within a single
[602] line. Here, for example, were the Rev. Jesse Kirk, himself the
son of a treaty signatory, and his sons, Clayton, Seldon, and Jesse Lee; here old chief Monchnkasgitk, and his sons, Harrison and Henry Brown; here Judge William Crawford, his wife, Eliza, and their son, Wade; here Henry Jackson, his half-brother, Ike, and the latter's son, Boyd Jackson.

While the political strength of a family is seen not only in the 648*
succession of interest but in a propensity for members of a family 657*
to vote *en bloc*, this is far from invariably true. The schism 619
separating Jesse Kirk from his half-brother, Joseph, is one prominent 602
instance—and by no means the only one—to the contrary. [665]
In fact, alignment within the family and extended kin has often [578]
been modified by contending considerations.

Nonetheless, for some leaders the solidarity of family some- 648*
times took precedence over impartiality in the discharge of office. 657*
One tribal council member is quoted as defending his action 661
favoring certain enrollments by the explanation ". . . that since 602
two children were his niece's children, he felt that it was his duty 619
to guard the interests of his minor relatives."[8] Political leaders, seeking to emphasize the purity of their motives, needed to go no further in justification than to declare that they sought only the welfare of their grandchildren.

Although intermarriage and alternative associations have long 648*
overlaid clear identification with the several peoples who had 657*
entered into the treaty, such affiliations have continued to exert 563
political force, however greatly diminished in recent years. In 621 •
turn, they related to the two broad communities on the reservation. 619
The Lower End remained predominantly Klamath, while Modoc, Paiute, as well as a number of Klamath and Pit River, comprised the Upper End community some forty miles away.
Even after the closing of the subagency at Yainax, the populations [184]
of Sprague River and Beatty continued to reflect the special character of the eastern reservation.

In turn, the relatively easier access of the Lower End to outside [177]
influences—a subject already reviewed in discussing modern tribal demography—superimposed the effects of differential acculturation and intermarriage upon the traditional subtribal
allegiances that distinguished the two Ends. Difficulty of travel 648*
along the road from the Agency to Yainax had given rise to the 657*
practice, long maintained, of holding separate councils at each 621
place. Thus at the two Ends there had developed political com- 665
munities responsive to their own local leaders. Harrison Brown, 619
in 1931, played upon a familiar theme when he recognized in Wade Crawford, a leader from the Lower End ". . . a young man who is not a full-blood, who is trying to stir up trouble, and we

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 *657 • 621 want to set him aside, as he does not understand what we want. . . . I am one of the full-blood Klamath leaders," he continued, "and I don't want any trouble with the government."[9]

665 619 In the factional struggle marking the final generation of tribal government, Wade Crawford and his wife, Ida, drew their principal strength from the Lower End and the absentee membership; while many of the leaders opposing them, including Harrison Brown, Levi Walker, Boyd Jackson, and later Jesse Lee Kirk, hailed from the Upper End and found their major strength there. Despite exceptions and progressive weakening, the dichotomy was long a working reality, of which the loyalty of the Paiute to Boyd Jackson was only the most signal of many expressions.

A review of tribal minutes over the last half-century reveals a striking faithfulness in the voting of the most prominent adherents of those leaders. It seems clear that out of factionalism small but stable parties were beginning to emerge, to which, however, the large body of tribal members remained uncommitted. It was upon his immediate followers that a leader relied for support in raising funds or carrying a point to the undecided. At the same time, his image drew dimension from the character, as well as the number, of his adherents. That the personal image was still important, and that loyalties were not invoked in terms of issues alone, is seen by the personal denigration which took place between factional opponents and by the identification of each partisan group with its leader in the phrase, "He's a Crawford—or Jackson—man."

*648 *657 665 619 The professional politician had come to dominate the ranks of leaders. It was not simply that industry in the management of one's private affairs held less significance in a world made equal by the flow of per capitas. The tasks confronting the new leaders also were different. It was no longer sufficient to provide aid out of one's pocket and offer sage advice in public gatherings. The new leader must be prepared to devote most of his time to political matters. He must concern himself with the administrative duties of the tribal office, to prolonged negotiation with Bureau personnel and with the officials and private individuals representing the interests of neighboring whites. On occasion, there were the delegations to Washington. Daily, there were the chores to be undertaken for constituents in the fence-mending that was

Most Klamath live in one or another of the several
648 towns and settlements on the reservation, or else they have settled elsewhere,
361 in Portland, Salem, Eugene, in California, in Alaska, in the Midwest, or along
[167] the Atlantic seaboard. In 1955 the Tribe had 2118 members, and of these 40
percent lived away from the reservation (Stern & Swanson 1960). Partly because
[619] of the recent progress of the termination of federal supervision of the reservation,
by this date the percentage of members residing off the reservation has
[161] probably increased. In fact, for years there have been numerous "tribal members"
[619] with no experience whatsoever of reservation life.

648 Throughout the years of White contact inter-marriage and inter-breeding have
144 been frequent. Today, more than 70 percent of the Tribe's members are, genetically,
less than one-half "Indian," and less than one sixth are "full-bloods."
[171] Many are indistinguishable in appearance from their White neighbors, as most are
not easily distinguished in dress and language.

175 The isolation of the early reservation period was soon removed by the influx
177 of White settlers, who at first took up farms and started towns near the fringes
of the reservation. Through inter-marriage and through the consequences of
[361] allotment of land to individual Klamath, many Whites were soon residing within
the reservation's boundaries, either on the lands of a spouse, or on land bought
[423] or leased from tribal members. Another source of change were the ever present
efforts of Agency officials to make over aboriginal ways, and later, the rapid
[657] growth of the lumber industry and the development of full fledged frontier communities
were also important sources of acculturative influences. In quick
[726] succession the Klamath experienced a period of armed conflict (the Modoc War of
[786] 1872-73), a religious revivalistic movement such as that which swept the plains
area, extensive governmental planning and intervention, the allotment of land
in severalty, and a growing participation in the cash economy. Because aboriginal
[181] Klamath values had stressed achieved status for those who worked to accumulate
[556] wealth and property, for some Klamath the early period of contact provided increased
opportunities, and there was a group of men who for a time were effective
[436] entrepreneurs. It was through such personal efforts and through the "easy money"
had from private sales or the leasing of agricultural lands, from pro rata shares
of boundary settlements, and from per capita payments for sales of tribal timber
that the Klamath made the transition to a money economy.

648 The participation in and contribution of the Klamath to the economy of the region
is a significant point of interchange between Klamath and White, and one with
[313] many ramifications. In considerable measure, the local timber industry prospers
[423] or slumps, depending on the allotted cut in the tribal forest. Similarly,
local merchants are somewhat dependent upon the assured income of tribal members,
[434] as they are upon the purchases of mill workers, fallers, and cat-skinners.
The major town on the reservation, Chiloquin, obtains the largest share of its
[632] revenue from sales at a municipally owned beer-hall and from the fines and forfeited
[651] bails paid by visitors to the city jail, both of which establishments are
patronized largely by Klamath.

648 In other aspects of community life the participation of Klamath is perhaps best
621 characterized as that of passive spectators. Many Klamath have come to have a
sense of being aliens in the heterogeneous local culture, although there is a
563 small assimilated minority.

[571] Thus Klamath may interact as equals in card rooms and pool hall, and are met
with a stereotyped "friendliness" in interactions in stores and on the street.
However, the great majority live in intimate interdependence separate from the
main currents of White social life. White ethnic exclusiveness is reflected

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are ex- 621
clusively White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office out- [575]
side the tribal structure, and although a high percentage have registered, very
few vote in local, state, or national elections. The dual structure of local [794]
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are fre-
quently tax exempt, as have been their per capita payments. Simultaneously, [651]
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chilo- [674]
quin during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a recon- 648
stituted "Klamath Tribe," with a corporate structure and assets to be adminis- 657
tered by a trustee, or they had the choice of withdrawing and of receiving a
pro rata share of tribal assets. In a later election, about 77 percent of the 619
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal super-
vision has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual
Klamath have shown an equally noncommittal relationship to tribal affairs. Atten- 619
dance at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

NATIVE MYTH AND MODERN RELIGION AMONG THE KLAMATH INDIANS

BY ROBERT F. SPENCER

773 IN A RECENT STUDY[1] of social change among the Klamath Indians
177 of southern Oregon, informants revealed an unformalized synthesis of
178 aboriginal and modern Christian religious beliefs. These involve, among
179 other ideas, an identification of the Klamath culture hero with personages in
the Christian pantheon such as the God-Father, Jesus, and Satan. This is of
interest since the contemporary Klamath have lost all formalized aspects of
their older culture. The major institutions of the past have fallen by the way
and, in their overt forms at least, have been replaced by those of the encroaching
Anglo-American society. Acculturation is so far along that the observer
182 can elicit only covert survivals of aboriginal ideas. Although the tone of the
folk culture has been lost by the Klamath, the reservation life, a common
economy, and the wardship status enforced by external governmental agencies
combine to effect a haphazard solidarity in the group. It is hence not surprising
to discover a rephrasing of older values to meet modern situations.
A case in point is the attempt by many tribal members, young and old, to
find continuity in folklore and so to read Christian meaning into aboriginal
myth.

175 Klamath culture of the past was not essentially different in its orientation
177 from that of many western tribes. Because the tribe was geographically marginal
to several culture areas, it is possible to note the composite nature of its
culture and to discern the realignment and reintegration of elements which
222 it shared with California, the Plateau-Basin, and the Northwest Coast. In
226 its overall configuration, the native culture differed from that of the adjacent
gathering peoples because the Klamath had settled on the lakes and marshes
631 of the region and depended on fish and a wild water-lily. Beyond the basic
621 economic structure, however, one may note the California flavor of the separatistic
771 hamlets with their loose social and political organization; the weakly
791 developed (and possibly late) wealth complex, suggestive of the Northwest
and the Oregon coast; and the formalized shamanistic religion which points
to affinities with tribes in the Plateau, California, and elsewhere.[2]

---

101 [1] This paper is based on data collected during two summer field sessions, 1948 and 1949,
122 on the Klamath Reservation. Field research was subsidized by grants no. 21 (Reserve Fund,
1947) and no. 1132 (1949) from the American Philosophical Society, Philadelphia, and by
research funds from the Department of Anthropology, University of Minnesota, Minneapolis.

113 [2] Cf. Leslie Spier, *Klamath Ethnography* (University of California Publications in American
Archaeology and Ethnology, 30, Berkeley, 1930), 224-325; Verne F. Ray, *Cultural Relations
in the Plateau of Northwestern America* (F. W. Hodge Anniversary Volume, III, Los Angeles,

The subdivisions or tribelets are:

I. ä'ukckni, the people of Klamath marsh and middle Williamson 101
river, the Klamath proper. Evidently the Sprague river people are 131
included here; there is some doubt, but I am even more doubtful 619
whether there were settlements as far away on Sprague river as
Yainax in pre-reservation times.

II. kowa'edikni, those of a village of that name on Agency lake. They may be ä'ukckni.

III. du'kwakni, on the delta of Williamson river. These are more closely affiliated with the Pelican bay people than with ä'ukckni.

IV. gu'mbŏtkni, those of Pelican bay and the marsh to the north.

V. iu"laloŋkni, the people of Klamath falls (Link river) and the eastern shore of Klamath lake.

The names are those of the districts they occupy with the suffix -kni, those of, people of: ä'ukci, Klamath marsh; du'kwa, the district about the mouth of Williamson river; gu'mbŏt, Pelican bay, possibly taking its name from Rocky point; iu"laloŋᴇ, on the end, the village at the outlet of the lake into Link river.

It is now difficult to get a true estimate of the size of these groups. 361
The ä'ukckni count twenty-nine or more settlements, half of the total; 162
of the others iu"laloŋkni have thirteen, gu'mbŏtkni seven or more,
du'kwakni five, and kowa'edikni, one. The towns vary considerably
in size, yet this mere count agrees closely with the populational pro-
portions as my several informants phrased them. The ä'ukckni are
by far the largest group, perhaps as large as all the others together.
Nancy Phillips recalls the large number of children who played [115]
together at gu'mbŏt, Pelican bay. At this place the settlements do
form a large compact group. Next in order she places the du'kwa
group, then those clustering about iu"laloŋᴇ at Klamath falls, and
goyᴇmske'ᴇgIs on Williamson river. The settlements on Williamson
river are small and scattered, but she places their joint population
above the gu'mbŏtkni. The iu"laloŋkni were comparatively few
despite their large territory. Of the ä'ukckni more lived at Klamath
marsh even in winter than on Williamson river. The huge size of a
single site, du"Ilkŭt, bears this out.

Consonant with their unequal size is it that the principal chief, at 619
least in early reservation days, was the principal chief of the ä'ukckni; 622
all others were distinctly subordinate in prestige. According to one
informant, himself a du'kwa man, the ä'ukckni are the highest people. [829]
Kᴇmŭ'kŭmps, the culture hero, made them first, best, and strongest;
later he made the others.

by the death of several on each side, the feud continues until payment 726
is made. Continued feuds prove disastrous, for retaliation is carried 628
out with all the intensity and destructiveness of a foreign war. Villages are attacked at dawn, houses and property destroyed, women and children carried away into slavery.

A chief may intervene; so I was told, though I doubt it. Chiefs do 728
accompany parleying parties and other men may echo their words. 622
Beyond that there seems to be nothing to their position but personal prestige which has been enhanced by developments since reservation days. Lɛle'ks and his successors among the ă'ukckni seem to have made much of their position. Pat's father and Tc!i'wi, both du'kwakni, killed a iu"lalonɛ man at stŏ'kmatc, Eagle Point. They were taken to Klamath marsh and each beaten five times at the order of this chief. This was in pre-reservation days, or at least prior to the establishment of the agency in 1864 (?). Nevertheless this is not aboriginal, but,
according to Nancy Phillips, these "laws" were brought by her cousin [177]
from the north.

The group that owes recompense, having lost fewer men, goes to 728
the other offering payment to even the score. The value of a man's life is not a fixed item, as it is for the lower Klamath river tribes; this despite the similarity of marriage payment and the slur on children not born of a purchased mother. My informants professed ignorance of what should be paid, yet it can hardly be doubted that recompense accorded with a man's wealth and prestige.

Children who are captured are kept; settling the score does not mean that they are restored, though this may well be only in case they have been sold. Their fate depends on their captors, who may elect to rear them as their own children. More commonly they are miserably treated, made to sleep with the dogs, fetch water, etc., and beaten if
they are lazy. They are as quickly sold at Warm Springs and the [437]
Dalles as are foreign captives. With the latter at least there is an advantage in immediately disposing of them, that they do not grow up to carry back to their own people precise knowledge of the habits and topography of the Klamath world.

Kŏ'kdiɳks of du'kwa was a chief (lŏ'ki) in warfare. He would tell his tribes- 159
men to get ready to fight with the iu"laloɳkni, for instance. He was always 701
in the forefront of battle. When a youth he went out to seek power by bathing
and wandering through the mountains at night. His mother had told him that 721
long before those of iu"lalonɛ had slain his father, Lĕ"l'wis, a du'kwa shaman
accused of poisoning one of them. He wanted to become a warrior to have

After the dance, scalps and trophies are usually preserved by those 727 535 who called the dance, relatives of the avenged man. They are dried and stored far from their homes to be brought out and danced over at each new scalp dance. Sometimes bits of the scalp are sewn in rows [177] down each breast of a woman's dress, a Plains custom impossible, of course, before the introduction of these Plains-like garments. [291] Both practices are un-Californian.

There is a question whether the notched rattle (ulo'ks) is played in 727 the war and scalp dances. Neither drums, which the Klamath formerly lacked, nor rattles are used. 535 Only one man, Ma'gai', whose day was well before the middle of the last century, knew the notched rattle. 534 He knew all about war. He had overheard the Upland Takelma singing to it, according to one informant, and always used their songs when the Klamath made war on them. No resonator is used; the notched stick is rested directly on the ground and rasped with another stick.[84]

CHIEFTAINSHIP

Chiefs are of but minor significance in Klamath life. 622 • In contrast my informants invariably stressed the importance of the shamans. 756 As an instance the largest house pits pointed out were always those of shamans. This relative unimportance of the chiefs was true at least until just before reservation days. 622 At that time contact with the Columbia river tribes, whose concepts of chieftainship were sharp and deeprooted, coupled with the developing trade which began to make considerable differences in wealth among the Klamath, operated to enhance the position of the chiefs, the rich men. It is significant that Lᴌle'ks, their most prominent chief, had spent several years of continuous residence at the Dalles. All this was sharply accentuated on the establishment of the reservation by the government's recognition of lay leaders while frowning on the shamans. [114] It must be distinctly understood that the picture Gatschet draws of chiefly powers is nonaboriginal.[85] [115] In fact, his principal informant, David Hill, was one of the newly raised chiefs who, we must believe, was not inclined to underrate his new importance. Both my best informants, Nancy

---

[84] The familiar association of this rasping sound with the voice of the frog and its use in a social dance (the Bear dance of the Basin Shoshoneans) are both unknown to the Klamath.

[85] Gatschet, 1:58–62.

622 Phillips and Tom Lang, doubted that there had been anyone who could properly be called chief in pre-reservation days.

756 As good a test of this as might be was the difficulty I had in getting the names of pre-reservation chiefs, let alone their functions. Shamans on the other hand were freely named and the many cited came far from exhausting the list. Gatschet encountered the same difficulty. 114 622 "Many times I attempted to obtain a list of the former head chiefs of the two chieftaincies [Klamath and Modoc]. I succeeded only in learning the names of two chiefs recently deceased, and no biographic details were obtainable." This he explains was due to their strong repugnance to name the dead,[88] but I found hardly a trace of a name taboo.

622 This situation seems much like that of the Great Basin tribes and the particular functions of chieftainship reenforce the view.

Some settlements have chiefs, others do not. It is very doubtful that they feel that political solidarity demands a chief for each subdivision. The three chiefs alone named with some certainty were all ă'ukekni men (Klamath marsh-Williamson river division): Tel'lokĭn who lived at the site of the present town Chiloquin, Lɛle'ks at bezükse'was across the river, and Motcŭnkă'skɛt at Yainax. Others of this subdivision were Li'lu at ḳa'umkăn on Sprague river and Dŏ'tklɛm sa'rdjĕnt (literally middle sergeant) at about the same place. In other tribelets were my informant's grandfather at mo'giŋkünks, and Kŏ'ḳdiŋka, both du'kwakni; a chief and another unnamed war leader at gu'mbŏt. It is quite in accord with this that none were named for iu'"laloŋkni, southern lake people. One informant suggested Link River Jack (nĕlo'lŏtk) for this group, but Tom Lang, himself one of them, was certain that this man was a post-reservation leader and doubted that his people had ever had a chief. All these chiefs were contemporaries of the period 1850 to 1870. Their predecessors, if they had any, are unknown. It proved quite fruitless to enquire for which groups or districts these men were chiefs. Tel'lokĭn was chief for the towns about the mouth of Sprague river (lobŏ'kstaŏksi, taka'lmakeda, etc.); Lɛle'ks for the whole middle Williamson valley, which includes these towns, and for Klamath marsh as well. In other words, each was a chief so far as people of his subdivision chose to follow his leadership.

Such is the separatism among the subdivisions that there can hardly be a tribal chief. How far any of the above functioned as such must have been purely a matter of personality. Pat Kane had it that the principal chief is always one of the ä'ukckni. This is by far the largest subdivision, hence chiefs in other divisions may well have less influence. Yet I believe he had the instance of Lxle'ks in mind. He said further that the ä'ukckni invariably issued the invitation to war and their chief selected the leader and received the booty. I doubt it. 622

---

[88] *Op. cit.*, 1:xli.

A chief is one who has acquired his position in war, with some background of spirit experiences, wealth, ability to talk, and a suggestion of hereditary interest; this beyond natural ability for leadership. As one informant summed up his qualifications: he must be brave and have property; he must have presence to meet and talk with anyone, must be competent to arrange matters without dispute, and must have the interest of all his people at heart. I have described above how one leader sought power to lead a party to war. Since power is implicit for undertaking all things difficult, it must be assumed to be part of every chief's make-up.

Several anecdotes of Tci'lok̈in will make some of these qualities clear. Tci'lok̈in was a short man, deep-chested, powerful, and exceptionally hardy. It is related that he overtook a party camped in the deep snows atop the Cascades. Not being properly equipped, he lay beside a fire covered only with a single blanket. In the morning he was covered with frost but apparently had not suffered. 539

Somewhere in the north, possibly Warm Springs, was a man who owned a big slave who was very much a bully. While the slave was absent Tci'lok̈in traded three horses for the master's best horse. When the slave returned he inquired for the horse and sent a man to demand it. That man went twice but each time Tci'lok̈in sat quietly sewing and did not reply. Then the slave himself went out and demanded its return but Tci'lok̈in paid no attention. When the slave went to untie it, Tci'lok̈in tripped him. The former struck at him with his hatchet but missed. Then Tci'lok̈in wounded the other and he retreated.

Teauteau, a northerner, wanting Tci'lok̈in's daughter, offered horses and other valuables. The latter refused. He came to Tci'lok̈in at night and fought with him till daybreak. Tci'lok̈in clung to the other's hair despite the beating he was receiving. He came again next night and again they fought. This performance kept up through the whole winter. When spring came, Teauteau acknowledged his defeat "I, Tci'lok̈in, k̈elo's; yes, Tci'lok̈in, you are fierce," and they were again friends.

Again in the north some northern shamans went into a sweat-lodge. They wanted a shaman among their Klamath visitors to accompany them. None was present so the Klamath insisted on Tci'lok̈in joining them. One after the other each northern shaman sprinkled water on the hot rocks as he sang his song, hoping to force the others out.[57] Some overcome by heat and steam had to be dragged out. Once outside they wondered what had become of Tci'lok̈in;

---

[57] This recalls the well-known test theme of western mythology.

539 he was nowhere to be seen. They thought he must have died. After a long time he began to talk, throwing water on the rocks. When he was quite ready he came out and walked to his own people. He had bested the shamans.

One informant completed the humorous tale of the lizard who killed five grizzlies with the comment, "He was braver than Tci'lokin."

• 622 Chiefs are wealthy. All informants gave the same term, lö'ki, for
rich man and chief, and when asked for the rich men named the chiefs.
556 They own many slaves; other people may have slaves, but many have
595 none. Some chiefs have a number of wives. Lɛle'ks had seven at one
time, not slaves, but one a Modoc, the others native. This, the largest
[567] marrige group known, argues considerable wealth. Lɛle'ks was accus-
[439] tomed to make frequent trips to northern tribes with captives to
exchange for horses. Everything points to the rise in wealth of these
men as dating only from the comparatively recent period of contact
with the northern tribes. Up to that time at least shamans rivaled
[756] chiefs in wealth.

622 A chief becomes such primarily by his leadership in war. When a group is gathered preparatory to war, chiefs address them and under their guidance war leaders, prominent, brave, and wealthy, are agreed on. Chiefs themselves are among the war leaders and no one alone captains the party. Chiefs make a point of engaging prominent adversaries in the forefront of battle. In addition to their other qualities, it is assumed that they are brave, unexcitable, and able to do without sleep.

Under the circumstances there can hardly be inheritance of chieftainship, largely because it is not an office to be regulated by definite succession. A chief's relative may be chosen as war leader, but not of necessity. Since wealth figures, it may be that at least the possibility of succession is heritable, but a man who is personally disqualified will not be considered. Pat Kane's paternal grandfather was a chief at du'kwa; further vision experiences had made him a good gambler but no shaman. But his son did not succeed because he was not competent and, in addition poor, nor has Pat any pretensions. On the death of Lɛle'ks, his son Solomon was passed over as lacking caliber, and in reservation days Alan David, previously a minor figure, was recognized in his place. Their relationship is unknown. My informants did not know whether the fathers of any of the chiefs named above had been chiefs before them.

[565] The Klamath have no feeling of class stratification as on the Columbia river and northward. A chief is a leader and nothing more.

His wife and children are commoners and not known by distinctive terms. 622

The emphasis among the chiefly functions is clearly on leadership in war and haranguing the people. Every morning before daylight he addresses them and again in the evening until the sun is well down. I am somewhat dubious that this procedure is as standardized as my informant had it. The address runs on fighting and acquiring spirit aid. He warns against hostile raiders; tells them to rise before daybreak; tells the young people to seek visions. "If you get a spirit, you cannot be killed; you will never fall sick; you will live to be old." But he has no word as to where they shall hunt or fish or carry on other routine activities. [701]

A chief has no speaker as a shaman has. Such might have been expected here, for Paviotso, Wishram, and Nez Percé chiefs have. [756]

A chief is not looked to to preserve peace. Old men may interfere in quarrels, but these are no especial concern of a chief. Nevertheless the word of an influential chief might end a feud. Just prior to reservation days the practice was introduced of tieing up and lashing quarrelsome men at the word of a chief. This was brought from the north by the cousin of my informant Nancy. It has a decided un-aboriginal flavor. A chief is under no obligation to help his people pay blood money, nor to assist them when starving. These are matters for relatives alone; they may die for all he is concerned. [71] [177]

SLAVES, TRADE, AND WEALTH

Slaves are captives of war, some of whom are kept by the Klamath but the majority are carried to the Dalles to be sold. They seem to have been numerous. Gatschet quotes a statement of Taylor in 1859 that in the raid on the Pit river people two years previously fifty-six of their women and children had been taken and sold on the Columbia river.[88] Doubt has been cast both on the number of slaves and the frequency of the raids as described by early writers. Kroeber, for instance, scouts the idea of yearly raids on the Achomawi and suggests that a few actual cases have been exaggerated.[89] Whatever the case be with regard to annual raids, I am certain that the evidences are too many and too circumstantial to permit of doubt that raids were 567

[88] 1:lx.

[89] Handbook, 819.

The number of plural wives depends on wealth; hence chiefs have 595
more than others. From my notes I glean two instances of two wives, [622]
another of three. The wives in both bigamous cases were sisters. The greatest number known was the case of the chief Lʟle'ks, who had at one time seven wives, two of them sisters.[73] I have described their derivations above. These women bore him many children. Whether the wives are sisters is a matter of complete indifference. To have two wives is called la'bwewa'nagītkt (lit., two females), three ʟnda'nwewa'nagītkt, and so on. Collectively the wives may be referred to as sīpkska'ltk; they call each other p'tcīki'p. Plural wives are paid for, but whether there is reciprocal visiting I do not know. Slaves [567]
are also taken to wife. Polyandry is unthinkable to the Klamath; it would be adulterous.

Barrenness is as usual a reason for taking a second wife, but not 595
always. Pat's maternal uncle had a barren wife. He kept her 842
throughout his life and never took another. The case of three wives noted above was one in which there were no children; the children of this family always died in infancy, I was told. Whether this implied that two of the three were barren, I do not know. One word, ts'e'do, means a sterile man or woman.

The sororate is not obligatory on the death of a wife, nor is there 587
any notion that a girl must marry an older sister's husband when she comes of age.[74] It is thought better to marry a deceased wife's sister, and from her family's point of view it is evidence that they care for the husband when they provide another daughter. There is however no feeling that they are under compulsion to make good the loss he sustained because of his marriage payments. A bereaved person waits a year or more before remarrying. The second wife has to be paid for like the first, but the amount is less. Again this depends on the man's affluence. The sororate is called spīno'la, the sister, [601]
spī'nuwīp, *i.e.*, sibling-in-law when the spouse is dead (cf. spīnu', to cremate, spī'nuks, cremation place).

The levirate is customary but not obligatory. It is desirable to keep a woman in the family, especially one with children. This is perhaps nothing more than an expression of household solidarity, for

---

[73] Gatschet states ten, but I am certain there were not more than seven, at least at one time (2:126).

[74] There is just a suggestion. When asked for the kinship term used by a woman for her sister's husband, my informant gave the term for husband, but somewhat in confusion corrected herself with the woman's term for brother-in-law. [601]

756 As both sexes are shamans there was no need for the transformation
838 had this been the goal.

Mŭksamse'lapli, also called White Sindey, was the berdache shaman. He tried to laugh like a woman. He was twice married, first to a Molala man named Tci'ptci, later to a Klamath, Tc!o'mŏks. The latter is known to me as a normal old man who has since raised a family of his own. White Sindey made considerable pretense to shamanistic powers, but was rather scouted. He performed and reacted like an
159 ordinary shaman.

838 One of my informants now in his sixties had been a berdache in his youth. I had observed his general unmasculine behavior but it was not until my visit of the second year that another informant gave the reason. He lives alone, takes pride in his cooking and the care of his house, weaves baskets for sale as women do, and still wears a basket hat, which no Klamath man now will. He is fleshy, slow, and distinctly feminine in gait and gestures, and speaks with the higher pitch of women's voices. Yet his transvestite state was given up nearly half a century ago. He is shrewd enough, though mild mannered, yet I confess that I suspected no abnormality. When about sixteen years old he was at the Dalles where an old woman shaman of the place took a fancy to him. He however was afraid that she would harm him so he put on woman's dress. He wore his hair long, prepared lily seeds, wove mats and baskets; all typical women's pursuits. He has never married. After learning his history I brought up the subject of marriage with him. He claimed that he had once been married, his wife having died twenty years ago, and in answer to the question why he had not remarried replied: "Some men like it that way."

838 The most striking case is that of the chief Lɛle'ks. As an ado-
lescent he wore women's dress and performed the appropriate tasks.
159 One day after returning from the lily seed harvest he lay down to
• 622 sleep. They placed a bow and arrow and a punt pole by his side, the latter a symbol of women's work. They stood over him and shouted. As he jumped to his feet he grasped the bow, thus determining his future. He ran off to Mount Scott (t!u'msŭmɛni), staying through the night on the mountain in quest of a supernatural experience. As he was returning he smelled the sweaty odor of running horses. He left off women's dress and actions from that time. He became lucky in every way, acquired wealth, especially in horses, and prestige, and became the foremost chief the Klamath have known. His

159 838 [622] subsequent career seems quite normal unless exception be made of his seven wives!

A woman named Co'pak lived like a man although she retained women's dress. She married a woman who lived with her a long time and finally died. She observed the usual mourning, wearing a bark belt as a man does at this time to prevent the back from growing bowed. She tried to talk like a man and invariably referred to herself as one.

Another woman still living has had relations with both women and men. She never adopted men's garb but told them that she was a man. She is today a common prostitute, an abnormal, irascible person. Those she lived with were all older women, not young girls. This practice is known as sawa'lĭnăa, to live as partners. They say of such: they have lots of partners, friends (snewă'ĕts doma' sawa' lĭnăa'sgitkt). Other Klamath of any standing have always avoided her and her women partners. She was never married to a man.

HOUSE GROUPS

342 592 It is now difficult to get evidence on household composition. Houses vary in size, to judge by the existing pits, from twelve feet in diameter to as much as thirty-five feet. The larger houses must have held a number of families and as many as ten or twelve persons. One described below had five families, numbering twenty.

The majority of the inmates of a house can usually trace some relationship. This is also true of most of the inhabitants of a settlement. For example, the village mo'giŋkŭnks had half a dozen earth-lodges, of which three held the families of two brothers and their father's male cousin. Residence is normally patrilocal. In the cases [591] which follow the connecting relatives are for the most part related in the first degree.

An earth-lodge on the lower Williamson river built about 1870, and measuring thirty feet in diameter, contained five men, their wives and children, whose respective portions of the house are shown in figure 4. This was known as the home of the shaman Boke's; the others were related to his wife.

1. Boke's, wife, and two children.
2. Lek!o'c, wife and two children.
3. Wokau'k!alls, a widower, whose two wives had been Molala sisters.[76]

---

[76] Their Molala names were Slowa' and A'li'ak.

[622] [177] The shaman himself is, or was, the outstanding figure of Klamath society. He had no rival in the chiefs, the rich man, until the coming of the whites brought a redistribution of emphasis in Klamath life. Chiefs had previously been persons of little influence.

771 *171 All this is familiar enough among Indians; the Klamath differ only in particulars. In its several aspects, their religion, as well as its practice, is one with that of the Great Basin, Plateau, and Mackenzie tribes.

THE POWER QUEST

787 The quest for supernatural aid is open to everyone, men and women, boys and girls. It is a constantly recurring feature of their lives. Everyone, perhaps without exception, seeks the powers at least once during his lifetime and further experiences seem to be repeatedly sought.

[881] The first occasion is always puberty. I doubt that boys and girls
are expected to be uniformly successful in securing aid at this time,
because, it was said, at shamanistic performances those who had power
might sing their songs. This may imply that the others either never
[765] acquired power or had lost it. My informants' frequent emphasis
on the period of mourning for a husband, wife, or child marks this,
too, as a peculiarly pregnant period when power may be successfully
sought. At least at such a time a man loses his power and must seek
[844] again if he wishes to regain it. A man also seeks power at the birth
of a first child. But it is not only the crises of life that provide
[756] occasion; the quest may be undertaken at any time, and it is the prac-
tice of such as gamblers and shamans to renew and enhance their
[525] powers by frequent attempts. The quest is called spū'tu.

The experience does not ordinarily include a vision, but is made manifest in a song heard in a dream. In some instances where a vision is had, a dream song follows, but it is clear that the latter is the essential experience. In the following case a man and a woman had identical visions but to the man alone fell the experience leading to power.

787 159 The grandfather of a Klamath Falls shaman went to stō'kmōte, the point of Eagle Ridge, in the evening. There is a spot in the lake where bubbles rise. Horses lived in this long ago (!). When this man reached the headland he saw two pinto horses, with long manes, rearing against each other from the water. He was not frightened but took off his clothes and plunged into the water in order to secure power. When he recovered consciousness he found himself again on land. From that time he was lucky; he began to get many pintos, large horses. Because of this experience his grandson, the shaman, also acquired, in his turn, spirit songs of all kinds.

This is a spirit. Doubtful as spirits are certain other stones; yati's 776
which stands at I'wal, and nĕ'ḳnŭḳ, a group of stones back of
Du"Ilḳŭt, both towns on Klamath marsh. These are "shaman 776
stones"; evidently once living things, for it was said that they were 756
transformed when Crow laughed at them.

A Molala struck one of the nĕ'ḳnŭḳ stones with a basket, saying, "How can this rock have power?" He soon sickened and died. The nĕ'ḳnŭḳ is a shaman.

SHAMANISM

The shaman (ḳiu'ks) is one who has acquired more than usual 756
spirit power. This is a relative matter; some shamans have considerably more power than others, and everyone who has got power is in some degree capable of using it as a shaman does. One of my informants, for example, now avowedly a member of the pseudo-Christian Shaker sect, maintains that he too is a little qualified; he can make it rain. Shamanism is completely individualistic among the Klamath; there are no shamanistic organizations.

It is clear that the shaman is the most important individual in 756
Klamath society, taking precedence over rich men, the chiefs. Sha- 622 •
mans' houses are the largest in the village and they have at least as much property as wealthy laymen. Invariably my informants spoke first of shamans in describing outstanding individuals. Their behavior and practices were readily formulated, whereas I experienced considerable difficulty in learning the functions and even the names of chiefs. It is reasonably certain that the status of the chiefs, that is the rich [178]
men, was relatively unimportant until the introduction of horses in the middle of the last century stimulated trading with the Columbia [177]
river tribes and perhaps brought in some of the northern view of the importance of wealth and chieftaincy. There is no doubt that the position of chiefs was strengthened by the habit of the whites of dealing with chiefs and other prominent laymen.

Shamans are both men and women, but unlike the Shasta, the 756
majority are men. My informants mentioned many men shamans 562
during the course of my visits, and this probably did not exhaust their memories; but on request they could muster only four women [170]*
shamans and one berdache. Women never acquire the prestige of men for they are rarely credited with such unusual powers as men. They cannot wander in the mountains nor dive for power so well as men;

114
342 lodges is curious. "It [a Klamath marsh village] was composed of
20 tents built on the water approachable only by canoes, the tents
[361] built of large logs shaped like block houses the foundation stone or
gravel made solid by piles sunk 6 ft. deep. . . . . Reached Indian
village of five huts, but large size square made of earth flat on top the
door at the top a defense against arrows but not balls."[368] Frémont
notes "they were large round huts, perhaps 20 feet in diameter, with
rounded tops, on which was the door by which they descended into
the interior. Within, they were supported by posts and beams." At
another place "the huts . . . . were made of tall rushes and willows."[369]

342 There is considerable variation in the size of houses, even those of
184 one type. Earth-lodges range in diameter from twelve to thirty feet
or more, the larger accommodating several families. The largest pit
I saw measured thirty-five feet in diameter. The largest earth-lodges
are invariably those of shamans, larger even that those of chiefs. This
is not only the statement of my several informants, but on every site
[756] I visited the largest pits were pointed out to me as the former residences
of shamans. The shaman's lodge, to be sure, houses the winter
[622] performances, but this also implies that shamans are the wealthiest
individuals, or were so at least before the ascendancy of the chiefs
during the last century. Winter houses are commonly larger than the
corresponding summer mat-covered forms.

342 The semi-subterranean earth-lodge is erected over a shallow pit (sloko'ps). This is commonly but knee deep, but the thirty-five-foot pit mentioned above had been excavated waist deep or even more. All the clearly defined house pits that I saw were circular, but I got the impression from one informant that the house might be somewhat squared. This is probably the case only with the summer mat-lodge: wu'kē'plōḳs. The circle is not measured in any way. The pit is dug with digging sticks, the earth thrown back all around the excavation with storage baskets (tlūḳs) or slabs of pine bark.

The roof has the form of a truncated, wedge-shaped cone, resting as it does on the circular periphery of the pit but with its upper truncated surface an elongated rectangle. The main frame is formed by four central posts, set to form the corners of this rectangle.[370] The tops of these are connected by stringers. Poles extending obliquely

[417] [370] Barrett implies a single center post ("climbs down . . . . by means of steps cut into the center pole itself," p. 244), but this was denied by my informants.

1: Spier E-4,5 (1925-1926) 1930
(ca. 1860-1900) NR10 Klamath NR10

Taken as a whole Klamath material culture is of Plateau type with 171*
strong leanings toward northeastern California. But their social and 101
religious culture has a different aspect. While basically of the
extremely simple Basin-Plateau type, social habits reflect the Northwest 105
Coast, religious ones rather those of northern California and
western Oregon.

The basis of Klamath religious experience is that of the northern 171*
interior, the Basin, and the Northwest Coast, in distinction to California
and the Southwest. The experience is deliberately sought and 771
the power obtained is of a generalized, unspecialized nature. In this
they resemble as well the generality of North Americans. Even their
spirits are of the sort universal east of the Pacific coast. Specific
Northwest Coast influence appears in the circumscription of general
spirit repossession to the midwinter month. On the other hand, the
shaman novice's inaugural dance, which gives at least as much color
to Klamath shamanism, is characteristic of northern California and
western Oregon. The Klamath form of it is, rather, Oregonian.
Details of shamanism, on the other hand, link more firmly with
northern, especially northeastern, California.

Social organization is extremely simple, and it is quite patent that 171*
as late as the end of the eighteenth century, it resembled that of the
Basin and Plateau in every particular. Even now social stratification
is only weakly developed. Chiefs were only recently set off from the
mass, their functions vague and their influence slight. At the very 171*
moment that Klamath society began to break down with the coming of 177
the whites, they first imported from the Columbia river judicial functions
for the chiefs. Chiefs are the wealthiest individuals, but they 622•
are not chiefs because they are wealthy. Their selection is still based
on principles of personal ability. The basis of this differentiation,
wealth, came from the same direction, but the accompanying principle
of the Northwest Coast, caste stratification, never reached here; nor
did the chief's adjunct, a speaker or advocate, although this functionary
is known in the Plateau and Basin as well as in the Northwest.
At the other end of the scale, slavery is apparently an old institution, 171*
but was of little importance until wealth began to figure among them. 567
The Northwest Coast concept of status based on wealth appears again
in marriage, here regularly by purchase. But social estimation did 171*
not rest on the amount paid, which was in fact very little. With so
slight an emphasis on rank and wealth, those northwestern corollaries, 556
local exogamy to maintain the one and the family compact following 584

The judicial function of chiefs, dispensing fines and punishments, is 177
known to have been derived from the Columbia river tribes at 622
this time.

Some trade articles not manufactured by the Klamath also pertain 439
to this era: parfleches, skin bags, and buffalo hides from Warm Springs and the Dalles, flat basketry bowls from Pit river through the Modoc, and beads, even dentalia, from the same southern source or from the Shasta.

The second quarter of the last century saw the coming of the 177
horse. Ogden remarked on only one among them in 1826, but they
began to be obtained in numbers, probably from Warm Springs, about 231
1840. There can be little question that with the horse came elements of Plains culture from the half-Plains tribes of the Columbia-Snake, the adoption of predatory habits, and the great stimulus to slave-raiding and to slave-trading with the people at the Dalles on the Columbia.

Both tradition and inference assign Plains traits to this period. 177
The relative newness of Plains style of dress is attested by the incom-
pleteness with which it was adopted. It was never the universal garb, [291]
but confined to the wealthiest, and, most significantly, proscribed at
the performances of shamans and the Ghost dance. Further, men
did not wear Plains costume to war and set out on their raids afoot, [714]
even after the acquisition of horses, which suggests that the new accouterment and habits had not taken firm root. The circular shield, which also was never in general use, may well have come in at this
time. The earlier types of Plains garments here were only simply
decorated or not at all. It is known that the elaborate beading of the [291]
yoke and the use of scalps, etc., for appendages on women's dress, and
the painted designs on men's shirts, are much more recent than the [531]
first adoption of these garments. These local changes probably reflect a similar transformation in decoration in the southern Plateau.
Possibly the dome-shaped sweat-lodge was introduced at this early
period. It seems to have been displacing the small earth-covered [343]
affair for some time. But the latter is also generically the eastern type, not the Californian, and is without doubt older than this incursion of Plains elements in the early nineteenth century. Finally, I cannot avoid the feeling that the sense of tribal solidarity, in which, even though but slightly developed, the Klamath differ from their Californian neighbors, dates from this contact with Plains-like peoples.

177 At least one minor element, assigned by tradition to this period,
535 was derived from another direction; the notched rattle used in war
534 and scalp dances in imitation of the Upland Takelma.

Direct contact was opened with the Upper Chinook at the Dalles
174 only after 1800. By this time Snake raids had dispossessed the
Sahaptins of central eastern Oregon, driven them north of the
648 Columbia, and cleared the south bank of that stream by scattering
Cayuse-Molala east and west. Direct contact quite across Oregon
brought the Klamath in touch with the great trading center at the
Dalles and revealed to them the superior and stimulating cultures of
the Chinookan tribes and the semi-Plains groups from above on the
Columbia.

174 The whole rise of the chiefs, the growth of social stratification
177 based on wealth, the concern with slave-holding, all seem to date from
this time. Wealth began to be considerable: its form was new: horses
[556] and slaves. Chiefs grew in wealth and prominence over shamans.
The basis of their selection changed in some degree from war to wealth.
[622] Slave-raiding to the south increased in frequency: the booty was
carried to Warm Springs and the Dalles.

[721] It is doubtful if the material differences in wealth and slave-
[567] holding existed prior to 1800. Shamans were dominant over chiefs
and were but slightly more wealthy than the majority. The historic
174 tribal subdivisions were in existence, the village groups and their dis-
177 tribution established, and the basic social relations, as reflected in kin-
ship terminology for example, much as we know them. Marriage may
[756] well have been by purchase, but possibly without the pseudo-potlatch
[622] custom of reciprocal visiting. Material culture was prevailingly
southern Plateau in aspect, and religious practices, while more north
[619] Californian, had already some impress of the Northwest Coast.

[583] Is there a Lutuamian culture province? I am doubtful. Kroeber
has somewhat hesitatingly posited one, set off by a certain distinctive-
101 ness from that phrasing of Northwest Coast culture found localized on
the lower Klamath river, and favoring rather the Basin and Plateau,
105 to which the Klamath country lies open.

114 "The Lutuamian culture or subculture, as represented by the
Klamath and Modoc, corresponds well with this setting. It reveals
some specializations, such as its wokas and tule industries, that are
obviously founded on peculiar environment. There are some north-
western influences, but rather vague ones. The basis of the culture
is perhaps central Californian, with certainly some Great Basin or

*171 583 ● 622 South of the Columbia river the quantity was quite moderate, even where its value in native eyes was high. For the Tillamook, the price was generally one adult and one child slave. The Coos value has been cited above. A chief's daughter came higher, being usually bought with woodpecker scalps, valuable for their use in dance caps. Such scalps formed valuables from this point to northern California. A Takelma paid dentalia and the like in moderation; the return was baskets, women's hats, camas, dried salmon, and other such household articles. The impression I derived among the Klamath was that the quantity was somewhat greater, approaching somewhat Wishram practice. A chief gave a slave, horses, blankets, beads, food, elk and other hides, but not nearly so much as my Wishram informant implied. One poorer man gave five fathoms of beads for his bride.

*171 583 Values drop appreciably among the Maidu; the northern groups made a gift of beads, deer, or gave nothing; the southerner gave shell money or other valuables such as blankets, and in return obtained baskets and other property.

On the northern coast of California values rise high again. The Yurok price was standardized. For a wealthy girl, ten strings of beads, fifty woodpecker scalps, an obsidian blade, a boat, etc., up to $300 in value, were given, with a return of ten baskets of dentalia, otter skins, a canoe or two, several deerskin blankets, and other valuables. A poor girl was valued at eight strings of beads and a boat. Hupa values may have been the same or somewhat less; Karok certainly were, five to ten strings. The Hupa groom gave woodpecker scalps, several strings of shell money, to a value of $30 to $100. Presumably he also gave articles of the kind returned to him, dresses, weapons, baskets, and food. The average Shasta price is set at one or two deerskins, fifteen or twenty long dentalia, ten or fifteen strings of disk beads, and twenty or thirty woodpecker scalps. Values dwindled again markedly south of here; the Sinkyone price was less than that of Yurok or Hupa, shell beads alone are mentioned for the Huchnom, and presumably neither group gave more, or much more, than the Pomo. The Pomo gave beads and deerskin and in return received baskets, or, according to another account, gave food, beads, deerskin or rabbit-skin blankets, receiving in return baskets, belts, and food.

Eastward of the Columbia river values were again low, even if measured in terms of the lesser quantity of valuables possessed by

selves the superiors of those among whom they are resident. Once the 171*
sentiment had become lodged in the group its fruition was made inev- 174
itable by the imitation of others. 583

With Kroeber, who has so expressed himself on the subject of the 554
Yurok,[339] I do not believe that the levirate and sororate were born of 556
this special development of purchase. Both customs have a nearly
universal distribution in North America. It seems rather that such
existing practices were drawn into the developing marriage complex
of this area.

SOCIAL STRATIFICATION

The background for a study of social stratification has been laid 128
in the preceding section. I will here deal with chieftainship, its
relations to wealth and heredity, and related topics.

Social stratification was but weakly developed among the Klamath. 554
Social standing did not depend directly on heredity and there was 556
apparently little difference in wealth from richest to poorest. Since
wealth was inherited there was at least some stability to family standing.
The marriage purchase gave respectability to the union; it did
not fix the standing of the couple by reason of the amount paid. Yet [56]
there was some differentiation based on wealth, a continuous gradation
from the wealthiest to the slaves.

The wealthiest individuals were called lō'ki, rich men. This was 556
also the term by which chiefs were styled. My interpretation of the
Indian's statements is that those prominent individuals, who exer- 622 •
cised functions which would elsewhere have led to their being called
chiefs, were at the same time the wealthiest. A chief became such
primarily by successful leadership in war, coupled with some background
of spirit power, wealth, personal qualities, especially ability
as an advisor, with some suggestion of hereditary interest.

The chiefly functions emphasized were leadership in war and 622
haranguing the people. The chief could not issue injunctions, he re- [700]
ceived no tribute, and was in no way responsible for the conduct or
debts of his people. Just prior to reservation days there was intro-
duced from Columbia river the practice of chiefs sitting as judges. [565]

While chiefs were set off from the mass, this did not imply any
sense of caste stratification. Their wives and children were not known
by a distinctive class term.

---

[339] Handbook, 31.

174 Every evidence points to the recency of the rise of chieftainship
• 622 among these people. It is doubtful that material differences in wealth
and slave-holding existed prior to the opening of direct contact with
756 the Columbia river tribes after 1800. Even then chiefs were of relatively minor importance. The shamans were the great men and the wealthiest, easily eclipsing the chiefs. As an instance I have cited the difficulty of obtaining the names of chiefs of pre-reservation days, whereas shamans are well remembered. It is clear that some of the local groups did not have chiefs. The relative dominance of the shaman persisted until reservation days. Prior to this time chiefs were barely differentiated leaders of the Great Basin type.

Basis of Chieftainship

* 171 The Northwest Coast tribes stood in sharp contrast to this simple
social scheme. There existed a caste system, a division into aristocracy,
622 commoners, and slaves. While the relative ranking was continuous
565 from the noblest aristocrat to the meanest commoner, there was never-
554 theless a well defined consciousness of distinction between the grades. This aristocracy was based on lineage and wealth. Its highest members were the chiefs, ordinarily the wealthiest persons. Yet a chief might lose wealth but retain his rank by reason of his birth. Within each community were several chiefs of the first rank whose authority extended hardly beyond their immediate retainers. Their advice was followed rather than their dictates obeyed. They were, however, among the Kwakiutl, for example, the recipients of gifts from their followers, not so much by reason of right as to bespeak their future aid and to enrich them to the further glory of the whole group.[560]

A definite caste system of this type is traceable southward from British Columbia through coastal Washington and Oregon at least as far as the Alsea. It has been noted, for example, for Klallam, the Puget sound tribes, Chinook, Wishram, and Alsea. It did not appear in the interior among the upper Fraser river tribes, nor in eastern Washington as among the Okanagon and Middle Columbia Salish, nor in eastern Oregon among Klamath, Modoc, and Northern Paiute. At the southern extremity of this area of distribution a somewhat different situation prevailed. There was no rigid caste system, but differences of wealth were considerable and on these social standing

(ca. 1860-1900)

rested. This held at least for coastal Oregon and northwestern California (Coos, Yurok, Hupa) while inland among Takelma and Shasta it was true to a lesser degree. The Klamath feeling for stratification based on wealth is thus intelligible as an attenuated form. 171* 622 565 554

It follows that chieftainship was hereditary in the area in which ranking was fixed by birth as well as wealth, while it rested on wealth alone in the southern area. Merely to list the instances, it was hereditary among Klallam, Snohomish, Chinook, Wishram, Wasco, and Alsea (but see below). The richest men among the southern tribes were the equivalent: Coos, Yurok, Hupa, and Shasta, and, if we reverse this statement, the Klamath. It is thus intelligible why Sapir found among the Wishram that "being a chief did not necessitate being a particularly wealthy man. It often happened that the wealthiest people did not belong to the highest rank."[561] Similarly that a wealthy Coos could flout the orders of a chief, and among the Alsea "it was possible . . . . for a common man, by reason of extraordinary power or wealth, to rise to the dignity of a chief and thus raise his family in rank."[562]

There was in none of these tribes a governme[illegible]ganization involving hierarchy of chiefs. The point is really th[illegible] we here write of as tribes were rather dialectic and cultural units, not political entities. Political separation was carried to a high degree throughout the Pacific slope, the local communities being almost without exception autonomous, or at most grouped for common action within a quite restricted district. It followed from this that the number of chiefs was rarely or never fixed. Those who were entitled to leadership by virtue of birth or wealth were recognized as leaders. Thus it happened that while some communities had more than one of first rank, others had none. Yet other tribes did not always exhibit the haphazardness of the Klamath in this regard. 171* 622

Where the feeling was strong that every wealthy man was entitled to consideration, as among the Hupa, "each village had a head-man who was the richest there. . . . . The very fact of his wealth gave him the power of a chief and maintained him in that power."[563] We may presume this true of the Yurok as well and probably the Karok. The Shasta "chief was the head of the richest family in the district," 171* 622 556

*171 and "one family was recognized as preeminent in each of the four
556 geographic divisions into which the Shasta are grouped."[564]

• 622 The number of chiefs was definitely fixed only on the Oregon coast, where there were two for each local division or village. "There were two chiefs for every river, among the Tillamook as well as among the Alsea," one the principal chief.[565] "The Coos Indians lived in small villages, each of which had two chiefs. . . . . Of the two village-chiefs, one usually ranked higher." There was in addition a tribal head chief.[566] This is the multiple chief-wealthy-man situation of the whole coast reduced to definite form, and it is even conceivable that these people did not differ at all, particular cases where there were two chiefs having been cited as the general custom. It must be remembered that our accounts are of the slightest. It is possible however that there was a dual chieftainship prevailing on the Oregon coast. This might account for the curious fact that two chiefs of presumably equal rank are repeatedly referred to among the Rogue river Indians assembled at Table Rock about 1855 (possibly Takelma proper or Upland Takelma).[567]

Quite another basis for the recognition of chiefs existed in the northern Basin-Plateau and the Plains, namely, a war record coupled with generosity and other personal qualifications. The Klamath shared this sentiment as well as the northwestern recognition of wealth. The warlike character of chiefs extended as far west as the Middle Columbia Salish, including Nez Percé, Wind River Shoshoni,[568] and such typical north Plains tribes as Crow and Assiniboin.

In the southern parts of the Basin the characteristics of chiefs, their functions and powers, were vague. There were headmen or leaders for hunting, perhaps the only communal enterprises, among Paviotso, Washo, and Southern Paiute. These individuals were chosen
[756] by their people.[569] In importance they were eclipsed by the shamans.

Chiefs' Functions

The functions of chiefs both to the northwest and in central California differed sharply from those of the Klamath. 171* 622

On the Northwest Coast proper the authority of a chief was by no means absolute. The commoners were subject to his admonition rather than his will, his direct authority extending hardly beyond his immediate following. Such gifts as they made him were free-will offerings, large as they were, dictated solely by traditional sentiment. While these include almost all articles of food among the Kwakiutl, to the south, as among the Klallam and Snohomish, they were rather such things as were difficult to procure, such as the products of the hunt, and were no more than were given to any respected old man.[570]

The situation on the Columbia river and in coastal Washington and Oregon was different. These chiefs had real authority. Wishram, Quinault,[571] and Coos chiefs were obeyed, their authority being challenged only by the rich. Commoners among Wishram and Coos gave largely from their gains and in return could expect the aid of their chiefs when in distress. The chiefs sat as judges in cases of witchcraft [692] and murder, assessing heavy fines and ordering the culprit killed if he defaulted. Such fines were not theirs but went to the family of the [682] murdered man. They also paid such fines for their followers. What little is known of the Tillamook suggests an identical situation.

This judicial function, with its meting of fines and punishment, made its appearance among the Klamath by way of the Dalles early in the middle of the last century.

Northwestern California shows considerable similarity to western Oregon, but the authority of rich men was slight in comparison and they did not sit as judges. Among the Hupa, Shasta, and presumably their neighbors, they were obeyed because they gave of their store in times of scarcity and paid fines for followers who were in difficulties. The headmen in more southerly Californian groups exercised more formal authority, as the Yuki and Patwin headmen, who may have made decisions of war and directed town activities. In northeastern California (Maidu, Achomawi, Atsugewi) chiefs were much like

[571] Olson, Quinault field notes, 1926.

*171 those of the Klamath; theirs was an advisory function and they led
622 in war.[672]

A corollary of the chief rich man's position in California and Oregon was that he did not himself engage in war. By reason of his wealth he could terminate the conflict by paying the blood money necessary to balance the score. This has been observed of the Tillamook, Shasta, Hupa, Kato, Pomo, and was perhaps general.[673] [701] There is some suggestion of this in Klamath custom; a chief was not ordinarily a war leader but he certainly did not make good the blood-money payments. On the other hand this may have been nothing more than the common western attitude that a chief was not of necessity a war leader.

*171 683 One characteristic feature of the cultures from Columbia river southward, which has been touched on before, was a well developed system of fines for injuries. This did not appear on the Northwest Coast nor in western Washington, but was by no means confined to northwestern California as has been implied. It is quite characteristic of a larger area: Wishram, Alsea, Coos, Takelma, Yurok, Karok, Hupa, Shasta, Pomo.[674] Remuneration was often demanded for comparatively slight injuries; thus an Alsea shinny player who was hit exceptionally hard had to be compensated. The eastern groups (Klamath, Maidu, etc.) had no such sentiment, but it is worthy of note that they did compound a murder by a property settlement, a notion which may have been absent still farther east in the Basin.

Speaker

*171 622 537 [756] Chiefs' speakers occurred among many western tribes. There were none such among the Klamath, whose shamans had however assistants with comparable functions. These have been discussed with shamanism. The chief's speaker was eminently characteristic of the Northwest Coast, where his activity in the potlatch and other ceremonies has been often remarked. He not only repeated the words of his chief to the gathering but also served as his representative and advocate. In the Great Basin, on the other hand, the function of the speaker was merely to repeat verbatim after an orator or story-teller.

[674] Frachtenberg, Alsea Texts, 199; Sapir, Notes on the Takelma, 270; Loeb, Pomo Folkways, 297.

The northwestern type of speaker was known among Klallam, Quinault, and Wishram, and probably to all the intervening tribes.[575] 171* 537
Their presence may also be suspected in coastal Oregon, for their functions would have been quite consistent with the social sentiment 622 •
there. Some positiveness is lent to this by the presence of what seems to have been a chief's speaker among the Rogue river tribes participating in the treaty negotiations of September 10, 1855. It is recorded that the chief spoke to a man who shouted his words to the assembled warriors.[576] Certainly the speaker was absent in northwestern California. On the other hand, Drake's description of the Coast Miwok in 1579 makes it certain that the speaker was a recognized functionary further south.[577] The Basin type of word for word repeater occurred over a wide area, having been recorded for the Nez Percé, the Sahaptins of Priest Rapids on the Columbia, Southern Maidu, Paviotso (Northern Paiute), Kaibab Paiute (?), and Havasupai.[578] Something of the sort might have been expected among the Klamath; they share, however, a substitute, the shaman's speaker, with the northern California groups.

Slavery

Slave-raiding and slave-holding may not have developed among 174
the Klamath until the coming of the horse and the opening of a slave 567
traffic with the Columbia river tribes in the early nineteenth century. It is probable that prior to that time there was only the mild interest in holding captives found among their southern and eastern neighbors. Their slaves were captives of war. Slave-holding and the meas- 171*
ure of wealth in terms of slaves were characteristic of all north-
western people. These were everywhere taken in war and sold. Slave- 567
holding of this type prevailed not only in western Washington to the Columbia but southward through Oregon (Tillamook, Alsea, Takelma, Upland Takelma,[579] and Shasta). Coos and others of western Oregon should undoubtedly be included. Slavery is not mentioned in Teit's account of the Middle Columbia Salish of eastern Washington, and does not appear consistent with their general mode of life.[580] Directly

526 seed beater to propel ball; carrying ball in racket or stick permitted; picking up and batting ball permitted; goal a stake or post, hole, circle on ground, rock, stakes or posts, arch, circular hoop, row of stakes. Ball race: single ball a hoop, stick, stone; carrying ball permitted; goal a line on ground, a stake, hole; home man catches ball on stick. Hoop-and-pole game; quoits.--Hoop and pole: unwrapped hoop, netted hoop, short stick as hoop; pole tossed underarm, both arms, thrust into rolling hoop; pole under hoop or stick scores; closest wins point(s); win by elimination. Quoits: target a stick lying loose; target a stone. Spear or dart throwing; snow snake; ring and pin.--Spear or dart throwing: specially made dart, feathered; target buried hoop, previously thrown dart. Snow snake: women play; arrow bounced. Ring and pin: ring a rabbit skull, pine cone, brush ball, piece of cane with 1 hole. Many-stick game; 524 hand game; objects laid down.--Many-stick: 3-choice guess. Hand game: cane "bone"; finger loops on "bones." Objects laid down: women play; 1 of each pair wrapped; unwrapped guessed; objects covered with mat, hide. Dice games.--Disk dice: animal shell, half walnut shells, wooden tablets, wooden hemispheres for dice; stone counters; dice thrown on hide, mat, into hopper basket, on hard ground, plank. Bone dice: women play. Stick dice. Jacks, tops, buzzer.--Jacks of foot bones of animal. Top of pepperwood nut; twirled with string. Buzzer, edge of disk notched; snake rattles used as buzzer. Games wholly absent.--Catching dart in ring. Many-stick game of take away, guess remainder. Guessing marks on ground. Scoring circuit for dice.

Social Dances

535 Circle dance; Bear dance.--Circle dance: performed at fall pine-nut harvest, to make piñons grow, produce rain, bring deer; performed at mourning ceremony; at funeral; center post dry cottonwood tree, pine-nut tree; dance occasion for public mourning. Bear dance: held in brush corral; musical rasp, gourd rattle; dance in couples; whip to make dance; chief urges dancers with stick; stop dance at fall; rub fallen person with rasp; cover fallen person with blanket; held at mourning ceremony. Dances wholly lacking.--"South" dance or Exhibition dance. Crazy dance.

POLITICAL ORGANIZATION

622 Chief paid to settle disputes. Chief owns all eagles, eyries; pays to have eagles released; buys them from captors. Assistant cult chief. Chief equated to birds. Totem for assistant 624 chief (screech owl, hawk). Boss for rabbit drives; irrigating boss. Crier has totem bird. Messenger has rod as symbol of office; builds

[165-B]

622 2648. Child called "chief's child."

000 2649. AW: Chief's daughter called "little chief"; wife, son not called by this title; "the son will be chief pretty soon."

2650. NS: Chief's daughter called maiyen. Has women to wait on her, does not cook, gather acorns. Generally only eldest daughter of chief has this title; to be maiyen "she has to be pleasant and good, not silly and saucy."

2651. MM: Title extends to wife of chief for all MM (see note 2619).

Activities and duties; escort.--

2654. WT: Chief stays home and "studies his words, and talks to the young boys and girls, telling them how to behave; doesn't hunt or fish much." MM: Applies both to chief for all MM and to village headmen. See note 2619.

2656. WT: All people bring chief food; he accepts it, eats what he wants after it is cooked and has rest put out for other people to eat.

2658. MM: Applies both to head chief and village headmen (see note 2619).

2659. WS: See note 2664.

2660. MM: Refers to village headmen (see note 2619).

2661. NP: Headman (hu·ku) mainly "stays around the assembly house all the time," however; does not go hunting, fishing. MM: Refers to village headmen (see note 2619).

2664. WS: Sunusa (see note 2622, WM) chief of WS, "was great hand to catch salmon; he'd call all the people in spring to catch salmon. He never got much himself, because he gave it away. In fall he went out and caught salmon for himself; fish spawn then."

2667. AW: Also tells people to feed visitors well; "give them plenty, don't hurt them, leave them alone." WM: When chief has invited people for a "big time," upon day set for their arrival he sends out scouts in all directions from which visitors expected. When scouts return saying visitors are coming, chief sends them out again to tell each group of visitors to camp by river until sundown, then to come into village where he is presiding. Visitors dress down by river; at sundown come in. Chief stands in center of brush enclosure made for occasion, and talks to visitors; "he tells them not to stumble over any little rock, but to have a good time. Then visitors are told in which sections of brush corral they are to camp." Each visiting local group has appointed place. MM: Refers both to head chief and village headmen (see note 2619). Headmen in charge of spring Bear dances, which last altogether for about 1 month. These dances held in succession in 4 valleys--Honey Lake, Big Meadows, Indian Valley, American Valley.

2668. WT: Headman owns assembly or "sweat house," which he has built "for the people to dance in. When new house is built and ready to be used, chief gets up on roof and makes long speech to assembled people."

[208-B]

622 2669. Occasionally. Kl: Stands by his own
800 house and talks; tells people what to do. MM: Refers to head chief (see note 2619).

2670. WT: See note 2654. MM: Refers to head chief and village headmen. See note 2619.

2675. MM: Refers to head chief and village headmen (see note 2619).

2676, 2678. MM: Refers to head chief.

2677. MM: Refers to village headmen.

2679. WT: A "protector." MM: Refers to head chief and local headmen. NF: A relative. NS: Chief's assistant.

2680. MV: "A whole group of his boys go with him."

Female chiefs; criers; clowns; messengers; fire tender; singers.--

2687. SW: Chief's wife may also talk for chief, morning and evening, occasionally, if she has good voice.

2689. SW: In time of raids, chief's wife "if she is spirited woman, dashes out and cuts bowstrings of enemy raiders." This was done, "especially if [neighboring] Kammatwa group [see note 282] were raiding SW." Denied for all other groups.

2707. SW: 2-3 criers.

2708. Mo, SE: Only when there is "news" to announce.

2712. MV: Orders fuel gathered for dances.

2716. WM: Mainly by boys who are called, when clowning, "Coyote."

2717. At: 2 clowns; WT, WM: several, but not formal office (see note 2716). MF: 5; NF, MV: 1 per village ("rancheria").

2718. NF: Clown (pepe) stands on top of assembly house, watching for people to return from hunting, other expeditions; when they come back, he shouts to notify villagers.

2722. NF: Also stands on top of assembly house and calls to visitors to enter; attends to fire in assembly house.

2726. WT: 1-3 messengers. WM: 3-5. Referred to as yemerikait. MM: 6-7.

2727. MV: Youths.

2734. At: Messenger who carries knotted string around when there is a "big war," paid; otherwise not paid.

2738. Often tells guests where to halt outside village, in order that they may dress for participation in dance to be given in village.

[515] [624] 2746. Kl: Man who wants to sweat builds fire and tends to it in sweat house; no special official.

2752. See also element 2722, NF.

2759. NF: 2-4 singers.

2760. MM: For sweat "dances," have 1 singer; for Bear dance, 2; for girl's puberty dance, ca. 6.

2763. MV: To serve as "common singer."

2765. MM: For women's songs, use women singers.

[209-A]

[Klamath Reservation]

M
789 as their human instrument; by contrast in the Klamath phrasing
756 they are the shaman's "helpers."

K However differently they construe the degree of individual
M access to the sources of power, both peoples recognize that
787 human accomplishments are contingent upon it. Thus even those
K M who have not secured a song appeal to the powers by prayer
[782] in the sweathouse. Because success is seen as a reward for virtu-
[772] ous striving and likewise as a token of supernatural aid, the
universe appears basically to be a moral order.

K In human society, success has its outward manifestations. The
M annual round of the food quest, the unremitting demands of the
181 progression of plant and animal harvests, set a premium upon
461 industry. "Work hard, so that people will respect you," is a theme
that runs through the counsels of the elders and the periodic
K exhortations of headmen. The leading men are exemplars of this
M 461 virtue, and the wealth they have thus amassed permits them to
556 maintain several wives, while their generosity attracts a follow-
595 ing. Aboriginally, the difference between these men and the
K common tribesmen is less than it will presently become, yet a
M contrast is already apparent. Only the daughters of prominent
• 622 men undergo the most elaborate form of the puberty dance. In
556 war, a leader is chosen in part because of the lavishness of his
[881] panoply. After death, when the body is cremated, that of a man
[701] of property is likely to be decked with many valuables con-
[764] tributed by those wishing to honor his memory. In myth, the
[538] man of prowess is depicted as possessing shamanlike foreknowl-
[756] edge. These heroes do not bustle about their affairs but send
out emissaries on their business. Theirs is the restraint of power
in reserve, for when the time is ripe they move inexorably to
K the destruction of their foe. That quality is well delineated in
622 the deed recounted of the historic Klamath chief, Chiloquin:
539

> Old chief Chiloquin was quite a man, short but very strong. He was a *chief!* One time people were fighting; they were fighting all the time. *He* didn't care; he just slept there in his tent. Then about evening, he woke up. He says to his wife, "Bring me some water to wash my face." And when he had washed his face, he says, "Bring me some food and something—some coffee—to drink." And when he had eaten and drunk, he said, "Bring me my horse." And he took his weapons and got on his horse, and *all alone* he beat them. He was a wonderful man!

[Klamath Reservation]

At the
center of concentric circles of concern stands
K the natal family.[16] In the myths, parents and offspring and
M siblings are bound by the strongest affective bonds: in trouble
593 they provide succor and in death, revenge. The obligation transcends
602 abstract ethical considerations. In real life, mutual responsibility
reaches out to embrace the extended family, the
close consanguineal kindred linked through two or three generations.
K Although kinship terminology acknowledges equally relationships
M [601] on the maternal and paternal sides, residence practices
[591] in general favor the latter. From close kinsmen on both sides
come the gifts that set the seal of approval upon the marriage of
a member; during his lifetime they share food with him in his
need, support him in his quarrels, and assist his avenger should
he be slain. At his funeral, it is they, together with friends of the
deceased, who are expected to place valuables upon the funeral
pyre.

K Beyond the sphere of immediate kindred and of friends lies
M the domain of neighbors and remote relatives. If more central
602 obligations tend to be principally a function of consanguinity,
621 and thus to be ascriptive in character, village relationships and
571 those outside are more frequently based upon performance.
K Here enter those standards of behavior by which a person of
M [577] good family may be confirmed in position, the poor but worthy
rise, and the ne'er-do-well sink in the public view. At the head
K of this loose and shifting status scale stand the shamans and
M 756 other influential men, the leaders of hamlet groups. On occasion
622 they may meet in an informal village council to concert decisions.
621 Yet the village, which in its spatial limits often blends with
554 adjacent settlements and which dissolves with the turn of the
seasons, can exert little constraint upon its members.

K The prestige of the leaders, the force of public opinion, and
M checks imposed by rival village interests hold the unruly in line.
62 The principle of self-help and the responsibility of kinsmen may
enlarge grievances to feuds if the differences are not soon ended,
and thus threaten the very being of the community. To counter
such fissive tendencies, leaders mediate disputes and exhort to
their fellow villagers the need to maintain harmony.

K Time may alter the membership of villages. Men frequently
M seek wives in other communities; and there is considerable inter-
621 marriage between Klamath and Modoc and Klamath and Molala,
563

M
175 1850. Aggressions by Northern Paiute bands led to similar large-
178 scale forays into the country east of Silver and Summer lakes.
726 The almost endemic condition of warfare and the enlarging
K M scale of operations, together with the lucrative trade in booty,
175 brought about the emergence of a chiefly class, the members of
726 which based their power upon eminence in war and possession
182 of wealth, including slaves.[10] Their successes attracted followers,
• 622 and common interest as well as kinship prompted them at times
565 556 to cement alliances with shamans.

756 Thus they drew into their hands coercive powers of no mean
[754] weight, for, as Henry Blow observed, "this [shamanistic] power
was used by the chiefs to get rid of rivals and there are some of
us old enough to remember of doctors being paid to kill certain
persons and of their foretellings of the exact day they would
die."[11]

K M The rise of the chiefs helped to knit together tribal loyalties.
175 A war party formerly consisted of only those among the able-
178 bodied men who were inclined to fighting, but a successful leader
622 increasingly transcended tribelet parochialism, drawing followers
619 from diverse hamlets and villages across the Klamath country.
628 As warfare became a way of life, the occasional allegiance ren-
726 dered while in the field became an enduring acknowledgment
of worth.

K In the growing eminence of the new leadership, hereditary
622 principles may have been operative. Chiloquin mentions his
175 father as having been a chief on Klamath Marsh, his own brother
as a subchief, and a sister as a chief. The father of Dave Hill,
a rising young war leader, was a village chief; while Allen David,
later head chief in reservation days, was the brother of Captain
George, a Klamath Lake chief. That family eminence was not
essential, however, is shown by the personal history of Lileks,
K [838] of good—but not chiefly—background. Lileks was a transvestite
in his youth until a supernatural experience vested him with the
power that was to lead him to be head chief of the Klamath.[12]

K A minor factor in these developments may have been the
175 interest of the whites in the centralization of tribal power, in
643 order that they might deal more effectively with responsible
648 leaders. In 1844, Elijah White, then Sub-agent for Indian affairs
177 met with some Klamath and Molala who had ridden into the

> told him about the Holy Spirit that was to come to the whole 175
> world and visit its remotest parts. When he came back from the 648
> Dalles he told his people about it but found them groping in [797]
> perfect darkness. . . . They would not believe him and told him
> he lied. He had watched long for the coming of the Holy Spirit
> and had never doubted that he should see him. He had heard
> Mr. Meacham talk for many days. . [and] now he saw that he
> was not like other men and knew that he must be the Holy
> Spirit come at last to bring gracious gifts for all tribes. . . ."[16]

Others—and they were to become more influential—lived for 175
some time with whites and became convinced that the best 177
policy for the Klamath was one of peace. They included Lileks, 648
who in the course of the trading excursions to the north dwelled 622
for several years at The Dalles and was exposed there, no doubt, to the examples of authority set by whites as well as by the Columbia River tribes themselves. Another was Dave Hill, who, starting about 1859, lived approximately five years in Oregon City. Allen David, later to succeed Lileks as head chief in reservation days, was "well versed in the ways of the white man, from travel among the Willamette settlement." Another was Charley Preston who, like Hill, had spent five years at Oregon City, working for white farmers and had become "quite civilized and learned many of the white man's ways. He returned to his tribe and became a headman. . . ."[17]

Men such as these became the leaders of a "peace party"
among the Klamath, and their views achieved dominance in the 175
growing centralization of power among the Klamath. Lileks may 159
have consolidated the ascendancy he presently achieved as head 622
of this group by marriages beyond his tribelet: to the four wives [595]
from his own, Klamath Marsh, division, he added one each from
the Lower Williamson and Klamath Falls groups, as well as one
from the Modoc. From the Columbia he or a contemporary [177]
brought back new "laws," which included the institution of [681]
flogging as punishment for murder or for persistent quarreling. In one instance, ascribed by Spier, with some question, to prereservation days, when two men of the Lower Williamson River tribelet slew a Klamath Falls man, Lileks had them haled to Klamath Marsh, where each was beaten five times.[18]

When, in 1858, it was indicated that Klamath and Rogue 175
648

K

175 River renegades had slain five prospectors on a tributary of the
648 Rogue River, the whites apprehended three Klamath involved
in the affair, "whom the Klamaths voluntarily killed to prevent
trouble; that tribe being now desirous of standing well with the
K U.S. Government."[19] It is probable that the hand of Lileks is to
• [622] be discerned in this matter also. In brief, his power and that of
Chiloquin, often termed his second chief, was challenged only
by Captain George, leader of a faction hostile to the whites, and
by Monchnkasgitk, leader of the remote Upland tribelet.

K Thus the frontier condition brought a heightened rate of intertribal
175 warfare and of intertribal trading. It gave the Klamath
648 both peaceful and bellicose exposure to whites, largely outside
177 the Klamath homeland. In the awareness of new ways of life
[721] beyond the limited range of which their fathers had been conscious
[439] the Klamath of the first half of the nineteenth century
became diversified in outlook. Enriched with new goods, Klamath
culture prospered, although in comparison with the levels
K M achieved by the whites it seemed poorer than ever. Warfare had
721 consolidated power and wealth in the hands of leaders and the
648 magnitude of their operations drew Klamath and Modoc into an
175 uneasy cooperation.

622 Indeed, in many of these developments the Modoc participated
K only to a small degree. In disposing of those slaves destined to
M 175 be sold at The Dalles, the Klamath and occasionally the Warm
567 Springs peoples acted as middlemen; in consequence the Modoc
721 did not come as fully under the influence of the Columbia River
177 556 tribes, nor did they amass as much wealth. The development of
a chiefly class among them was feebler, and the tribelets coalesced
M 643 under a single acknowledged leader only tardily and
525 incompletely.[20]

619 When in 1846 an exploring party under Jesse and Lindsay
M Applegate laid out an alternate emigrant route known as the
175 South Road, they directed it from Fort Hall down through Modoc
648 country and past the winter settlements on Tule and Lower
721 Klamath lakes, then west of the Cascades and north to the
Willamette settlements. The Modoc bitterly resented the invasion
of their homeland and waged war against the wagon
trains, a war which in turn brought reprisals from the settlers.
In 1852, after the Modoc had extensively damaged several trains

175 of the English language, and fully comprehended the civil war 648 under which our unfortunate country is now suffering, and he thought, or professed to think, that if all the Indians unite they could kill off all the whites and retake the country." He and another chief, known as Skookum John—a man suspected of instigating trouble in 1856—were reputed to counsel war continuously.[38]

In power, the redoubtable hostile had few peers. As of about [624] 1859, he was war chief of both Klamath and Modoc, in which capacity he divested a Modoc chief of his elk-skin cuirasses for refusing to join an expedition against the Pit River tribes. In- [622] deed, Henry Blow later averred that Captain George had superseded Lileks as chief for a time, during which he had entered into a treaty—with whom is uncertain, though possibly with Rosborough or Steele in Northern California—and had been promised pay as head chief.[39]

In its own time, the government moved to contain the threat posed by his ascendancy. The necessary action embraced both military and civil commitments, and the contentions engendered lie vividly upon the pages of the day.

Outstanding among the individuals involved were members of the numerous Applegate clan, whose destinies were to be intertwined with the Klamath for almost a half-century. They were led by the doughty Lindsay Applegate, who had crossed the plains with his brothers, Jesse and Charles, and their families in the great migration of 1843. A staunch Union man and a Republican, he then resided at Ashland Mills, across the Cascades from the Klamath country. Of his extensive family, mention should be made of four of his sons, Elisha, who held the office of surveyor general, Ivan, Lucien, and Oliver. As a member of the state legislature, Lindsay Applegate had been instrumental in securing passage of the joint resolution calling for the establishment of a military post in the Klamath country. During the Rogue River War, he had served with distinction as captain of a company of mounted volunteers. His second-in-command on that occasion had been J. W. Perit Huntington, married to a daughter of brother Charles, and a man with whom he shared the conviction that the Indians must be dealt with firmly but justly.[40]

K 175 648 citizen—his office having lapsed for lack of authorized pay—denounced the location in a letter to Huntington, now Superintendent of Indian Affairs for Oregon. "Drew . . . and his *Copperhead* friends, have already committed an outrage in the country, by locating the Fort in a place, where it entirely fails to accomplish the objects for which a post was ordered, solely I believe for selfish and factious purposes of their clan."[44]

Drew, while recommending that treaties be concluded with Lileks' and Old George's bands of Klamath, and with certain other groups, roundly scored these tribes as "a horde of practical thieves, highwaymen, and murderers, cowardly sycophants before the white man's face, and perfidious assassins behind his back". He annexed to his report a detailed list of hostilities in the Klamath Lake – Tule Lake – Goose Lake region from the opening of the South Road down to the time of his report. Following one such attack in 1856 which left at least thirty-nine fatalities, and in which the abduction of women and children was suspected, as he claimed, "the Indians of Umpqua valley exhibited an unusual number of dresses and other articles of female apparel," which they alleged they had obtained from the Indians at Klamath Lake".[45]

K M 175 648 721 622 Drew moved with dispatch. To the south, the long-standing warfare waged by Klamath and Modoc against Shasta and Pit River tribes had ended by embroiling them with the settlers. Suspecting the whites of having sided with the Shasta, who had slain several of their warriors, the hostile Klamath and Modoc under Captain George had, in the words of Steele, "commenced depredations by stealing the cattle of the frontier settlements, robbing travellers passing through their country, and uttering threats of murder and war on the opening of the spring." Acting upon a petition by citizens and a letter from Sub-agent Amos E. Rogers, Drew promptly arrested Captain George and summarily hanged him. George's troublesome colleague, Skookum John, met his death in the same action. At one stroke the bellicose faction had been decapitated.[46]

K 175 648 So draconian a measure did not pass without comment. In a confidential letter to Huntington, Rogers wrote from Jacksonville, intimating that it had all been planned beforehand by Drew and other Copperheads at a "turkey and champaign dinner" at

[Klamath Reservation]

> but they came more and more like new grass in the spring. I looked around and saw that many of our young men were dead and could not come back to fight. My heart was sick. My people were few. I threw down my gun. I said, "I will not fight again." I made friends with the white man."[51]

M 175 648 643

Despite the fact that Schonchin was favorably disposed toward the whites and had represented the Modoc in an agreement at which Steele had presided, Steele heeded more militant factions which sought to replace him. Two chief contenders came forward: the extremist, John Schonchin, a younger brother of the chief who was then absent, and the somewhat more moderate Kintpuash, whom Steele dubbed Captain Jack. At the election, the tribesmen in attendance chose the latter, and Steele designated him chief of all the Modoc.

M 175 648 643 578

M [666]

In the course of the council, under the mistaken belief that Modoc territory lay largely within California, Steele negotiated a treaty with that tribe whereby they pledged their readiness to relinquish all their territory in exchange for assurances that they would be permitted to retain the area about Tule Lake. Since Steele was not authorized to enter into agreements of this character, his treaty was not ratified by Congress, although the Modoc remained unaware of that fact. Shortly thereafter, he was removed from office by a political maneuver.[52]

M 175 648

Less than a month after the Yreka council, the newspapers carried the news that Congress had appropriated $20,000 to effect a treaty and purchase the lands of the Klamath, Modoc, and Paiute. Late in June, Huntington was instructed to effect the treaty, and in August he visited the tribes for a preliminary conference. About the same time, Lileks and a delegation of Klamath are said to have waited on their friend, Captain Kelly, to propose that such a treaty be entered into. Early in October, Huntington, together with Agent William Logan to represent the absent superintendent for California, repaired once more to Fort Klamath to enter into the treaty.

K M 175 648

The parties to the treaty, according to Huntington, included 21 Klamath chiefs and headmen, led by Lileks and Chiloquin, representing 710 Klamath then present. Of the signatories who can be identified, at least 9 were Klamath Marsh men. The Modoc were led by Schonchin, still recognized as head chief by Huntington, and included the Klamath-Modoc interbreed, Chief

K
M George (Sleketatk), Captain Jack, and one Chuck-e-i-ox
175 (Njakeaks).[53] They are said to have represented 339 Modoc.
648 Finally, there were two Paiute, who signed for some 22 members
• 622 then present of a group known as the Yahuskin band of Snakes.[54]
M The Walpapi Snakes, under their crafty leader, Panaina, were
[643] also to have been included, but they withdrew and were dealt
with in a separate treaty in August, 1865.[55]

Captain Kelly, who was present, gives figures for the tribes that differ somewhat from those of Huntington. He notes that all the Klamath, including their slaves, were present, and numbered 133 males over fifteen years of age, 286 women, and 214 children. Of the Modoc, 46 men, 15 women, and 16 children were in attendance. "About 40 of the Modoc warriors," he adds, "were absent with the women and children in their own country. They have about the same proportion of women and children as the Klamaths." Finally, the Snakes numbered 11 men, 5 women, and 6 children.[56] It is possible that the absent Modoc included members of the party advocating continued resistance.

Many years later, the Upland Klamath leader, Monchnkasgitk, recalled the treaty making:

> Huntington came to Council Grove and sent out invitations to all the Indians to meet him to discuss a treaty about the lands. I went as chief with Seven Warm Springs Indians to the first meeting at Council Grove. I met La Lake, head chief, and Chiloquen, chiefs of the Klamaths; also Captain Jack, Schonchen, and Chief George of the Modocs.
>
> Huntington met me there with the man who wrote for him, and another white man. We were there about a week and talked three days about the treaty. We built our first camp fire under a big pine tree which I think is still there. Huntington made a speech and said: "I have come from Washington, from the Great Father, to see about buying your land and have brought [with] me the things to pay for it." He then showed up fishhooks, beads, buttons, coarse blankets, and red paint. Huntington finished his speech by saying, "Tell me how much land you want to save for yourselves?" The chiefs went back to the camp and talked among themselves and agreed, and the next day told Huntington they wanted the land from the three snow mountains and the Cascades (the three sisters) from there to Steens Mountain; thence southerly along the mountains east of Goose Lake Valley to the California line, then westerly to the Cascades, taking in the Tule Lake country; then back to the beginning.

SIX

[P. 74]

Political Changes

K
*648 UNDER THE TREATY OF 1864, THREE INDIAN GROUPS, DIFFERING IN
*657 size and degree of internal cohesion, were brought together to
619 form a single polity. The Klamath, under Lileks and Chiloquin,
• 622 had achieved some measure of chiefly centralization in the decades immediately preceding the treaty, but band cleavages were still very real. Principal among these was that which separated the Upland Klamath of Monchnkasgitk from the Lakeside tribelets. The Yahuskin Snakes at that time seem to have been closely linked to the Upland band, and in early reservation times were numbered among the adherents of its chief.

M
643 The Modoc not only showed a lesser degree of political integration than did the Klamath but were disputing over the nomi-
648 nal office of head chief. The position of the aging Schonchin
657 was precarious; for Steele in 1864, after treating with him as representative for his tribe, had presided over the election which was widely construed as providing a successor. In the treaty with Huntington, Schonchin was again treated as head man,[1] but less than a year later it was reported that "the Modoc Indians are very much dissatisfied and have deposed their head chief who signed the treaty of friendship with the Whites, because of his doings in the premises." The officer relaying the information to Huntington at the same time offered the support of the army "to sustain the chief and bring the Indians to terms by force."[2] The revolt was short-lived, nor, judging by Schonchin's later actions, is it probable that the military were needed. He and his followers came on the reservation for the first distribution of annuities in 1867, but Captain Jack and John Schonchin, together with their adherents, remained in their homeland in the Tule Basin, which they understood to have been reserved to them in the treaty with Steele.[3]

By the terms of the treaty concluded with Huntington, the 657*
United States had established the right to bring other tribes not 648*
signatory upon the reservation. This clause was invoked in
1865, when a treaty was concluded with Panaina, elusive chief
of the Walpapi Snakes, who had withdrawn from participation
in the original treaty. Place was accordingly made for him on
the Upper End in Monchnkasgitk's territory,[4] where he and his
followers remained until the following spring, when they left,
apparently upon the summons of the hostile Snake chief, Howlark.[5]
Soon the Walpapi returned, with an attack—vigorously repulsed—upon
Schonchin's band, then summering in the Sprague
River Valley.

The fear of raids drove the Uplanders in to take up residence
at the council ground near the Agency. In the hostilities that [726]
followed, Fort Klamath served as a base of military operations
and a small body of Klamath under subchief Henry Blow functioned
as scouts. At the end of the war, when peace had been
restored and the arrival of annuities attested the good faith of
the government, Schonchin and his followers came upon the
Lower End and located near Modoc Point, adjacent to their
former neighbors, the Klamath Falls tribelet.

Thrust together, bands, tribes, and their leaders attempted to 657*
adjust their political balance. In the first days, before the Agent 648*
moved upon the reservation, his major contact with his charges 622 •
was through the military at Fort Klamath. Drawing upon the
enhanced prestige of government backing and in the absence
of the Agent, Lileks grew imperious. Applegate found it necessary
to write Major Rinehart in 1865:

> I learned after seeing you that LaLakes had in his prison house on Williams' [sic] River on the day of our conference with 'Taunina' several Indians bound hand and foot for unruley and disorderly conduct, and I should be happy if you would inquire into the matter and see that indians thus confined are not inhumanly treated.
>
> Lalakes [he continued] seems to have commended a policy rather more regal than usual for him, and has constructed a "guardhouse" in which to bring his subjects to a better state of discipline, and I believe the plan a good one unless carried to an extreme.[6]

Within less than a year, Lileks had fallen ill. Feeling that his

*657 time had come, he summoned his people "to receive his solemn
*648 admonishments err [sic] his spirit take flight." Soon recovering,
• 622 he voiced to the Agency farmer, S. D. Whitemore, the suspicion
that the shaman who had cured him, and whose professional
charges had stripped him of all his effects, had been in league
with the subchiefs to bring about his death; and he requested
that the shaman be imprisoned by the military. Later events
made it clear that Monchnkasgitk had been a leader in the
conspiracy, plotting to take the place of the old chief. Thereupon,
Whitemore, then in charge of the Agency, called a council, at
which he "stated that it will be highly necessary to consult their,
and the government agent, or the change could not be regonized
[sic]. . . . I learned that after a lengthy consultation with the
indians has [sic] become impressed with the belief that Mosen
Kasket and his band have no hostile intentions."[7]

[558] With Agency backing, Lileks once more was restored to a
position of relative authority, but his recourse to outside support
caused his personal prestige to decline. He thus had to resort
increasingly to formal instruments to bolster his power and to
implement the changes he sought. When one Spokane Ike slew
[682] his child in Jacksonville, Lileks asked that the Agent order all
Indians back upon the reservation. Spokane Ike was tried by the
Indian court, Lileks presiding, and was fined fifty dollars.

[692] Lileks took readily to the court, and Whitemore reported, "The
indians are holding court dayly [sic]. I am not informed of the
nature of their cases." O. C. Applegate described one session
thus: "A few days ago the Grand Court of Klamath set, Chief
LaLakes presiding, and many men were convicted of many
[681] crimes. One in particular had stolen a number of women, 20
mink skins and otherwise trampeled [sic] on the rights of his
people, he now wears shackles and a heavy log chain and chops
wood for La Lakes."[8]

*648 The head chief was by no means an advocate of indiscriminate
*657 change. He favored inhumation of the dead, which he had
622 witnessed among the whites in his travels to Jacksonville, Yreka,
177 and The Dalles, over the native practice of cremation; and about
[764] 1868 he secured its adoption.[9] On the other hand, when the
[567] proposal was made in 1865 to liberate the slaves, Lileks was
prominent in voicing his displeasure, undoubtedly backed by

other chiefs who were the principal slaveholders. "The Indians," 648*
reported Lindsay Applegate, "have declared that if such was to 657*
be the case, they would kill all of the Pitt River Indians among 622•
them or run them off to other places to trade for horses."[10] Per- 177
haps in deference to that feeling, the slaves were not liberated 567
until 1869, after Lileks had been deposed.

Within the reservation polity, the ailing and senile Lileks 657*
proved increasingly difficult to control. Growing autocratic 648*
toward his followers, he stubbornly opposed Agency policy. 622
Meanwhile, Monchnkasgitk, sensing his weakness, was waxing troublesome in a new bid for power. Early in 1868, Whitemore reported that the Klamath were venting a "more turbulent spirit one with another," and that they were flourishing arms and axes upon one another. Lileks now openly admitted that he could no longer control them.[11]

Meanwhile, the administration had progressively lost confidence in the turbulent chiefs and came instead to rely upon younger men such as Allen David, Henry Blow, Dave Hill, and Charley Preston, who combined a warlike record sufficient to give them standing in Klamath eyes with a dependable advocacy of white ways. These were men with whom young Oliver Applegate found strong mutual ties. When Lileks lost sway over the Klamath, it seemed natural to Applegate to move while he was temporarily in charge of the Agency to depose him.

The manner in which he did so is illustrative of the direct intervention by which the adminstration subsequently shaped political affairs. Applegate's own notation is sufficiently succinct.

> A few days ago [he wrote his brother in the spring of 1869] I had a great Council with the indians and tried some chiefs for various offences. Two of them (La Lakes & Moshenkosket) finding themselves about to be impeached, resigned. A grand Convention was held and candidates nominated for President. The campaign is now fairly open with Allen David & Blow in nomination.[12]

The matter as he later recalled it in greater detail was something more than the convention he deemed it:

> The younger Captain Applegate [narrated his daughter] took charge of the affair and called a meeting of the Indians at Kowasta in the early summer of 1868 [sic]. Here, seated on the

*657 *648 • 622

> top rail of a fence, facing the redskins assembled in the meadow before him, flanked by a group of young and energetic Indians who were his sworn friends and allies, he dispensed summary justice to the most notorious recent offender. . . . He then proceded [sic] to explain, through a Klamath interpreter, that the old chief, though entitled to all honor and respect for his years of valuable service, had ceased to be an effective officer and should be replaced by a younger and more active man. The new day had arrived, he said, when the Indians were adopting the white man's ways of life, and chief among these was the white man's law, which demanded that justice should be done and order maintained without fear or favor, and which provided for such justice and order by the election of officers who were chosen for their capabilities in performing these duties. He suggested that another meeting be held a week later for the nomination of candidates for head chief of the whole reservation—not only of the Klamaths who owed allegiance to La-Lakes, but also of the Modocs, Paiutes, and Pit Rivers who made their homes on the reservation. The old chief was naturally crestfallen at this procedure, and his relatives and friends grieved, but there seems to have been no attempt at open rebellion against the dicta of the young white leader. . . . Throughout the whole campaign, however, the feeling of personal loyalty to the old sachem was the greatest obstacle to be overcome.[13]

*657 *648 622 643 666

The election that followed pitted Henry Blow, "a prominent sub-chief under La-Lakes, a man of the finest personal and executive qualities," with support from both Lower End Klamath and the Modoc,[14] against Allen David, "a tall handsome, and popular young brave from the upper country,[15] progressive, well versed in the ways of the white man, from travel among the Willamette settlements," backed not only by Lower End Klamath but by the Upland band and the Paiute as well. Charley Preston was a third nominee, "a man popular on account of his personal qualities and admired for his ability in various industries acquired by residence among the whites, but not possessing the prestige of a sub-chief." Young Applegate seems also to have been proposed, but declined. "There were many at this meeting who deplored the whole procedure in view of their allegiance to the old chief. . . ." At the election which followed, Allen David was elected by a plurality of five.[16] Thus a panreservation polity was established, to which tribal distinctions thereafter were subordinated.

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one who had obstructed Agency-sponsored reforms, but had left the membership of the lesser chieftaincies intact. It is clear that administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693
executive role to constitute a court, while a sheriff, chosen from among the Indians, together with constables, one per chief, were to maintain order. Chiefs, somewhat extralegally, soon began to assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at all, advising them that the object of the law is to *protect* the people and not to *oppress* them."[19] Soon thereafter, he reduced the court to a membership of only seven chiefs and set its sessions at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622
against property (arson), together with what can only be con- [68]
sidered redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585]
were to be confirmed before the principal chief, who was to [643]
receive a fee; the bride price was not to be returned on the [586]
desertion of the husband; while the court might order the sepa-
ration of an irreconcilable couple. Monogamy alone was per- [595]
missible.[21]

Thus, not only were the chiefs given new and different powers,

*657 but they were made the arbiters for the acceptance by their
*648 fellows of changes in customary practice. Their position was
• 622 buttressed by the procedure at first adopted of issuing annuities through them, of loaning equipment to the chiefs for the use of their followers, of building houses for them, and of giving them priority when breaking ground for planting.[22]

*657 Even as an embodiment of indirect rule, however, the early
*648 reservation courts knew the intervention of the Agents. Meacham
756 records that, "Captain Knapp forbade thier [sic] Doctors to
692 practice and shackeled [sic] them for attempting to persist in the same."[23] And Meacham himself, having requested the commander of Fort Klamath to arrest and confine one Link River Doctor for the same offense, proceeded to try him during the next session of the court and sentenced him to four months' imprisonment at Fort Klamath.[24] Dyar similarly set sentence for Pitt River Dick, convicted of assaulting another Indian with a knife.[25]

*657 The degree to which the Agency had set itself up to confirm
*648 the chiefs, and thus to constitute the supreme authority, is shown
622 by the commission earlier awarded to Allen David, which runs,

> The Bearer
>
> for his intelligence, loyalty and long continued good behavior, is hereby appointed during good conduct Chief of the Chucklolum division of the Klamath Tribe. He will exercise authority over the said people subject to the will of the High Chief of the Klamath Nation and also of the proper authorities of the United States.
>
> Witness
> O. C. Applegate Intr.
> Saml. D. Whitmore
> Acting Farmer
>
> Signed at the Klamath
> Agency Sept 28th 1867
> L. Applegate
> U. S. Indn Sub Agent

Note especially that the division referred to does not correspond with any of the Klamath tribelets. Thus a regrouping was either being recognized or, more probably, instigated by the Agency.[26]

Despite their increasing control, Agents continued to chafe under the independence still exercised by the chiefs. As Commissary Meacham chose to phrase it, "In thier [sic] present condition it is probably best that each tribe should be represented by thier hereditary chiefs, but I am satisfied that the time is not

far distant when good judgment will direct the deposing of all 657*
hereditary sovereigns and the election of proper officers by the 648*
people at large. Thier present mode of constituting courts of 622 •
justice and of conducting trials is probably far in advance of
thier primitive style—but is anything but Republican. . . ."[27]

The contrast between the old and new leaders is shown by one 657*
of two liquor cases that vexed Dyar. A saloonkeeper, guided by 648*
a "squaw man" to an Indian village a few miles above Linkville 622
"for vile purposes," gave a bottle of whiskey to the Indian who 273
transported them. After the Indian had drunk part, he gave the
remainder to Lileks, who shared it with another man. Of this
instance and another, Dyar observed, "Allan David, Head Chief [643]
of the Klamaths, first brought these cases to my knowledge and
is anxious that the parties shall be punished."[28]

Allen David, indeed, impressed Meacham strongly, for he 657*
characterized him among the Indians as "unquestionably the 648*
clearest and most logical talker I have ever listened to. . . . He 643
is fully imbued with the ideas of civilization and never misses an opportunity to give his people good advice."[29] Dyar, echoing these sentiments, added, "his time is so much taken up in settling the little disputes of his people, and he is naturally compelled to give away so much food in thier [sic] frequent visits, that he is kept continually poor." As head chief for the entire reservation, David was expected by the Indians to feed them during the frequent assemblies at his house. From visits to other reservations and to the American settlements, he was aware that white officials received pay for performing their duties and that even Mark, the head chief at Warm Springs, drew a salary. Before David would undertake the head chieftaincy, O. C. Applegate had had to promise to try to secure a salary for him. Subsequently, Dyar himself recommended that Allen David be paid an annual salary of $300.00.[30] It was not forthcoming.

The concept of an all-reservation hierarchy of chiefs was rudely 657*
challenged by the Modoc War. For a brief time, upon the urging 648*
of A. B. Meacham, Superintendent of Indian Affairs for Oregon, Captain Jack and his adherents had joined Schonchin at Modoc Point in 1869. They were soon disillusioned. The Klamath acted like lords of the land and treated the Modoc as if they were there only on sufferance. When the Modoc split fence rails, Klamath

K
*657
*648

726 were mustered out of service. Subsequently, when Jack and his
M followers slew the Peace Commissioners, Oliver Applegate re-
657 648 ported that the reservation Indians were ready to take the war-
726 path against them in revenge, but they were not called upon.[40]

K In the end, the Modoc were defeated and the leaders tried at
*657 Fort Klamath. During the hearing, they attempted to implicate
*648 728 the Klamath, with claims that Link River Jack had cached
M ammunition for them and that Schonchin—"the noblest Roman
657 of them all!" exploded Oliver Applegate indignantly—had brought
648 them a message from Allen David promising aid if they would
728 hold out a little longer. The countercharges proved misdirected
as defense; and in the presence of the reservation Indians and
other spectators the leaders of the hostiles were hanged or committed to Alcatraz; and the remainder, 153 in number, were
shipped off to Fort Quapaw, Indian Territory.[41]

K With the end of the war, the reservation became in effect a
*657 closed political system. The only exception was Ocheho's band
*648 of Paiute, which alternated between the reservation and their
M 657 Warner Valley homeland until 1876, when the major part of
648 them remained off the reservation for good. Meanwhile, with no
K salary forthcoming to offset the heavy financial burdens of his
[643] office, Allen David resigned, and Henry Blow was elected in his
stead.[42]

K The statement made in 1877 by Dave Hill gives a fair idea
*657 of the chiefs of the time and contrasts the hierarchy at the
*648 Agency with the comparatively open order at Yainax.

• 622
643
> We Lake People live here thus: Blow is chief of all, and I,
> M Dave Hill, am chief second to Blow, Long John after Dave,
> 657 then too Link River Jack after Long John, and Lilu. Pit River
> 648 Charley is chief of the Pit River people at the Lake. Ben and
> 622 Littlejohn are the chiefs, and Schonchin is chief of the Yainax
> 643 people. Johnson is chief of the Modoc at Yainax. George Kuatilak also is Modoc chief after Johnson. Chocktoot is chief of the
> Paiute.[43]

Gatschet's list for the same year, which includes the adherents
K for each leader, differs somewhat from that of Hill. At the Lower
[062] End, the chiefs, all Klamath, and the number of their followers
M were: Blow, head chief (122), Hill (225), Long John (103),
[062] Link River Jack (92), and Lilu (23). At Yainax, the Modoc bands

K
comprised those of Modoc Johnson, head chief (71), and Schonchin 657*
(18). The Upland Klamath leaders were Brown [i.e. Monchnkasgitk] 648*
(30), Ben (61), and Littlejohn (14). 622 • 643

Gatschet thus omits Pit River Charley at the Lower End and 162
the adherents of George Kuatilak and Chocktoot at Yainax, but M
includes that of Monschnkasgitk. If the Klamath and Modoc 657
followings are separately totaled, the figures agree closely with 648 622
those of the statistical summary for that year,[44] suggesting that 643
the Pit River chief was subsumed under one of the Klamath 162
leaders and George Kuatilak under Modoc Johnson. Note that the Paiute, who seem to be predominantly Walpapi, account for 137, almost half the Yainax total of 331, while the Lower End, with 565, then contained almost twice as many people.

The replacement of leaders had already gone far: Of the chiefs K 657*
listed above, only five, Blow, Jack, Lilu, Schonchin, and Monchnkasgitk, 648*
had been prominent enough in 1864 to sign the treaty; 622
and only Lilu, Monchnkasgitk, and Schonchin were then noted 643
chiefs.[45] By 1877, their followings had dwindled, amounting to M
only a fraction of their previous numbers. Most of the losses had 657
been to Agency men advancing in favor. Among them Dave Hill 648
far outstripped even Henry Blow, the head chief, in adherents. 622 643

Beneath this system, we know from the accounts of elderly
Indians, a system of informal local headmen continued. Some K
of these individuals were, indeed, also favored with a measure 657*
of government support. Among them were some of the older 648*
chiefs, now out of official power. Lileks was put in charge of a 622
ferry across the river—probably the Williamson—where he kept track of passengers by drawing pictures of a man, mules, and so on.[46] Allen David, still a chief, figured among the progressive Indians for some years. In 1883, however, his quiet opposition to Agency inroads upon the remaining chiefly authority drew remarks from Nickerson:

> There is but one man, Allen David, 3rd chief, who in any way proves a hinderance [sic] to the discharge of duties of the police. He does not do this openly, but covertly and slily, and is ready with a denial when charged with it. I have been seriously thinking of depriving him of his position and power as one of the cheifs [sic]. Indeed, I think the time is not far distant when this tribe will be better off without any chiefs whatever.[47]

*648 Men such as Chiloquin at the Lower End and Chief George at
*657 Yainax continued for years their informal leadership. Along with
• 622 them were local leaders of kinship groups, such as Hunter Wilson
on the lower Williamson. Here, in good farming country, a large number of Indians had been collected, including Wilson's band, which had been uprooted from Pelican Bay, now off the reservation, and moved among former feudatory foes. Those in this vicinity, for whom Dave Hill was now responsible, were thus far from constituting a homogeneous following.

The new leaders were at one with their predecessors in the vigilant scrutiny which they maintained over the acts of their Agent. When Lindsay Applegate relinquished that office in 1869 to Capt. O. C. Knapp, the chiefs made speeches voicing their personal esteem for the ex-Agent; and Monchnkasgitk and Chiloquin were content to leave it at that. Lileks and Blow, however, improved on the occasion to recall promises as yet unfulfilled. Said Lileks,

> Its a long time since Mr Huntington told us we should have Saw and Flour Mill, and many other things, we have not seen. The President sends new men and new promises, but no new things; Yes Applegate looks after us, but the white men that were to mak[e] our houses are not among us, we have learned that we must rely upon our selves to build our houses—

To this Henry Blow added,

> You have been here a long time, Applegate is tired and my heart is like his, both tired wa[i]ting for what was promiced [sic]—The Government bought our Country, it was a word of mouth trade, we saw nothing—Yes we have learned that our land brings us grain and means of subsistance, for this we owe a debt to Applegate[.] I kill Ducks and Geese, sell feathers, buy calico for my wife when I was told in beginning this would be furnished by Government. Six years I have had no oxen, have no cows chickens and such like good things[.]
>
> Maby [sic] the President thinks he gave us all these things but we have them not.
>
> Many women and men have died without ever seeing those things that were promiced [sic] [.]

And he recalled Joel Palmer and the council of 1854 and the "many good goods [he gave] to other Indians."[48]

*657 Thus, within the very year that had seen the ratification of the
*648 treaty, Indian spokesmen were already vocal in discontent over

improvements at Yainax Station." Elsewhere, he warned, "the 657*
settlement of whites within the Reservation limits would bring 648*
endless trouble if not open war."[54]

For some time Dyar withheld the unwelcome information from the Indians, until at length it was brought out into the open in a petition by local citizens. Dyar himself signed a similar paper after discussing the matter with some of the leading Indians; in the course of these talks he gave assurances to the Indians that the government would protect them in their rights. Their reply is quoted in words that Dyar had anticipated in earlier correspondence. The treaty, they contended, had mentioned nothing about lands to be withheld; and when they had consented to the construction of the military road they had understood it to be no more than a public road, such as was provided for in the treaty. They had no intimation that additional lands were to be claimed. They added that if the government allowed these lands to be taken away they had no reason to believe they would be protected in any of their rights, and might as well be killed off at once in a war, however futile, as to make a slow end.[55]

Thus was joined the struggle which was to command the unified support of the diverse people of the reservation and to shape the political structure for years to come. From time to time new developments agitated the Indians. Such, for example, was the move of the California Oregon Land Company, when it had come into possession of the Military Road claims, to push a bill through Congress in 1881 to open the Upper End for sale to homesteaders.[56]

Another threat, the claims of the state of Oregon, acting under the swampland grant of March 12, 1860, to the swamplands on the reservation, was quietly contested by Nickerson in 1880 and 1881, and the Indians do not seem to have learned of it. At the same time, the Bureau was not loathe to call general councils of the Indians to discuss such issues as the proposed transfer of Bureau functions to the War Department.[57] These meetings provided occasions for continued political expression on the reservation. The issues, in turn, gave focus for a more militant leadership.

Meanwhile, the Agency was grappling with the problem of [622]
sustaining the elected chiefs, for they received no salary for their

*657 *648 • 622 services in the court. In 1878, support took the form of a suit of clothes for Henry Blow and three years later of a request to provide him with a weekly ration of flour and beef. However, as Agent Roork then found, the issue could not be authorized even for one who "spends a good deal of time looking after the interests of his people, when he can ill afford it."[58]

*657 *648 625 At this juncture a temporary solution was found. In 1878, drawing upon successful experience on other reservations, the Bureau authorized the employment of a small force of Indian police. In the first days of the reservation, Lindsay Applegate claimed to have organized such a force, one that served without pay, with power to perform military duties as well to arrest malefactors; and though it was later discontinued, Dyar had subsequently proposed a similar body.[59]

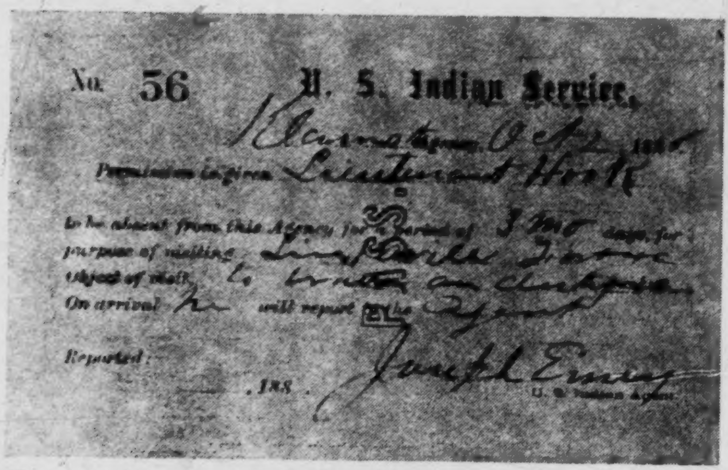
The number now settled upon was six, at Roork's request, "in order to have one for every tribe."[60] O. C. Applegate, then clerk at the Agency, was appointed chief of police. The first men in the service, with one or two exceptions, were not particularly distinguished; and neither of the officers of the force is now recalled as having been a leader. Within a year or two, however after many fluctuations in numbers, both Henry Blow and Dave Hill had been appointed as officers. The subsequent reduction of the force from fifteen to three for budgetary reasons dictated from Washington was distressing.

> As the Police Force was too small to be of much account [wrote Nickerson], the Indians felt under less restraint & were now dificult [sic] to manage. The chiefs considered that the Government had taken their authority to rule and administer punishment out of their hands, and did not consider themselves responsible for good order. They are now anxious to be allowed to administer law as before the Police force was organized. Unless this force can be put upon a permanent basis, and consist of from 8 to 10 members with a yearly allowance of rations I am of the opinion that it would be best to grant them their request. In that case it would be desirable to keep 2 or 3 men in the service to aid in arresting offenders & to take charge of all prisoners. . . . The Agent would of course be the judge in all trials.

[643] [622] He suggested that, following the plan he had put into operation before the force was reduced, the head chief be named captain and the second chief, lieutenant, while two other chiefs be appointed sergeants of the force.

appointed sergeants of the force. "This," he added, "would give 657*
these chiefs something to do & a support. They would be interested 648*
in watching their people and in keeping good order."[81] 625
The move also would counter the opposition to the police among 622
the chiefs themselves, led by Allen David.

Once the force was authorized, Nickerson became aware of 657*
its peculiar jurisdictional limitations. When he sent the police 648*
625
[175]



No. 56 U. S. Indian Service.

Joseph Emery

This pass authorized an Indian police officer to leave the reservation for three months while on duty in the Linkville area. 1886.

to Linkville to round up Indians absent without passes and to pursue Indian horse thieves, he was informed that they had no power to make arrests off the reservation: the United States authorities must be notified to act. Yet when the turbulent Spokane Ike shot Skookum Doctor and fled, to be captured by the Indian police near Prineville, the U.S. District Attorney declined jurisdiction, saying that it lay either with the state courts or
with the tribe. Accordingly, "the chiefs in council, acting as a 657*
grand jury, accused Spokane Ike of the crime of murder. A court 648*
was held, the Indian Agent presiding. A jury, of twelve of the 622
most intelligent Indians of the tribe was selected. . . ." Both by 692
the testimony of a witness and by his own statement the defendant 695
was found guilty of murder in the first degree. Upon further 000

Upon further
*657 instructions from Washington, he was publicly hanged. Struck
*648 by the solemnity of the proceedings, Nickerson reported, "Fully
696 half the people of the nation was [sic] present. The order and behavior were admirable. The arrangements and execution of the plans were in the highest degree creditable to the Indians having charge of the same."[62]

*657 The following year, a parsimonious Congress made necessary
*648 a reduction in pay. "They are all poor men," exclaimed Nicker-
434 son, "and can not support their families on one ration and 5
625 dollars per month. Young men have not the experience needed & do not command the respect of the tribe & nation." He searched about for alternatives to help them eke out an existence.[63] Opportunely, there arrived a copy of *Rules Governing the Court of Indian Offenses* which, pronounced Nickerson, would "work a radical change in the government of this people."

*657 He suggested that Blow and Hill "loyal, intelligent, and pro-
*648 gressive Christian men" be appointed as judges, to serve con-
• 622 currently as policemen. To them he proposed to add another,
625 Jesse Kirk, a pupil at the Agency school and a carpenter's appren-
692 tice, to be both a member of the force and a judge. Of the three, he wrote, "David Hill will make the most competent man for presiding Judge. If necessary I will nominate him for Captain and Blowe [sic] for Lieutenant of Police. Otherwise I would prefer that they remain as they [are] as Blowe is head chief of the nation."[64]

The triple role of Hill and Blow made it difficult to delimit their judicial functions. Wrote Nickerson in 1886:

> I was obliged to be quite positive and firm in the exercise of my authority as an agent, before they came to understand that they were not independent in the performance of their duties as Judges. It also required some time to convince them that they were not to become prosecutors of supposed criminals, and that they were not to form and express an opinion in advance of hearing all the testimony, and then not until they had taken time to deliberate together. I am satisfied that we have no better material for judges than those that are now acting in that capacity, and yet they are strongly opinionated, and are making but slow progress in the right direction.[65]

*657 The police force, meanwhile, had been distributed so that four
*648
625

657* 648* 625

served at the Agency and three at Yainax, with an additional policeman at each school to bring in new scholars, recapture runaways, and oversee the prisoners. Dave Hill presided over the police building at the Agency, with quarters for his family and cells for the prisoners.[66] On occasion, policemen accompanied labor parties off the reservation and worked alongside them for pay in addition to their salaries; and they served as escort to the freighting runs to Ashland and Jacksonville and the late winter expeditions to the Lost River fisheries. They were a considerable power in maintaining order, even apprehending deserters from Fort Klamath; and Emery used them effectively in imposing his agricultural policy upon his wards.

657* 648* 625 622 • 578

The police, however, at times found themselves at odds with the very laws and regulations they were employed to uphold. Among those involved in the illicit traffic in reservation timber, as already described, were several members of the police, together with other Agency employees, and three chiefs: Monchnkasgitk, Allen David, and David Hill. The latter, in 1888, learned at first hand the impersonal character of authority when, disturbed by some ruling concerning his son, he approached the clerk who was acting as Agent in the absence of Emery, in what that worthy described as "an angry, insulting, insolent, defiant, threatening, warlike and rebellious manner." He was arrested—resisting the while—and locked in the guardhouse; and the clerk requested that he be kept in solitary confinement for one week, or until the clerk had returned from Yainax.[67]

657* 648* 692 622 [693]

Emery apparently conceived that too much power was concentrated in a few hands, for later that year he reorganized the court, with the observation that "in the very nature of things the *Judge* should not be the *Sheriff*." His appointments were drawn from a new generation of leaders: William Crain, William Crawford, and Benjamin Butler.

> They are intelligent men [he observed], [and] can read and write and speak accurately the English language. One of them is a graduate of the Chemawa Indian School, another educated at the Klamath School and the third one is the best informed man on the reservation.
>
> 657* 648* 692
>
> Court is held once a quarter at Yainax—40 miles from here and twice a quarter at the Agency.

> *657 *648 692 A large number of Indian offences come before this Court for trial, consisting mainly of family quarrels, disputes about the ownership of property and acts of licentiousness.[88]

With the accidental death of Crain, Jesse Kirk was appointed in his stead.[89]

Thus, within a generation the administration had replaced the popular leaders with those among them who were Agency employees, and in turn had supplanted them with the products of its schools. Legally constituted authority was administered through the Agency, at first through a customary court of chiefs and later [625] through a Court of Indian Offenses. The Indian police, who took their orders directly from the Agent, were satisfactory to him as the instrument of his hand. Not so the courts, which tended instead to constitute seats of power alternative to that of the Agent. The result was to be that Agents tended to strengthen the police while circumscribing the functions of the courts.

*657 *648 • 622 571 Meanwhile, beyond the administrative structure thrived an unacknowledged informal leadership, based as in former days upon wealth and accomplishment. Unlike that of the Agency, it was not restricted in position nor limited narrowly in function. This was a leadership in which employees could also participate; and it was presently to see such diverse men as the old chiefs, Monchnkasgitk, Henry Blow, and Allen David, make cause with Dave Hill, and he with young Jesse Kirk, and he in turn with Jeff Riddle, son of Frank Riddle and Winema, the heroine of the Modoc War, and with Henry Jackson, the wealthy exslave. In this sense at least E. L. Applegate was right when he observed:

> [179] [178] [101] The tribal distinction among the Indians on this Reservation is practically disregarded by the Indians, and the ancient prejudices are rapidly fading away. The general name of Klamath People seems to be superseding all other distinctions.[90]

*657 and this corresponds fairly closely with averages from the listing
*648 of Upper End bands. Only the Link River tally is aberrant, with
592 an average of about 20, far above the figure to be obtained from
162 those Link River households included in the census of the tribe at
large. Since the tally was made in September, it may reflect the
open living conditions of that season.[21]

*657 Household size ranges from 27 persons down to 2, the latter
*648 figure for the household of a widow. Households of known chiefs
592 —taking as criterion a signatory to the treaty of 1864—are well
• 622 above the average, ranging generally between 22 and 15, with
162 only those of the Modoc, Schonchin, and the Paiute, Ocheho,[22]
falling below. However, as will be seen, chiefly households were
not the largest in absolute figures: those of some of their followers
exceeded them. The large households indicated here
[178] point to the continued presence of the extended family as a
residential group.

*657 By contrast, the census of Slabtown, a small settlement near the
*648 Agency occupied primarily by Agency employees in 1901, shows
592 13 households comprising house head, wife, and from three
162 children down to none, with an average of 1.4. In one family a
girl past school age, and in another a grown son, were among
the children. In addition to those children at home, the families
had others in school, in the same numerical range and with the
same average. The total family size ranged from 2 to 8, with an
average of 4.7. Because some of the family heads, perhaps all,
were young at this time, family size may thus have been somewhat
skewed.[23] Nonetheless, the contrast of these households
comprising conjugal families with those occupied by extended
families forty years earlier clearly demonstrates the residential
fractionation of the larger units.

*657 A seasonal mobility still characterized the Klamath family.
*648 Nickerson mentioned in 1884 that the heads of reservation families—from
one-half to two-thirds of the men—had been away for
166 the last four months, and added, "They generally take their
families with them on such occasions."[24] Similarly, in a predecessor
of Slabtown, over fifty families engaged in hauling logs on
sleds to the sawmill camped in tents in January to be near their
work.[25]

000 Of all the societal relationships, the government sought directly

[Klamath Reservation]

Of all the societal relationships, the government sought directly 657*
to change only those within the family. It was clear that a nation 648*
that was soon to impose upon the Mormons the American, and 595
not the Biblical family, would permit no special marital practices 177
among the Indians. Polygamy was banned, although not retroactively 178
for unions such as those of Allen David and Monchnkasgitk, which had been contracted prior to January 1, 1870. Some leaders themselves appear to have advocated the change in a desire to emulate whites. In 1877, Gatschet noted that there were still two or three polygamous men.[26] [556]
Since polygamy had been a mark of the affluent, the ban, like the emancipation of the slaves that preceded it, served to erode the status of the traditional chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals con- 622•
cerned. In the legal code instituted when the court was estab- 692
lished, the consecration of marriage was made the function of 685
the head chief, to whom the groom was to pay a fee of five, three, 583
or two dollars or the same amount in horses, graduated according [643]
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] [586]
The traditional ritual of marriage still was being practiced by some families in the 1890's[28] but the gift exchanges between the families concerned which set a public seal on the union were superseded, and the controls exerted by the family over the couple were thereby diminished. The effects of these and other changes were recognized by Gatschet. "Matrimonial reverses . . . among the Klamath [he declared] . . are one of the unavoidable consequences of the gradual emancipation of the females from the former rule of their brutal husbands through the advent of the whites, and also of the obnoxious and corrupting neighborhood of the soldiers at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independ- 648*
ent of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

> *657 To prevent a *practice* is one thing, to change the belief in the
> *648 theory which actuated that practice is quite another thing. Thus
> 756 while it is very true the *practice* of medicine by Indian doctors
> 178 is abolished yet I am fully warranted in saying that there is not
> half a dozen Indians on the Reservation who are not as firm as ever in the belief of "spiritual medicine." Even Head Chief Allan David grave, sedate, and logical as he is in most things, acknowledged to me the other day that he *still believed* and was afraid to punish the Doctors.[2]

Notwithstanding his appreciation of the difficulty in eradicating belief in this way, Meacham continued to war against the shamans, causing Link River Doctor, whom Knapp had imprisoned, to be arrested and tried for having openly defied the order against shamanistic practice.[3] Meanwhile, he hailed the ministrations of the agency physician as demonstrating "that an efficient, patient and intelligent physician can do more than almost any other person in rooting out thier [sic] faith in thier own 'spiritual' medicine, and thus opening the way for the white man's customs, laws and religion."[4]

Not all shamans were initially singled out, for many were held in esteem. Of his paternal grand-aunt, a shaman, a present-day informant recalled, "She was like a preacher and all respected her. Chief Chiloquin always called her first when he had a meeting because she had a good brain. . . . Sally had a strong power
*657 [i.e. tutelary spirit]. . . ."[5] Tecumseh, an early Agency employee
*648 and Dave Hill's companion during the lyceum tour of 1875, was
756 a noted shaman. It was the parvenu chiefs, replacing Lileks and
754 Chiloquin, who abetted the Agents; and initially, as in the code
• 622 set forth by Dave Hill, their censure was directed only against sorcery.
177 Indeed, Hill's wife wrote him that she had taken their ailing child
178 to a female shaman to be cured.[6] As Henry Blow remarked, "Since there is a white man's law among us the doctors are afraid to kill for malice or money as they did long ago, but exert the same power to heal the sick as they did."

*657 Significantly, when the court of chiefs tried Doctor John, a
*648 shaman, for having bewitched and thus slain another, the chief
756 witness against him was Sally, the woman shaman mentioned
622 above, who testifyed that in her dreams her shamanistic powers
177 had seen those of the accused.[7]

178 In 1880, Nickerson took a further step toward reducing the
[754] number of shamans, but thereby gave those who remained a

measure of official sanction. "I have recently induced their chiefs 657*
and people," he reported, "to dispense with one half or more of 648*
their native doctors, each chief and his people selecting one to 756
retain. They came into this plan more readily than I had appre- 622
hended."[8] On a visit to the Agency, Lindsay Applegate came 178
upon the new system and, in a letter bristling with indignation, 177
wrote "[Nickerson] turned to me and remarked that they ware
his indian docters that he had invited the indians to furnish to
practice with his docter at the same time [.]"[9]

Meanwhile, the growing success of the medical program upon 657*
the reservation sapped the authority of the shamans in what was 648*
their last legitimate field. The personality of Dr. Royal, who had 756
doubled as chief of police, apparently did much to win over 164
some of the chiefs, as did his treatment of syphilitic cases among 177
the Indians. (Since, as Roork had remarked, the disease had been 178
contracted by Indians in the course of their annual trading trips
to Oregon City and other points,[10] it may have had a higher
incidence in chiefly families.) They desired to retain him and,
wrote Nickerson in advocating this, "Should he remain perma-
nently the chiefs have agreed to do all they can to do away with
their Indian doctors. These Indian doctors have heretofore had
almost unbounded sway over the people."[11]

In outlawing shamanistic activities, the Agency in effect drove 657*
a wedge between the shaman and his ritual assistants: the inter- 648*
preter, caller, and singers. Since a curing seance was a public 756
demonstration, it involved too many participants to be concealed 177
easily; and the shamans, formerly among the most respected and 178
feared members of the tribe, were not given to skulking. More- [178]
over, in native theory, supernatural power waxes with use; and
when performances were no longer given frequently, that power
declined.

Recalled H. N.:

> I always seen David Hill go among the people and interpret the agent's words. Sally [the shaman] said, "I didn't do it myself, but my medicine do it. It's up to my medicine. If I do it, it's the medicine's fault." But David Hill said, "It's better for you to quit than to have trouble for yourself, or your family. That's what the agent wants."
>
> . . .
>
> Nobody ever called her after the orders were given. They might help minor things. I watched Sally. I watched her doctor.

[Klamath Reservation]

*648

668
777 shamans widened again as ordinary people ceased dreaming,
778 and shamans incorporated Dream Dance symbols and practices
756 into their rituals."[16]

While these nativistic movements were going on, the first steps
*648 were being taken to provide Christian training to replace the
*657 native faith which was being discredited. In 1872, Thomas
797 Pearne, an educated Indian from the Yakima reservation, had been appointed interpreter. During that year, until his resignation to return to Washington Territory in the following spring, he carried on missionary work among the Klamath, bringing
• [622] thirty-six into the church. Among them was Lileks, who at his death three years later was numbered among the "Praying Indians."[17]

The following year, the Reverend James Harer was appointed Commissary at Yainax, where for a brief period he preached at religious meetings which were well attended.[18] By 1876, the Agent at the Lower End and the farmer at Yainax still were holding forth. Employees had volunteered to advance half the salary for a missionary if the Methodist Missionary Society would match the amount; but nothing came of it.[19] Roork, the following year, took a number of the principal men and women, along with some scholars from the Indian School, to the annual conference of the Methodist Episcopal Church in Salem, probably in another appeal for a missionary.[20]

The flavor of those early meetings is preserved in one of the letters to Dave Hill, dictated in 1875 by Allen David.

> After we had had our talk at the Agency I sent word for all the people to come to my house to talk about these things, and see who would agree to listen to what Dave, Tecumseh and I had said, and who would get our hearts and who would not. I told them to come on Sunday the Lord's day and we would all the same as mammook [make, hold] church, we would make good hearts and the Lord would mammook close nanish [take good care of] us on his day. So some Yainax Inds.—Brown Mosenkosket and some Modocs, some Lake Inds., some Chiloquin's people and some of all the Inds. came. Chikaskane first spoke and said that at first he had a bad heart. That the chiefs first listened to the Agents and got their hearts and then tried to get the other Inds. to get the same hearts; that they had put him in the guard house which was right, and Mr. Dyar was also right for he was in the wrong and all the same as said to the Chiefs

*648 778 *657 797

> Make them better men and women." He was a Methodist preacher and was a big man. He had a loud voice and was a good singer. He was awfully strict. He didn't want the Indians to get into trouble. He said, "If you don't mind me, I will put you in jail or put a ball and chain on you." And he did. So the Indians behaved well, you know. I understood what he said, and it sounded good to me and after they interpreted his sermon in Klamath, the old Indians liked it too. Testimonies were then given. . . . The preacher read from the scriptures and made sermon. . . . He said, "I want people to come together and work together as one."[36]

*648 *657 793 756 177 178 The emergence of native preachers provides another illustration of the confrontation of native and American roles. From the Indian viewpoint, the role of shaman did not coincide with that of the American preacher, for in aboriginal times the shaman's duties had encompassed curative powers, and through sorcery and counter-sorcery he had come to wield quasipolitical influence as well. Now healing lay within the duties of the Agency physician, while political sway had passed progressively, first to the raid-and-trade leaders and latterly to the Agency chiefs.

*648 *657 793 • 622 537 177 178 On the other hand, points of resemblance existed between the traditional role of the chief and that of the preacher. The sermon, the most distinctive and formal exercise of the minister, as the Indian saw him, corresponded most closely with the exhortations to a better life given by chiefs to followers and by elders to the young. The correspondence of preaching with political authority was furthered by the circumstance that a number of Agents had assumed the responsibility of preaching to the Indians. Among those realizing the linkage in their actions were Dave Hill and, to a lesser extent, Lileks, Allen David, and Henry Blow. Jesse Kirk, soon to become a preacher, later applied that office to political ends.

*648 *657 776 177 178 In the Klamath view of the supernatural order, syncretism set in early, probably as the result of an Indian effort to reconcile native and Christian belief. The trickster-transformer figure of Gmukamps, known in myth by the epithets, "Earth-Maker" and "The One Above," became identified by some with God, although his trickster exploits led others to reject this. Within the first decade of reservation life, Christian dualism, seizing upon the first correspondence, became responsible for the coining of

*648 those Indians who were "ready, competent and willing" to re-
*657 ceive lands in severalty, to report such opposition as might be
423 raised, "and . . . endeavor to overcome it by pointing out the
advantages of individual ownership."[3]

A month later Emery reported on a council that he had called,
• [622] at which he and Captain Carpenter had explained the law. "The
[666] Indians," he continued, "were then permitted to council among themselves for an hour, when, by the request of the Chiefs and leading men, they were again called together, and requested to be given the privilege to vote—which was given—nearly all present voting in affirmative. The number present was estimated at 600." Later he held another council at Yainax "at which were over 200 Indians, nearly all of whom received favorably the proposition of the Government." At another passage he noted, "no leading Indian opposes the measure."[4] Over 800 names were enrolled for allotment, out of a total of 933.

By the provisions of the act as amended in 1891, each enrolled
[311] member was to receive a single allotment, comprising one-eighth of a section (80 acres) of farming land or double the amount of grazing land. Emery termed the Klamath a grazing reservation with a proportion of agricultural to pastoral lands of one to twenty-five; and accordingly requested that double allotments be issued and that all eligible members take turns at selecting the first allotment, repeating by rotation on the second tract. "This," he observed, " will distribute the good land *more equally* among the Indians." Matthews, terming the mountainous portions of the reservation worthless, advocated that after allotment these acres be held in common by the tribe.[5]

The actual allotment of land was delayed several years, pending settlement of a controversy over the external boundaries of the reservation and of the overlapping claims of the California and Oregon Land Company, successor to the Military Road tracts. The Indians grew somewhat restive under the delay, and Matthews found it necessary to warn that "should the Indians be persuaded to give up their surplus lands before they have made improvements upon their allotments I fear there would be much dissatisfaction among them."[6] Only in 1895 did Maj. Charles E. Worden, assisted by Jesse Kirk as interpreter, launch

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

No sooner had the party of nine pupils finally gotten under 648*
way than Applegate received a letter from the Commissioner 657*
calling attention to a letter sent him, apparently by Jesse Kirk 871
himself. In it, the writer accused Police Captain Joseph Kirk, a part-Modoc, and Judge Jack Palmer, a Lower End Klamath, of using their influence against sending children to nonreservation schools. "There are two parties here," wrote Applegate, "who [865]
oppose each other on nearly all propositions, the two leaders of which are Captain Joseph Kirk and Rev. Jesse Kirk, half brothers, and who are among our most advanced and able men." He promised to refer the matter to Gen. A. C. Hawley, a Special Agent then visiting Klamath.[15]

Ironically, Jesse Kirk's stand was soon reversed. Soon after he had deposited his sons at Carlisle, the elder boy, Clayton, in company with another pupil, Joseph Ball, ran away and was only recaptured in Pittsburgh. In Applegate's view, Joe Ball, an interbreed and a product of the public school in Klamath Falls, was the ringleader of the escapade and had led his more impressionable companion astray.[16] The senior Kirk thereupon sought to have both sons returned, and Applegate tried to put him off.[17] To Major Pratt at Carlisle he wrote ruefully:

> . . . I have been reconsidering the idea of sending you a class and even regret that I did send the class of nine, as things have turned out. It is hard to get pure bloods to go, and the pressure to get away from the reservation to our non-reservation schools is almost invariably from the mixed element. The Klamaths and Modocs are a determined lot and Rev. Jesse Kirk, son of a resolute old warchief, is no exception to the rule. A short time ago the principal champion of Carlisle he is now ready to move Heaven and Earth to secure the return of his boys since Clayton's escapade, and I wish they were all back."[18]

This action brought into confrontation an embattled Agent 648*
and the defiant leaders of the reservation. In Jesse Kirk the 657*
Indians has as leader a product of those very "civilizing" forces 622 •
upon which the government had rested sanguine hopes. The son 159
and namesake of one of the treaty signatories, we have encountered him previously as schoolboy and carpenter's apprentice, as interpreter and as ordained Methodist preacher. In 1886 a representative of the Indian Rights Association characterized him as "a superior man, in poor health and great poverty, . . .

C

3:Stern E-4,5 (1949-1957) 1965 NR 10 Klamath NR 10

[Klamath Reservation]

*648 working without salary or assistance of any kind, for the moral
*657 and religious improvement of his people. He has a great thirst
• 622 for knowledge, but has no books, not even a Bible, only some torn
159 fragments of an old one."[19] From Nickerson's time on he had served as judge in the Court of Indian Offenses, while he had likewise been in the forefront of several actions earlier detailed. Thus, in 1896 he was one of five men advocating that money received for pasture be distributed equally among tribal members and that the price for grazing be raised.[20]

Applegate, who had long known him, had gone out of his way to endorse Kirk's financial credit. That he tended to be somewhat slow in paying his debts is more than suggested by a partisan letter written late in the clash by one of Applegate's friends, formerly a trader at the Agency.[21] There is little question that the attention Kirk received magnified his own opinion of his status. In Washington, he gave as his title, "Delegate and Representative Agent of the Klamath Indians of Oregon," suggestive of the equality with the U.S. Indian Agent toward which he aspired. Indeed, ambition of this character, blunted by an administrative surrogacy, was one of the unacknowledged ingredients of the new spirit abroad on the reservation.

*648 On the Upper End, Henry Jackson, at the summit of his power,
*657 chafed under restraint. A former employer recalled him in the
571 time of his power,

159

> . . . riding day after day like a feudal lord accompanied by his buskined and bespurred henchmen, often white men among them, looking after his cattle on a thousand hills. Henry Jackson is generous and hospitable. No weary traveller is turned away from his mansion, no matter what his race may be, and of the many Indians who appeal to him for financial aid, few are refused. Especially are the people of his home tribe welcomed to his bounty, and when any of them come to Klamath from the Moatwas land on Pit River, his house is their home. He has been known to go to Bonanza, the nearest white Trading Post, and make his neighbors happy by calling for their accounts, amounting to hundreds of dollars, and settling them in full.[22]

Knott C. Egbert, superintendent of the Yainax school and the administrator in charge of the Upper End, saw Henry Jackson somewhat differently. Upon the pages of his reports the "feudal lord" appears as a man defiant of authority and addicted to drink.

Carrie: Male, Age 36

Background Data

156 Carrie is the model of a self-made, upwardly mobile, brash and back-slapping
*159 young American male. He is a tribal leader whose power is rooted in an amalgamation of various dissident elements, rather than in a large kin group, and a
[622] business man with numerous interests. He says, of himself, that "I have no occupation, as occupations go. I guess you might say I am a confidence man."

*159 Like the other subjects, Carrie was raised on a ranch by his parents. He is a high school graduate and a graduate of a junior college course in accounting.
[873] His work record suggests his ambition and his upward progression, for he started as a farm laborer, went to truck driving, then worked during World War II as
[464] a production machinist, completed his education, then worked for the Agency and, finally, was able to settle down to living off his several sources of income. He has never been out of the state except for short business trips. He spends most of his time on the reservation attending to tribal and his own business,
156 and participating in various voluntary and formal associations. More recently
*159 he has become active in politics on a local level and by some has been ear-marked as a "comer." His intellectual horizons are very wide, extending to a keen
[66] awareness of the difficulties faced by Dag Hammarskjold. His reputation is excellent and he is particularly esteemed by many Whites, although this esteem is
[626] not shared by all Klamath, which reflects only the factionalism of Klamath politics and, perhaps, the efforts of some to control a man who is too successful.

[184] Carrie has been married once and this marriage has lasted 15 years. He has six children and his family life, again, is precisely what might be expected of a successful young American. Carrie's entire style of life is entirely different from that of most other young Klamath men.

*159 Very little is known of Carrie's early life except that his background is rural Klamath and that his mother was a housewife and his father an indifferently and intermittantly employed laborer.

156 The writer never made much headway with understanding Carrie until the day he was brow-beaten into taking the Rorschach. Before this time he had been seen
124 only as an aggressive, back-slapping, competitive, and somewhat empty character. He had agreed to testing, but had managed to slip out of several appointments until one day when the entire complement of field workers descended on him during a visit, arguing and insisting that he had to set the example. Carrie was thus hung on his own petard, and when we walked into the testing room there was some question as to who was the most fearful of the consequences of this episode, Carrie or the examiner. Carrie was manifestly tense and fearful, but in a very short period of time relaxed and accepted the test situation. Rapport was excellent, and Carrie clearly defined the situation as one where he should discuss
156 his private concerns, motives, and sentiments. From sessions like this it became evident that Carrie's brash front consisted of a set of behaviors he saw as appropriate to his position. That is, the social Carrie was a well defined role. Behind this persona lay a genuine concern with the welfare of tribal members and their future, as well as strong personal aspirations, deep committments to family and community, and fears associated with his private feeling that he was not an adequate or relaxed "mixer." He stated, for example, that "I guess I just don't have the courage to get out, even among my own people. I'm not much of a talker and I guess you'd say I'm kind of backward. I really prefer to be alone by myself." Some of this apprehensiveness is associated

175 Alexander S. Taylor has the following passage in his "California
● 622 Farmer" of June 22, 1860: "Cumtukus, Lalacks, Schonches, and Tertupkark are names of chiefs among Klamath Lake Indians of the Oukskenah tribe. The big Klamath Lake is called Toakwa." Except the first, the above head-men were all identified in the Dictionary with the well-known names of Lelékash, Skóntchish (a Modoc chief) and Tatápkaksh. Cumtukni, who died about 1866, is mentioned by Stephen Powers as a great orator, prophet, and rain-maker.†

175 Whether the two incursions made upon the Klamath Lake people by
648 the Rogue River Indians of Tinné lineage, across the Cascade range, of
726 which detailed accounts were furnished in our Texts by Dave Hill, took place about 1855 or earlier I have not the means of ascertaining. The Lake tribe were not slow in inflicting vengeance upon the attacking party, for they crossed the mountain pass and fell upon the camps of their enemies, making sad havoc among them.

Frequent disputes and encounters occurred between the two chieftaincies and the *Shasti Indians* around Yreka, California; but the warlike qualities of the latter were often too strong for the aggressors, and the conflicts were not very bloody.† With the Pit River or Móatwash tribe the matter was different. They were not, like the Shasti, possessed of the warrior spirit, and therefore had to suffer terribly from the annual raids perpetrated upon them. In April and May the Klamath Lakes and Modocs would surround the camps, kill the men, and abduct the women and children to their homes, or sell them into slavery at the international bartering place at The Dalles. Some of these raids were provoked by horse-stealing, others by greed for gain and plunder, and the aggressors never suffered heavily thereby. When they began is not known, but the treaty of 1864
000 put an end to them. The recitals in the Texts, pages 19–27 and 54, 55,

---

* Overland Monthly, 1873, June number, page 540. His appearance had something fascinating for the Indians, and some are said to have traveled two hundred miles to consult him. His name appears to be Kúmᵉtakni="coming from a cave," or "living in a cave."

† One of these fights took place between the Shasti, Modoc, and Trinity River Indians for the possession of an obsidian quarry north of Shasta Butte, mentioned by B. B. Redding in American Naturalist, XIII, p. 668, et seq., and Archiv f. Anthropologie, XIV, p. 425.

he pays five, then I not may imprison (him), he having paid me. And (if) a chief beats

m'na snáwädsh, tsúi ni snä'kĕlua; gä'tak lakí gi hûk.
his wife, then I remove (him); no longer chief remains he.

NOTES.

[177] 58–62. The legal practices, regulations, and ordinances given here by a subchief of the Klamath Lake tribe are observed by all the chiefs; and are apparently fashioned after American models. The principle which seems to guide most of the judicial decisions of the chiefs, is given in one (59, 20. 21) of these regulations: "If a chief makes law like white people, that will be right."* This article is composed of three parts:

Part I. List of the chiefs acting as judges on the reservation in 1877.

Part II. Legal customs governing the Klamath Lake people.

Part III. Instances of application of these legal customs; amount of fines, terms of imprisonment, etc. These are the "*novellæ*" of Klamath legislation.

58, 1–3. P'lú, Lilu, and some other headmen mentioned here have signed the treaty of Oct. 14, 1864.

[563] [657] 58, 4. Móatuash. There are only two Pit River *families* living on the whole reservation.

58, 8. Tcháktot belongs to the Yahúskin tribe of Snake Indians. Cf. Ind. Aff. Report 1873, p. 324.

[193] 58, 10 etc. The future tense employed in these behests, regulations and defenses recalls the French future used in an impressive manner instead of the imperative: *tu ne tueras point, tu ne déroberas point.*

58, 10. shlí-uapk shash. The pronoun shash has here almost the force of a reciprocal pronoun, for the meaning of the sentence is: "do not shoot at people of your own tribe." The same is true of sas in palluápk sas, 58, 10; 56, 13 (twice); pálla shash, 61, 14.

[194] 58, 10. ksaggayuapkámsui is pronounced as one word, as the removal of the accent from the syllable -uápk demonstrates; and so in many of the following verbs standing in the future tense. For the sake of clearness, I have preferred to resolve these forms graphically into their component elements.

[192] [193] 58, 11. wátsam, etc. The possessive wátsam stands here instead of the instrumental case watsátka through attraction from wännikísham. Tchíkla here means to ride away on another's horse, the horse being missed by his owner.

---

* Dave Hill introduces himself in the first person as chief; but many of these decisions can be given by the headchief only, not by any of the subchiefs, to whose number Dave Hill belonged. The Modocs at Yáneks claim to observe these regulations; the Snake Indians do not.

*539 58, 15. shetcháktanuapk stands for the more common form: shitcháktanuapk.

622 58, 16. nánuktua shéshatuish m'na: "all what your husband has transferred to
692 your parents to obtain your hand"; m'na stands for hishuáksham. Cf. 61, 8.

193 192 59, 7. mish, *you, to you*, is often used in this article for málash, málsh, *ye, to ye*, in allocutions to two or more persons. This is a way of expressing what may be called the "inclusive plural of the second person". This mode of speaking is observed in m's lápuk, 59, 7; lápuk mish, 59, 7. In the same manner î stands for ât, 59, 8: î sissókuapk, if ye whip each other; also 60, 22.

59, 9. î mî stands for mish mî.

59, 17. hă k̲úi gí'uapk: if he should fail to do his duty; 59, 19. hă túdsh gí'uapk: if he does his duty well; nanuktuánta: in every respect.

59, 22. î'χaks mî: what you may win by betting on the horses engaged in the race.

60, 2. kä'lish is the objective case of kä'liak, kéliak, "not having", the simple form of which, without -ak, would be kä'li or kä'liu (kä'li hû).

583 60, 11. túma wátch gitk. The horses have, of course, to be transferred to the parents of the bride and not to any of the chiefs.

231 60, 12. wátch. The horses owned by the Klamath Lake and Modoc people are valued from 20 to 25 dollars each; they descend from the hardy, enduring race of Cayuse ponies, and were originally obtained by bartering commodities with the Columbia River Indians at the Dalles, Oregon.

192 193 60, 15. wátch spuni'-uapka; wátch refers to *one* horse only, for the verb spuni', to transfer, is used of one (living) object only; shäwána is: to give *many* objects. "Not even one horse your wife has to give to you, if she leaves you; but if you leave her, you must give her several."

177 595 60, 17. láp snawä'dshla. Polygamy was abolished by the headmen of the tribe shortly after the establishment of the reservation, and this ruling was one of the greatest benefits ever conferred upon that tribe by the progress of civilization. But those who had several wives then were not compelled to dismiss all but one, and so in 1877 two or three men were still polygamists. The irascible and excitable disposition of the Modoc and Klamath females must have produced many chin-music intermezzos with their husbands at the time when polygamy was predominant.

193 61, 3. K̲á-i mi'sh etc. In this paragraph, in: k̲i'tgik, káktak, hémkanktgik, gitkik, the terminal k contains the abbreviated gi, which joined to the foregoing nû, n means *I said*. The construction runs as follows: Hû'nk ni gî k̲á-i mish k̲i'tgi; nánuktuanta káktak gi pîla m's n hû'nk hémkanktki gi; nä'-ulakt gí'tki î snawä'dshash tchi'sh káktak gi pîl. K̲á-i etc.

61, 6. tchik. This particle does not mean *if*, but cannot be rendered *here* (and below) with a more appropriate word. It is identical with tchĕk, *then*. A subordinate clause is here expressed by a co-ordinate one. Cf. 61, 9. 10. 12. 62, 4.

192 193 61, 6. któktatska: "we clip their hair in every instance", is the distributive form of któtchka, któtska, occurring in 58, 16.

61, 9. Tsúi etc. This inverted sentence has to be construed as follows: Tsúi tchish násh bíshuaksh wutódshish snawä'dsh m'na pä'n hû'nk snúkp'la, tsúi nä'-ulĕkan etc.

[Klamath Reservation]

THREE

[P.45]

The Klamath Agency

THE TREATY BROUGHT TOGETHER TWO PEOPLES, INDIAN AND WHITE, 648* in a program of directed change and marked a termination of tribal autonomy. From records still available, it seems improbable that the treaty commissioners made any attempt to place before the Indians the weighted advantages and disadvantages of the step being urged upon them.[1] They had been directed to secure a treaty and they seem to have argued well its attractive features. Within the Indian councils, the individuals best [623] qualified to speak upon the matter were those who had been attracted to white ways and thus had become most conversant with them. The discussions, carried on through the medium of [191] Chinook jargon, contained much that was not included in the written treaty, but in the Indian view they were equally binding.

When the Indians passed under the governance of an Agent, 648* they gradually found that their commitments brought unanticipated consequences. 657* The new garment they had donned was another man's suit, not cut to their proportions, and if it was loose in some places, it pinched unexpectedly in others. The system of roles they were asked to assume was in many ways incommensurate with that they had known. They found themselves subjected to constrains that often seemed harsh and uncomprising and that were circumscribed by obscure administrative rulings which seemed to have little bearing upon their advancement.

Although there was some comfort in the knowledge that all were taking the step together, the new life yielded rewards to a somewhat different array of qualities and skills than had the old; and some persons surged forward while others lagged or held back. The relatively homogeneous society of native times, already somewhat diversified in the days of early contact, now

648* 657* 423 619

Indeed, for some time after the passage of the act, the details of membership had not been worked out. As late as 1892, the Assistant Commissioner was writing, "No final decision has been rendered on the question of the status of half-breeds or mixed-bloods, as regards their right to take lands and receive other benefits with the tribes with which they claim to belong."[19] By the time that allotment was well under way at Klamath, the matter had been resolved in their favor. While Indians not residing upon a reservation might receive an allotment upon the public domain, it became the practice to encourage them to take up land upon the reservation. A vigorous campaign was mounted to ensure that all who had legitimate claims should be allotted before the surplus lands were opened. In a characteristic letter, O. C. Appleton wrote one woman:

> I am of the opinion that you and the relatives you mention are all right. *Blood* is what we must depend upon to decide who has rights upon the reservation. If you have Klamath blood or Modoc blood in your veins you are entitled to lands upon the reservation and to have your children in school here.[20]

A policeman was dispatched to Yreka and other points in Northern California in search of persons "who have rights on the Klamath Indian Reservation."[21] Reservation residents were encouraged to invite eligible relatives to write to the Agent and to make application.

Candidates for admission to the tribal rolls were obliged to submit affidavits of their affiliation with enrolled members. Emery could write to Capt. J. W. Siemens of Klamath Falls:

> . . . as I understand it, your wife is a member of this tribe and she and your children are justly entitled to allottments [sic]. If you will furnish this Office with the full name of your wife, together with those of your children, I will instruct the clerk to place them on the census roll.[22]

This procedure was highly irregular. The evidence was customarily submitted to a tribal council for consideration.

648* 657* 423 619 623 •

One such council of "the people of Klamath Reservation" was called by Petet for the consideration of six named persons and others who might present themselves for admission. Of the six, four were admitted, in addition to Frank Riddle, the white husband of Winema of Modoc War fame.[23]

*648 *657 423 619 • 623 The qualifications argued by a council in 1908 included conditions of family relationship and tribal association. Of two applicants considered favorably only the circumstances of relationship was cited. "The council," ran the findings, "was of the opinion that both of these Indians are related to the Indians of this reservation, and are entitled to allotment and enrollment here."

In denying the application of another on behalf of her children, failure to associate was the main ground given: ". . . to the best of our knowledge and belief," the council stated, "as Amelia Skeen does not associate and affiliate with the Indians on the Klamath reservation, . . . her children are not entitled to enrollment and allotment. . . ." The claims of Amelia Skeen were later accepted when a number of tribal members traced out their relationship with her.[24]

Meanwhile, the Superintendent expressed his own opinion. Forwarding the statements of a council that had found two Indians entitled to membership, Wilson observed:

> Neither of these Indians have come forward and made any affidavits in their favor, setting forth their rights here, nor furnished any affidavits from other Indians that they are entitled, as I am informed in other Office letters is required by your Office.

He added that one of the Indians was already allotted on the Warm Springs Reservation.[25] On the other hand, he recommended allotment of the three children by a former wife of an Umpqua Indian now married to an enrolled member. The council refused to admit them, despite favorable affidavits of six local Indians. Wilson himself cited the regular school attendance of the children as a point in their favor. They were finally enrolled and allotted.[26]

A general reading of cases shows that the council was disposed to give greater weight to evidence of association than to relationship, and that the Superintendent tended to reverse the order of importance. In the official view, all Indians were to be allotted either on the reservation or on the public domain. O. C. Applegate, indeed, labored for a time under the impression that "Halfbreeds cannot hold allotment on the public domain," and he urged all eligible to take up land on the reservation.[27] Even when persons affiliated with tribal members had already secured

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

648*

allotments on the public domain, Applegate advocated that they 657*
relinquish them in favor of tracts upon the reservation.[28] 423

For tribal members, the enrollment of outsiders was often 619
objectionable; although opposition was less to their being [623] •
granted allotments upon the reservation than to admitting them to equal shares in the tribal funds. By the terms of the McLaughlin Agreement of 1901 settling boundary claims, over a half-million dollars had been entered to tribal credit, part of which then became available to tribal members in per capita payments. As Applegate wrote to one off-reservation member, "there are a good many who would like to see people who do not live on the Reservation cut off from all benefits of the Treaty."[29]

In 1903, Applegate had estimated that there were "about 185 nonresidents, a number of them allottees though not residing on the reservation—with them are about 80 children of school age, many of whom are attending white schools."[30]

Analysis of the annuity payments from trust shares sent out 648*
between November, 1907, and January, 1908, reveals interesting 657*
characteristics of the nonresident membership. Omitting shares 619
to 13 students (8 girls, 5 boys) at off-reservation schools, payments went to 6 married couples, in which both parties were enrolled members, and to 39 women and 14 men either single or married to nonenrolled spouses. In addition, shares were sent to these adults for a total of 51 children. Children's shares were sent to 4 married, enrolled couples, to 14 enrolled mothers, and to only 2 enrolled fathers. While other explanations are plausible, the figures are highly suggestive of a preponderance of off-reservation marriages between Indian women and white men.

From the point of view of geographical distribution, the off- 648*
reservation population is also of interest. The table below, which 657*
excludes scholars sent away to government schools, presents the 162
salient features:

CALIFORNIA		20
South	5	
North (including San Francisco)	15	
OREGON		88
Southern Coast	4	
Klamath Basin	66	

> his wife will be allotted on Klamath Marsh, some 50 miles away. 648*
> They are almost compelled to live a part of the year in each 657*
> place on account of putting up hay for their cattle.[40] 423

O. C. Applegate saw a supplementary relationship between 311
the allotted and tribal lands.

> There are a few localities on the Reservation [he stated] where industrious Indians may be able to make a living on 160 acres of land, especially after the land best calculated for farming is improved by irrigation; but the opening of the Reservation to settlement by White men upon the unallotted lands would make it hard for those Indians who live in the meadow districts by stockraising to make a living, as it would deprive them of the advantage of pasture on the tribal lands.[41]

Immediately following the passage of the Dawes Act, there 648*
were reports of heightened industry among the Indians, as they 657*
set about to build upon and improve their allotments. It must 423
be borne in mind that by the time the act was applied at Kla- [427]
math it had already been amended in 1891 and 1894, and soon
again in 1897 and 1900, to permit leasing under certain conditions.[42] Leasing of what was then tribal domain had been 648*
secured through Nickerson by Sykes Worden in 1882 and by 657*
Matt Obenchain in 1884. Before lands were finally allotted, E. 563
L. Applegate had permitted Dave Hill to make an informal 427
agreement with one white rancher, by which the latter cut and stacked hay on Hill's place and winterfed his cattle there, paying Hill for the hay.

Matthews, Applegate's successor, at first clashed with the system when he sought to impose an additional fifty cents per head fee for bringing the cattle on the reservation.[43] Soon, however, he was advocating that whites be permitted to come upon the reservation and cut hay on lands which Indians had enclosed, paying the Indians for the hay. Like his successors, he argued the help the Indians would derive from this revenue and the advantages of utilizing resources which would otherwise go to
waste.[44] Soon thereafter a group of stockmen proposed to him [464]
the leasing of the Klamath Marsh area, which he favored as affording employment to a number of Indians in putting up hay.[45]

At a council with "the representative Indians of this Reserva- [311]
tion," a vote was take to lease certain lands for grazing pur- [623]
poses.

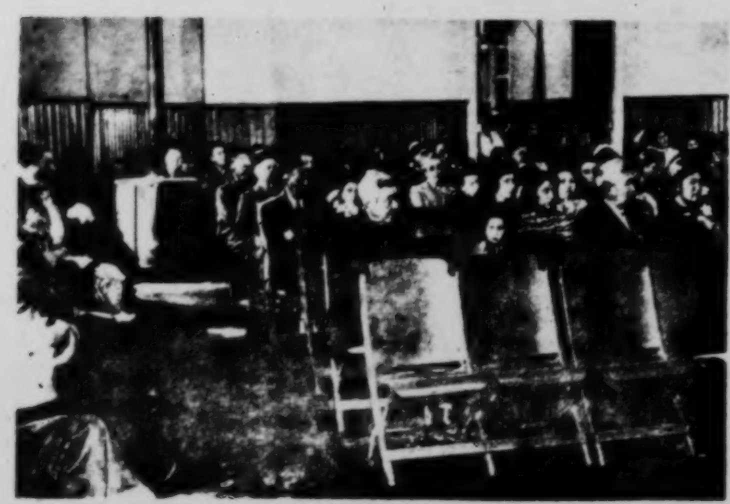
Meeting of the General Council in the latter days of the Tribe. Above, Boyd Jackson addresses the membership while Jesse Lee Kirk presides. Below, members of the "Crawford side." (Courtesy Klamath Information and Education Office.)



Comparison
with the record of white performances places the 648*
tribal picture in perspective. In Beatty, six out of seven white 657*
househeads were employed. A sample taken in 1950 including 464
almost every white household in Chiloquin showed that all the 162
men save those who were ill or retired were gainfully employed, 171
and that in thirty-seven per cent of the households wives or junior
members also held jobs.

By this token, the Klamath had come to occupy a marginal 648*
position as economic producers. That this had not always been 657*
true is shown by the record of those who in the early days of 464
Chiloquin had tried their hand at business; and several continued 433
to maintain themselves by ranching or business. The large majority of the men, however, were content to labor seasonally as unskilled farmhands. The undependability of some workers had generated an adverse reputation among potential employers for the Klamath as a whole. The industrious Klamath came to be viewed as exceptional.

Thus, even on their own reservation, the Klamath stood beneath the shadow of economic structures dominated by whites. This condition was, of course, true for the reservation as a unit; for distant interests dictated that it should be devoted to the production of lumber, beef, power, and to communications. Within the several communities the major enterprises were also controlled by whites. To be sure, there were checks upon the
ruthless exercise of economic power. Local awareness of inter- [623]
dependence, the intimate acquaintance developed in the daily life of a small community, and the knowledge that the tribal council controlled the fate of timber contracts upon which the community depended: all these served to temper purely eco-
nomic decisions. The exercise of a credit system by storekeepers [452]
in the face of lower prices in Klamath Falls, the good faith they expected of their customers, and the occasional need for hired hands by ranchers, were equally conducive to restraint.

Klamath families who chose to farm were often similar to their [241]
white counterparts in the concentration which they devoted to their farming; and they often exchanged labor or equipment with white neighbors. There were few successful farmers among
tribal members, perhaps no more than a dozen in all. By contrast, [233]
there were those in the countryside who chose to follow other time-honored values than industry, giving precedence to per-

[Klamath Reservation]

Within the
*648 reticulation of familial roles, the traditionally
*657 esteemed attributes had lost place. Age was no longer accorded
561 respect, for the wisdom of experience seemed irrelevant under
593 the new conditions, and in the environing society the emphasis
577 was upon youthful qualities. The premium upon industry as an
434 ideal for old and young alike had become submerged by the
178 golden flow of per capitas which rewarded equally the wastrel
177 and the unremitting toiler. Remarked one man wryly, "I can make more money raising Klamath than I can raising cattle."[3] Under these changes, paternal authority had declined sharply. "Why should I listen to you?" demanded one adolescent son of his father. "I've got just as much money saved up [in a compulsory trust fund] as you have!"

*648 By contrast, the status of the mother within the household
*657 had been enhanced. Housekeeping and child rearing constituted
562 concrete activities that possessed a high measure of continuity
434 with the past, of a type normally respected in her counterpart
177 in white society. Access to her own per capitas had raised the
178 economic standing of a wife to a par with that of her husband.
• [623] The relative changes in local roles, together with the passage of woman's suffrage in the nation at large, had become reflected in the increasing prominence of women in the debates of the General Council.

*648 The major point of contrast between white and tribal house-
*657 holds on the reservation was the relatively greater fluidity among
563 the Klamath, as reflected in the record of sequent marriages,
58 the figures for common-law unions, and the broken families. In this respect, Beatty did not differ significantly from Chiloquin. Interethnic marriages—those between a Klamath and a nontribal partner—were more stable than those contracted between tribal members.

*648 Household composition makes it clear that the traditional
*657 valuation of kin had by no means been entirely relinquished.
592 In a number of instances, Klamath, particularly women, had
587 taken in the children of collateral kin. Remarriage produced
[178] composite families, in which the couple reared not only their own children but the offspring of previous unions of one or both partners.

*648 Consequently, Klamath households exhibited a diversity of
*657 form, size, and composition, frequently characterized as well by
592
593

*648 formal occasions in the General Council in a demonstration of
*657 decorative oratory; and there it might also serve a speaker to
177 shut out a heckler who knew only English. In such a session, a
178 member in the audience, although fluent in English, might de-
191 mand the services of an interpreter for the purpose of underscoring his Indian status. Similar functions were served when Klamath was spoken in the presence of whites. The ability to shift from one language to another, or from one behavioral modality to another, was akin to the behavior which Polgar has described in the "biculturation" of Fox children.[21]

*648 In the latter days of the reservation, there were few occasions
*657 when tribal members came together for traditional events, and
177 the sessions of the General Council constituted the main remain-
178 ing tribal gathering. Such individuals as our old friend mentioned
• 623 above had their closest and most continuous relations with chil-
619 dren and grandchildren, who by no means shared their outlook.
571 On the occasional visits of their aged peers, these elders exchanged memories and expressed common concerns which were as much the product of the parallel roles they then performed in their respective families as of the time in which they had grown up.

*648 Such accommodation as there has been to American culture has
*657 not only changed through time with alterations in the state of
177 Klamath and American cultures; but at any single time, Klamath
178 have drawn diversely from what was available. Thus, the small
184 number of families in Chiloquin that have attained a measure of social acceptance by whites of middle or high status have done so by manifesting the appropriate life style. In so doing, unless they are able deftly to shift role-orientations, being now Klamath, now white, they have had to sacrifice close relations with their kin. "Some of my family I never see any more," remarked one such woman, "and I don't want to see them." They often forbade their children to play with undesirable tribal children. Insistence upon household neatness, fastidious emphasis upon personal cleanliness, punctuality, and adherence to self-standards usually accompanied these attitudes.

Inframodal behavior among Klamath in turn has by no means been random in form, but has approximated already established patterns in the dominant culture; often combining them in ways

The Tribal Government

* 648 FOR NEARLY FIFTY YEARS FOLLOWING ALLOTMENT, THE KLAMATH
* 657 tribal government constituted the formal instrument for arriving
619 at common objectives, the ultimate guardian against encroachments
646 upon Klamath treaty rights, and the corporate symbol of
Indian status. Its form and operations sensitively reflected the interplay of continued efforts by the Bureau of Indian Affairs to mold Indian life and the Indian reaction to those efforts. They gave evidence as well of the diversity of opinion which presently arose among tribal members as to the future in which they wished to live.[1]

[423] Central to the importance of the tribal government was the
considerable wealth over which it presided: at the close of allotment, tribal property amounted to over 860,000 acres of land, roughly three-fourths of it in prime timber, owned corporately by some 1,150 members. By contrast, the Umatilla reservation, in the northeast section of the state, in 1908 possessed fewer than 2,000 acres in unallotted tribal lands for a comparable (893) membership.

* 648 The principal body of the tribal organization was the General
* 657 Council, a successor to those sessions convened on occasion in
646 times past to discuss matters of common concern. Such *ad hoc*
• 623 councils had formerly been found useful to the federal government
for mustering a representative Indian body; but with the development of an executive body, the General Council also emerged as a more regular entity. Like its predecessors, it was
[562] originally composed of all the men of the Tribe; after the passage
[177] of the Nineteenth Amendment, the women were added to
their number.

*648 Since the highly rationalized bureaucracy of the government
*657 found the occasional councils too unwieldly to handle the in-

526 seed beater to propel ball; carrying ball in racket or stick permitted; picking up and batting ball permitted; goal a stake or post, hole, circle on ground, rock, stakes or posts, arch, circular hoop, row of stakes. Ball race: single ball a hoop, stick, stone; carrying ball permitted; goal a line on ground, a stake, hole; home man catches ball on stick. Hoop-and-pole game; quoits.--Hoop and pole: unwrapped hoop, netted hoop, short stick as hoop; pole tossed underarm, both arms, thrust into rolling hoop; pole under hoop or stick scores; closest wins point(s); win by elimination. Quoits: target a stick lying loose; target a stone. Spear or dart throwing; snow snake; ring and pin.--Spear or dart throwing: specially made dart, feathered; target buried hoop, previously thrown dart. Snow snake: women play; arrow bounced. Ring and pin: ring a rabbit skull, pine cone, brush ball, piece of cane with 1 hole. Many-stick game; 524 hand game; objects laid down.--Many-stick: 3-choice guess. Hand game: cane "bone"; finger loops on "bones." Objects laid down: women play; 1 of each pair wrapped; unwrapped guessed; objects covered with mat, hide. Dice games.--Disk dice: animal shell, half walnut shells, wooden tablets, wooden hemispheres for dice; stone counters; dice thrown on hide, mat, into hopper basket, on hard ground, plank. Bone dice: women play. Stick dice. Jacks, tops, buzzer.--Jacks of foot bones of animal. Top of pepperwood nut; twirled with string. Buzzer, edge of disk notched; snake rattles used as buzzer. Games wholly absent.--Catching dart in ring. Many-stick game of take away, guess remainder. Guessing marks on ground. Scoring circuit for dice.

Social Dances

535 Circle dance; Bear dance.--Circle dance: performed at fall pine-nut harvest, to make piñons grow, produce rain, bring deer; performed at mourning ceremony; at funeral; center post dry cottonwood tree, pine-nut tree; dance occasion for public mourning. Bear dance: held in brush corral; musical rasp, gourd rattle; dance in couples; whip to make dance; chief urges dancers with stick; stop dance at fall; rub fallen person with rasp; cover fallen person with blanket; held at mourning ceremony. Dances wholly lacking.--"South" dance or Exhibition dance. Crazy dance.

POLITICAL ORGANIZATION

622 Chief paid to settle disputes. Chief owns all eagles, eyries; pays to have eagles released; buys them from captors. Assistant cult chief. Chief equated to birds. Totem for assistant 624 chief (screech owl, hawk). Boss for rabbit drives; irrigating boss. Crier has totem bird. Messenger has rod as symbol of office; builds

[165-B]

624 fire at ceremony; totem. Female dance managers. Fire tender appointed by crier. Judge. Moieties
615 lacking; lineages lacking, except possibly among
613 AE.

WAR

72 Leader has totem animal, bird. Painting of contestants according to totem. Men taken prisoners in war; enslaved. Compensation for slain amounts to more than victim's or victim's mother's bride price. Compensation paid before dance of settlement; at end of dance.

CYCLE OF LIFE

Birth

844 Pit, small hole dug in preparation for childbirth. Animal medicine to aid childbirth. Navel cord cut with bone, cane knife. Cord buried in ashes. Cord thrown in bush, stream. Mother baked in pit. Mother uses drinking tube. Father lies down, after birth of child. Father uses drinking tube. Milk teeth thrown toward moon; backward; over pregnant woman; over house.
845 Twins liked; one killed, only if of opposite
847 sex, incest theory. Abortion accomplished by taking animal, vegetable medicines, massaging with hot stones. Infanticide practiced on all illegitimate, deformed children, twins; infant killed by sitting upon, drowning, abandoning.

Puberty and Menstrual Observances

881 Girls' puberty rites.--Private seclusion: held for group of related, unrelated girls. Held outside in ceremonial enclosure. Girl sits, lies on curtained couch, bed platform, heated pit. Girl sits, lies face down. Girl's blankets given attendant(s). Girl abstains from food completely. Meals limited to once a day; girl eats after others. All liquids taboo. 4-day increase in food taboos after first period. Food taboos enforced limited number of subsequent periods. Food taboos not enforced after first period. Girl chews deer-fat pellets. Girl fed in pit. Does own cooking. Uses bone drinking tube. No sleeping. Girl avoids all people. No visitors. Scratcher yew wedge, horn. Girl scratches head with fingers. Delousing by self. Mud plastered on hair. Girl makes flower garlands. All join girl in running. Girl travels at night. Girl uses blanket, rabbit-skin blanket, mat wool head covering. Girl wears woodpecker scalp, shell, brush, flower crown headband; brush visor. Hair hangs over face. Girl stands at wall covered. Hair worn done up; braided with goat's wool. Hair dressed by self. Bangs cut at end of ceremony. Face painted white; all colors; sun painted on fore-

622 2669. Occasionally. Kl: Stands by his own
600 house and talks; tells people what to do. MM: Refers to head chief (see note 2619).

2670. WT: See note 2654. MM: Refers to head chief and village headmen. See note 2619.

2675. MM: Refers to head chief and village headmen (see note 2619).

2676, 2678. MM: Refers to head chief.

2677. MM: Refers to village headmen.

2679. WT: A "protector." MM: Refers to head chief and local headmen. NF: A relative. NS: Chief's assistant.

2680. MV: "A whole group of his boys go with him."

Female chiefs; criers; clowns; messengers; fire tender; singers.--

2687. SW: Chief's wife may also talk for chief, morning and evening, occasionally, if she has good voice.

2689. SW: In time of raids, chief's wife "if she is spirited woman, dashes out and cuts bowstrings of enemy raiders." This was done, "especially if [neighboring] Kammatwa group [see note 282] were raiding SW." Denied for all other groups.

2707. SW: 2-3 criers.

2708. Mo, SE: Only when there is "news" to announce.

2712. MV: Orders fuel gathered for dances.

2716. WM: Mainly by boys who are called, when clowning, "Coyote."

2717. At: 2 clowns; WT, WM: several, but not formal office (see note 2716). MF: 5; NF, MV: 1 per village ("rancheria").

2718. NF: Clown (pepe) stands on top of assembly house, watching for people to return from hunting, other expeditions; when they come back, he shouts to notify villagers.

2722. NF: Also stands on top of assembly house and calls to visitors to enter; attends to fire in assembly house.

2726. WT: 1-3 messengers. WM: 3-5. Referred to as yemèrikait. MM: 6-7.

2727. MV: Youths.

2734. At: Messenger who carries knotted string around when there is a "big war," paid; otherwise not paid.

2738. Often tells guests where to halt outside village, in order that they may dress for participation in dance to be given in village.

[515] 2746. Kl: Man who wants to sweat builds fire
[624] and tends to it in sweat house; no special official.

2752. See also element 2722, NF.

2759. NF: 2-4 singers.

2760. MM: For sweat "dances," have 1 singer; for Bear dance, 2; for girl's puberty dance, ca. 6.

2763. MV: To serve as "common singer."

2765. MM: For women's songs, use women singers.

175 of the English language, and fully comprehended the civil war 648 under which our unfortunate country is now suffering, and he thought, or professed to think, that if all the Indians unite they could kill off all the whites and retake the country." He and another chief, known as Skookum John—a man suspected of instigating trouble in 1856—were reputed to counsel war continuously.[38]

• [624] In power, the redoubtable hostile had few peers. As of about 1859, he was war chief of both Klamath and Modoc, in which capacity he divested a Modoc chief of his elk-skin cuirasses for refusing to join an expedition against the Pit River tribes. Indeed, [622] Henry Blow later averred that Captain George had superseded Lileks as chief for a time, during which he had entered into a treaty—with whom is uncertain, though possibly with Rosborough or Steele in Northern California—and had been promised pay as head chief.[39]

In its own time, the government moved to contain the threat posed by his ascendancy. The necessary action embraced both military and civil commitments, and the contentions engendered lie vividly upon the pages of the day.

Outstanding among the individuals involved were members of the numerous Applegate clan, whose destinies were to be intertwined with the Klamath for almost a half-century. They were led by the doughty Lindsay Applegate, who had crossed the plains with his brothers, Jesse and Charles, and their families in the great migration of 1843. A staunch Union man and a Republican, he then resided at Ashland Mills, across the Cascades from the Klamath country. Of his extensive family, mention should be made of four of his sons, Elisha, who held the office of surveyor general, Ivan, Lucien, and Oliver. As a member of the state legislature, Lindsay Applegate had been instrumental in securing passage of the joint resolution calling for the establishment of a military post in the Klamath country. During the Rogue River War, he had served with distinction as captain of a company of mounted volunteers. His second-in-command on that occasion had been J. W. Perit Huntington, married to a daughter of brother Charles, and a man with whom he shared the conviction that the Indians must be dealt with firmly but justly.[40]

> *657 10 acres of land. I am commanded, to go among the Indians
> *648 with my farmer and direct them in plowing, sowing, planting,
> 241 etc, and see that they have the necessary tools and know how to
> 177 use them.

Vegetables, he thought, could be sold at Fort Klamath and Linkville; grain would always find a market at some price.[16] In order to heighten the incentives, Emery reported,

> I have found it necessary. . .to make temporary divisions of lands suited to Agriculture.
>
> During the Spring and Summer months, I laid off, assisted by Indian boys, about 50 farms, chaining boundary lines; the Indians greatly desired the work to be continued, each Indian agreed to fence and cultivate a portion of the land assigned to him.
>
> The plots laid off ranging from 30 to 120 acres—according to treaty stipulations.[17]

[625] The next year, however, he had recourse to the Indian police. "During the present Spring," he reported, "they have assisted in enforcing the general order that all able-bodied Indians will be required to do some work in Agriculture. I owe much to the police for the marked advance made this year in the lines of agriculture."[18] By these methods he soon had three quarters of the available adults helping, nearly every family seeding from 2 to 20 acres.[19] The following year he reported that "nine tenths of the Indians have been induced to engage in the work of agriculture,"[20] but the year after, with a record 2,400 acres sown, he was complaining about the "unprecedented heat"—and was moving on to greener pastures.[21] When he returned for another tour in 1896-97, however, he resumed the same program.

[829] Lindsay Applegate had remarked, some thirty years earlier, that the Indians "look upon the whites as superior beings. . . ."[22] It must have been difficult, even with the best will, to maintain that estimate in the face of administrative obstinacy of this order.

Stock Raising

*657 231 177 Meanwhile, with the discovery that the upper valley of the Sprague provided satisfactory condition for winter range, stock raising had gradually come to the fore. In prereservation days, horses had constituted an important form of wealth, and cattle were now accepted into the pecuniary system. By 1879, Agent

*657 services in the court. In 1878, support took the form of a suit of
*648 clothes for Henry Blow and three years later of a request to
622 provide him with a weekly ration of flour and beef. However, as Agent Roork then found, the issue could not be authorized even for one who "spends a good deal of time looking after the interests of his people, when he can ill afford it."[58]

*657 At this juncture a temporary solution was found. In 1878,
*648 drawing upon successful experience on other reservations, the
• 625 Bureau authorized the employment of a small force of Indian police. In the first days of the reservation, Lindsay Applegate claimed to have organized such a force, one that served without pay, with power to perform military duties as well to arrest malefactors; and though it was later discontinued, Dyar had subsequently proposed a similar body.[59]

The number now settled upon was six, at Roork's request, "in order to have one for every tribe."[60] O. C. Applegate, then clerk at the Agency, was appointed chief of police. The first men in the service, with one or two exceptions, were not particularly distinguished; and neither of the officers of the force is now recalled as having been a leader. Within a year or two, however after many fluctuations in numbers, both Henry Blow and Dave Hill had been appointed as officers. The subsequent reduction of the force from fifteen to three for budgetary reasons dictated from Washington was distressing.

> As the Police Force was too small to be of much account [wrote Nickerson], the Indians felt under less restraint & were now dificult [sic] to manage. The chiefs considered that the Government had taken their authority to rule and administer punishment out of their hands, and did not consider themselves responsible for good order. They are now anxious to be allowed to administer law as before the Police force was organized. Unless this force can be put upon a permanent basis, and consist of from 8 to 10 members with a yearly allowance of rations I am of the opinion that it would be best to grant them their request. In that case it would be desirable to keep 2 or 3 men in the service to aid in arresting offenders & to take charge of all prisoners. . . . The Agent would of course be the judge in all trials.

[643] He suggested that, following the plan he had put into operation
before the force was reduced, the head chief be named captain
[622] and the second chief, lieutenant, while two other chiefs be
appointed sergeants of the force.

appointed sergeants of the force. "This," he added, "would give 657*
these chiefs something to do & a support. They would be in- 648*
terested in watching their people and in keeping good order."[81] 625 •
The move also would counter the opposition to the police among 622
the chiefs themselves, led by Allen David.

Once the force was authorized, Nickerson became aware of 657*
its peculiar jurisdictional limitations. When he sent the police 648*

Joseph Emery

U. S. Indian Agent

This pass authorized an Indian police officer to leave the reservation for three months while on duty in the Linkville area. 1886.

to Linkville to round up Indians absent without passes and to pursue Indian horse thieves, he was informed that they had no power to make arrests off the reservation: the United States authorities must be notified to act. Yet when the turbulent Spokane Ike shot Skookum Doctor and fled, to be captured by the Indian police near Prineville, the U.S. District Attorney declined jurisdiction, saying that it lay either with the state courts or
with the tribe. Accordingly, "the chiefs in council, acting as a 657*
grand jury, accused Spokane Ike of the crime of murder. A court 648*
was held, the Indian Agent presiding. A jury, of twelve of the 622
most intelligent Indians of the tribe was selected. . . ." Both by 292
the testimony of a witness and by his own statement the defend- 695
ant was found guilty of murder in the first degree. Upon further 000

[Klamath Reservation]

*657 *648 696 Upon further instructions from Washington, he was publicly hanged. Struck by the solemnity of the proceedings, Nickerson reported, "Fully half the people of the nation was [sic] present. The order and behavior were admirable. The arrangements and execution of the plans were in the highest degree creditable to the Indians having charge of the same."[62]

*657 *648 434 625 The following year, a parsimonious Congress made necessary a reduction in pay. "They are all poor men," exclaimed Nickerson, "and can not support their families on one ration and 5 dollars per month. Young men have not the experience needed & do not command the respect of the tribe & nation." He searched about for alternatives to help them eke out an existence.[63] Opportunely, there arrived a copy of *Rules Governing the Court of Indian Offenses* which, pronounced Nickerson, would "work a radical change in the government of this people."

*657 *648 622 625 692 He suggested that Blow and Hill "loyal, intelligent, and progressive Christian men" be appointed as judges, to serve concurrently as policemen. To them he proposed to add another, Jesse Kirk, a pupil at the Agency school and a carpenter's apprentice, to be both a member of the force and a judge. Of the three, he wrote, "David Hill will make the most competent man for presiding Judge. If necessary I will nominate him for Captain and Blowe [sic] for Lieutenant of Police. Otherwise I would prefer that they remain as they [are] as Blowe is head chief of the nation."[64]

The triple role of Hill and Blow made it difficult to delimit their judicial functions. Wrote Nickerson in 1886:

> I was obliged to be quite positive and firm in the exercise of my authority as an agent, before they came to understand that they were not independent in the performance of their duties as Judges. It also required some time to convince them that they were not to become prosecutors of supposed criminals, and that they were not to form and express an opinion in advance of hearing all the testimony, and then not until they had taken time to deliberate together. I am satisfied that we have no better material for judges than those that are now acting in that capacity, and yet they are strongly opinionated, and are making but slow progress in the right direction.[65]

*657 *648 625 The police force, meanwhile, had been distributed so that four

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

served at the Agency and three at Yainax, with an additional 657*
policeman at each school to bring in new scholars, recapture 648*
runaways, and oversee the prisoners. Dave Hill presided over 625
the police building at the Agency, with quarters for his family and cells for the prisoners.[66] On occasion, policemen accompanied labor parties off the reservation and worked alongside them for pay in addition to their salaries; and they served as escort to the freighting runs to Ashland and Jacksonville and the late winter expeditions to the Lost River fisheries. They were a considerable power in maintaining order, even apprehending deserters from Fort Klamath; and Emery used them effectively in imposing his agricultural policy upon his wards.

The police, however, at times found themselves at odds with 657*
the very laws and regulations they were employed to uphold. 648*
Among those involved in the illicit traffic in reservation timber, 625
as already described, were several members of the police, to- 622
gether with other Agency employees, and three chiefs: Monchn- 578
kasgitk, Allen David, and David Hill. The latter, in 1888, learned at first hand the impersonal character of authority when, disturbed by some ruling concerning his son, he approached the clerk who was acting as Agent in the absence of Emery, in what that worthy described as "an angry, insulting, insolent, defiant, threatening, warlike and rebellious manner." He was arrested—resisting the while—and locked in the guardhouse; and the clerk requested that he be kept in solitary confinement for one week, or until the clerk had returned from Yainax.[67]

Emery apparently conceived that too much power was con- 657*
centrated in a few hands, for later that year he reorganized the 648*
court, with the observation that "in the very nature of things the 692
Judge should not be the *Sheriff*." His appointments were drawn 622
from a new generation of leaders: William Crain, William Craw- [693]
ford, and Benjamin Butler.

> They are intelligent men [he observed], [and] can read and write and speak accurately the English language. One of them is a graduate of the Chemawa Indian School, another educated at the Klamath School and the third one is the best informed man
> on the reservation. 657*
>
> Court is held once a quarter at Yainax—40 miles from here 648*
> and twice a quarter at the Agency. 692

[Klamath Reservation]

> *657 A large number of Indian offences come before this Court for
> *648 trial, consisting mainly of family quarrels, disputes about the
> 692 ownership of property and acts of licentiousness.[68]

With the accidental death of Crain, Jesse Kirk was appointed in his stead.[69]

Thus, within a generation the administration had replaced the popular leaders with those among them who were Agency employees, and in turn had supplanted them with the products of its schools. Legally constituted authority was administered through the Agency, at first through a customary court of chiefs and later
[625] through a Court of Indian Offenses. The Indian police, who took their orders directly from the Agent, were satisfactory to him as the instrument of his hand. Not so the courts, which tended instead to constitute seats of power alternative to that of the Agent. The result was to be that Agents tended to strengthen the police while circumscribing the functions of the courts.

*657 Meanwhile, beyond the administrative structure thrived an
*648 unacknowledged informal leadership, based as in former days
622 upon wealth and accomplishment. Unlike that of the Agency, it
571 was not restricted in position nor limited narrowly in function. This was a leadership in which employees could also participate; and it was presently to see such diverse men as the old chiefs, Monchnkasgitk, Henry Blow, and Allen David, make cause with Dave Hill, and he with young Jesse Kirk, and he in turn with Jeff Riddle, son of Frank Riddle and Winema, the heroine of the Modoc War, and with Henry Jackson, the wealthy exslave. In this sense at least E. L. Applegate was right when he observed:

> [179] The tribal distinction among the Indians on this Reservation is
> [178] practically disregarded by the Indians, and the ancient preju-
> [101] dices are rapidly fading away. The general name of Klamath
> People seems to be superseding all other distinctions.[70]

hay for his own [cattle]."[50] The practice of contract grazing on 648*
tribal land was also continued, though with scanty returns.[51] 657*

Leasing brought regulatory headaches. Trespass could less 563
easily be controlled. Some stockmen who rented land from the 427
Indians turned in more cattle than the pasture could sustain, [311]
while keeping the fences in such disrepair that the cattle drifted
onto the unfenced lands of neighboring allotments.[52] In consequence, [625] •
the meager band of reservation police had to be diverted
to the task of enforcing the grazing rules. The Superintendent [675]
was obliged to see that all contracts were made through
his office. When disputes arose, he was often forced to intervene
and even at times to threaten a lawsuit in order to collect on
behalf of an Indian. Meanwhile, some lessees were themselves
fencing the lands in lieu of part of the lease, so that many Indians
were no longer compelled to put in any work in order to receive
returns from their property.[53] By 1903, even unfenced allotments
were being leased. In that year payments from leases [434]
comprised thirty per cent of estimated personal income, providing
$8,220 distributed among some ninety to one hundred allottees.[54]

By 1908, a large number of Indians were entrusted with the 648*
"experiment" of managing their own allotments, including the 657*
hiring of necessary labor and leasing their tracts for a term not 423
to exceed the legal limit. The narrow discretion afforded, however, 427
is seen from the provision that "the leases that you are to
draw this year will be drawn for you in this office," although the
Indian was to collect his own rental. Fifty-eight Indians were
empowered at once to handle their allotments and apparently
those of their children as well, upon these cautious terms.[55]

Leasing had scarcely gotten under way when a movement for 648*
the sale of lands began. The act had originally envisaged a trust 657*
period of twenty-five years, to be extended at the discretion of 423
the President, during which time the United States retained title to 432
the land. For many individuals, allotted just prior to 1910, that
period—although subsequently extended—was to expire in 1935.
However, amendments provided for sale under proper supervision
when circumstances required, and by 1912 five sales had
been consummated, all involving heirship cases.[56]

When an allottee died, his land passed to his heirs—by the 648*
657*
423
428

His son, Ralph, is depicted as a ne'er-do-well, a ruffian, and a 648*
drunkard. (He later died while awaiting trial for cattle theft.) 657*
His indulgent father, it was said, was convinced that Ralph had 571
a weak heart, and would pay his fine rather than see him in jail. 159
There are manifest in Henry Jackson as in Jesse Kirk some of the same values evinced by the early Klamath: kin-loyalty honored above abstract ethical mandates, merit gauged by generosity, and the dissimulation of hostility are three among them.

As Egbert saw it, "The Jackson outfit are so used to lawlessness and successful concealment afterward that they have gotten to thinking that they have a right to almost anything and then hire witnesses to lie them out of the scrapes. Then too they are all afraid of the czar, Ralph." Alluding to the murder of the Modoc shaman which Henry Jackson had been suspected of instigating, he added, "I will also be afraid of him if they are allowed to go on till they think they can duplicate the killing of Dr. George in the Caucasian race."[23]

The Jacksons in turn were linked to Jeff Riddle, whose daughter Ralph had married. There were, indeed, limits beyond which Riddle would not go. His father had known Applegate well from Modoc War days on, and when stranded on the lyceum tour had relied upon Applegate's generosity for funds. Even after Applegate had resigned his position, Riddle continued to correspond intimately with him.[24] When Ralph beat his wife, Jeff Riddle preferred charges against him.[25] These circumstances aside, Jeff Riddle exemplifies one of the less-partisan leaders who stood somewhat aside from attacks on Applegate but was nonetheless restive under administrative restraint. Later the author of *The Indian History of the Modoc War* (1914), he was first and
foremost a patriot of his people. With others, he focused his bit- 648*
terness against the Indian police, who as "Agency men" consti- 657*
tuted the immediate embodiment of administrative sanctions. 625 •
Such critics were quick to ferret out and to report derelictions [159]
on the part of the police lieutenant[26] and to oppose other members of the force. Of one such man, Egbert wrote:

> Jeff and others are bitter against Ike Mose as policeman mainly because, I think, he will arrest one of the big men as quickly as one of the smaller prize, so called. Jeff has made his brag that Ike will not be on the force July 4th. For this reason, as well

> *648 *657 • 625 as for the reason that he is the most effective man we have, I think he should be retained. The whiskey element has made some virilent [sic] attempts to raise its head lately, and scruples not to tell lies."[27]

*648 *657 571 The leading men among the "Agency Indians" are, unfortunately, less clearly delineated. Among them were Joseph Kirk, born of a Modoc mother, and half-brother of Jesse Kirk; Harrison Brown, the son of Monchnkasgitk; and Jack Palmer, son of another treaty signatory. The fact that dissidents as well as the faithful numbered many among the more acculturated, and that both sides included Agency employees demonstrates clearly that the battle was not fought on progressive-conservative alignments.

Central to this dispute was the personality of Oliver Applegate. Scion of a pioneer family, he was the son of the first Agent, and, as he states, the first employee of the Agency. For years, his destiny and that of his brothers was intertwined with that of the reservation. He had served in a number of positions and had sought the office of Agent at least twice before he secured it;[28] his brother, Ivan, had served as an early Commissary at Yainax; and Elisha, another brother, had been Agent for about a year.

From the early days of the reservation, Oliver Applegate had known the Indians intimately, had gained some familiarity with their language and customs, and had formed many friendships. By the turn of the century, however, the fortunes of life had borne the people he knew away from the attractive naïveté of their early state, when they had willingly depended upon him. Now there was impatience at being denied equality. Many of the acquaintances of his youth were gone, and the rising generation thought him—the man who was moved by the flag upon Dave Hill's grave on Decoration Day, or who perennially entered pleas for support of the remaining treaty chiefs—somewhat heavy-handed and insensitive. He, the man that all whites were convinced "knew Indians," could not take the measure of the younger leaders. The title by which he had been known to their elders, *blaiwas laqe*, "Eagle Chief," acquired an ironic ring.

Among the informal counselors to whom both Klamath and whites turned in common problems, the Applegates were prominent. Yet, perhaps inevitably their own property interests and their wide and intimate relationships with the white community eventually confronted them with a grave conflict of interests.

> I might call attention to the fact that at the last election in 648*
> Klamath County a trust patented Indian was elected Justice of 657*
> the Peace, and a fee patented Indian was elected Constable of 641
> the Beatty District on the Klamath reservation. It seems a rather [693]
> unusual situation when a trust patented Indian can preside as a judge over a court and pass sentence on other people and at the same time question the same court's jurisdiction over him.'

Nor was this all. Federally regulated land on the reservation [625] •
was off bounds for officers of the law from city, county, and state; yet in 1947 there were only two special Indian officers and two deputies to enforce law and order over almost one million acres of reservation. It was physically impossible for them to follow up all cases, and consequently they could not deal effectively with the misdemeanors of delinquents or with truancy from the county schools.'

In the 1920's, soon after the opening of the reservation, towns 648*
such as Chiloquin were faced with the influx of a mobile popu- 657*
lation in which the unmarried "timber beast" was prominent. 621
Roistering and violence occasionally assumed major proportions, 625
and law enforcement broke down at first. Within the first three 563
years after its incorporation in 1926, Chiloquin witnessed no 674
less than twelve appointments to the position of town marshal. At times the Superintendent, concerned over the effect upon the Indians, intervened, delivering an ultimatum or sending in his officers to restore order. His jurisdiction, in turn, was also limited: When Arnold brought pressure to bear upon Chiloquin authorities to close down gambling in the pool halls and card rooms, the gamblers merely shifted their operation to Bly, just over the eastern boundary of the reservation, and the same procedure had to be repeated by state and local officials there.

The interdependence of law enforcement on state lands and 648*
reservation was emphasized during the depression. In 1931, when 657*
logging on the reservation—and with it tribal income—had been 641
temporarily reduced by Washington, a tribal leader, Wade 625
Crawford, succeeded in securing a congressional cut in the [651]
administrative budget of the Agency, which from about 1924 had been supported out of tribal revenue. Since the budgetary allocation for law enforcement then became inadequate, the federal officers left, until there remained only a constable and an

*648
*657
641
• 625
Indian officer, both at Beatty. Thereupon, Chiloquin's marshal and his deputy also resigned, asserting that enforcement under those conditions was too difficult—and too dangerous, to boot. The county, which had already barred tribal members from the county jail, now took the position that, short of a government request, its courts would try no more Indian cases. Crawford [692] countered with a proposal that the Court of Indian Offenses be reinstituted, while other leaders fell back upon that time-honored solution, the United States cavalry. Several months passed before funds were found to restore the reservation staff to normal strength.[4]

*648
*657
641
571
Within the interlocking jurisdictions of the reservation and the reservation community, Klamath came to play out the role of citizen as a voter, a taxpayer, and the object of legal control. In small towns such as Chiloquin and Sprague River, relationships were primary in character, dominated by face-to-face relationships. Within the special environment of the reservation, with the vast potential of its unexploited resources, something of a western frontier tradition was preserved, with emphasis placed upon individualism and a high premium set upon voluntaristic action in concerting effort.

*648
*657
621
563
These conditions were nowhere better evident than in Beatty. In this little community, with fewer than one hundred fifty members, leadership was furnished by a few individuals and action was highly informal. Perhaps the most influential person was a white storekeeper, a resident in the community for almost four decades, who had on occasion donated land and cash for worthy causes, who presided over a credit system, and who was much respected by the older tribal members. Among the latter, a leading spirit was the widow of his brother-in-law, who could be counted upon to act with him. His store was a frequent gathering place and the debating ground of the "hot stove league," where tribal politicians from the Upper End were often to be found. Another local leader was a young white, married to a tribal member, who farmed along the Sprague and in his spare time was a vigorous preacher in the Assembly of God Church.

Indians from other reservations, also married to Klamath, provided specialized leadership. One was prominent in the affairs of

000 For the recency of separation of the Modoc, see Gatschet (1890), Pt. 1, pp. 13, 14, n.13, 1.

5. See Sapir, reprinted in Mandelbaum (1951), pp. 169-78.

K
M [114] [161]
6. Mooney (1928), p. 18, gives a value for the Klamath of 800 and for the Modoc, 400 persons. Kroeber (1925), p. 320, sets the combined figure at 2,000 and estimates that the Klamath have always numbered more than twice the Modoc population. Spier (1930), p. 5, reaches total figures in agreement with Kroeber. Kroeber (1939), pp. 136-38, reverts to Mooney's values in estimating tribal densities.

7. For the latter, chiefly Barrett (1910), Coville (1897, 1904), Curtin (1912), Curtis (1924), Dorsey (1901), Gatschet (1890), Kroeber (1925), Powers (1877), Ray (1963), and Spier (1930), the last two being the most important sources, respectively, for Modoc and Klamath.

8. Anastasio (1955). The changing societal constellations each directed toward a common task also resemble the "structural poses" described by Gearing (1962), for the eighteenth-century Cherokee, with the difference that the social groups entering into the constellations among the Klamath and Modoc are, by comparison, far more diffuse and less well defined.

9. Spier (1930), p. 13, site 6.

10. See Spier (1930), p. 15, site 23. The settlement size follows Spier.

11. As the Klamath pungently express it, "They even divide up a flea." Barker (1963), pp. 162-63.

K [648] [625]
12. An Agent once requested waiver of the stipulation that Indian police must stand five feet eight inches in height, since few Klamath men could qualify.

13. Dorsey (1901), p. 21.

14. Quoted in Pearsall (1950), pp. 348 ff. For details of wokas preparation, see Coville (1904).

15. Spencer (1956), pp. 77 ff. From time to time, I heard much the same speech directed by this woman to the boy, aged twelve. As Spencer remarks, at no time did his immediate actions give occasion for her harangue. She was, however, much concerned over some of his associates.

K
M [594]
16. The term "natal family" is employed as a more graceful alternative to the conventional "family of orientation," to denote the nuclear unit into which the individual is born and within which he is reared. For similar reasons, I have preferred the term "marital family" to denote the "family of procreation," a similar entity seen from the vantage of the married partners who stand at its head. See Murdock (1949), p. 13, for a discussion of the original terms.

*539 683 [551] [756] **64, 1.** Tetĕmádshish or Aunt Susie is one of the numerous female "doctors", who eke out a scanty living from some patients of the Klamath Lake tribe. She received the above name for having been a washerwoman to the soldiers stationed at Fort Klamath, and the nickname Wúya-ak was bestowed on her on account of her predilection for small sucker fish.

64, 2. sümtsálχa. The means employed by her to discover that Dr. John had cast upon the patient a spell of a deadly character, were the singing or recital of tamánuash songs, and the *dreams* which she had on that subject. Her tamánuash songs had *seen* those of the accused conjurer. See **65, 9.** The great majority of the tribe still believes in the possibility of witchcraft.

64, 7. The two sentences contained in this line anticipate the result of the whole trial, and the popular verdict. The proper place for them would be after **65, 15.**

64, 9. Tuá ni etc. The defense made by Dr. John in his own case is not an unable one, nor is it devoid of oratorical powers. But if the arguments were delivered in the order as given by Dave Hill, they ought to have followed each other in a more logical order to attain their full effect.

64, 10. wák lish etc. The logical connection existing between this sentence and the foregoing has to be supplied by: "why should he have been my personal enemy?"

[192] **64, 10, 11, 13 etc.** î, ik stands here for ăt (*ye*); because, when the headchief is addressed in council, all the others are addressed also. Lóli stands for lóla î. The trial took place on Williamson River.

64, 13. kúkamtchish. The distributive form is used here instead of the absolute verbal k'mû'tchish, because old age comes on *gradually, by degrees.*

64, 16. tchî ínsh instead of tchî nish; the language likes juxtaposition of two short equal vowels, even when a metathesis is required.

65, 8. Kátak etc. Aunt Susie's opinion, given just after Púkish's death and some time *before* the trial, did not fail to have a striking effect on the superstitious judges and tribe, for her arguments perfectly agree with the national ideas. But to us the arguments seem so weak, that no conviction seems justified, if not based on other evidence.

65, 9. nä'nsak etc. "Your defense does not disprove any of the points advanced against you."

[192] **65, 11.** K'mukámtsam nä'-ulaks: "the old customs of the people."

[124] **65, 16.** The second account of this tamánuash-case was obtained a few weeks after the trial; Dr. John was present at the agency buildings at the time of the dictation, furnishing the facts to my informant.

[697] **66, 4.** ká-ishnank etc. This underground jail was in such an unhealthy condition that Dr. John could not have lived in it through the tenth part of his long term of imprisonment.

[625] **66, 5.** Tchikéskni and Skélag, names of two watchmen (i-álhish); the chiefs appoint watchmen from time to time. Skélag is "the young weasel" and Tchikéskni "man living at Tchikési camping-place". They were armed with pistols to foil any attempt at escape.

[192] **66, 10.** nä'dshek for nä'dsh ak: "the only one". Compare nádshiak, **60, 21**; waítak, **56, 7.** and *Notes.*

[192] [193] **66, 12.** shishi'tilatk. The past participle often stands for forms of periphrastic conjugation: shishítilatko gi, they *were* carrying in their dress. Cf. illólatko, **55, 20.**

1: Spier E-4,5 (1925-1926) 1930
(ca. 1860-1900) NR10 Klamath NR10

556

wealthy individuals. In approximate frequency of mention are slaves, horses, beads—and not always dentalium—food, archers' equipment, furs and hides, especially elk hides, Plains type garments, armor, large houses, buffalo skins, canoes. It is just as interesting to observe what things were not mentioned as valuable, or so to a lesser degree: baskets, nets, mortars, etc. In a word, articles of value in foreign commerce, articles of dress and adornment, of war, ritual, and sustenance, have value; domestic utensils have not. Some of the phrases describing wealthy men are illuminating. A war leader is chosen in part for his riches: he would own five quivers (five is the pattern number); he goes into battle with a quiver under each arm and one on his back. If his bowstring is cut he has another. A rich man has fur blankets, coyote and wolf pelts.

Dentalium shell beads do not function as money here as on the lower Klamath river. They are strung in fathom or half-fathom lengths, but neither length of string nor size of shell is standardized. The longer individual shells are more valuable but no one is known to haggle over the precise length as Yurok and their neighbors do. 436

MARRIAGE

A marriage payment is a social obligation. It is not a negotiated transaction as with the Yurok, Hupa, and Karok, for example, where indeed the social status of the family is measured in exact accord to the sum paid for the bride. Here failure to pay, which can be only a confession of inability, leads only to a lowering in social esteem. It is consonant with this that the bride is in no sense a chattel; she may leave her husband at will, and she certainly cannot be disposed of as a possession. Bride purchase is as inapplicable a term as can be found for the Klamath practice. In the interchange of presents which follows marriage the advantage lies most frequently with the husband's family. Payment constitutes an obligation, a seal of respectability. This is the well-nigh universal situation in North America if payments enter at all; it is a far cry from the commercial, contractual bride purchase of Africa, for example. The peculiarity of the Klamath is that failure to pay constitutes a social stigma. This is clearly explicable as a function of their geographic position, lying between the tribes to the west, with their clear-cut monetary evaluations of social relations, and the tribes of the Great Basin to the east, utterly devoid of any such sentiments.

583
[171]*

[626] •
[177]

581 Probably one-third of all Klamath women have
[848] borne at least one child out of wedlock. At the same time, there is considerable
out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177] style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
[177] extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, *de facto* groupings
rather than *de jure*. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594] tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
industrious and to the most delinquent. Controls over the expenditure of
434 children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

Susan: Female, Age 24

Background Data

156 Unlike Slim, Susan is not so well liked or respected. The occasion for this is
*159 specific, an unsanctioned pregnancy during her last year in high school and a
[848] more recent marriage to an entirely disreputable Mexican from Utah. This community
evaluation is accentuated because of the very high respect in which her
[382] own family is held. Everyone expected better of Susan.

•[626] Susan has worked as a dishwasher in several cafeterias, both on and off the
reservation, and moved to Utah so as to take a practical nursing course. She
*159 found this training uncongenial, met and married her husband, and they returned
[464] to the reservation when his small business failed. Susan is a high school graduate.

[874] Susan's mode of selecting a husband parallels that of her mother, who met her
husband while hospitalized in New Mexico. Her father by birth is an Apache
*159 Indian, and by cultural affiliation a southwestern United States Spanish-American.
593 Without doubt, he is the most autocratic, stern, demanding, rigid adult male on
the reservation. Although a married woman with children of her own, Susan must
ask her father's permission to use the telephone or to walk downtown. Her mother
was Klamath and very well respected for her stable family life and for her active
participation in many community activities. Susan was extremely close to her
mother until her unexpected death several years ago. They were known as an inseparable
pair and her mother never went out of the house without her. The
mother's death was, perhaps, the major cause of Susan's failure to complete her
nurse's training. Susan's illegitimate pregnancy in high school was a considerable
shock to her mother and is, with her marriage, a continuing source of strain
[155] with her father. Susan evidently feels that her behavior was a contributing
cause for her mother's death. She made a death-bed promise to her mother that
she would not be a loose girl and that she would marry and stay married to one
man. It was shortly thereafter that she married and returned to the reservation
to live with her father. There is much strain within this household, derived
from the relations between father and son-in-law, and from Susan's unsuccessful
efforts to serve two masters, for along with her marital relationship she evidently
[626] was trying to act as a replacement for her deceased mother's role. At the
same time her conduct has alienated her from the church, from family friends,
and from the community.

*159 The contact with Susan was made via her father, who told her that she should
cooperate. Her father's motivation in this was not, as may be supposed, the conviction
[124] that she needed testing because something was wrong with her, but involved
[123] a more general sentiment. He felt somewhat honored to have an "educated
man" visit his house and that such a contact was a good experience for his children.
[593] Susan accepted this like an obedient, dutiful daughter. She came readily,
with no indication of unwillingness, and relations with her were quite good,
perhaps because of the strains of her marginal position and her need to talk
with someone.

*159 Susan seemed an apathetic person whose feelings were dulled. If anything, her
reactions were those of an over-trained, too obedient child. She was not very
157 responsive or active, and would seldom talk except to answer a direct question.
Then she would, frequently with evident pain and anxiety, describe her feelings
and situations tersely and haltingly. Susan clearly wants more than her life
now gives her, but cannot define her present conflicts or see her way clear to

Nell: Female, Age 33

Background Data

In contrast to Sparrow, much of Nell's behavior is disparaged and negatively 159*
sanctioned by the community, while she too must be located at the lower end of [156]
the status hierarchy. Nell got her first job when she was 18, and for the [464]
last five years she has been working steadily as a clerk in the Agency. She
is a high school graduate and has 2½ years of business school training. Except [874]
for being away at school and a short period of residence with one of her husbands in Oklahoma, she has lived all of her life on the reservation.

Nell was raised by her own parents on their ranch and is the second eldest of
nine children. Her earliest memories are of being fearful of domestic animals
and of preferring to be by herself, playing with her dolls. She seldom played
with her siblings or with other children, and her interest in dolls and making
and dressing paper dolls continued through her first marriage in her early
twenties. She felt that her mother always blamed her or the other girls for
everything, while her father favored his daughters. All of the children were [871]
sent away to boarding school, and most of their childhood was spent away from
home. By the age of 12, when home, Nell was busy with housework, cooking, baking, [857]
and caring for her younger siblings. In this large nuclear family there was an
extensive division of labor, with each assigned his or her specific tasks. Her [593]
parents never left their children with "sitters" or relatives. Their "caretaking"
activities are, perhaps, among the most consistent and extensive in the area,
with the exception of the boarding school. Nell received little direct instruction from her mother, and her closest adult woman companion was her grandmother. [868]
Nell knows none of the Klamath language. Both her mother and her father were [191]
disturbed because Nell always wanted to be off by herself. When she was in
boarding school her parents visited her once or twice yearly, but they never wrote
her. Nell preferred her father, and when she grew up she felt that her mother
was not the kind of person she had thought she was. Nell feels that this may be
due to her own behavior. She received no direct sex training, and was 18 before [864]
she discovered the significance of her menses. Her first sexual experience was
at 8, when she was molested by a cousin.

Nell has always preferred to play with boys rather than with girls. Today she [626]•
is socially isolated at her office, where none of the other women speak to her. [156]
She is equally isolated from her family, who rejected her and threw her out of
their house when she was 20, at which time she was pregnant by her first husband,
who had deserted her when he discovered her pregnancy. She has been married and [586]
divorced three times and has maintained a regular liaison with at least five
other men. She will go directly from one such liaison to another, with never [156]
more than a few days between men, and on several occasions some overlap. Occasionally one of her ex-husbands or ex-lovers returns to live with her and attempts [588]
to take up with her again. She has borne eight children, has had two miscarriages,
and at least one abortion. She cannot tolerate not having a man in the house
(it is her house maintained at her expense). Several of her children are technically illegitimate and the paternity of at least one is in doubt. It is this 59*
sexual laxity which particularly brings down the ire of the community upon her. 56

Nell thinks of herself as an unfriendly person who would rather be left alone,
particularly by other women. She always waits until someone else makes the first
advance. It was therefore surprising to have her show up one day and request [124]
testing and advice. She was in trouble and she was convinced something was
wrong with her. The "presenting problem" was an unbearable load of shame, guilt,

Carrie: Male, Age 36

Background Data

156 Carrie is the model of a self-made, upwardly mobile, brash and back-slapping
*159 young American male. He is a tribal leader whose power is rooted in an amalgama-
tion of various dissident elements, rather than in a large kin group, and a
[622] business man with numerous interests. He says, of himself, that "I have no
occupation, as occupations go. I guess you might say I am a confidence man."

*159 Like the other subjects, Carrie was raised on a ranch by his parents. He is a
high school graduate and a graduate of a junior college course in accounting.
[873] His work record suggests his ambition and his upward progression, for he started
as a farm laborer, went to truck driving, then worked during World War II as
[464] a production machinist, completed his education, then worked for the Agency and,
finally, was able to settle down to living off his several sources of income.
He has never been out of the state except for short business trips. He spends
most of his time on the reservation attending to tribal and his own business,
156 and participating in various voluntary and formal associations. More recently
*159 he has become active in politics on a local level and by some has been ear-marked
as a "comer." His intellectual horizons are very wide, extending to a keen
[666] awareness of the difficulties faced by Dag Hammarskjold. His reputation is ex-
cellent and he is particularly esteemed by many Whites, although this esteem is
622 not shared by all Klamath, which reflects only the factionalism of Klamath politics
and, perhaps, the efforts of some to control a man who is too successful.

[184] Carrie has been married once and this marriage has lasted 15 years. He has six
children and his family life, again, is precisely what might be expected of a
successful young American. Carrie's entire style of life is entirely different
from that of most other young Klamath men.

*159 Very little is known of Carrie's early life except that his background is rural
Klamath and that his mother was a housewife and his father an indifferently and
intermittantly employed laborer.

156 The writer never made much headway with understanding Carrie until the day he
was brow-beaten into taking the Rorschach. Before this time he had been seen
124 only as an aggressive, back-slapping, competitive, and somewhat empty character.
He had agreed to testing, but had managed to slip out of several appointments
until one day when the entire complement of field workers descended on him during
a visit, arguing and insisting that he had to set the example. Carrie was thus
hung on his own petard, and when we walked into the testing room there was some
question as to who was the most fearful of the consequences of this episode,
Carrie or the examiner. Carrie was manifestly tense and fearful, but in a very
short period of time relaxed and accepted the test situation. Rapport was ex-
cellent, and Carrie clearly defined the situation as one where he should discuss
156 his private concerns, motives, and sentiments. From sessions like this it be-
came evident that Carrie's brash front consisted of a set of behaviors he saw
as appropriate to his position. That is, the social Carrie was a well defined
role. Behind this persona lay a genuine concern with the welfare of tribal
members and their future, as well as strong personal aspirations, deep committ-
ments to family and community, and fears associated with his private feeling
that he was not an adequate or relaxed "mixer." He stated, for example, that
"I guess I just don't have the courage to get out, even among my own people.
I'm not much of a talker and I guess you'd say I'm kind of backward. I really
prefer to be alone by myself." Some of this apprehensiveness is associated

727 535 2917. Kl: Men and women dancers in 2 separate single files; circle fire, men circling it clockwise, women counterclockwise. Women dance on inside, near fire, men on outside. Stamp left foot continually. As men come down to fire, hand women dancers scalps, each on small hand pole. Dancers sing; also have singers who stand by fire. No rattles used. Dance thus for 5 nights sometimes; each night dance stops about midnight.

000 2921. Mo: Center pole has several scalps on it. At: Pole 5 ft. tall. NF: Scalp at top of pole.

[648] 2922. WM: "Learned to tie heart on top of pole from Kl."

2923. Mo: Woman leader of dance carries single scalp on small hand pole.

2940. Such as elkhide tunic, rod armor; carry bow and arrows, and shield if such is used.

727 783 627 Purification of killers; wounded.--This section relates in the main to persons who have engaged in intratribal murders rather than to warriors returning from open combats. The distinction between the taboos imposed on killers in open warfare and individuals who have secretly killed in a feud should have been more specifically inquired about, and separate entries made for the purification practices followed in each instance. Unfortunately this was not done and the field data do not allow insertion of separate entries for more than 5 or 6 of the groups covered. As a general rule, warriors seemed to have engaged in few purificatory practices; whereas for SW, SE, and other groups feud-murderers observed many of the taboos listed in this section. NF taboos which follow relate to person who has taken scalp in intertribal war. Such person is deemed witai (crazy) after he has taken scalp; must be purified before he can rejoin family.

2941. Kl: No ceremonialism connected with observance, however. Klamath Marsh men swim in lake.

2951. At: 2-3. WM: 4-5 days.

2955. Kl: Fish also taboo.

Peace Negotiations

000 Compensation for slain; dance of settlement.--

2958. SW: No compensation for slain, but compensation for captives. See note 2873, SW. AE: No settlement for intertribal killings in war; "just keep on owing each other a war (AE owe Paiute a war now; the Paiute came over and killed a man, years ago)." It is modern custom to settle for intertribal wars; Mo did it, under Captain Jack. MM: For intertribal wars, as with Washo, neither side will take payment for those killed. "Just fight it out; when good and ready, MM chief may send messenger man over to Washo; then they'd make friends with them."

[192]
[193]

68, 13. gé'hlaptchapka. The verb gelápka means to step on, to mount, ascend; with 'h infixed, to mount upon something by using one's hands; ge'hláptcha is to perform this while on the way, while going or travelling; gé'hlaptchapka, to perform this at a distance from other people and unseen by them. Doctor John escaped, aided by his son, in the midnight hour.

68, 14. m'na únakam gatpĕnótash. Gatpĕnóta is a derivative of gátp'na with a durative signification, the suffix -óta pointing to an action performed while another is going on. "His son having arrived close by, while he was imprisoned."

68, 16. shnû'ntatka, verbal intentional of shnû'nta, the suffix -tka being sometimes substituted for the usual -tki, -tki gíug.

PUNISHMENT OF MANSLAUGHTER THROUGH WITCHCRAFT.

to (his) lodge,	and		cremated (him)	the people.

NOTES.

68, 1 etc. This is a pretty good illustration of the method of doctoring by suction adopted in similar tamánnash cases. Persons sent out to call for the conjurer do not enter his cabin, but loudly halloo outside till he appears; in this instance he is supposed to sing his medicine songs amidst the solitary wilds of the mountain slopes.

[192] [177] **68, 1.** mū'ntch-gī'tk. This temporal adverb places the mode of punishment described by the informant among the *ancient* customs of the people. Compared to what is stated here, the trial of Doctor John shows a material modification in the dealings with suspected conjurers, attributable to the influence of the white population.

[192] [193] **68, 1. 10.** salχíta is always used in a passive signification, "to be afflicted with the tamánnash spell or bewitching power", which conjurers can send out at will.

68, 1. 2. The words inclosed in quotation marks *anticipate* all that follows up to 68, 10.

68, 2. 8. a-i. This particle has the signification: "undeniably, evidently".

[754] **68, 5.** shû'ta hû'nk. The "working" of a conjurer on a patient's body consists in rubbing, pressing, magnetizing, in blowing on it, and in pouring water over the face or other parts. [753] Sucking out the object which caused the disease is of course the principal operation called for to effect a cure.

68, 5. mû'ns; it is not stated whether this hánshish was a frog, a worm, a small stick, or any such thing; this is immaterial, for the Indian strictly believes that the article was removed from the patient's body and that it caused the disease.

[192] **68, 6.** hántsantking and 68, 8: shúkpaltakiug stand for hántchantki gíug and shukpalítki gíug; cf. shû'kpĕli.

68, 6. hántchipka properly means: "he sucks towards himself"; husatchipgápĕle [192] "he throws up again to himself"; viz. into his mouth, so as to be able to take it out [193] with his hands.

68, 7. lútatkish is the conjurer's assistant. His office is to repeat his tunes or speeches before those present in the lodge, to expound or explain his sayings, to start songs and tunes in his stead, and to perform such manipulations as mentioned here.

68, 8. k'lä'ksh, contracted from k'läkápkash, the dead, the deceased; k'lekápkash telshámpka, to be on the point of death.

[192] **68, 8.** tché-ulχa: he rises from his seat on the ground, or on a blanket near the patient's couch, for the purpose of leaving.

[756] **69, 1.** hushtsóχa. The killing of a doctor or doctress by the relatives of the patient who died under his or her treatment was nothing unusual in the Columbia Basin until quite recently. In some tribes the third failure in curing brought certain death on the conjurer, especially when he had received his reward in advance.

in importance to fish. Summer is also the time of travel and trade, 221
taking people as far as the Dalles where they may elect to spend the
winter. Winters are exceptionally severe at this altitude (4000 feet), [132]
with deep snow and lakes, marshes, and even streams solidly frozen.
Movement is stopped and unless a winter residence has been chosen [133]
which gives some possibility of fishing, starvation may be faced before 221
spring. These winter sites are in sheltered, sunny spots on running
streams or at springs warm enough to prevent ice from forming. The 361
families return in the fall, rebuild the earth-lodges from the remains [226]
of the previous year's structure, and are all snugly housed by mid-December.
The only permanent settlements are the winter villages.
The summer residences are shifting, and while reoccupied from year
to year, there is no feeling that particular camping localities belong
to certain groups. The summer camps are rather indiscriminate aggregations [628] •
of any Klamath, but the winter locations are so fixed of habit
as to give a measure of political separatism to the several localities.

The case of Tom Lang's family is typical. Their permanent winter home is at iu'laloŋx, a large village on the west side of Link river at the foot of Klamath lake, hence Tom is considered one of the southern lake people, iu''laloŋkni generically. His family is accustomed to move for the spring fishing to dïtk!aks, Barclay spring, or to Modoc point, both on the east side of the lake, where they erect temporary lodges. Crossing the lake to dë'ktcoŋks they leave their canoes and travel overland to woksa'lks on the north shore of Wokas marsh. Here Tom was born in July. When the berry and wokas harvest is ended they retrace their steps and take canoe to Algoma to pick wild plums, berries, etc. From there they drift back to their winter home.

The towns for the most part lie along Williamson river, on the
southern side of Klamath marsh, and along the eastern shore of Klamath
lake. As these are winter settlements, the open lake is avoided,
and occupied only where warm springs outweigh its disadvantages.
They cluster along Williamson river whose sheltered valley is distinctly [133]
warmer than the lake front a few miles distant and where the
running stream contains fish most of the year. [132]

The towns are not isolated, compact groups of houses, but stretch 361
along the banks for half a mile or more. In fact, the settlements on
Williamson river below the Sprague river junction form a practically 342
continuous string of houses for five or six miles, the house pits being,
in many spots, crowded close together. Informants insisted that
many of these were occupied at the same time. When we consider
that these earth-lodges may have housed several families, there is
strong suggestion of a considerable population.

[TEXT CONTINUED ON PAGE 13]

721 [619] [567] scale expeditions were undertaken only after the slave traffic was established on an extensive scale. On one occasion at least all the chiefs were at a dance preparatory to going to war: this implies that all the tribelets were engaged. All the tribelets joined similarly in a raid for revenge against the Upland Takelma. It is said that the Klamath marsh division (ă'ukckni), by far the largest group, always extended the invitation for war, but I doubt that this is literally so. It is true that they led in aggressions just prior to reservation days, but this seems because of the initiative of their chief Lɛle'ks, the most prominent ever known, who was singularly interested in the slave trade for his personal advantage.

726 628 Internecine warfare is probably as significant as that with foreigners, for quarrels and blood feuds are quite common. Feuds exist between the several subdivisions, not within them, evincing a solidarity which but rarely extends to the tribe. Thus the du'kwakni of the mouth of Williamson river are known to have taken action against members of each of the four other divisions, even the gu'mbötkni of Pelican bay with whom they are closely linked. There are cases of reciprocated action by each of the five against the others indiscriminately. Yet Pat Kane stated that the lesser divisions avoided conflict with the ă'ukckni. Yet there is the case of his own people, du'kwakni, fighting with an ă'ukckni settlement. Nancy Phillips said it was true that she knew of no cases involving gu'mbötkni or iu" laloŋkni (southern lake people) with ă'ukckni, but this does not mean they would not fight. I think it hardly likely that the others are awed by the numbers of the ă'ukckni, for the feuds are essentially between groups of relatives alone. Yet others besides relatives might be induced to join.

721 628 A characteristic circumstance initiating a feud is the murder of a man residing with a wife of another tribelet. Ten or twenty of his male relatives take canoe and demand the delivery of the murderer or satisfaction from his relatives in the form of women, slaves, beads, dentalia, etc. The parley (ndĕ'na) is held from a safe distance at the top of their voices. Instead of acceding, the offenders may offer fight. But an effort is usually made to reach an agreement by offering payment. They may forestall retaliation by dispatching as a go-between (gaḳö'ḳwa) a relative of the offended group who is paid for his trouble, a canoe, a shirt, net, skin armor, or a woman's dress. If they have neither women nor money to offer, they give nets, weapons, anything, even to the last things they have. If no amicable adjustment can be reached they resort to fight. Even though the score be evened

by the death of several on each side, the feud continues until payment 726
is made. Continued feuds prove disastrous, for retaliation is carried 628 ●
out with all the intensity and destructiveness of a foreign war. Villages are attacked at dawn, houses and property destroyed, women and children carried away into slavery.

A chief may intervene; so I was told, though I doubt it. Chiefs do 728
accompany parleying parties and other men may echo their words. 622
Beyond that there seems to be nothing to their position but personal prestige which has been enhanced by developments since reservation days. Lɛle'ks and his successors among the ă'ukekni seem to have made much of their position. Pat's father and Tc!i'wi, both du'kwakni, killed a iu"lalonɛ man at stŏ'kmate, Eagle Point. They were taken to Klamath marsh and each beaten five times at the order of this chief. This was in pre-reservation days, or at least prior to the establishment of the agency in 1864 (?). Nevertheless this is not aboriginal, but, [177]
according to Nancy Phillips, these "laws" were brought by her cousin from the north.

The group that owes recompense, having lost fewer men, goes to 728
the other offering payment to even the score. The value of a man's life is not a fixed item, as it is for the lower Klamath river tribes; this despite the similarity of marriage payment and the slur on children not born of a purchased mother. My informants professed ignorance of what should be paid, yet it can hardly be doubted that recompense accorded with a man's wealth and prestige.

Children who are captured are kept; settling the score does not mean that they are restored, though this may well be only in case they have been sold. Their fate depends on their captors, who may elect to rear them as their own children. More commonly they are miserably treated, made to sleep with the dogs, fetch water, etc., and beaten if
they are lazy. They are as quickly sold at Warm Springs and the [437]
Dalles as are foreign captives. With the latter at least there is an advantage in immediately disposing of them, that they do not grow up to carry back to their own people precise knowledge of the habits and topography of the Klamath world.

Kŏ'kdiŋks of du'kwa was a chief (lŏ'ki) in warfare. He would tell his tribes- 159
men to get ready to fight with the iu"laloŋkni, for instance. He was always 701
in the forefront of battle. When a youth he went out to seek power by bathing
and wandering through the mountains at night. His mother had told him that 721
long before those of iu"lalonɛ had slain his father, Lɛ"l'.wis, a du'kwa shaman accused of poisoning one of them. He wanted to become a warrior to have

Modoc NS17

[Klamath Reservation]

to say nothing of captured women from Shasta, the Achumawi K M
and Atsugewi of the Pit River region, Paiute, and the tribes 621
beyond the Cascades. Among the Modoc, the villages of the band 582
called *gumbatwas* are said to be composite in membership, including 563
Modoc, Klamath, Pit River, and Shasta; and those of the
Upland Klamath consist of Klamath with some Modoc and
Paiute elements.[17]

Allegiance with the village may be partial. If an attack is to K
be launched, war leaders can find recruits only among those men M 621
with proclivity for fighting and an attraction toward the leader. 628 •
On the other hand, feuds may ignite attacks that are restricted 581
to the family groups concerned. While the myths reveal currents 701
of hostility between affinals, in real life marriage acts to extend
the ramifications of support, often into other communities.

Beyond the village lies the tribelet, an entity that recognizes its K
being in a territorial name and in a common cause in feuds with M 619
other tribelets. In its virtual autonomy this unit marks an extreme K
in band organization within the larger tribe, a quality that was 619
reduced by subsequent tribal integration. For the Klamath there
are six tribelets (see map): (1) The Klamath Marsh people,
who outnumber all the others together; (2) the tiny Agency
Lake group; (3) those of the lower Williamson River; (4) the
Pelican Bay tribelet; (5) the Klamath Falls group; and (6) the
Upland Klamath of the Sprague River valley. The Modoc comprise M
three main groups: (7) that of Lower Klamath Lake, extending 619
to Tule Lake (the *gumbatwas* mentioned above); (8)
those clustered upon the lower Lost River; and (9) the eastern
tribelet, with settlements dispersed as far as Goose Lake. No K
firm evidence exists that these local territorial units are distinguished M 619
by either language or culture, although, as already 726
mentioned, at least two are of composite origin. Each tribelet
seems to have gained a tenuous cohesion through a common
recognition of the worth of several prominent headmen. Between K
tribelets there is sometimes war. Under their formidable leader, 619
Kokdinks, the Williamson River group attacked in turn villages 726
of each of the other lower Klamath tribelets, including that at
Pelican Bay, to which they considered themselves related; and
the prolonged war ended only when the Upland Klamath leader,
Monchnkasgitk, a kinsman, first joined, then slew Kokdinks.[18]

K

M
175 1850. Aggressions by Northern Paiute bands led to similar large-
178 scale forays into the country east of Silver and Summer lakes.
726 The almost endemic condition of warfare and the enlarging
K M scale of operations, together with the lucrative trade in booty,
175 brought about the emergence of a chiefly class, the members of
726 which based their power upon eminence in war and possession
182 of wealth, including slaves.[10] Their successes attracted followers,
622 and common interest as well as kinship prompted them at times
565 to cement alliances with shamans.

556 756 Thus they drew into their hands coercive powers of no mean
[754] weight, for, as Henry Blow observed, "this [shamanistic] power
was used by the chiefs to get rid of rivals and there are some of
us old enough to remember of doctors being paid to kill certain
persons and of their foretellings of the exact day they would
die."[11]

K The rise of the chiefs helped to knit together tribal loyalties.
M
175 A war party formerly consisted of only those among the able-
178 bodied men who were inclined to fighting, but a successful leader
622 increasingly transcended tribelet parochialism, drawing followers
619 from diverse hamlets and villages across the Klamath country.
• 628 As warfare became a way of life, the occasional allegiance ren-
726 dered while in the field became an enduring acknowledgment
of worth.

K In the growing eminence of the new leadership, hereditary
622 principles may have been operative. Chiloquin mentions his
175 father as having been a chief on Klamath Marsh, his own brother
as a subchief, and a sister as a chief. The father of Dave Hill,
a rising young war leader, was a village chief; while Allen David,
later head chief in reservation days, was the brother of Captain
George, a Klamath Lake chief. That family eminence was not
essential, however, is shown by the personal history of Lileks,
K [838] of good—but not chiefly—background. Lileks was a transvestite
in his youth until a supernatural experience vested him with the
power that was to lead him to be head chief of the Klamath.[12]

K A minor factor in these developments may have been the
195 interest of the whites in the centralization of tribal power, in
643 order that they might deal more effectively with responsible
648 leaders. In 1844, Elijah White, then Sub-agent for Indian affairs
177 met with some Klamath and Molala who had ridden into the

NATIVE MYTH AND MODERN RELIGION AMONG THE KLAMATH INDIANS

BY ROBERT F. SPENCER

173 IN A RECENT STUDY[1] of social change among the Klamath Indians
177 of southern Oregon, informants revealed an unformalized synthesis of
178 aboriginal and modern Christian religious beliefs. These involve, among
[176] other ideas, an identification of the Klamath culture hero with personages in
the Christian pantheon such as the God-Father, Jesus, and Satan. This is of
interest since the contemporary Klamath have lost all formalized aspects of
their older culture. The major institutions of the past have fallen by the way
and, in their overt forms at least, have been replaced by those of the encroaching Anglo-American society. Acculturation is so far along that the observer
[182] can elicit only covert survivals of aboriginal ideas. Although the tone of the
folk culture has been lost by the Klamath, the reservation life, a common
economy, and the wardship status enforced by external governmental agencies
combine to effect a haphazard solidarity in the group. It is hence not surprising to discover a rephrasing of older values to meet modern situations.
A case in point is the attempt by many tribal members, young and old, to
find continuity in folklore and so to read Christian meaning into aboriginal
myth.

175 Klamath culture of the past was not essentially different in its orientation
177 from that of many western tribes. Because the tribe was geographically marginal to several culture areas, it is possible to note the composite nature of its
culture and to discern the realignment and reintegration of elements which
[222] it shared with California, the Plateau-Basin, and the Northwest Coast. In
[226] its overall configuration, the native culture differed from that of the adjacent
gathering peoples because the Klamath had settled on the lakes and marshes
[631] of the region and depended on fish and a wild water-lily. Beyond the basic
[621] economic structure, however, one may note the California flavor of the separatistic hamlets with their loose social and political organization; the weakly
[771] developed (and possibly late) wealth complex, suggestive of the Northwest
[791] and the Oregon coast; and the formalized shamanistic religion which points
to affinities with tribes in the Plateau, California, and elsewhere.[2]

---

[101] [1] This paper is based on data collected during two summer field sessions, 1948 and 1949,
[122] on the Klamath Reservation. Field research was subsidized by grants no. 21 (Reserve Fund, 1947) and no. 1132 (1949) from the American Philosophical Society, Philadelphia, and by research funds from the Department of Anthropology, University of Minnesota, Minneapolis.

[113] [2] Cf. Leslie Spier, *Klamath Ethnography* (University of California Publications in American Archaeology and Ethnology, 30, Berkeley, 1930), 224-325; Verne F. Ray, *Cultural Relations in the Plateau of Northwestern America* (F. W. Hodge Anniversary Volume, III, Los Angeles,

648 Most Klamath live in one or another of the several
towns and settlements on the reservation, or else they have settled elsewhere,
361 in Portland, Salem, Eugene, in California, in Alaska, in the Midwest, or along
[167] the Atlantic seaboard. In 1955 the Tribe had 2118 members, and of these 40 percent lived away from the reservation (Stern & Swanson 1960). Partly because
[619] of the recent progress of the termination of federal supervision of the reservation, by this date the percentage of members residing off the reservation has
[161] probably increased. In fact, for years there have been numerous "tribal members"
[619] with no experience whatsoever of reservation life.

648 Throughout the years of White contact inter-marriage and inter-breeding have
144 been frequent. Today, more than 70 percent of the Tribe's members are, genetically, less than one-half "Indian," and less than one sixth are "full-bloods."
[171] Many are indistinguishable in appearance from their White neighbors, as most are not easily distinguished in dress and language.

175 The isolation of the early reservation period was soon removed by the influx
177 of White settlers, who at first took up farms and started towns near the fringes of the reservation. Through inter-marriage and through the consequences of
[361] allotment of land to individual Klamath, many Whites were soon residing within the reservation's boundaries, either on the lands of a spouse, or on land bought
[423] or leased from tribal members. Another source of change were the ever present efforts of Agency officials to make over aboriginal ways, and later, the rapid
[657] growth of the lumber industry and the development of full fledged frontier communities were also important sources of acculturative influences. In quick
[726] succession the Klamath experienced a period of armed conflict (the Modoc War of 1872-73), a religious revivalistic movement such as that which swept the plains
[786] area, extensive governmental planning and intervention, the allotment of land in severalty, and a growing participation in the cash economy. Because aboriginal
[181] Klamath values had stressed achieved status for those who worked to accumulate wealth and property, for some Klamath the early period of contact provided in-
[556] creased opportunities, and there was a group of men who for a time were effective entrepreneurs. It was through such personal efforts and through the "easy money"
[436] had from private sales or the leasing of agricultural lands, from pro rata shares of boundary settlements, and from per capita payments for sales of tribal timber that the Klamath made the transition to a money economy.

648 The participation in and contribution of the Klamath to the economy of the region is a significant point of interchange between Klamath and White, and one with
[313] many ramifications. In considerable measure, the local timber industry prospers
[423] or slumps, depending on the allotted cut in the tribal forest. Similarly, local merchants are somewhat dependent upon the assured income of tribal mem-
[434] bers, as they are upon the purchases of mill workers, fallers, and cat-skinners. The major town on the reservation, Chiloquin, obtains the largest share of its
[632] revenue from sales at a municipally owned beer-hall and from the fines and for-
[651] feited bails paid by visitors to the city jail, both of which establishments are patronized largely by Klamath.

648 In other aspects of community life the participation of Klamath is perhaps best
621 characterized as that of passive spectators. Many Klamath have come to have a sense of being aliens in the heterogeneous local culture, although there is a
563 small assimilated minority.

[571] Thus Klamath may interact as equals in card rooms and pool hall, and are met with a stereotyped "friendliness" in interactions in stores and on the street. However, the great majority live in intimate interdependence separate from the main currents of White social life. White ethnic exclusiveness is reflected

Modoc NS17

[Klamath Reservation]

K
*648 *657 619 423 association and residence. The membership thus construed included not alone the reservation peoples, but the absentee Modoc and those who had severed their connections with the reservation.

M
648 657 619 423 The ambiguities thus introduced might have been avoided in part had the allotment program maintained some of the provisions of an early allotment plan outlined in 1871 by Commissioner E. S. Parker. By its terms, residence and association taken together were to be made the primary criteria. Whites or interbreeds married to tribal women, who resided with them upon the reservation, and who had been adopted into the tribe might be allotted. Indian women married to whites and living off the reservation forfeited that right, and the children of Indian women living in common-law relations with whites were to receive a share of land only if they moved back to the reservation.[39] It should be remarked, however, that this principle would only have been effective in preventing absentee ownership had residence also been required of heirs. Otherwise, in the first generation the allotments would have been treated like an inherited property. That, indeed, was their fate under the administration of the Dawes Act.

Once allotted, an Indian had a new status. His allotment could be fenced and it could be leased. The results of his industry, together with anticipated lease funds made many a man a good risk for advances in merchandise and foodstuffs. Citizenship lay within his grasp, involving with it a changing jurisdiction under law and bringing about a restive reappraisal of the sometimes autocratic rule of the Superintendent.
K
M
• [641]

K
*648 *657 423 311 The original intent of the act had been to transform the Indians into yeomen-farmers. That 160 acres of grazing land on the upper reservation was an economically practicable unit had been doubted by Nickerson, and the subsequent experience of at least one white rancher with long experience in the same area tends to confirm that judgment. At the same time, when several members of a family possessed adjoining tracts, the acreage might be adequate. In later times at least there were complications. Remarked Wilson in 1909:

> . . . the allotting was not made as it should have been made. An Indian will be allotted in Modoc Point district and perhaps

heeded. Surely, the government stands in some measure accountable here; and the Indian viewpoint bears a rough relationship to the events of their history. It errs, however, in oversimplification and has the important consequence of deflecting all responsibility for the condition of the Indians upon the shoulders of others. 648* 657* 829

These developments, when related to the promise of citizenship for Indians, became critical. Originally the Allotment Act had designed that all Indians living apart from their tribes and in assimilation to whites should be awarded citizenship; and that any reservation Indian, upon receiving a patent in trust, would attain the same status. Subsequent amendments postponed citizenship until a patent in fee had been secured. For the Klamath reservation, the local timetable had the result that no trust patents were awarded until all allotments had been made, a condition that in turn had to await settlement of several of the claims suits. The assignment of lands thus took place in an atmosphere heavy with the anticipation of a swift change of status. The better-educated among the leaders, who in turn mingled with those whom allotment had brought back into the reservation polity, were eager to press for greater freedom and increased self-rule. 648* 657* 423 641

Signally, administrators believed the same act implied they had a heightened responsibility toward their charges. Schooling had become compulsory, and O. C. Applegate, then Agent, was convinced that allottees should send their children by preference to reservation school. Repeatedly, in his letters to those seeking allotments, he urged them to send their children to the boarding school "where they will be boarded and clothed without expense to you."[4] To a schoolboy who wished to remain away, he wrote, "Tell your father that I intend all the children to have land on the reservation, and that they must come into school according to the rules."[5] When one off-reservation member failed to send her children to school after having consented to do so, Applegate firmly reproved her and added, "Please write me at once what you propose to do about them, and if it is your wish to have them give up their allotments on the reservation."[6] 648* 657* 871 423

The relationship between schools on and off the reservation now took on a new dimension. Some of the more acculturated tribal members began to criticize the Agency-run schools as 648* 657* 871

Local Political Relations

*648 IN ADDITION TO THE SPECIAL RELATIONSHIP EACH KLAMATH BORE
*657 to the federal government, both through the Tribe and as an
• 641 individual, he also entered formally into the role of citizen in a hierarchy of political bodies, ranging from the United States, through state and county, and often participated as well in one of the communities within the reservation. In those relationships, however, his tribal status sometimes conferred upon him special immunities with regard to taxation and the exercise of law. Until the last days of the reservation, when jurisdiction was transferred to the state of Oregon,[1] those Klamath who remained in trust status were responsible solely in federal courts for the commission on Indian land of the so-called "ten major crimes."[2]

[423] Only when the member received a fee patent upon his allotment or—for those who had not been assigned a tract—had all his property placed in unrestricted status, did he become subject to state courts. Oregon's jurisdiction extended within the reservation to the state highways traversing it and to all lands held in fee simple. Since the "Indian country" within the boundaries of the reservation had become checkerboarded with white-owned ranches, the fee-simple tracts of tribal members, together with trust lands and tribally owned territory, the title to which resided with the government, the jurisdictional aspect of law enforcement posed serious problems.

Within this setting operated an interlocking set of agencies, including the state police and courts, the county sheriff and justices of the peace, and the municipal marshal and police judge of communities such as Chiloquin. The sometime immunity of tribal members to their jurisdiction was a frequent cause for comment. Wrote Superintendent Arnold in 1930:

> I might call attention to the fact that at the last election in 648*
> Klamath County a trust patented Indian was elected Justice of 657*
> the Peace, and a fee patented Indian was elected Constable of 641 •
> the Beatty District on the Klamath reservation. It seems a rather [693]
> unusual situation when a trust patented Indian can preside as a judge over a court and pass sentence on other people and at the same time question the same court's jurisdiction over him.'

Nor was this all. Federally regulated land on the reservation [625]
was off bounds for officers of the law from city, county, and state; yet in 1947 there were only two special Indian officers and two deputies to enforce law and order over almost one million acres of reservation. It was physically impossible for them to follow up all cases, and consequently they could not deal effectively with the misdemeanors of delinquents or with truancy from the county schools.

In the 1920's, soon after the opening of the reservation, towns 648*
such as Chiloquin were faced with the influx of a mobile popu- 657*
lation in which the unmarried "timber beast" was prominent. 621
Roistering and violence occasionally assumed major proportions, 625
and law enforcement broke down at first. Within the first three 563
years after its incorporation in 1926, Chiloquin witnessed no 674
less than twelve appointments to the position of town marshal. At times the Superintendent, concerned over the effect upon the Indians, intervened, delivering an ultimatum or sending in his officers to restore order. His jurisdiction, in turn, was also limited: When Arnold brought pressure to bear upon Chiloquin authorities to close down gambling in the pool halls and card rooms, the gamblers merely shifted their operation to Bly, just over the eastern boundary of the reservation, and the same procedure had to be repeated by state and local officials there.

The interdependence of law enforcement on state lands and 648*
reservation was emphasized during the depression. In 1931, when 657*
logging on the reservation—and with it tribal income—had been 641
temporarily reduced by Washington, a tribal leader, Wade 625
Crawford, succeeded in securing a congressional cut in the [651]
administrative budget of the Agency, which from about 1924 had been supported out of tribal revenue. Since the budgetary allocation for law enforcement then became inadequate, the federal officers left, until there remained only a constable and an

*648 Indian officer, both at Beatty. Thereupon, Chiloquin's marshal
*657 and his deputy also resigned, asserting that enforcement under
• 641 those conditions was too difficult—and too dangerous, to boot.
625 The county, which had already barred tribal members from the
county jail, now took the position that, short of a government request, its courts would try no more Indian cases. Crawford
[692] countered with a proposal that the Court of Indian Offenses be reinstituted, while other leaders fell back upon that time-honored solution, the United States cavalry. Several months passed before funds were found to restore the reservation staff to normal strength.[4]

*648 Within the interlocking jurisdictions of the reservation and
*657 the reservation community, Klamath came to play out the role
641 of citizen as a voter, a taxpayer, and the object of legal control.
571 In small towns such as Chiloquin and Sprague River, relationships were primary in character, dominated by face-to-face relationships. Within the special environment of the reservation, with the vast potential of its unexploited resources, something of a western frontier tradition was preserved, with emphasis placed upon individualism and a high premium set upon voluntaristic action in concerting effort.

*648 These conditions were nowhere better evident than in Beatty.
*657 In this little community, with fewer than one hundred fifty
621 members, leadership was furnished by a few individuals and
563 action was highly informal. Perhaps the most influential person was a white storekeeper, a resident in the community for almost four decades, who had on occasion donated land and cash for worthy causes, who presided over a credit system, and who was much respected by the older tribal members. Among the latter, a leading spirit was the widow of his brother-in-law, who could be counted upon to act with him. His store was a frequent gathering place and the debating ground of the "hot stove league," where tribal politicians from the Upper End were often to be found. Another local leader was a young white, married to a tribal member, who farmed along the Sprague and in his spare time was a vigorous preacher in the Assembly of God Church.

Indians from other reservations, also married to Klamath, provided specialized leadership. One was prominent in the affairs of

*648
*657 Although tribal members in Chiloquin lagged little behind their
621 white neighbors in registering to vote (1958), their concern was
563 less with local than with national issues.[6]

• 641 A second aspect of Indian citizenship was the support of local
619 government through payment of taxes. Since all property held
666 in trust or restricted status by the government, together with
*648 income derived from such property, was exempt from taxation,
*657 many tribal members occupied an unusual position among their
641 fellow citizens. The effect was particularly felt by the county and
651 local communities, which were heavily dependent upon property taxes. For years, Klamath County sought to secure funds from the government to compensate it for the trust lands within its boundaries, which were served by county roads, sheriffs, courts, and schools. Johnson-O'Malley funds finally provided money in lieu of taxes to support the schools; to these the Klamath Tribe on occasion added funds for special purposes, but the other causes were unavailing.

In Chiloquin, officials resented the action of one Superintendent, who advised tribal residents that any property bought within the city with funds in trust or restricted status might be restored to corresponding status, even though it had been owned in fee simple when purchased. Such house lots were thus removed from the tax rolls and, although benefited by sewers and other municipal improvements, could not be levied for their support. It was not commonly recognized by white citizens of
[563] Chiloquin that a number of tribal members paid taxes regularly upon property held in fee simple and that a multitude of indirect taxes fell as heavily upon tribal consumers as upon their fellow citizens. Rather, the image was that of a people exempt from financial responsibility toward the support of local institutions from which they benefited. Though a distortion, like many other parts of the stereotype, this evaluation nonetheless contained a substantial kernel of truth.

If truth be told, the citizens of Chiloquin were no more disposed to pay taxes than American citizens anywhere, and indeed they were somewhat less inclined to do so than those elsewhere in Oregon. In 1951-52, the millage rates of Chiloquin were by far the lowest among the organized communities of Klamath

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

County. Of regular municipal income in the year, 1956-57, taxation 648*
supplied only a little over four per cent. The largest sources 657*
of revenue were the water system, the city tavern (which alone 641 •
supplied over one-third of the budget), and the proceeds from 651
law enforcement (amounting to over one-fourth of the budget). Since, after the repeal of Indian prohibition in 1951, tribal members had become the major patrons of the municipal tavern, comprising in 1958 an estimated eighty per cent of its clientele, it is evident that in this indirect manner they had come to constitute a major support in the operation of the municipal government.

Nor was this all. The sizable sum derived from law enforcement 648*
was highly unusual. While the major enforcement problem 657*
in most Oregon cities of comparable size was traffic violations, 641
Chiloquin in 1956-57 found no less than ninety-three per cent of 674
its offenses to be felonies and misdemeanors other than traffic violations. Tribal members and other Indians, including repeaters, accounted for over seventy-two per cent of the arrests; [681]
they paid over seventy per cent of the fines and forfeited bail; [464]
and they furnished over ninety-six per cent of the trusty labor performed in the city.[7]

Aside from a few individual instances, this record does not 648*
reflect a policy of discriminatory arrests on the part of the city 657*
administration. It does, however, mark one of the significant 674
confrontations upon the reservation. It was conditioned in part [641]
by the special statutory position of the Klamath, for as an Indian [656]
under federal supervision he was enjoined by law from having or using liquor and from marrying a white within the state. Until these disabilities were removed in 1951, tribal members were subject to arrest for acts not held criminal when committed
by non-Indians. During prohibition, tribal members had learned [273]
to operate stills, had taken to drinking extracts, proprietary medicines, rubbing alcohol, and "canned heat" in lieu of scarce liquors, and had both patronized and served as bootleggers. Habits of defiant drinking, akin to those of other Americans during the "dry" years, lingered even into the years after repeal.

Klamath experience with strong drink and violence had neither begun with the reservation towns nor was it confined to them;

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

Tribal member-
*648 ship was, as we have seen, only one of several
*657 political roles in which Klamath might participate, and in some
619 measure it lay athwart the others. Citizenship in the United
• 641 States, granted generally to American Indians in 1924, affiliation with state, county, and municipality: these political memberships are explicit in character, conditional upon the fulfillment of stated requirements and with the exercise of well-defined rights. Superficially, tribal membership appears to possess a similar character. In the admission of new members, both the establishment of qualifications and the decision upon individual candidates rested with the Tribe, though subject to review by the Bureau of Indian Affairs. Applicants had to be of Klamath parentage on at least one side, and those of one-quarter or more Klamath heritage were automatically admitted upon application. In 1945 a clause was added permitting adoption of members of one-sixteenth heritage, contingent upon assurances that they would reside upon the reservation and participate in tribal activities.

In practice, Indian heritage of any sort, and not merely that stemming from the Klamath Tribe, was reckoned in; and token assurances of participation and residence have conventionally
[161] been accepted. Of the final enrollment of 2,133 tribal members,
[162] 86 fell within the category of one-sixteenth quantum. Of these, 12 dwelt on the reservation and another 12 in Klamath Falls, the remaining 62 residing at some distance from the seat of tribal government. Once enrolled, members have not been subject to review, save when their original qualifications were called into question.

In a membership that was not conditional upon performance,
[602] the Tribe had a great deal in common with such ascriptive en-
[621] tities as the family and ramified kin, the traditional tribe, and the broad regional communities into which the latter had tended to cluster.

Family loyalties have been at once strong and selective. At times, they have provided continuities of interest within a single
[602] line. Here, for example, were the Rev. Jesse Kirk, himself the son of a treaty signatory, and his sons, Clayton, Seldon, and Jesse Lee; here old chief Monchnkasgitk, and his sons, Harrison and Henry Brown; here Judge William Crawford, his wife, Eliza, and their son, Wade; here Henry Jackson, his half-brother, Ike, and the latter's son, Boyd Jackson.

crease of tribal business following allotment, the Bureau of Indian 648*
Affairs pressed for the formation of a supplementary executive 657*
body. At Klamath the need for such a body may have been 646
underscored by the abuse of the common council in the partisan [665]
sessions called by the Kirk and Brown factions. Thus, 1908 saw
the introduction of an executive body, called the tribal council,
to function in addition to the occasional councils. Initially, it [563]
was made up of twelve men, six from each End of the reservation,
and with communal representation: its membership included
seven Klamath, three Modoc, and one each from the Pit River
and Paiute. Since it proved difficult to maintain a quorum, the
number was subsequently reduced to eight members.

In 1927, the factionalism which had earlier brought into question 648*
the legitimacy of the common council now touched the 657*
tribal council; for in that year a dissident group elected a rival 646
body and claimed that it had superseded the existing council. 665
Their action placed in jeopardy the efficient administration of [578]
the tribal resources, and the Commissioner of Indian Affairs consequently
insisted that matters be set upon a constitutional
footing. After considering several tribal charters submitted to [642] •
them as models, the Klamath in 1929 enacted their own constitution
and by-laws for the executive body, now restyled the Business
Committee. Its six members, three from each End, were to
consider ". . . business matters pertaining to the Tribe. [Matters]
of great importance to the Tribe and which the Business Committee
believe should be referred to a general tribal council"
might be so referred by a vote of five members of the Committee,
with the consent of the Superintendent.[2]

Once more, in 1950, envisaging a time when the tribal government 648*
would have full control over the common estate, a new 657*
constitution was enacted, this time for the General Council. By 642
its terms, all powers were vested in that body, made up of all 646
adult tribal members. In addition, an Executive Committee was
designated, to be composed of the eight members—the number
had again been increased—of the erstwhile Business Committee,
together with the President and Secretary of the General Council.
To this new committee, the General Council was authorized to
delegate powers, although as matters turned out it did so only
reluctantly and after long delay. In turn, by appropriate vote

In turn, by appropriate vote within ninety days, the General Council might—and on occasion did—reverse the action of its Executive Committee. Finally, by a petition of at least one-fourth of the eligible voters, an action of the General Council might be submitted to a referendum of tribal members.[3] *648 *657 • 642 646 [666]

In the succession of tribal bodies, the interest of the government was not solely the convenience of securing formal sanction in property matters concerning the common interest of enrolled members. The tribal government was to provide as well a regular channel by which the government might assess tribal opinion, consult with leaders, and announce programs; and it was to furnish tribal members with experience in responsible citizenship. Through this instrument, a representative body was to be articulated with Bureau administration, its decisions being rendered concrete in official minutes and subjected to review by higher administrative echelons. [182]

Tribal rule is municipal in character, as seen in the restricted scope of its powers.[4] The narrow administrative domain with which the Klamath executive dealt is suggested by the names of the permanent adjuncts of the Executive Committee, the Tribal Loan Board and the Enrollment Committee. In 1947, some fifteen tribal members and one other were employed in General Council and Loan Board activities. By contrast, the Superintendent employed 123 persons, including 31 tribal members and 40 Indians from other groups, in the administration of agency, health, extension, law and order, roads, forestry and grazing, and irrigation.[5] Over these areas the Executive Committee might exercise a veto by cutting from the proposed Agency budget tribal funds allocated to an unwanted item. In this way, the hospital, bull pool, and tribal herd have occasionally been threatened. Ordinarily, however, the Executive Committee took no positive action in the development of a budget. Understandably, Klamath efforts to appoint a tribal member to serve as watchdog over Agency administration were not kindly received.

[693] In the formulation of general policy, the executive drew upon the advice of the tribal attorney, as well as upon unofficial counsel, both sought and volunteered. All major policy decisions required approval by the General Council and were subject to review within the Bureau of Indian Affairs and the Department

of the Interior. An essential communicatory function was served 648*
by the delegations now sent annually to Washington, to discuss 657*
policy matters with Bureau officials and with members of Con- 642 •
gress. Elected by the General Council, delegates were generally 646
instructed by that body and by the Executive Committee on the official position to be taken. These positions of trust and power were frequently filled by members of the Executive Committee.

By contrast with administrative and executive functions, the regulatory functions which Eisenstadt terms juridical-cultural found little place within the formal structure.[6] For the exercise of legitimate force lay rather with the Superintendent than the Tribe, and even Indian police and courts, while they endured, reflected his authority. For well over a generation during the last period of tribal rule, after "Indian custom" marriage had lost legal status there were no traditional practices requiring special adjudication. In practice, neither expulsion from the Tribe nor curtailment of membership privileges has been meted out as punishment for offenses against the tribal body. At least two tribal members have been re-elected to office despite the common knowledge that they had served prison sentences for felony, a record that by formal regulation should have disqualified them. Presiding over a territory, the Tribe was particularly lax, when not indeed impotent, in exercising control over absentee members. Indeed, the sole coercion brought to bear, and that from a partisan vantage only, has been the withholding of benefits under distribution.

In the General Council there resided undifferentiated tribal powers, and consequently this body best symbolized the continuity of tribal government. For the general membership it simultaneously embodied their tribal identity and functioned as the proper arena for public debate. It was in this assembly, rather than in the executive bodies, that many preferred to see issues discussed and decisions rendered. Reluctance to delegate powers to the executive under the 1950 constitution, which had the result of deferring that act for a year and one-half, was not merely an expression of factional distrust but also voiced a continued Klamath preference for direct and informal consensus in tribal affairs.[7]

Tribal membership was, as we have seen, only one of several 000

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 pro rata apportionment of the tribal assets. Toward this end, he
*657 turned increasingly for support toward the absentee membership.
423 Thus it was that in 1945, returned to Washington as a delegate,
619 Crawford sought passage of a bill that combined some of the
*648 aims of the final settlement proposals with federal purchase of
*657 the tribal tracts, which would then be established as national
423 forests, and with the liquidation of other properties. This met
619 opposition from the dominant tribal party, by this time under the
665 leadership of Boyd Jackson, Dice Crain, and Jesse Lee Kirk. In
successive versions, the proposed legislation was the subject of
hearings conducted both in Washington and on the reservation.
As an outcome of suggestions made then, Supt. Bert. G. Court-
right prepared a trial bill permitting voluntary withdrawal of
competent members, each of whom was to be paid a portion of
his share in the tribal estate. A shift of political winds now swept
Crawford, who became the chief proponent of this bill, back into
political ascendancy.

*648 At this juncture, Seldon Kirk, the respected chairman of the
*657 General Council, intervened to secure establishment of an extra-
• 642 ordinary special committee of those "who believe in the per-
619 petuation of the Klamath Reservation." Among the eight mem-
bers, in addition to Kirk himself, were Jackson and several of
his adherents. The committee drew up a new constitution for
the Tribe, designed to provide a structure satisfactory for self-
government over a proposed transition of two decades. It was
adopted in 1950, but only after being linked with the voluntary
withdrawal bill; and thus for a time both parties rested satisfied.
*648 From a long-range view, it is noteworthy that Crawford had
*657 turned from a plan for an enduring tribal cooperative to one
619 directed to the piecemeal withdrawal of members who wished
to sever tribal connections. In their turn, the former advocates
of final settlement had become the champions for the preserva-
tion of the tribal body.

Further attempts by Crawford to amend the voluntary withdrawal bill and other circumstances delayed action on it until 1953, by which time the government had embarked upon a program seeking to terminate federal supervision over a number of Indian reservations. Chief among them was that at Klamath, for which terms were proposed similar to those outlined for the

Modoc NS17

[Klamath Reservation]

K

M
175 1850. Aggressions by Northern Paiute bands led to similar large-
178 scale forays into the country east of Silver and Summer lakes.
726 The almost endemic condition of warfare and the enlarging
K M scale of operations, together with the lucrative trade in booty,
175 brought about the emergence of a chiefly class, the members of
726 which based their power upon eminence in war and possession
182 of wealth, including slaves.[10] Their successes attracted followers,
622 and common interest as well as kinship prompted them at times
565 to cement alliances with shamans.

556 Thus they drew into their hands coercive powers of no mean
756 [754] weight, for, as Henry Blow observed, "this [shamanistic] power
was used by the chiefs to get rid of rivals and there are some of
us old enough to remember of doctors being paid to kill certain
persons and of their foretellings of the exact day they would
die."[11]

K The rise of the chiefs helped to knit together tribal loyalties.
M
175 A war party formerly consisted of only those among the able-
178 bodied men who were inclined to fighting, but a successful leader
622 increasingly transcended tribelet parochialism, drawing followers
619 from diverse hamlets and villages across the Klamath country.
628 As warfare became a way of life, the occasional allegiance ren-
726 dered while in the field became an enduring acknowledgment
of worth.

K In the growing eminence of the new leadership, hereditary
622 principles may have been operative. Chiloquin mentions his
175 father as having been a chief on Klamath Marsh, his own brother
as a subchief, and a sister as a chief. The father of Dave Hill,
a rising young war leader, was a village chief; while Allen David,
later head chief in reservation days, was the brother of Captain
George, a Klamath Lake chief. That family eminence was not
essential, however, is shown by the personal history of Lileks,
K [838] of good—but not chiefly—background. Lileks was a transvestite
[839] in his youth until a supernatural experience vested him with the
power that was to lead him to be head chief of the Klamath.[12]

K A minor factor in these developments may have been the
195 interest of the whites in the centralization of tribal power, in
• 643 order that they might deal more effectively with responsible
648 leaders. In 1844, Elijah White, then Sub-agent for Indian affairs
177 met with some Klamath and Molala who had ridden into the

Kalapuya settlements in the vicinity of Oregon City, and induced 175
them to be regulated by the same rules as were the Nez Percés 177 643 •
and to appoint a single paramount chief. A disaffected Indian from 648
The Dalles, however, subsequently joined the party as it was making its way homeward and provoked a quarrel in which those favoring the Agent's proposal were slain.[13]

While these events were taking place, the Klamath country 175
was again being visited, at first by occasional parties whom the 648
Indians watched unseen. In the years 1844-45 a mixed party of Walla Walla, Spokane, and Cayuse, under the Walla Walla chief, Piupiumaksmaks, passed through the Klamath region en route to California to buy cattle. In 1843 and again in 1846 the Klamath were visited by the explorer, John C. Frémont. In his earlier visit, the martial captain, in order to quell "the treacherous disposition, which is a remarkable characteristic of the Indians south of the Columbia," fired a round from his howitzer over Klamath Marsh. Although his action was scarcely calculated to allay the suspicions of the Indians, he was shown the same courtesy as had been extended Peter Skene Ogden years before. A village chief—the father of David Hill—and his wife came out to meet the party and guided them east toward Summer Lake.

Frémont's second entrance, in 1846, was less fortunate. In that year, moving up from California, he passed through Modoc country and thereafter up the west shore of Upper Klamath Lake, where he was attacked by a party that had followed him from the southern end of the lake. Three of his Delaware Indians were slain. Although his attackers probably were from the Klamath Falls tribelet, Frémont's reprisal was directed instead at a village of the Lower Williamson group. Neither women nor children were spared in the attack. The slaughter left a legacy of hatred that did much to draw some of the Klamath into the Molala war.[14]

By the time of Frémont's second visit to the Kamath country, [731]
the Indians of Oregon had been sorely stricken. Diseases brought by the whites had ravaged the tribes of the Columbia and Willamette valleys. The Hudson's Bay Company had sought to assure a firm supply of furs in the country it controlled and thus to maintain just and amicable relations with the Indians; and many of its employees had taken Indian wives. It was now being

*657
*648
622

> top rail of a fence, facing the redskins assembled in the meadow before him, flanked by a group of young and energetic Indians who were his sworn friends and allies, he dispensed summary justice to the most notorious recent offender. . . . He then proceded [sic] to explain, through a Klamath interpreter, that the old chief, though entitled to all honor and respect for his years of valuable service, had ceased to be an effective officer and should be replaced by a younger and more active man. The new day had arrived, he said, when the Indians were adopting the white man's ways of life, and chief among these was the white man's law, which demanded that justice should be done and order maintained without fear or favor, and which provided for such justice and order by the election of officers who were chosen for their capabilities in performing these duties. He suggested that another meeting be held a week later for the nomination of candidates for head chief of the whole reservation—not only of the Klamaths who owed allegiance to La-Lakes, but also of the Modocs, Paiutes, and Pit Rivers who made their homes on the reservation. The old chief was naturally crestfallen at this procedure, and his relatives and friends grieved, but there seems to have been no attempt at open rebellion against the dicta of the young white leader. . . . Throughout the whole campaign, however, the feeling of personal loyalty to the old sachem was the greatest obstacle to be overcome."

*657
*648
622
• 643
666

The election that followed pitted Henry Blow, "a prominent sub-chief under La-Lakes, a man of the finest personal and executive qualities," with support from both Lower End Klamath and the Modoc,[14] against Allen David, "a tall handsome, and popular young brave from the upper country,[15] progressive, well versed in the ways of the white man, from travel among the Willamette settlements," backed not only by Lower End Klamath but by the Upland band and the Paiute as well. Charley Preston was a third nominee, "a man popular on account of his personal qualities and admired for his ability in various industries acquired by residence among the whites, but not possessing the prestige of a sub-chief." Young Applegate seems also to have been proposed, but declined. "There were many at this meeting who deplored the whole procedure in view of their allegiance to the old chief. . . ." At the election which followed, Allen David was elected by a plurality of five.[16] Thus a panreservation polity was established, to which tribal distinctions thereafter were subordinated.

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one who had obstructed Agency-sponsored reforms, but had left the membership of the lesser chieftaincies intact. It is clear that administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693
executive role to constitute a court, while a sheriff, chosen from among the Indians, together with constables, one per chief, were to maintain order. Chiefs, somewhat extralegally, soon began to assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at all, advising them that the object of the law is to *protect* the people and not to *oppress* them."[19] Soon thereafter, he reduced the court to a membership of only seven chiefs and set its sessions at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622
against property (arson), together with what can only be con- [68]
sidered redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585]
were to be confirmed before the principal chief, who was to [643] •
receive a fee; the bride price was not to be returned on the [586]
desertion of the husband; while the court might order the separation of an irreconcilable couple. Monogamy alone was per- [595]
missible.[21]

Thus, not only were the chiefs given new and different powers,

far distant when good judgment will direct the deposing of all 657*
hereditary sovereigns and the election of proper officers by the 648*
people at large. Thier present mode of constituting courts of 622
justice and of conducting trials is probably far in advance of
thier primitive style—but is anything but Republican. . . ."[27]

The contrast between the old and new leaders is shown by one 657*
of two liquor cases that vexed Dyar. A saloonkeeper, guided by 648*
a "squaw man" to an Indian village a few miles above Linkville 622
"for vile purposes," gave a bottle of whiskey to the Indian who 273
transported them. After the Indian had drunk part, he gave the
remainder to Lileks, who shared it with another man. Of this
instance and another, Dyar observed, "Allan David, Head Chief [643] •
of the Klamaths, first brought these cases to my knowledge and
is anxious that the parties shall be punished."[28]

Allen David, indeed, impressed Meacham strongly, for he 657*
characterized him among the Indians as "unquestionably the 648*
clearest and most logical talker I have ever listened to. . . . He 643
is fully imbued with the ideas of civilization and never misses an
opportunity to give his people good advice."[29] Dyar, echoing
these sentiments, added, "his time is so much taken up in settling
the little disputes of his people, and he is naturally compelled to
give away so much food in thier [sic] frequent visits, that he is
kept continually poor." As head chief for the entire reservation,
David was expected by the Indians to feed them during the
frequent assemblies at his house. From visits to other reservations and to the American settlements, he was aware that white
officials received pay for performing their duties and that even
Mark, the head chief at Warm Springs, drew a salary. Before
David would undertake the head chieftaincy, O. C. Applegate
had had to promise to try to secure a salary for him. Subsequently, Dyar himself recommended that Allen David be paid
an annual salary of $300.00.[30] It was not forthcoming.

The concept of an all-reservation hierarchy of chiefs was rudely 657*
challenged by the Modoc War. For a brief time, upon the urging 648*
of A. B. Meacham, Superintendent of Indian Affairs for Oregon,
Captain Jack and his adherents had joined Schonchin at Modoc
Point in 1869. They were soon disillusioned. The Klamath acted
like lords of the land and treated the Modoc as if they were there
only on sufferance. When the Modoc split fence rails, Klamath

[Klamath Reservation]

K
*657 under Blow and Link River Jack appropriated them as their own
*648 property.[31] Appeal to the Agent, Captain O. C. Knapp, proved fruitless; he only advised the Modoc to move further away from the Klamath. Captain Jack is reported to have told his followers, "I do not want my men to be slaves for these Indians, and they shall not be. My people are just as good as these Indians."[32]

While Schonchin was away fishing, Captain Jack overwhelmed the "friendly" subchiefs, Chief George and Charlie Riddle, and the Modoc left the reservation in a body. After reporting their departure, Schonchin joined them. There remained only a small party of twenty, who had been settled at Yainax earlier that year. Through them, Ivan Applegate contacted the absentee Modoc and persuaded Schonchin to return. When he did so, in the spring of the year (1870), he refused to rejoin the Lower End Klamath and was established instead at Yainax, home of his Upland Klamath mother, where Monchnkasgitk and the Paiute were already in residence. Evidently, the latter held the main voice there, for the following year—though only temporarily as it turned out—Yainax was made independent of Klamath Agency, "owing to the fact that these Indians had long been at war with those at Klamath. . . ." The change, "demanded by the chief headmen of the Snakes and Wall-pah-pe tribes, [was] approved by the chiefs and headmen of the Klamaths."[33]

M With Captain Jack's refusal to return to the reservation, the
657 veto of A. B. Meacham's proposal that he be granted a tract in
648 the Tule Basin (as originally envisaged in the Steele treaty),
921 and the decision of Meacham's successor, T. B. Odeneal, that the Modoc be brought forcibly upon the Klamath reservation, the lines were laid for the fatal flare-up of the Modoc War. The
K outbreak of hostilities found Allen David "very faithful and
• [643] active in his efforts to preserve a good feeling among all the
*[648] Indians on the Reservation, repeatedly visiting the Snakes and
*[657] Scontian's band of Madocs [sic], advising them to keep quiet on the Reservation and have nothing to do with Capt. Jack's people."[34]

M Fearful that the hostile Modoc would induce the Yainax
[902] Paiute and Modoc to join them, Dyar organized a home guard.
K At the Lower End, Dave Hill and Henry Blow swiftly recruited
*[648] 32 men, primarily from the Link River band, while Oliver Apple-

were mustered out of service. Subsequently, when Jack and his followers slew the Peace Commissioners, Oliver Applegate reported that the reservation Indians were ready to take the warpath against them in revenge, but they were not called upon.[40]

In the end, the Modoc were defeated and the leaders tried at Fort Klamath. During the hearing, they attempted to implicate the Klamath, with claims that Link River Jack had cached ammunition for them and that Schonchin—"the noblest Roman of them all!" exploded Oliver Applegate indignantly—had brought them a message from Allen David promising aid if they would hold out a little longer. The countercharges proved misdirected as defense; and in the presence of the reservation Indians and other spectators the leaders of the hostiles were hanged or committed to Alcatraz; and the remainder, 153 in number, were shipped off to Fort Quapaw, Indian Territory.[41]

With the end of the war, the reservation became in effect a closed political system. The only exception was Ocheho's band of Paiute, which alternated between the reservation and their Warner Valley homeland until 1876, when the major part of them remained off the reservation for good. Meanwhile, with no salary forthcoming to offset the heavy financial burdens of his office, Allen David resigned, and Henry Blow was elected in his stead.[42]

The statement made in 1877 by Dave Hill gives a fair idea of the chiefs of the time and contrasts the hierarchy at the Agency with the comparatively open order at Yainax.

> We Lake People live here thus: Blow is chief of all, and I, Dave Hill, am chief second to Blow, Long John after Dave, then too Link River Jack after Long John, and Lilu. Pit River Charley is chief of the Pit River people at the Lake. Ben and Littlejohn are the chiefs, and Schonchin is chief of the Yainax people. Johnson is chief of the Modoc at Yainax. George Kuatilak also is Modoc chief after Johnson. Chocktoot is chief of the Paiute.[43]

K
[162]
M
[162]

Gatschet's list for the same year, which includes the adherents for each leader, differs somewhat from that of Hill. At the Lower End, the chiefs, all Klamath, and the number of their followers were: Blow, head chief (122), Hill (225), Long John (103), Link River Jack (92), and Lilu (23). At Yainax, the Modoc bands

K
comprised those of Modoc Johnson, head chief (71), and Schon- 657*
chin (18). The Upland Klamath leaders were Brown [i.e. Monchn- 648*
kasgitk] (30), Ben (61), and Littlejohn (14). 622 643 •

Gatschet thus omits Pit River Charley at the Lower End and 162
the adherents of George Kuatilak and Chocktoot at Yainax, but M
includes that of Monschnkasgitk. If the Klamath and Modoc 657
followings are separately totaled, the figures agree closely with 648 622
those of the statistical summary for that year,[44] suggesting that 643
the Pit River chief was subsumed under one of the Klamath 162
leaders and George Kuatilak under Modoc Johnson. Note that the Paiute, who seem to be predominantly Walpapi, account for 137, almost half the Yainax total of 331, while the Lower End, with 565, then contained almost twice as many people.

K
The replacement of leaders had already gone far: Of the chiefs 657*
listed above, only five, Blow, Jack, Lilu, Schonchin, and Monchn- 648*
kasgitk, had been prominent enough in 1864 to sign the treaty; 622
and only Lilu, Monchnkasgitk, and Schonchin were then noted 643
chiefs.[45] By 1877, their followings had dwindled, amounting to M
only a fraction of their previous numbers. Most of the losses had 657 648
been to Agency men advancing in favor. Among them Dave Hill 622
far outstripped even Henry Blow, the head chief, in adherents. 643

Beneath this system, we know from the accounts of elderly
Indians, a system of informal local headmen continued. Some K
of these individuals were, indeed, also favored with a measure 657* 648*
of government support. Among them were some of the older 622
chiefs, now out of official power. Lileks was put in charge of a ferry across the river—probably the Williamson—where he kept track of passengers by drawing pictures of a man, mules, and so on.[46] Allen David, still a chief, figured among the progressive Indians for some years. In 1883, however, his quiet opposition to Agency inroads upon the remaining chiefly authority drew remarks from Nickerson:

> There is but one man, Allen David, 3rd chief, who in any way proves a hinderance [sic] to the discharge of duties of the police. He does not do this openly, but covertly and slily, and is ready with a denial when charged with it. I have been seriously thinking of depriving him of his position and power as one of the cheifs [sic]. Indeed, I think the time is not far distant when this tribe will be better off without any chiefs whatever.[47]

*657 services in the court. In 1878, support took the form of a suit of
*648 clothes for Henry Blow and three years later of a request to
622 provide him with a weekly ration of flour and beef. However, as Agent Roork then found, the issue could not be authorized even for one who "spends a good deal of time looking after the interests of his people, when he can ill afford it."[58]

*657 At this juncture a temporary solution was found. In 1878,
*648 drawing upon successful experience on other reservations, the
625 Bureau authorized the employment of a small force of Indian police. In the first days of the reservation, Lindsay Applegate claimed to have organized such a force, one that served without pay, with power to perform military duties as well to arrest malefactors; and though it was later discontinued, Dyar had subsequently proposed a similar body.[59]

The number now settled upon was six, at Roork's request, "in order to have one for every tribe."[60] O. C. Applegate, then clerk at the Agency, was appointed chief of police. The first men in the service, with one or two exceptions, were not particularly distinguished; and neither of the officers of the force is now recalled as having been a leader. Within a year or two, however after many fluctuations in numbers, both Henry Blow and Dave Hill had been appointed as officers. The subsequent reduction of the force from fifteen to three for budgetary reasons dictated from Washington was distressing.

> As the Police Force was too small to be of much account [wrote Nickerson], the Indians felt under less restraint & were now dificult [sic] to manage. The chiefs considered that the Government had taken their authority to rule and administer punishment out of their hands, and did not consider themselves responsible for good order. They are now anxious to be allowed to administer law as before the Police force was organized. Unless this force can be put upon a permanent basis, and consist of from 8 to 10 members with a yearly allowance of rations I am of the opinion that it would be best to grant them their request. In that case it would be desirable to keep 2 or 3 men in the service to aid in arresting offenders & to take charge of all prisoners. . . . The Agent would of course be the judge in all trials.

• [643] He suggested that, following the plan he had put into operation
[622] before the force was reduced, the head chief be named captain
and the second chief, lieutenant, while two other chiefs be
appointed sergeants of the force.

7

[Klamath Reservation]

Of all the societal relationships, the government sought directly
to change only those within the family. It was clear that a nation 657*
that was soon to impose upon the Mormons the American, and 648*
not the Biblical family, would permit no special marital practices 595
among the Indians. Polygamy was banned, although not retro- 177
actively for unions such as those of Allen David and Monchnkasgitk, 178
which had been contracted prior to January 1, 1870.
Some leaders themselves appear to have advocated the change in
a desire to emulate whites. In 1877, Gatschet noted that there
were still two or three polygamous men.[26] Since polygamy had [556]
been a mark of the affluent, the ban, like the emancipation of the slaves that preceded it, served to erode the status of the traditional chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals con- 622
cerned. In the legal code instituted when the court was estab- 692
lished, the consecration of marriage was made the function of 685
the head chief, to whom the groom was to pay a fee of five, three, 583
or two dollars or the same amount in horses, graduated according [643] •
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] The traditional ritual [586]
of marriage still was being practiced by some families in the 1890's[28] but the gift exchanges between the families concerned which set a public seal on the union were superseded, and the controls exerted by the family over the couple were thereby diminished. The effects of these and other changes were recognized by Gatschet. "Matrimonial reverses . . . among the Klamath [he declared] . . are one of the unavoidable consequences of the gradual emancipation of the females from the former rule of their brutal husbands through the advent of the whites, and also of the obnoxious and corrupting neighborhood of the soldiers at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independ- 648*
ent of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

School

WHILE THE RE-EDUCATION OF THEIR ELDERS WAS BEING CARRIED OUT, it was the youth of the reservation on whom the Agents placed their ultimate hopes. The American faith in the transforming powers of education is nowhere clearer than in the words of Dyar: 657* 648* 871

> Being fully convinced that a radical change in the Indian character can only be wrought in childhood and early youth, I would most respectfully urge the co-operation of the Government in the prosecution of this work of taking the children from their native haunts of degradation, and clothing, feeding, and teaching them the habits and arts of civilization.[1]

It had been a slow start. Lindsay Applegate had employed a teacher, but as that functionary observed, he had been "instructed to labor on the farms and to give instructions to certain Indians in manual labor"—evidently not his metier.[2] The "sickly effort" as A. B. Meacham termed it, was abandoned,[3] and not until 1873 did Dyar's plan for a manual training boarding school bear fruit.[4] It met initial opposition. John Meacham had advocated the hiring of a "good reliable educated Indian" as teacher who "would himself be a living example of the result to be achieved by study. . . ."[5] Such a person might also have been able to reduce the initial aversion of parents to sending their children to school. Dyar noted, "I shall be obliged to commence with a very few—perhaps with orphans who have no friends to oppose." However, he wisely declined to use force.[6] In his efforts he was to have the steadfast support of Henry Blow, who became head chief in 1874. "Mr. Dyar . . . says," wrote Nickerson, "that he never could have established the school on this reservation, had it not been for him. He was its friend when all others were against it."[7] 648* 657* 872 [875] [643]

Soon Dyar had over twenty scholars,[8] only to have to close

SEVENTEEN

[P.236]

The Tribal Government

* 648 FOR NEARLY FIFTY YEARS FOLLOWING ALLOTMENT, THE KLAMATH
* 657 tribal government constituted the formal instrument for arriving
619 at common objectives, the ultimate guardian against encroachments
• 646 upon Klamath treaty rights, and the corporate symbol of Indian status. Its form and operations sensitively reflected the interplay of continued efforts by the Bureau of Indian Affairs to mold Indian life and the Indian reaction to those efforts. They gave evidence as well of the diversity of opinion which presently arose among tribal members as to the future in which they wished to live.[1]

[423] Central to the importance of the tribal government was the considerable wealth over which it presided: at the close of allotment, tribal property amounted to over 860,000 acres of land, roughly three-fourths of it in prime timber, owned corporately by some 1,150 members. By contrast, the Umatilla reservation, in the northeast section of the state, in 1908 possessed fewer than 2,000 acres in unallotted tribal lands for a comparable (893) membership.

*648
*657
646
623 The principal body of the tribal organization was the General Council, a successor to those sessions convened on occasion in times past to discuss matters of common concern. Such *ad hoc* councils had formerly been found useful to the federal government for mustering a representative Indian body; but with the development of an executive body, the General Council also emerged as a more regular entity. Like its predecessors, it was
[562] originally composed of all the men of the Tribe; after the pas-
[177] sage of the Nineteenth Amendment, the women were added to their number.

*648 Since the highly rationalized bureaucracy of the government
*657 found the occasional councils too unwieldly to handle the in-
646

crease of tribal business following allotment, the Bureau of Indian 648*
Affairs pressed for the formation of a supplementary executive 657*
body. At Klamath the need for such a body may have been un- 646•
derscored by the abuse of the common council in the partisan [665]
sessions called by the Kirk and Brown factions. Thus, 1908 saw
the introduction of an executive body, called the tribal council,
to function in addition to the occasional councils. Initially, it [563]
was made up of twelve men, six from each End of the reserva-
tion, and with communal representation: its membership included
seven Klamath, three Modoc, and one each from the Pit River
and Paiute. Since it proved difficult to maintain a quorum, the
number was subsequently reduced to eight members.

In 1927, the factionalism which had earlier brought into ques- 648*
tion the legitimacy of the common council now touched the 657*
tribal council; for in that year a dissident group elected a rival 646
body and claimed that it had superseded the existing council. 665
Their action placed in jeopardy the efficient administration of [578]
the tribal resources, and the Commissioner of Indian Affairs con-
sequently insisted that matters be set upon a constitutional
footing. After considering several tribal charters submitted to [642]
them as models, the Klamath in 1929 enacted their own constitu-
tion and by-laws for the executive body, now restyled the Busi-
ness Committee. Its six members, three from each End, were to
consider ". . . business matters pertaining to the Tribe. [Matters]
of great importance to the Tribe and which the Business Com-
mittee believe should be referred to a general tribal council"
might be so referred by a vote of five members of the Committee,
with the consent of the Superintendent.[2]

Once more, in 1950, envisaging a time when the tribal govern- 648*
ment would have full control over the common estate, a new 657*
constitution was enacted, this time for the General Council. By 642
its terms, all powers were vested in that body, made up of all 646
adult tribal members. In addition, an Executive Committee was
designated, to be composed of the eight members—the number
had again been increased—of the erstwhile Business Committee,
together with the President and Secretary of the General Council.
To this new committee, the General Council was authorized to
delegate powers, although as matters turned out it did so only
reluctantly and after long delay. In turn, by appropriate vote

In turn, by appropriate vote
*648 within ninety days, the General Council might—and on occasion
*657 did—reverse the action of its Executive Committee. Finally, by a
642 petition of at least one-fourth of the eligible voters, an action of
• 646 the General Council might be submitted to a referendum of tribal
[666] members.[3]

In the succession of tribal bodies, the interest of the government was not solely the convenience of securing formal sanction in property matters concerning the common interest of enrolled
[182] members. The tribal government was to provide as well a regular channel by which the government might assess tribal opinion, consult with leaders, and announce programs; and it was to furnish tribal members with experience in responsible citizenship. Through this instrument, a representative body was to be articulated with Bureau administration, its decisions being rendered concrete in official minutes and subjected to review by higher administrative echelons.

Tribal rule is municipal in character, as seen in the restricted scope of its powers.[4] The narrow administrative domain with which the Klamath executive dealt is suggested by the names of the permanent adjuncts of the Executive Committee, the Tribal Loan Board and the Enrollment Committee. In 1947, some fifteen tribal members and one other were employed in General Council and Loan Board activities. By contrast, the Superintendent employed 123 persons, including 31 tribal members and 40 Indians from other groups, in the administration of agency, health, extension, law and order, roads, forestry and grazing, and irrigation.[5] Over these areas the Executive Committee might exercise a veto by cutting from the proposed Agency budget tribal funds allocated to an unwanted item. In this way, the hospital, bull pool, and tribal herd have occasionally been threatened. Ordinarily, however, the Executive Committee took no positive action in the development of a budget. Understandably, Klamath efforts to appoint a tribal member to serve as watchdog over Agency administration were not kindly received.

[693] In the formulation of general policy, the executive drew upon the advice of the tribal attorney, as well as upon unofficial counsel, both sought and volunteered. All major policy decisions required approval by the General Council and were subject to review within the Bureau of Indian Affairs and the Department

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

of the Interior. An essential communicatory function was served 648*
by the delegations now sent annually to Washington, to discuss 657*
policy matters with Bureau officials and with members of Con- 642
gress. Elected by the General Council, delegates were generally 646 ●
instructed by that body and by the Executive Committee on the official position to be taken. These positions of trust and power were frequently filled by members of the Executive Committee.

By contrast with administrative and executive functions, the regulatory functions which Eisenstadt terms juridical-cultural found little place within the formal structure.[6] For the exercise of legitimate force lay rather with the Superintendent than the Tribe, and even Indian police and courts, while they endured, reflected his authority. For well over a generation during the last period of tribal rule, after "Indian custom" marriage had lost legal status there were no traditional practices requiring special adjudication. In practice, neither expulsion from the Tribe nor curtailment of membership privileges has been meted out as punishment for offenses against the tribal body. At least two tribal members have been re-elected to office despite the common knowledge that they had served prison sentences for felony, a record that by formal regulation should have disqualified them. Presiding over a territory, the Tribe was particularly lax, when not indeed impotent, in exercising control over absentee members. Indeed, the sole coercion brought to bear, and that from a partisan vantage only, has been the withholding of benefits under distribution.

In the General Council there resided undifferentiated tribal powers, and consequently this body best symbolized the continuity of tribal government. For the general membership it simultaneously embodied their tribal identity and functioned as the proper arena for public debate. It was in this assembly, rather than in the executive bodies, that many preferred to see issues discussed and decisions rendered. Reluctance to delegate powers to the executive under the 1950 constitution, which had the result of deferring that act for a year and one-half, was not merely an expression of factional distrust but also voiced a continued Klamath preference for direct and informal consensus in tribal affairs.[7]

Tribal membership was, as we have seen, only one of several 000

integral to the maintenance of power. Tribal leadership had become 648*
a full-time job, requiring its own set of special talents. The 657*
rewards offered were considerable, not only those of power and 665
prestige, but in per diem fees and in the funds advanced on 619
occasion by followers and—persistent rumor had it—by outside interests as well.

The rise of the new leaders did not entirely spell the eclipse
of the old. Even in the last decade of tribal government, a senior [646]
member of the executive was James Johnson, a wealthy stockman from the Lower End. Another man, Seldon Kirk, one of the three politically prominent sons of Jesse Kirk, worked as a carpenter for the Agency, and was therefore sometimes accused of being a pawn of the administration. He took up the guerdon from his brother, Clayton, and later came to exemplify a moderate position in his own right, even in the last, turbulent days of the Tribe.
Until his retirement, he served as permanent chairman of the [646]
General Council, then was succeeded by his brother, Jesse Lee. The example of Seldon Kirk in turn brought onto the political scene several younger men, like him occupying the middle ground, and concerned only peripherally with the party building activities of the professional politicians.

Tribal government thus developed along the intersection of an informal, particularistic political system and a counterposed, highly rationalized bureaucracy; and the emergence of the new leaders was merely one of the consequences. Within the frame so defined, the leaders were beset with the party-political[10] task of marshaling support for their programs. It was hazardous to trust alone to appeals to reason, for the issues were often complex and difficult to interpret for a wary electorate. Since the number of his devoted adherents was inadequate to carry the day, the practical politician had resort to a supplementary arsenal of tactical devices. It was at this level that political acculturation proved to have been most pervasive.

In he first instance, a leader might sometimes seek to mobilize support by playing upon a popular cause. Often this took the form of a defense against an outsider. A claim against the government, attacks upon the Bureau, particularly in the person of the Superintendent,[11] the repulse of intrusions upon the tribal domain by white commercial or sporting interests: these issues

*648 *657 665 619 might be exploited instrumentally to broaden the base of appeal. Other devices entailed the manipulation of particularistic loyalties. Politicians from the less populous and ethnically more diverse Upper End endeavored to retain districting, whereby the members of the executive body were elected in equal numbers by each End; and they also sought to preserve communal representation, which ensured that each of the traditional subtribal groups, Pit River and Paiute, as well as Modoc and Klamath, would find a place in that body. These measures were opposed as a matter of course by Crawford, the Lower End leader; but it was he in turn who had been responsible for the election in 1927 in which only the Lower End took part, thus creating a second tribal council and precipitating the Bureau's demand for a tribal constitution.

*648 *657 665 619 • 646 666 The tactics employed to control voting were diverse. In general elections, Jackson favored restriction of voting to polling places located on the reservation, against attempts by his rival to secure absentee balloting, a measure that would swell the response from his off-reservation constituency. For General Council meetings, Jackson sought to continue the practice of alternating their site between the Ends, and for those held at the Agency he provided stages at tribal expense to transport members from the Upper End.

Seating within the General Council was conventionally by faction, a device that provided an easy check upon voting regularity, although the chairs along the wall afforded a retreat for the less partisan. Jackson further favored a standing vote,[12] while Crawford, particularly while he was out of power, called instead for a secret ballot. Each side on occasion exercised the boycott to prevent the mustering of a quorum when the issue was likely to go against it,[13] and Crawford also resorted to the filibuster, under cover of which his forces might withdraw in order to attain the same end. Each also strove, when he no longer controlled the executive body, to route business instead through the General Council.

*648 *657 665 619 661 In the recruitment of a following, leaders found many occasions to render personal services, appointing the faithful to tribal positions, serving as advocate in their favor, sponsoring the enrollment of their children as tribal members, or advancing them

money from the tribal fund set aside for the purpose. Interlocking 648*
memberships of the Executive Committee, the Enrollment 657*
Committee, and the Loan Board made those bodies the apex of 665
tribal power. If the first-named was the central body, and important 619
particularly in relations with agencies beyond the Tribe, the 661
other two were no less essential in the administration of patronage. [646]
[647]

The Tribal Loan Board had been established to preside over 648*
a fund set aside from the Yamsay Judgment of 1938, by which the 657*
issue of the Military Road had finally been settled. The fund had 619
been designed to provide capital advances for tribal members, 452
many of whom found bankers reluctant to lend to them. Although 647
loans were supposed to be applied only to improvements, it became common practice to spend them merely as an anticipation of the next per capita. When the Bureau called a halt to its operations in 1955, the Board had out on loan approximately a half-million dollars, or the equivalent of almost $250 per member, and a collector had to be engaged to recover a sizeable portion of it.[14]

The Enrollment Committee was the third seat of power. Admission 648*
of one's children to tribal membership was eagerly 657*
sought, and not alone for reasons of sentiment. Once he was a 619
tribal member, a child was vested with a pro-rata share of the 647
undivided tribal estate, amounting at the time of termination to 434
some $43,500. In addition he qualified to receive the per capita dividends that, subject to Agency restriction, were commonly drawn upon to defray current family living expenses.

Despite—and sometimes because of—these tactical measures, 648*
by which partisan leaders strove to bind them, many tribal 657*
members were driven into abstention by the bitter contentions 646
that marked the final generation of tribal life. Although hundreds 619
flocked to the luncheon set out at tribal expense in the Council Hall for those attending the General Council, morning meetings failed so frequently to draw a quorum that they were discontinued; and even afternoon sessions sometimes could not muster one hundred adults from among the thronging diners to transact tribal business. When they did come, they were often in holiday mood, frequently interrupting speakers, and exhibiting a keen appreciation for lengthy, eloquent, and often irrelevant harangues

[Klamath Reservation]

*648 in the Klamath language.[15] In this setting, the chairman and
*657 principal leaders sought with great difficulty to operate under
• 646 Robert's Rules of Order. Council minutes record numerous in-
619 stances in which many of those present cast no vote.

In this, as in other political contexts, the observer could sense what some members admitted readily: a reluctance to commit themselves to decisions that might lead to dangerous consequences on either side. As in their dealings with the Agency, individuals accepted as a right what those controlling the executive had to offer, and declined to be bound thereby. Factional charge and innuendo had so sapped confidence in the Klamath leadership that interviews conducted in the course of termination revealed that all but one of the respondents (118 in all) favored a management plan administered by unknown trustees over an organization headed by their own members.[16]

It was not, however, factionalism alone that was at the root
[178] of the uncertainty. The long dependence of individuals upon per
capitas, and the corresponding lack of experience in pursuing a livelihood, understandably enough made many wary of any change that might threaten the economic niche in which they dwelt. Moreover, on many of the more complex issues involving property their very lack of experience made them easily swayed
[666] by irrelevancies. Not infrequently, Seldon Kirk, when presiding
over a vote of the General Council, would query, "I wonder how many of you know what you were voting for?"—and, calling for a reballoting, would see the issue solidly reversed.

*648 If they were uncertain in the exercise of their power, tribal
*657 members nonetheless felt a strong need to display it. Real and
619 fancied acts of coercion had left a legacy of alienation, to which
the impersonal bureaucratic operation of the Agency only added. In a span during which tribal membership had done little more than double, the Agency staff had swelled from an early 5 members to an ultimate figure of 139, some twenty-five times as great. With expansion, the Agency program had become compartmentalized, each division taking on a life of its own and growing endlessly ramified. Bureaucratization, together with the frequent turnover in the upper echelons of administration, led to increasing impersonalization of relations. Subtly, the training of Klamath

other two were no less essential in the administration of patron- [646]
age. [647] •

The Tribal Loan Board had been established to preside over 648*
a fund set aside from the Yamsay Judgment of 1938, by which the 657*
issue of the Military Road had finally been settled. The fund had 619
been designed to provide capital advances for tribal members, 452
many of whom found bankers reluctant to lend to them. Although 647
loans were supposed to be applied only to improvements, it became common practice to spend them merely as an anticipation of the next per capita. When the Bureau called a halt to its operations in 1955, the Board had out on loan approximately a half-million dollars, or the equivalent of almost $250 per member, and a collector had to be engaged to recover a sizeable portion of it.[14]

The Enrollment Committee was the third seat of power. Ad- 648*
mission of one's children to tribal membership was eagerly 657*
sought, and not alone for reasons of sentiment. Once he was a 619
tribal member, a child was vested with a pro-rata share of the 647
undivided tribal estate, amounting at the time of termination to 434
some $43,500. In addition he qualified to receive the per capita dividends that, subject to Agency restriction, were commonly drawn upon to defray current family living expenses.

Despite—and sometimes because of—these tactical measures, 648*
by which partisan leaders strove to bind them, many tribal 657*
members were driven into abstention by the bitter contentions 646
that marked the final generation of tribal life. Although hundreds 619
flocked to the luncheon set out at tribal expense in the Council Hall for those attending the General Council, morning meetings failed so frequently to draw a quorum that they were discontinued; and even afternoon sessions sometimes could not muster one hundred adults from among the thronging diners to transact tribal business. When they did come, they were often in holiday mood, frequently interrupting speakers, and exhibiting a keen appreciation for lengthy, eloquent, and often irrelevant harangues

[141] [231] They are well provided with bows and arrows. They have only one horse. Snow is so deep, horses perish for want of food. In winter, they live on roots. In summer on antelope and fish.

December 1st. 30 Clammite Indians paid us a visit: fine men in good condition, but wretchedly clad. They say the river to the ocean is far distant and beaver they do not know. They say the Indians become more numerous as we advance to the ocean. . . . .

[342] [161] [439] Tuesday 6th. Reached Indian village of five huts, but large size square made of earth flat on top the door at the top a defence against arrows but not balls. 200 of them collected about our camp and traded 4 days. The 2 chiefs delivered traps lost by Mr. McDonald last year with 8 beaver. This is much in favor of their honesty. On our march this day, we passed the camps from wh. Mr. McDonald turned back last year and are consequently strangers to the country in advance.

[161] Thursday 8th. About 300 Indians around our camp. We advanced 6 miles south following the river south. I estimate the Clammitte nation 250 men.

Monday 12th. Reached the lake [Klamath lake?] 1½ × 15 miles well wooded with maple and hazel; course S.

The second visit on record is that of Frémont, who reached the northern shore of Klamath marsh on December 10, 1843. He saw smoke at what appeared to be the middle of the marsh and along the opposite shore. An unoccupied northern shore agrees with my own [361] information. The following day he visited the village "in the middle of the lake (or savannah)," which appears to be one of those at the outlet of the marsh.

[342] The huts were grouped together on the bank of the [Klamath] river, which, from being spread out in a shallow marsh at the upper end of the lake, was collected here into a single stream. They were large round huts, perhaps 20 feet in diameter, with rounded tops, on which was the door by which they descended into the interior. Within, they were supported by posts and beams.

[226] [252] [285] [291] Almost like plants, these people seem to have adapted themselves to the soil, and to growing on what the immediate locality afforded. Their only subsistence at this time appeared to be a small fish, great quantities of which, that had been smoked and dried, were suspended on strings about the lodge. Heaps of straw were lying around; and their residence in the midst of grass and rushes had taught them a peculiar skill in converting this material to useful purposes. Their shoes were made of straw or grass, which seemed well adapted for a snowy country; and the women wore on their head a closely woven basket, which made a very good cap. Among other things, were parti-colored mats about four feet square, which we purchased to lay on the snow under our blankets, and to use for table cloths.

[231] Numbers of singular-looking dogs, resembling wolves, were sitting on the tops of the huts. . . . .

[648] They made us comprehend that they were at war with the people who lived to the southward and to the eastward; but I could obtain from them no certain information. . . . .

This morning the camp was thronged with Tlamath Indians from the southeastern shore of the lake. . . . .

Frémont also remarked on the scarcity of their horses.[22]

Frémont reached Klamath lake again May 6, 1846. He commented on the outlet, Link river, "this is a great fishing station for the Indians." His statement on the distribution of their settlements coincides with my information. [231] [226]

> They have fixed habitations around the shores of the lake, particularly at the outlet and inlet [Williamson river], and along the inlet up to the swamp meadow [Klamath marsh], where I met the Tlamaths in the winter of '43–'44, and where we narrowly escaped disaster. . . . . The Indians made me understand that there was another large river [Williamson river] which came from the north and flowed into the lake at the northern end, and that the principal village was at its mouth, where also they caught many fish. [361] [131] [133]

Frémont's party made a circuit of the lake. It is curious that he does not mention the settlements about Pelican lake on the western side, which he could hardly have avoided. On the other hand it is not clear how closely his memoirs follow his diary. Attacked while on the western side, his party reciprocated by raiding a village on the opposite side, perhaps one of those on Williamson river just above the present highway bridge. [726]

> Behind the sage-bushes where they had taken their stand every Indian had spread his arrows on the ground in fan-like shape, so that they would be ready to his hand. . . . . Quantities of fish were drying, spread on scaffolds, or hung up on frames. The huts, which were made of tall rushes and willows, like those on the savannah above [Klamath marsh], were set on fire, and the fish and scaffolds were all destroyed.[23] [252] [342] [726]

The first invaders remembered by the Klamath came from the north about 1835. The stories about them have now a legendary flavor. The first group was mounted; the Klamath dubbed them mpě'tkoŋks (from mětc!a', to pack about) from their roving habits. An alternative name, pásai'ūks (French-Canadian in Chinook jargon), more surely identifies them. During their brief stay at the mouth of Williamson river they bought fat dogs of the Klamath, which to the latter's amazement, they ate. For these they gave buttons and metal disks with a central perforation (wika'lkal). 173 437 648 ●

Almost as early was a white contingent moving northward on the west side of Klamath lake. The Indians watched them unseen. They were impressed with the horses, axes, and the food of the whites. 173 648 177

---

[22] Frémont, Narrative, 122.

[23] Frémont, Memoirs, 483, 484, 494.

173 177 [302] When the latter broke camp they left behind a little flour, which the Indians carried home and divided. They rubbed it on their palms and smeared their faces.[24]

648 648 Other early whites came from the southeast on horseback. This marked the beginning of the great migration by way of the Modoc country to the Pacific slope. On the whole the Klamath came off remarkably well in their relations with the whites. The full brunt of immigration was borne by Modoc and Pit River peoples. The Klamath were spared the Oregon wars of the fifties, which all but annihilated the tribes of western Oregon and northern California.[25] The earliest white settlements in the neighborhood were about the present Jacksonville, Medford, and Ashland. The first white settlement within Klamath territory was near the village of kowa'edi at the northern end of the lake. This was about 1860–65, hence may have reference to the first agency established there. Subsequent relations have been on the whole quite amicable. The Klamath took no part in the Modoc war of 1872–73.

Habitat

131 133 The territory of the Klamath is on the high plateau of eastern Oregon, in the shallow basin wherein lies the group of lakes that give rise to Klamath river. The southern half of this basin about lower Klamath and Tule lakes is Modoc territory, extending southward across the lava beds in the direction of Pit river. The northern half, which lies against the Cascade range, is the home of the Klamath.

[361] The Klamath properly reside on Klamath lake (or as it was formerly known, upper or middle Klamath lake), on Klamath marsh, and on Williamson river, which connects them. At least, most of the permanent winter settlements are on these three waters, with a scattering on their tributaries. Summer camps are established over a much wider territory, as far, it would seem, as the natural limits of this drainage area.

---

[263] [24] Salt was equally unknown to them at this time.

[174] [648] [25] A somewhat obscure account was given me of the inclusion of Klamath in the great round-up of western Oregon Indians on Siletz (?) reservation in the fifties. These had been wintering at the Dalles and were herded with the Indians there. The Upland Takelma and Molala were penned in together and fed by the soldiers. Some died every day; the Klamath suspected that they were poisoned. The Klamath were kept apart, and, thanks to the strenuous arguments of their chief Lalc'ks, were not only freed but supplied with beef and an escort of soldiery to conduct them back to their own country.

101
131
> East of the Cascade mountains, and south of the 44th parallel, is a country not attached particularly to any agency. That portion at the eastern base of this range, extending twenty-five or thirty miles east, and south to the California line, is the country of the Klamath Indians.[26]

This is essentially correct although the boundary might better be set somewhat farther south to exclude the headwaters of the Deschutes, in earlier times the home of Sahaptin peoples. The country north of Klamath marsh is considered too open and cold for settlement. On the eastern border are a series of lakes (Silver, Summer, Abert, Goose) and rims which give on the desert to the east. There are Northern Paiute settlements on the eastern sides of Summer and Goose lakes, perhaps those of the Walpahpas mentioned by Meacham.

• 648
> The meeting with the Klamath and Snakes was one of interest to all parties, from the fact that they had been enemies, and the chiefs had not met in person since peace was restored. Living in the country intervening [presumably Summer to Goose lakes] was a small tribe of Wal-pah-pas, who are half Snake and half Klamath. They were mediators, though sometimes fighting on alternate sides, as interest or affront gave occasion.[27]

101
131
221
Sycan river, Sycan *marsh, and Yamsay* mountain are summer resorts of the Klamath, who had their easternmost settlement (hledleluē'luke) somewhere west of Gearhart mountain. Chewaucan marsh, between Summer and Abert lakes, was probably also visited, although I was not told so. Its name is Klamath, probably tcuwa'k̄ān, arrowhead place, derived from the abundance of arrowhead or wappatoo roots (tcuwa') gathered there.[28]

SETTLEMENTS

221
The occupation of this territory is determined by the manner of life. The fixed villages are the winter residences to which people return year after year. Early spring finds them leaving for favorable fishing stations where there are successive fish runs. Through the summer they move to the prairies to gather edible roots and berries or to the mountain and desert to hunt. During most of this time families are widely scattered and the winter villages quite deserted, but with the ripening of pond lily seeds in the marshes during August
[262]
and September they again congregate. The pond lilies grow in enormous quantities, the seeds (wo'kas) constituting a staple second only in importance to fish.

WARFARE AND FEUDS

721 Klamath warfare is deserving of the name in contrast to the conflicts of the northern Californian tribes. Raids are carried into foreign parts for plunder, slaves, and revenge, and received in turn. No single town or tribelet is alone concerned: warriors are drawn [171] from the Klamath at large. This is in marked contrast to the Yurok and their neighbors, e.g., whose foreign wars seem but an extension of the private quarrels that set town against town, and in which the large body of Yurok may remain neutral. Warfare is here not mere retaliation, murder for murder, but is engendered by patriotic motive and tangible benefits.

There can be little doubt that the Klamath attitude is due to their contact with tribes of warlike habit to the north and east. Raids from that direction had to be met and countered. The interesting circumstance is that the Pit river people were under a similar compulsion but apparently made no effort to cope with the raids by reciprocating. So far as I can learn they never ventured against the Klamath despite their equivalence or even superiority of numbers. The cause for the difference seems to be that the Klamath had reason to raid; slaves and [437] plunder were important to them. There was a market for these articles at the Dalles with much-coveted horses to be had in return. [231] The Achomawi had no such outlet. I would not underestimate the difference in tribal solidarity, which may have been entirely lacking [619] among the Achomawi, but the suggestion is that such solidarity may in this instance be a function of a common cause against a common enemy. The Klamath had their share of internecine warfare.

648 Besides the close bond with the Modoc, normally friendly relations are maintained with the Molala across the Cascades, the Wätä'nkni (Warm Springs people) of the Deschutes, and the Wishram-Wasco 648 at the Dalles. Warfare is directed toward all other directions. Raids 721 are exchanged with the Shasta several days' journey down the Klamath river, the Upland Takelma on the Rogue river, and the Northern [231] Paiute (Snake) of the desert to the east. The Klamath fight the Kalapuya and take horses from the Warm Springs Indians.[33] Since horses were obtained by them, raids may be expected of the Ya'mökni two hundred or more miles away; northerners generically, but in this

---

[33] Gatschet, 1:18.

connection the Sahaptins of the Columbia and the Cayuse seem 648
meant.[36] Both Ya'mökni and Shasta made slaves among the Klamath. 721
How infrequent were these raids may be judged by the circumstance [567]
that my informants independently mentioned the half-dozen recorded
years ago by Gatschet, and no others.

The Pit river people, possibly only the Achomawi, may alone be
raided with impunity. Reciprocity on their part would lead them
only into the intervening territory of the hostile Modoc, who may well
have served the Klamath as a buffer. For their part the Klamath were [567]
stimulated by the lucrative traffic in slaves established with the Columbia
river tribes, and the majority of captives were by all accounts Pit
river people. Gatschet writes of these raids as a regular occurrence. 114
"In April and May the Klamath Lakes and Modocs would surround
the camps, kill the men, and abduct the women and children to their 437
homes, or sell them into slavery at the international bartering place 567
at The Dalles"; and again, "the Lake men enslaved many every
spring time."[37] To be sure, consonant with Kroeber's view,[38] raiding [231]
was undoubtedly accelerated by the appearance of the horse in the
north. Contacts were then more rapid, and the beast itself became
an important and desirable article to possess. But there can be no 567
doubt that the practice of taking slaves on Pit river was already
established. This is not only implied in the informants' statements,
but it must be kept in mind that slaves were an important element in
the society of the Wishram, Wasco, and their down-river neighbors.
This means that the Klamath were not only turning to slave-taking
as a lucrative traffic, but that slave-holding as indicative of social
distinction was becoming their habit by imitation.[39]

How frequently the Klamath made war as a whole is unknown. It 721
seems doubtful that concerted action was frequent. Perhaps large- 567

---

[36] Henry Renier, an old settler, told me of such a raid up the Deschutes about 1876. 619

[37] *Op. cit.*, 1:lix, 19.

[38] Handbook, 319.

[39] While the Klamath do not distinguish among the Pit river peoples raided, Kniffen's recent account of the Achomawi (Achomawi Geography) makes it clear that Klamath and Modoc descended most frequently on Achomawi settlements north of the Pit and also crossed it to Atsugewi territory in Hat Creek and Dixie valleys. The Achomawi proper about Fall river were subject to continual attack; the Hewisedawi, south of Goose lake, and the Astariwawi, near them on the Pit, bore the brunt. The Atsugewi divisions, Atsuge (Hat creek) and Aporige (Dixie valley), were also freely raided. The Atwamsini, on the middle Pit, and the Kosalektawi, on the extreme headwaters of the river, were reached much less frequently. The other groups of Achomawi were free from attack probably by reason of their inaccessibility; the Ilmawi, Itsatawi, and Madesi at the western end of their range, and the Hammawi on the extreme east.

The topography directs Shasta attacks against southern settlements. Coming by the open country along the Klamath river, they attack iwau'wōnᴇ at Klamath Falls, sometimes swimming the river there. Or they cross by the little island to the south to surprise the settlement on the east bank. Many years ago a large body of Ya'mökkni, northerners, descended on the Klamath on Sycan marsh in the northeastern corner of their territory. These may have been marauding bands of Shoshoni and Bannock, fought by the soldiery of Fort Klamath in the summer of 1864.[43] Henry Renier, an old settler, told me of Indians coming south about 1876 or earlier by way of the Warm Springs country from the Snake river range east of Lewiston, Idaho.

Northern Paiute scouts use various calls in order to keep contact with one another, imitating the crow by day, coyote in the evening, and owls at night; unlike Klamath scouts. When these are heard, women and children take to canoes, staying on the water until morning. The screech owl is thought to call, kökᴇdĕ'l sḳiu'ki'u, who sent me? A thrush (sḳo''lĕ) names who is coming, wī'mpis ᴇge'pkwa, they are coming.

K
721
648
[727]

Klamath hunting in the Cascades might meet Upland Takelma from across the range. On one occasion (perhaps about 1850) a party of five or six was wiped out with the exception of a boy who made his way at night, arriving footsore at Klamath marsh. Those who fetched the bodies for cremation found that the Takelma had taken scalps, hands, and feet as trophies. Two of those killed were brothers to the maternal grandfather of my informant, Coley. A wife of this grandfather was an Upland Takelma woman, perhaps a slave, who was a sister to the Upland Takelma chief Tö̆ḳtö'ḳli 'red). They killed her in revenge. She had been living among them at the marsh for years but had no children. The reciprocal raid can be reconstructed from Gatschet's information[44] and my own. The expedition was undertaken at the call of Lᴇlo'ks, the most prominent ă'ukckni chief and a distant relative of Coley's grandfather. Men of all the tribelets took part. Crossing the mountains on foot, they found the Takelma encamped in Molala territory at the head of Rogue river. They attacked as the Takelma rose at dawn, scalping many and carrying off women and children. Among those killed was Tö̆ḳtö'ḳli, whose hands and heart they took. After the man was shot, Lᴇlo'ks lanced him through the throat. Lᴇlo'ks invited all the Klamath to a huge scalp dance at Klamath marsh. During the dances a wife of Coley's grandfather danced about with the heart in her teeth. The captives were dragged by their arms and forced to dance close to the fire.

Shasta NS21

grown up among the Klamath, Klamath in speech and custom, were K 567
not tempted to begin life anew elsewhere. Some, at least, had considerable K
prestige. Pit River Charley, for instance, a freed slave, [786]
returned from his people in 1873 with novel rites which were engrafted [177]
on the Ghost dance then newly come to the Klamath.[62]

Trade is probably of no great consequence within the tribe although K
it figures intertribally. Contacts were few and frequently unfriendly 439
until after the coming of the whites. The exception is the neighboring 221
Modoc groups; others are too distant. Winters are too severe for 361
travel and trade, but summers find the Warm Springs people in residence
with the Klamath. These similarly set out for Warm Springs
and the Dalles when the grass begins to grow, camping there in the
open during the summer, and building mat-covered structures of
earth-lodge shape (wakĕ'ploks) if they stay through the winter. K
Slaves, Pit River bows, and beads are taken there to trade for horses, 439
blankets, buffalo skins, parfleches, beads (probably dentalium shells), 436
dried salmon, and lampreys.[63] Two slave children are valued at five 567
horses, several buffalo skins, and some beads. This is not far from
the values recorded by Taylor in 1859; one woman was worth five or
six horses, a boy one horse.[64]

The Molala are also visitors and are met on the headwaters of the K 648
Rogue west of Crater lake. From them buckskins are obtained for
pond-lily seed and beads. Relations with the Shasta have not always [437]
been unfriendly; some of the Klamath Falls group and Modoc married S
with them, possibly only since the white advent. The nearest Shasta 131
settlements at Shovel and Jennie creeks can be reached afoot several K
days' journey down the Klamath. Laik'ĕlmi is a jointly occupied 648
fishing site somewhat upstream but below the Klamath canyon. Skins [226]
and skin blankets are traded for Shasta beads. Dixon states that [437]
Shasta trade with the Klamath is slight.[65]

In the period 1860–70 the few Shasta remaining in their territory congregated S
on the lower Shasta river and near the frontier town, Yreka. They were 131
reached by crossing the Black Mountain range. At that time this was a S
much mixed group, principally half-breeds. My informant Tom Lang, taken [302]
there as a youngster, remarked how he was afraid of their highly tattooed faces.

Intercourse and marriage went on freely with the Modoc. They K
were visited on Tule and Lower Klamath lakes, and joined for the 648
fishing on Lost River near Olene. 131

• 648 fishing on Lost river near Olene. A shallow bowl-shaped twined
[439] basket, called ḳ!we'lu, is obtained from the Modoc, who in turn trade
it from Pit river. There is no direct trade with the latter people.

231 Horses were first acquired in any number about 1840. They had
177 been previously acquainted with them in the hands of whites who
crossed their country about this time; dates are uncertain. Ogden
in 1826 remarked on a single horse seen as though it was a rarity
231 among them.[66] The first sources were Warm Springs and perhaps
177 some group immediately east of that place. These were obtained by
chiefs; others were too poor in slaves to buy them. The name given
437 the new animal follows the common habit, wa'tcag from wate, dog.
Saddles (pă'olăs) were first made of antelope hide. Here, as in the
Plains, horses served as a stimulator of contacts, especially with the
Columbia river peoples. As I have remarked, their introduction seems
responsible for the rapid increase in wealth, the flow of northern ideas
concerning social stratification, importance of wealth and of slave-
holding, Plains costume, and those predatory habits which furnished
the withal to maintain the new status.

237 Buffalo (yo'ho) skins are obtained at second hand; the Klamath
177 know that their origin is east of the Umatilla, that is, in Idaho.
Buffalo never ranged into this country, although they reached the
437 Harney Lake district. But very few skins ever make their way into
527 Klamath hands; only men with many slaves can afford them. They
are wanted to cover a gambler's hands in the stick game, an oppor-
tunity for ostentation.

177 Parfleches (sḳö'psöli, folded up) are traded from Warm Springs
437 people and Sahaptins beyond them on the Columbia. They are not
made by Klamath.
415

Incidentally, many older people have fluent command of Chinook
* 171 jargon. They, or somewhat doubtfully the Modoc, are the southern-
most people with whom this trade jargon is current. Kroeber remarks
437 on the fragments in use by Yuki and Shasta.[67] Naturally enough, it
191 served a purpose with the Columbia river peoples alone and was of but
small value with the whites coming from California.

It is interesting to know what constituted wealth among the Kla-
556 math, but with the old life now gone it is difficult to get direct evi-
dence. However, certain things alone were spoken of when describing

---

[66] Elliott, Ogden Journals, 210.

[67] Handbook, 308, 319.

177 At least one minor element, assigned by tradition to this period,
535 was derived from another direction; the notched rattle used in war
534 and scalp dances in imitation of the Upland Takelma.

Direct contact was opened with the Upper Chinook at the Dalles
only after 1800. By this time Snake raids had dispossessed the
174 Sahaptins of central eastern Oregon, driven them north of the
648 Columbia, and cleared the south bank of that stream by scattering
Cayuse-Molala east and west. Direct contact quite across Oregon
brought the Klamath in touch with the great trading center at the
Dalles and revealed to them the superior and stimulating cultures of
the Chinookan tribes and the semi-Plains groups from above on the
Columbia.

174 The whole rise of the chiefs, the growth of social stratification
177 based on wealth, the concern with slave-holding, all seem to date from
this time. Wealth began to be considerable: its form was new: horses
[556] and slaves. Chiefs grew in wealth and prominence over shamans.
The basis of their selection changed in some degree from war to wealth.
[622] Slave-raiding to the south increased in frequency: the booty was
[721] carried to Warm Springs and the Dalles.

It is doubtful if the material differences in wealth and slave-
[567] holding existed prior to 1800. Shamans were dominant over chiefs
and were but slightly more wealthy than the majority. The historic
174 tribal subdivisions were in existence, the village groups and their dis-
177 tribution established, and the basic social relations, as reflected in kin-
ship terminology for example, much as we know them. Marriage may
[756] well have been by purchase, but possibly without the pseudo-potlatch
[622] custom of reciprocal visiting. Material culture was prevailingly
southern Plateau in aspect, and religious practices, while more north
[619] Californian, had already some impress of the Northwest Coast.

[583] Is there a Lutuamian culture province? I am doubtful. Kroeber
has somewhat hesitatingly posited one, set off by a certain distinctive-
101 ness from that phrasing of Northwest Coast culture found localized on
the lower Klamath river, and favoring rather the Basin and Plateau,
105 to which the Klamath country lies open.

114 "The Lutuamian culture or subculture, as represented by the
Klamath and Modoc, corresponds well with this setting. It reveals
some specializations, such as its wokas and tule industries, that are
obviously founded on peculiar environment. There are some north-
western influences, but rather vague ones. The basis of the culture
is perhaps central Californian, with certainly some Great Basin or

DOO AE: 3-6 players. WT: 10+. WS: 4-5. MM: 3-4. MV: 5, in women's game; 3, in men's.

[526
648] 2201. Often, but not always. Mo: Play Kl often. Concerning 1 such intertribal match between women, informant related following: "Before the [Modoc] war, the Mo and Kl were camping on opposite sides of Lost River, fishing. The Mo and Kl women played shinny; the Mo won, but the Kl women, instead of paying [their gambling debt] jumped in Lost River and ran home. But the Mo women jumped in the river after them, and followed them into camp."

2202. Mo: See note 2201. MV: At spring celebration women play first shinny game of year; no betting on this first game, which opens season for games of all descriptions. Season for games closes in November; "after that everything quiets down for winter."

2203. AW: In men's game. WT, NM: 1 man acts as referee. WT: "Big, strong man, who can stop fights between players." MF, NF: 2 male referees for game.

Ball race; hoop-and-pole.--

2204. For 3 groups, AW, AE, and MM, 2 types of ball races entered in this section. When element refers to one type only, note indicates which type. All other entries refer to both types. AW, AE: Type (1), single ball race. Type (2), 2-ball race. Informant ignorant of source of introduction of types (1) and (2), but positive they are both "half-breed" (post-White) races. WT: Informant denied any ball races, but WS informant said he had seen ball races held at Hayfork, in WT area, and that they were of recent introduction. WS: Ball races lear[illegible]m Round Valley Reservation group, about 60 [illegible]go. They were "played at Hayfork first [illegible] WS group learned to play." Race is somewhat similar to WS form of women's shinny game (see note 2170) but played by men only, with 2 balls. MM: Type (1), 2-ball game. Type (2), "wrestling football," single ball.

2205-2207. MM: Refers to 2-ball game (see note 2204).

2208. AW: Refers to single-ball game. MM: Refers to 2-ball race. See note 2204.

2209. AW, MM: Refers to 2-ball race (see note 2204).

2210-2212. AW, AE: Refers to 2-ball race. MM: Refers to single ball, wrestling football. See note 2204.

2213, 2215a. AW, AE, MM: Refers to 2-ball race (see note 2204).

2219. MM: Refers to wrestling football (see note 2204).

2222. AW, AE, MM: Refers to single-ball race (see note 2204).

2225. AE: 6 on side, in 2-ball race; 4 on side, single-ball race. MM: 4 on side, 2-ball race; 2 on side, single-ball race (see note 2204). NM: 2 men or 3 women.

2228. MM: 2-ball game.

[204-B]

WAR

Nature and Causes

Nature of warfare; motivation.--

000 2770. SW: Four Shasta groups "didn't have much trouble among themselves," but chiefly fought Mo and Wintu. Kammatwa (see note 282) raids against SW also mentioned, but Shasta "didn't fight much against Karuk or the other [Klamath] River tribes." Intertribally, wars chiefly for revenge; any intratribal fights usually over women. At: Mo stole young girls from At, but "latter never went up and fought the Mo; 2 captive women the Mo took managed to escape and return to Fall River (Achomawi territory) where they married Fall River men." Informant did remember a raid by Fall River men, who came down and took roots and baskets from At. Also Kl came down once and stole some women. "Shasta never came over to Hat Creek (At), but the Wintun came over once and killed a Hat Creek man; then men from all the Hat Creek towns went to war." Fighting in this war amounted to little, however (see note 2798), and on the whole At made few offensive raids. AW: Subject to Mo raids; unfriendly toward Mo. Intermarried with, friendly toward Okwanuchu (ye·tatwa) at McCloud. "Afraid of Noze Indians, [N Yana, ti'saiči, salt people, at Round Mountain]; fought with them." Not much intercourse between AW and N Paiute (Surprise Valley); latter "were friendlier with the AE around Likely." "Not very friendly with the 'Shaverhead' [At] tribe." "Not very friendly with Wintun. The people at Big Bend (Madesi Achomawi) were friendly with the Wintun." AW territory sometimes invaded by Shasta; AW pursued them, fought them. AE: Mainly fought with Kl, Mo, Paiute; the Wintun and Shasta were too far away. WT: Fought Karuk, Yurok, Hupa ("Klamath Indians") and Yuki (Round Valley Indians); latter were "real mean." On friendly terms with Chimariko; intermarried with them. WM: Fought Central Yana; on friendly terms with Madesi Achomawi and N Yana of Big Bend, Montgomery Creek. MM: Fought Washo (čaisum); occasionally fought Sacramento Valley Maidu (taiyIm) and people around Mooretown (MF), but after fight, "then they were friends again pretty quick." At of Hat Creek (kom maidum, snow people) and MM friendly; never fought each other; "they were good friends, just like 1 tribe together." Paiute, Wintu, Shasta too distant to engage in any fights with MM. NF: Very few wars; when whites settled around Marysville all fighting stopped. Fought Marysville, Colusa groups (Valley Maidu and Patwin, respectively); when NF went down to Yuba River to pick grapes, Marysville people chased them out. Or "Marysville people might call NF cowards, and tell them to come down and fight"; NF would then accept challenge. Marysville and Colusa people "mean; no good. Never fought Nevada City [NM], Mooretown

[648]

[209-B]

000 [MF group], or Plumas Co. [MM] Indians." MM: This section not discussed with informant. MV: Informant lacked all knowledge of war, declared she had never heard it discussed.

2771. At: "Never fought Aporige [other At group]: partners with them; Aporige helped At fight against Wintun. Also Round Mountain people [N Yana] helped; a Round Mountain man was in charge." AW: Hammawi (AE) raids mentioned by informant; AW retaliated. AE: No fights between small villages referred to collectively by outsiders as Hammawi (see note 2617); there were however feuds between villages "over women and girls, or over a doctor of 1 village poisoning the people of a near-by village." Fights between Hammawi and "Big Valley people [Atwamsini [648] Achomawi] were rare; the Kl and the Shasta fought them. Once in awhile [Hammawi] fought the Fall River people [Achomawi proper]; then they'd pay [in settlement]. The [Hammawi] had relations at Big Valley and Fall River. The Madesi [westernmost group of Achomawi] never came into [Hammawi] territory; only the Big Valley Indians fought them." WT: Fought E Wintu groups occasionally. MM, MF: Fought each other occasionally (see note 2770). MF: See note 2770.

2780. MV: "The only people who stole young girls were White people."

2783. AE: See note 2771.

2789. SW: "Lots of stealing of money and stored food by women; this started fights [but only among the women]. Also fights arose among the women from arguments; then they grabbed each other's hair, and threw dirt in each other's faces. Men didn't steal this way, but women did."

Participants

Groups involved; combatants; leaders.--

2790. For definition of autonomous group, see elements 2617 ff.

2791. At: See note 2771. WT: Villages leagued together and asked Trinity Center and Lewiston Wintu to help them sometimes; former also occasionally called on WT for aid. MM: Sometimes asked At (Hat Creek group) to help in war; never asked MF groups, as on rather unfriendly terms with them.

2792. MF: Women never accompany war party, which is chiefly composed of young men.

[726 701 648] 2795. Kl: Often asked Mo to help. Mo informant also emphasized this. Kl did not pay Mo; latter got food, buckskins, other plunder. At: See note 2771. AE: Headman or "chief" of village group, if latter raided, visits headmen of other near-by village groups, discusses matter during "a big smoke." All headmen consulted then meet at winter living house of group which was attacked, and decide what to do. Headmen then tell their men to join them, when matter is settled, and war dance is held at winter house of attacked group; "then they all go off to war.

[210-A]

727 535 2917. Kl: Men and women dancers in 2 separate single files; circle fire, men circling it clockwise, women counterclockwise. Women dance on inside, near fire, men on outside. Stamp left foot continually. As men come down to fire, hand women dancers scalps, each on small hand pole. Dancers sing; also have singers who stand by fire. No rattles used. Dance thus for 5 nights sometimes; each night dance stops about midnight.

000 2921. Mo: Center pole has several scalps on it. At: Pole 5 ft. tall. NF: Scalp at top of pole.

● [648] 2922. WM: "Learned to tie heart on top of pole from Kl."

2923. Mo: Woman leader of dance carries single scalp on small hand pole.

2940. Such as elkhide tunic, rod armor; carry bow and arrows, and shield if such is used.

727 783 627 Purification of killers; wounded.--This section relates in the main to persons who have engaged in intratribal murders rather than to warriors returning from open combats. The distinction between the taboos imposed on killers in open warfare and individuals who have secretly killed in a feud should have been more specifically inquired about, and separate entries made for the purification practices followed in each instance. Unfortunately this was not done and the field data do not allow insertion of separate entries for more than 5 or 6 of the groups covered. As a general rule, warriors seemed to have engaged in few purificatory practices; whereas for SW, SE, and other groups feud-murderers observed many of the taboos listed in this section. NF taboos which follow relate to person who has taken scalp in intertribal war. Such person is deemed witai (crazy) after he has taken scalp; must be purified before he can rejoin family.

2941. Kl: No ceremonialism connected with observance, however. Klamath Marsh men swim in lake.

2951. At: 2-3. WM: 4-5 days.

2955. Kl: Fish also taboo.

Peace Negotiations

000 Compensation for slain; dance of settlement.--

2958. SW: No compensation for slain, but compensation for captives. See note 2873, SW. AE: No settlement for intertribal killings in war; "just keep on owing each other a war (AE owe Paiute a war now; the Paiute came over and killed a man, years ago)." It is modern custom to settle for intertribal wars; Mo did it, under Captain Jack. MM: For intertribal wars, as with Washo, neither side will take payment for those killed. "Just fight it out; when good and ready, MM chief may send messenger man over to Washo; then they'd make friends with them."

many tribesman brought at once into a relationship so explicit and compelling in its demands.

K M 756 796

Such public gatherings must be held early in the winter and serve only to punctuate its length. As the season advances and the earth lodges become increasingly fetid and flea-ridden, housewives anxiously eye the dwindling supplies, and social bonds are threatened. During this time, says Ray, Modoc take pains to conceal from outsiders the location of the food cache or the presence of food in the house. Hospitality is necessarily curtailed and theft becomes common. Nonetheless, those shamans who have access to one of the spirits controlling weather still conduct public ceremonies, and they are assisted by the villagers.

K M 221 261 [356]

K M [574] [685] [756] [796] [789]

If spring is long delayed, the people may be reduced to eating hides, boiled or roasted. Even at this time, however, they will not eat their dogs. When the ground is sufficiently clear of snow, they venture forth to ferret out roots overlooked last year, to gather the tough lichen, and to pry off the tender cambium layer of young ponderosa and lodgepole pines. With the appearance of the first holes in the ice, the men swiftly set about fishing.

K M 261 22

As snow retreats and ice melts, and warmer winds waft the delicate odors of growing things, a feverish activity seizes the villages. Some settlements, favorably located, will continue to be occupied through the year. In others the earth lodges are dismantled. The decrepit and those too ill to move reconcile themselves to remaining in the mat lodges with a boy or girl to look after them. The others, raising the dugout canoes from the muddy shallows, where they have been submerged to prevent splitting, pile the household gear and children aboard and, with firm strokes of the pole or paddle, depart for the spring fishing stations. Already, in March, the runs of suckers are surging up the Williamson and Sprague.

K M 221 361

K M [501]

At the spot on the latter river where Gmukamps first instituted the tradition, the Klamath observe the first sucker ceremony, which ensures a propitious run. On the lower reaches of Lost River near present-day Olene, there is a famous fishing station, where Modoc and many Klamath congregate for several weeks, catching and drying an estimated fifty tons of fish. On a stream tributary to the upper Sprague, the teeming run of small suckers

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10
Modoc NS17

[Klamath Reservation]

K M draws upland Klamath, Modoc, and Paiute and gives to the
226 nearby settlement, the easternmost of the permanent villages of
103 the Klamath, the name, "Sucker-fishery." Others make their way
648 K to stone weirs, built, it is said, by Gmukamps himself, or to the
M lakes to fish with a variety of dip nets, gill net baskets, the two-pronged
226 harpoon and the multibarbed spear. At night, men set
forth in canoes upon the lake to fish by torchlight. Set lines are
K put out infrequently. While the men catch the fish—suckers,
M [261] salmon, and trout—their wives work ceaselessly, splitting them
and laying them in the sun to dry.

K Released from the protracted confinement to the winter settlements,
M tribesmen eagerly renew bonds with relatives and friends
221 from other villages. Related families may rendezvous to travel
222 together down to the fisheries and set up their lodges side by
[571] side. Then, as spring advances and the runs of suckers and
[602] salmon abate, the fishing settlements break up and parties of
[226] two or three families fan out along the flats and meadows to dig
[103] roots: the succulent camas, the nutlike ipos, yans, and the arrowroot
for which Chewaucan Marsh is named. In the watery flats
they seek the roots of tule and cattail; elsewhere they pick wild
K celery and mosses. There are the eggs of swan and other waterfowl
M to gather; trout in the streams to be caught; and for the
22 Modoc, antelope and mountain sheep to hunt. At this time, some
[361] areas are occupied that at other times are too cold or barren.

K If there is danger of hostile attack, the parties coalesce; and
M 22 under all circumstances they maintain a wary lookout. In the
226 north small bands make cautious excursions into the upper valley
of the Deschutes, watchful for raiding parties of Cayuse, Nez
K Percés, Warm Springs, and Paiute. Toward the east, Sycan and
M Chewaucan marshes are dug over by Klamath and Paiute. Frémont
222 once found the latter tract furrowed as if it had been
252 plowed. In many places the stone-lined earth ovens in which
camas and other vegetal foods were baked for winter storage
can still be seen.

K As the long summer days wear on, the pond-lily seeds, known
M 221 as wokas, begin to ripen on the marshes, and once more the
222 people draw together. The Modoc congregate especially along
648 Tule and Lower Klamath Lake, while some join the Klamath
on Wokas Marsh. Many Klamath, together with a few Modoc

and Paiute, meet on the broad expanses of Klamath Marsh, K M where, as Coville observes, over ten thousand acres of ripening 221 plants promise in good years an abundance not to be exhausted 222 [648] • by the demands of man. In later times Agents describe wokas as the most important single food of the Indians; and its specialized preparation is one of the most distinct features of their subsistence technology. Its importance is emphasized further by K the circumstance that the month of its harvest, August, marks [805] the beginning of the Klamath year. The wokas-gathering is preceded K M by shamanistic performances to ensure a plentiful crop. [756]

Daily, the dugout canoes, somewhat smaller than those used in [789] fishing and ordinary transport, slip out from the camps upon the K N broad expanse of the waters. In the openwork bags twined from 50 tules, the pods accumulate until the canoe is full. One old woman 222 recalled how she and a girlhood chum learned how to collect the pond-lily seeds:

> We thought we'd get some wokas. We knew how to do it because we'd seen the people doing it. We took a canoe. First, we fought about which patch to go to. My friend was in one end of the canoe and saw a patch of wokas, but I wanted to go in another direction. We stayed out all day but came home early enough to put the canoe back before the women came. Then we took the wokas out and tried to fix it in a pit with grass and pine needles the way we knew it ought to be done. We made a little place just for our own wokas. Then we decided to get up early the next morning and go out again. We took another canoe. There were always lots of extra poles lying K around so we took one. We took some bread and dried fish for M lunch. When we got home, we fixed the wokas. We fixed tules [252] to sift it through. Then we put the wokas in a pan and threw it up so the wind would blow the dirt away. My mother saw what we were doing and said, "Yes, that's the best way to do it." I kept asking her how to fix the wokas the different ways, and she told me. I asked her for a little sack to put the wokas in. My mother watched us do all this, and she said that maybe some days she would be tired, and we could use her canoe. We got up every morning, even when it was cold and foggy, for awhile. I got two sacks of wokas. My mother said I could do what I wanted with them so I sold them."[14]

While the women, old men, and children are occupied on the K M marshes some of the men fare forth to hunt. The favored grounds 224 are in the east, where Klamath and Modoc pursue antelope, mule

K M 609 K M [574]

In such a sphere, and in relations with strangers beyond, the myths picture encounters fraught with possible danger. They may be initiated by a trucial period which endures until, by proper guest-host behavior, by a claim of kinship or on the other hand by an act of aggression, the issue of "friend or foe" is precipitated. Hospitality dictates that one receive and feed the stranger, though a visiting kinsman brings a gift of food or otherwise repays the kindness. If, however, hostility is decided upon, it rarely becomes open: instead, both sides proceed indirectly, under the guise of amicability, and employ followers or auxiliaries to encompass the destruction of the other. It is here that the prescient qualities of the hero, his access to assistants and to supernatural forces, are decisive.[19]

K 648

In ethnographic reality, the outer limits of society are marked by the boundaries of common speech. Beyond this, the Klamath maintain amity with the Molala, intermittent friendship and hostility toward the Warm Springs and other Columbia River Sahaptin, who sometimes raid them, and toward the Paiute; inveterate hostility toward the Takelma of the upper Rogue and other peoples west of the Cascades; and a predatory aggressiveness toward the Pit River and Shasta to the south, whom they increasingly raid for slaves and loot.

K M 571 156 [838]

The horizons of such a society are not wide. With the exception of the shaman, a part-time specialist, each man and each woman has much the same skills and knowledge as his fellows. The aberrant individual can do no more than assume the dress and behavior of the other sex, ascribing his action to supernatural dictate. The transient forms of the community and the informal constraint it imposes, the paucity of activities that demand concerted action, go hand in hand with a permissiveness in the individual. When this takes aggressive form, it may threaten the very fabric of society.

K M 754 571 152 682

The covert expression of hostility is likely to invest relations beyond the natal family with fear and mistrust. Revenge can take the form of murder from ambush, sorcery to engender the illness or death of the enemy, or the stealthy destruction of his property.[20] One frequent cause of open slayings, and of the feuds that ensue, is suspicion that a shaman has brought about the death of one's kinsman. Commonly, such charges are leveled

TWO

[P.22]

The Frontier Condition

726 648 175 FOR MANY YEARS THE SETTLEMENT OF THE WILLAMETTE AND COlumbia valleys bypassed the tribes of the Klamath Basin.[1] Indirectly, however, they felt the first remote influences, as the Sahaptin-speaking tribes of the middle Columbia, equipped with the superior weapons of the trading posts and mounted on horses acquired from the Shoshonean bands to the south, began to raid up the Deschutes Valley to take Klamath slaves.[2] The Klamath [231] [411] were at a disadvantage: in 1826 Peter Skene Ogden, of the Hudson's Bay Company, found them with but a single horse and uneasily awaiting raids by joint parties of Cayuse and Nez Percés; and even by midcentury they had only one firearm among them.[3] The scantiness of the local beaver made their territory of little interest to the company, however, and they came to enjoy a reputation as fierce warriors which preserved them [101] for some time from settlers. Nonetheless, they were known even then to the tribes of the Columbia, for Ogden applied to them a name, "Clammite," that was not their own and seems to stem from Chinookan.[4]

648 175 Some ten years after Ogden passed through, a party of French-Canadian trappers made their way into the region and on their return to The Dalles took along some Klamath.[5] From that time on, contact with the tribes at that great Indian trading center increased. Klamath parties moved down the Deschutes Valley, making their way either to The Dalles itself, or branching westward down the north fork of the Santiam along what came to be known as the Klamath Trail, through the settlement of the northern Molala, thence to the Kalapuya on the outskirts of 648 567 439 437 435 175 Oregon City. There, in 1843, one missionary recorded the visit of "a large party of the Clamath tribe, fierce and warlike . . . with about twenty slaves, [who] sold most or all of them. Some, I was informed were sold for three horses each, some cheaper."[6]

I was informed were sold for three horses each, some cheaper."[6] 000

In the changing conditions of the early nineteenth century, K
the Klamath were caught up in currents generated from without. 175
The advent of horses and of firearms made it possible for the 177
tribes of the east-central Plateau, the eastern Salish and eastern 648 •
Sahaptin, to cross the Rocky Mountains, to hunt buffalo and [231]
enter into relations, both peaceful and bellicose, with the tribes [411]
of the Plains. As they came under Plains influence, the appeal K
of Plains garb, of parfleches and tipis, grew.[7] The Klamath were [291]
attracted to these new goods, and the clothing at least came to [556]
replace or supplement traditional forms of wealth.

Moreover, the horse and the gun had revolutionized warfare K
patterns. Although traditional enemies beyond the Cascades M 175
were preoccupied with white settlers, on the east the Paiute were 177
gradually developing mounted bands of great mobility and 726
striking power. The Klamath and Modoc were not slow to seek 231
the new instruments of war. 411

The opening trade to the north brought a corresponding K
intensification of the raids carried south into the territory of the M 175
Pit River tribes—the Achumawi and Atsugewi—to capture women 177
and children, Pit River bows, and other loot. As Chiloquin, one 721
of the leaders of the time, recalled:

> When the Snakes [Northern Paiute] made war on us that made us keen to fight other Indians and we made war without provocation on the Pitt Rivers, Shastas and Rogue Rivers, but they never made willing war on us. Those wars lasted a great many years. We found we could make money by war, for we sold the provisions and property captured for horses and other things we needed. It was like soldiers nowadays who fight for money. We made war because we made money by it and we rather got to like it anyhow. The Snakes provoked us to make war on them.[8]

With developing warfare and the accumulation of foreign K
wealth came a gradual transformation of Klamath, and to a M 175
lesser extent, of Modoc society. The forays into hostile country 178
enlarged the scale of the war party. Chiloquin speaks of a body 726
totaling one hundred warriors, which included, according to Spier,
members of all the Klamath tribelets, and took in some Modoc as
well.[9] A joint raid on the part of Umpqua, Upland Takelma, and
other western tribes brought one such retaliatory reprisal about

[Klamath Reservation]

M
175 1850. Aggressions by Northern Paiute bands led to similar large-
178 scale forays into the country east of Silver and Summer lakes.
726 The almost endemic condition of warfare and the enlarging
K scale of operations, together with the lucrative trade in booty,
M
175 brought about the emergence of a chiefly class, the members of
726 which based their power upon eminence in war and possession
182 of wealth, including slaves.[10] Their successes attracted followers,
622 and common interest as well as kinship prompted them at times
565 to cement alliances with shamans.

556 Thus they drew into their hands coercive powers of no mean
756 weight, for, as Henry Blow observed, "this [shamanistic] power
[754] was used by the chiefs to get rid of rivals and there are some of
us old enough to remember of doctors being paid to kill certain
persons and of their foretellings of the exact day they would
die."[11]

K The rise of the chiefs helped to knit together tribal loyalties.
M
175 A war party formerly consisted of only those among the able-
178 bodied men who were inclined to fighting, but a successful leader
622 increasingly transcended tribelet parochialism, drawing followers
619 from diverse hamlets and villages across the Klamath country.
628 As warfare became a way of life, the occasional allegiance ren-
726 dered while in the field became an enduring acknowledgment
of worth.

K In the growing eminence of the new leadership, hereditary
622 principles may have been operative. Chiloquin mentions his
father as having been a chief on Klamath Marsh, his own brother
175 as a subchief, and a sister as a chief. The father of Dave Hill,
a rising young war leader, was a village chief; while Allen David,
later head chief in reservation days, was the brother of Captain
George, a Klamath Lake chief. That family eminence was not
essential, however, is shown by the personal history of Lileks,
K
[828 of good—but not chiefly—background. Lileks was a transvestite
833] in his youth until a supernatural experience vested him with the
power that was to lead him to be head chief of the Klamath.[12]

K A minor factor in these developments may have been the
195 interest of the whites in the centralization of tribal power, in
643 order that they might deal more effectively with responsible
648 leaders. In 1844, Elijah White, then Sub-agent for Indian affairs
177 met with some Klamath and Molala who had ridden into the

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

Kalapuya settlements in the vicinity of Oregon City, and induced them to be regulated by the same rules as were the Nez Percés and to appoint a single paramount chief. A disaffected Indian from The Dalles, however, subsequently joined the party as it was making its way homeward and provoked a quarrel in which those favoring the Agent's proposal were slain.[13] 175 177 643 648 •

While these events were taking place, the Klamath country was again being visited, at first by occasional parties whom the Indians watched unseen. In the years 1844-45 a mixed party of Walla Walla, Spokane, and Cayuse, under the Walla Walla chief, Piupiumaksmaks, passed through the Klamath region en route to California to buy cattle. In 1843 and again in 1846 the Klamath were visited by the explorer, John C. Frémont. In his earlier visit, the martial captain, in order to quell "the treacherous disposition, which is a remarkable characteristic of the Indians south of the Columbia," fired a round from his howitzer over Klamath Marsh. Although his action was scarcely calculated to allay the suspicions of the Indians, he was shown the same courtesy as had been extended Peter Skene Ogden years before. A village chief—the father of David Hill—and his wife came out to meet the party and guided them east toward Summer Lake. 175 648

Frémont's second entrance, in 1846, was less fortunate. In that year, moving up from California, he passed through Modoc country and thereafter up the west shore of Upper Klamath Lake, where he was attacked by a party that had followed him from the southern end of the lake. Three of his Delaware Indians were slain. Although his attackers probably were from the Klamath Falls tribelet, Frémont's reprisal was directed instead at a village of the Lower Williamson group. Neither women nor children were spared in the attack. The slaughter left a legacy of hatred that did much to draw some of the Klamath into the Molala war.[14]

By the time of Frémont's second visit to the Kamath country, the Indians of Oregon had been sorely stricken. Diseases brought by the whites had ravaged the tribes of the Columbia and Willamette valleys. The Hudson's Bay Company had sought to assure a firm supply of furs in the country it controlled and thus to maintain just and amicable relations with the Indians; and many of its employees had taken Indian wives. It was now being [731]

175 supplanted by immigrants from the wagon trains and ships.
648 Some of the newcomers were from areas in which echoes of the frontier still lingered.

From the first, the settlers were active rivals of the Indians for lands and resources. They brought wives who were often repelled by the Indian way of life, and who established for themselves an insular world in which the Indian could find little place. Where they did not directly displace the natives, their swine uprooted camas and cous and their sheep browsed on berries. After an area had been inhabited by settlers for a time, it could no longer support the Indians, save as degraded and drunken remnants. The newcomers, as a whole, found little to respect in Indian culture; and many Indians who tried to follow the missionary's road found that it did not lead to the easy acquisition of the material wealth and status of the Americans. To the disillusioned apostates, finally, can be added those enraged by the lawless deeds of small bands of renegades, both Indian and white.

These events and others of local character lay behind the Cayuse slayings at the Whitman mission in 1847. In that same year, Crooked Finger, the leader of the closely related Northern Molala, visited the Umpqua, Rogue River, Pit River, Modoc, and Klamath, seeking recruits for an uprising timed to take advantage of the absence of local settlers in the military campaign against the Cayuse. Even as preparations were under way, emissaries from the Cayuse are said to have visited his camp in Molala country; but the settlers, forewarned, struck first. In the ensuing fighting, approximately eighty Klamath were involved, comprising over half of Crooked Finger's supporters, and a Klamath chief, Red Blanket, was slain. The triumphant whites gave the survivors three days to leave, and they departed along the Klamath Trail, bearing their dead with them.[15]

During these troubled times, the experience of the Klamath beyond their homeland was consistent: the white man was too powerful to be withstood. Comparable power, said some, must be sought in the white man's way. Link-River Jo, a Klamath sub-
[997] chief, recalled in later years his contact in the 1840's with missionaries at The Dalles who

> told him about the Holy Spirit that was to come to the whole 175
> world and visit its remotest parts. When he came back from the 648
> Dalles he told his people about it but found them groping in [797]
> perfect darkness. . . . They would not believe him and told him he lied. He had watched long for the coming of the Holy Spirit and had never doubted that he should see him. He had heard Mr. Meacham talk for many days. . [and] now he saw that he was not like other men and knew that he must be the Holy Spirit come at last to bring gracious gifts for all tribes. . . ."

Others—and they were to become more influential—lived for 175
some time with whites and became convinced that the best 177
policy for the Klamath was one of peace. They included Lileks, 648
who in the course of the trading excursions to the north dwelled 622
for several years at The Dalles and was exposed there, no doubt, to the examples of authority set by whites as well as by the Columbia River tribes themselves. Another was Dave Hill, who, starting about 1859, lived approximately five years in Oregon City. Allen David, later to succeed Lileks as head chief in reservation days, was "well versed in the ways of the white man, from travel among the Willamette settlement." Another was Charley Preston who, like Hill, had spent five years at Oregon City, working for white farmers and had become "quite civilized and learned many of the white man's ways. He returned to his tribe and became a headman. . . ."[17]

Men such as these became the leaders of a "peace party"
among the Klamath, and their views achieved dominance in the 175
growing centralization of power among the Klamath. Lileks may 159
have consolidated the ascendancy he presently achieved as head 622
of this group by marriages beyond his tribelet: to the four wives [595]
from his own, Klamath Marsh, division, he added one each from the Lower Williamson and Klamath Falls groups, as well as one
from the Modoc. From the Columbia he or a contemporary [177]
brought back new "laws," which included the institution of [681]
flogging as punishment for murder or for persistent quarreling. In one instance, ascribed by Spier, with some question, to prereservation days, when two men of the Lower Williamson River tribelet slew a Klamath Falls man, Lileks had them haled to Klamath Marsh, where each was beaten five times.[18]

When, in 1858, it was indicated that Klamath and Rogue 175

K

175 River renegades had slain five prospectors on a tributary of the
648 Rogue River, the whites apprehended three Klamath involved
in the affair, "whom the Klamaths voluntarily killed to prevent
trouble; that tribe being now desirous of standing well with the
K U.S. Government."[19] It is probable that the hand of Lileks is to
[622] be discerned in this matter also. In brief, his power and that of
Chiloquin, often termed his second chief, was challenged only
by Captain George, leader of a faction hostile to the whites, and
by Monchnkasgitk, leader of the remote Upland tribelet.

K Thus the frontier condition brought a heightened rate of inter-
175 tribal warfare and of intertribal trading. It gave the Klamath
648 both peaceful and bellicose exposure to whites, largely outside
177 the Klamath homeland. In the awareness of new ways of life
[721] beyond the limited range of which their fathers had been con-
[439] scious the Klamath of the first half of the nineteenth century
became diversified in outlook. Enriched with new goods, Klamath
culture prospered, although in comparison with the levels
K achieved by the whites it seemed poorer than ever. Warfare had
M
721 consolidated power and wealth in the hands of leaders and the
648 magnitude of their operations drew Klamath and Modoc into an
175 uneasy cooperation.

622 Indeed, in many of these developments the Modoc participated
K only to a small degree. In disposing of those slaves destined to
M
175 be sold at The Dalles, the Klamath and occasionally the Warm
567 Springs peoples acted as middlemen; in consequence the Modoc
721 did not come as fully under the influence of the Columbia River
177 tribes, nor did they amass as much wealth. The development of
556 a chiefly class among them was feebler, and the tribelets co-
M
643 alesced under a single acknowledged leader only tardily and
525 incompletely.[20]

619 When in 1846 an exploring party under Jesse and Lindsay
M Applegate laid out an alternate emigrant route known as the
175 South Road, they directed it from Fort Hall down through Modoc
648 country and past the winter settlements on Tule and Lower
721 Klamath lakes, then west of the Cascades and north to the
Willamette settlements. The Modoc bitterly resented the invasion of their homeland and waged war against the wagon trains, a war which in turn brought reprisals from the settlers. In 1852, after the Modoc had extensively damaged several trains

and manhandled some of the survivors, the citizens of Yreka, a mining town in California southwest of the Modoc country, organized a party led by one Ben Wright. Under the guise of a council, they met some forty-six Modoc, to whom they offered a feast of poisoned beef. When the Modoc, forewarned by a Warm Springs Indian, declined to eat, Wright and his followers shot and killed all but five of them.[21]

M
175
648
721

By contrast, the Klamath peace party withheld their hand. As Chiloquin later recalled an event of that year, a party under Captain Jim Crosby pursued some of the Modoc in the direction of Silver Lake.

K

721

> The troops did not find the Modocs but at Oux-y [at the north end of Klamath Marsh] killed some Klamaths. They killed a few up on the marsh, some on Williamson River and a good many on both sides of Klamath Lake, but this did not precipitate a war with my people. Even if they felt like avenging the death of the people, they knew they could not contend against the whites long, for they had learned they were as numerous as the trees on the mountains.
>
> Below the Dalles on the Columbia River a Modoc murdered one of the McKays or one of old Tom McKay's friends,[22] The murderer made his escape to the Modoc country, but was pursued as far as Oux-y by McKay's friends. The chief Chim-tolk and my brother, Beaded Hat, who was a sub-chief, and three men pursued the murderer and brought him back to Oux-y and there killed him.[23]

For the emergent leaders of the Klamath, the maintenance of a consistent policy toward neighboring settlers posed problems of control. Similar difficulties beset the whites. From 1852 on, some men were accepted within tribal territory by the Indians as personally known and trustworthy. Wallace Baldwin, who ran cattle on land south of the present site of Klamath Falls, was one to whom Indians made gifts of roots, wokas, and game. Judge F. Adams in 1856 was grazing two thousand head of cattle in the vicinity of Keno; having made terms with the Indians, he was not molested. Wendolen Nus ranged stock in Klamath country in 1858-59, and, following a sojourn in the John Day region, returned in the 1860's to become the first permanent settler in the Klamath Basin. From 1857 on, the fur trader, Marty Frain, made an annual trip out of Yreka for the spring fishing at Lost River. Frain is quoted as saying that the Indians would be

K
175
648

175 peaceable save for the whites who from time to time slew some
648 of them without provocation.[24]

The Indians had provocation in plenty. With the opening of the goldfields in northern California, would-be miners passed from the Willamette Valley through the Klamath country. There were the border ruffians living on the fringe of society, to whom the judgment of the Rev. Samuel Parker might justly apply. "Their demoralizing influence . . . with the Indians," he exclaimed, "has been lamentable, and they have imposed upon them in all the ways that sinful propensities dictate. It is said they have sold them packs of cards at high prices, calling them the bible; and have told them if they should refuse to give white men wives, God would be angry with them and punish them eternally, etc."[25] Some of the depredations ascribed to Indians were their doing.

Even the more responsible settlers found it difficult to escape being tangled in indiscriminate reprisals. Early in 1854 four men were slain near Lower Klamath Lake, and in May of the same year settlers attacked the Indians at Klamath Ferry. In almost every case the government placed the responsibility upon the whites, a view the latter repudiated indignantly.[26]

Armed escorts provided for the immigrant trains discouraged direct and massive assaults, but did not entirely eliminate them. Meanwhile, bands comprising individuals from several tribes were harrying transient prospectors, settlers, and particularly immigrants plodding full-laden through tribal territory.

In 1862 Joseph A. Chaffee established a ferry across the Klamath River and another at the lower end of Klamath Lake, after having paid the sum of one hundred dollars which the bands required of him. The Indians then extorted a second fare from each of his passengers and after two weeks drove Chaffee away. He reported that they levied a charge of one dollar a night for grass upon those passing through the country and robbed small and defenseless parties. These bands, well armed, were said to comprise Modoc, Paiute, and Snakes (Northern Paiute), who asserted "that in case of difficulty, they will be supported by all these different tribes of Indians."[27]

The rapid settlement of the country made evident that some control must be extended over the tribes of southern Oregon. As

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

early as 1849, Jesse Applegate, who had glimpsed the Klamath Basin as a leader of the South Road expedition, introduced a bill into territorial legislature to charter an association, The Klamath Company, to treat with the Indians and purchase lands from them.[28] Since these powers were reserved to the government, the bill failed of passage. In 1854, Joel Palmer, Superintendent of Indian Affairs for Oregon, desired to see at first hand the country and its people, whose "thieving propensities" had been a source of complaint. Consequently he persuaded a Klamath chief whom he encountered in Oregon City to bring together his people for a council at Klamath Lake.

Together with an interpreter, a Warm Springs guide, and the chief he made his way southward up the valley of the Deschutes and into Klamath country. It was mid-August and the tribesmen were doubtless out gathering wokas. Messengers sent to summon the Modoc, Paiute, and Pit River tribes proved to be fruitless; and only members of the Klamath Marsh, Agency Lake, and Lower Williamson River tribelets came in to the council. Palmer warned them of ". . . our determination to punish those who committed acts of violence and theft against our people, and [listened] to their replies and promises of good conduct. . . ." He then made some presents and the council broke up "with an apparent good feeling." Years later, Henry Blow was to contrast his liberality by inference with the parsimony of the government under the treaty.[29]

Palmer came away favorably impressed with the Klamath country as a place to colonize—i.e. remove—the Indians from the Willamette and Umpqua valleys. Of the three full Indian Agents under his control, he felt that the Agent for the southeastern district should reside in the vicinity of Klamath Lake, and that should the reservation he envisaged come into being a cavalry detachment should be posted there.[30]

The plan to remove the western tribes beyond the Cascades was subsequently dropped, but other phases of the plan were soon put into operation. Mounting hostilities, although not within Klamath territory, gave it impetus. Indeed, the surveying expedition under Lt. R. S. Williamson that pursued its way the next year through Klamath country and up the river that now bears his name, encountered no difficulty en route, but emerged from

3:Stern E-4,5 (1949-1957) 1965 NR 10 Klamath NR 10

175 its sojourn in eastern Oregon into the midst of the Rogue River
648 and Yakima wars of 1855.[31]

Although behind them the Klamath settlements remained at peace, Klamath in the troubled areas were caught up in the dragnet. When the special agent for the upper Umpqua Valley was collecting the friendly Umpqua in order to shift them temporarily to the site of a proposed reservation, at the request of local citizens he also received some 35 Klamath, "who willingly surrendered their arms and ammunition." Again, in the roundup of approximately 1,440 Indians of coastal Oregon and the Willamette Valley in 1856, awaiting removal to permanent reservations, were members of tribes with whom no treaties had yet been concluded, who usually wintered in the Willamette Valley, and who in those troubled times sought the protection of the Indian department. Among them were 141 Klamath.[32] Even Lileks, out hunting deer in the mountains with some men of the Pelican Bay tribelet, was picked up, as were his companions. With their families they were taken to Oregon City and confined for some time until Lileks was able to secure their release.[33]

In the Klamath country itself, the alarms of war persistently pointed to the Klamath as hostile. Settlers reported the tribesmen armed and threatening on the Santiam and the Kalapuya, 202 and saw signal fires burning along the Klamath Trail from the Lakes to Oregon City.[34]

In the aftermath of warfare grew a new determination to end the recurrent hostilities. Wrote Commissioner of Indian Affairs James W. Denver in 1857:

> I know of no alternative to the present unsatisfactory and dangerous state of things but the adoption of early measures for the extinguishment of [Indian] title, and their colonization on properly located reservations, using and applying the consideration agreed to be allowed to them for their lands to subsist and clothe them until they can be taught and influenced to support and sustain themselves. The losses and damage to the government and to the citizens resulting from another general outbreak on the part of these Indians would probably fully equal, if not exceed, in amount what would be necessary to buy out and colonize them, so that they could be effectively controlled, if not improved and civilized.[35]

In Oregon, Indian Agent G. H. Abbott promptly paid a visit to the Klamath for the twin purpose of concluding treaties with Klamath and Modoc and of selecting a site for an agency. The legislative session of 1858-59 instructed the delegate to Congress to press for the establishment of both agency and a military post in the Klamath country. Once more in 1860 the legislature urged that treaties be signed with the remaining unreduced tribes of Oregon and that military posts be authorized at Warm Springs and in the Klamath region.[36] The outbreak of the Civil War delayed action until the following year.

Meanwhile, the hostile bands in southern Oregon grew bolder. They operated particularly in the zones beyond tribal territory, where the wagon trains, laden with potential loot and owned by nameless strangers who had no claim to consideration, were a fit counterpart to the villages of the Pit Rivers. For at least one leader an additional spur for the attack was provided by the fear that the country would soon fill up with strangers.

This man was the Klamath Lake chief, Kiluampch, "Old Brave," also known as Captain George. He was a brother of Allen David, who, however, held quite different views. It was during Captain George's period of dominance that Chief Sam of the Rogue River hostiles reported in 1852 that "the Indians at the Klamath Lake country had agreed to kill off all that might come in that way. That they do not intend to let any more whites come into their country." Two years later, as Judge A. M. Rosborough wrote Colonel Drew, the Klamath met with emissaries from the tribes of the Illinois, Rogue, and Upper Klamath rivers to plan concerted war upon the whites, with the bands of Shasta and Scott's Valleys attending but declining to take part. "The Upper Klamath or Klamath Lake Indians," he added, "(with the exception of the tribe [of] which La Lakes is chief) commenced their depredations by killing Whites and stealing stock, and a report was current among the friendly Indians that these hostiles intended to destroy the immigrants as fast as they came from the Valley of the Humboldt."[37]

Captain George, like his brother, had been exposed to the American settlements but had been antagonized in the process. "George," wrote Elijah Steele, "had acquired some knowledge

175 648 of the English language, and fully comprehended the civil war under which our unfortunate country is now suffering, and he thought, or professed to think, that if all the Indians unite they could kill off all the whites and retake the country." He and another chief, known as Skookum John—a man suspected of instigating trouble in 1856—were reputed to counsel war continuously.[38]

In power, the redoubtable hostile had few peers. As of about [624] 1859, he was war chief of both Klamath and Modoc, in which capacity he divested a Modoc chief of his elk-skin cuirasses for refusing to join an expedition against the Pit River tribes. [622] Indeed, Henry Blow later averred that Captain George had superseded Lileks as chief for a time, during which he had entered into a treaty—with whom is uncertain, though possibly with Rosborough or Steele in Northern California—and had been promised pay as head chief.[39]

In its own time, the government moved to contain the threat posed by his ascendancy. The necessary action embraced both military and civil commitments, and the contentions engendered lie vividly upon the pages of the day.

Outstanding among the individuals involved were members of the numerous Applegate clan, whose destinies were to be intertwined with the Klamath for almost a half-century. They were led by the doughty Lindsay Applegate, who had crossed the plains with his brothers, Jesse and Charles, and their families in the great migration of 1843. A staunch Union man and a Republican, he then resided at Ashland Mills, across the Cascades from the Klamath country. Of his extensive family, mention should be made of four of his sons, Elisha, who held the office of surveyor general, Ivan, Lucien, and Oliver. As a member of the state legislature, Lindsay Applegate had been instrumental in securing passage of the joint resolution calling for the establishment of a military post in the Klamath country. During the Rogue River War, he had served with distinction as captain of a company of mounted volunteers. His second-in-command on that occasion had been J. W. Perit Huntington, married to a daughter of brother Charles, and a man with whom he shared the conviction that the Indians must be dealt with firmly but justly.[40]

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

Acting out of Northern California from the mining town of Yreka, south of the Modoc country, were A. M. Rosborough and his friend and successor, Judge Elijah Steele. They followed a policy in independence of that in Oregon and exercised a restraint in dealing with the hostiles which Applegate and his associates were to denounce as coddling. Animosities between the two states were involved: the Californians with some justification maintained that the Oregonians were bent on making a profit from the location of the military post.[41]

175
648 •

As if it were not enough to find a schism within the ranks of those civilians who were to be responsible for the handling of Indian affairs, further complications arose. The military campaign was entrusted to a company of volunteers led by Colonel Charles S. Drew, who hailed from the town of Jacksonville, a few miles distant from Ashland Mills and its economic rival. Drew, as Steele averred, had come under the influence of Gen. George Wright, commanding the Department of the Pacific, and was aligned with him in violent disagreement with the leniency displayed toward the natives by the Indian Bureau. Applegate and his friends darkly suspected Drew of seditious views; and the implication is strong that they felt Drew was endeavoring, through harsh measures, to foment a general Indian war which would divert much needed troops from the fighting on the eastern seaboard.[42]

About 1861, the Rogue iver settlements were plagued by an influx of Klamath, Modoc, and Paiute, who were soon supporting themselves by trading with the whites, by theft, and by prostitution of their women. They expressed themselves as eager to sell their lands, but in their new location they were "a constant source of annoyance and terror" to the settlers. Consequently, anticipating an immediate danger, the Superintendent of Indian Affairs for Oregon, William H. Rector, appointed Lindsay Applegate to the post of special Indian agent for the Indians of southern Oregon to deal with these and related matters. Shortly thereafter, Elisha Applegate rode off to Salem carrying a petition from the people of Jackson County for a reservation at Klamath Lake.[43]

The new military post was authorized and in 1863 it took form in the heart of the Klamath country, between Fort Creek and Wood River. Bitterly, Lindsay Applegate, once more a private

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10
Modoc NS17

[Klamath Reservation]

K 175 648 citizen—his office having lapsed for lack of authorized pay—denounced the location in a letter to Huntington, now Superintendent of Indian Affairs for Oregon. "Drew . . . and his *Copperhead* friends, have already committed an outrage in the country, by locating the Fort in a place, where it entirely fails to accomplish the objects for which a post was ordered, solely I believe for selfish and factious purposes of their clan."[44]

Drew, while recommending that treaties be concluded with Lileks' and Old George's bands of Klamath, and with certain other groups, roundly scored these tribes as "a horde of practical thieves, highwaymen, and murderers, cowardly sycophants before the white man's face, and perfidious assassins behind his back". He annexed to his report a detailed list of hostilities in the Klamath Lake – Tule Lake – Goose Lake region from the opening of the South Road down to the time of his report. Following one such attack in 1856 which left at least thirty-nine fatalities, and in which the abduction of women and children was suspected, as he claimed, "the Indians of Umpqua valley exhibited an unusual number of dresses and other articles of female apparel,* which they alleged they had obtained from the Indians at Klamath Lake".[45]

K M 175 648 721 622 Drew moved with dispatch. To the south, the long-standing warfare waged by Klamath and Modoc against Shasta and Pit River tribes had ended by embroiling them with the settlers. Suspecting the whites of having sided with the Shasta, who had slain several of their warriors, the hostile Klamath and Modoc under Captain George had, in the words of Steele, "commenced depredations by stealing the cattle of the frontier settlements, robbing travellers passing through their country, and uttering threats of murder and war on the opening of the spring." Acting upon a petition by citizens and a letter from Sub-agent Amos E. Rogers, Drew promptly arrested Captain George and summarily hanged him. George's troublesome colleague, Skookum John, met his death in the same action. At one stroke the bellicose faction had been decapitated.[46]

K 175 648 So draconian a measure did not pass without comment. In a confidential letter to Huntington, Rogers wrote from Jacksonville, intimating that it had all been planned beforehand by Drew and other Copperheads at a "turkey and champaign dinner" at

175
648

Captain T'Vault's. "The party who met at this dinner," he insisted, "freely discussed the policy of this arest* and execution. It was determined that the charges contained in the petition of citizens and my letter to Drew was sufficient to arrest and hang the Indian . . . without trial or further evidence. The insolence that Drew complained of was, of course, but a pretext."[47]

The Indians, not surprisingly, found these measures profoundly unsettling, and sought out their friend, Lindsay Applegate. "I was visited a few days ago by Lake indians," he recounted to Huntington early in 1864,

> who said that they had been instructed by thier people, to learn of me, whether thier country was to be taken from them or not without compensation, and if they were to be made slaves. They say Col. Drew has taken possession without thier having any assurance that they would ever get anything for thier country, and that it would shortly be over run by settlers.
>
> They complain bitterly of these things, [but] say they do not want war with the whites. . . . If the Bill now before Congress proposing to make treaties with these indians, passes, we will be saved in all probability from an indian war, for the course that Drew is pursuing toward them will I think, if not counteracted in some way, certainly lead to war. . . .[48]

In June, Huntington, having communicated with his opposite in California, Austin E. Wiley, made his way to the new post, Fort Klamath, to confer with the Klamath and Modoc chiefs and those headmen that could be assembled in preparation for a treaty council the following October. He reported that they were "friendly with the whites and have been for some time. Their desire to treat for the sale of their lands has been known for some time. . . ." He was pleased to learn that Capt. William Kelly, finding the Indians in a suffering condition during the previous winter, had advanced them foodstuffs out of his own stores. It was an act of statemanship pronounced by Huntington to have "a most salutory effect in conciliating the Indians, and rendering future control of them easy and economical."[49]

In California a few months earlier, another peacemaker had been at work. Elijah Steele, who had succeeded his friend, Rosborough, as Indian Agent, had returned in mid-February from San Francisco to find a large gathering of Indians encamped

[Klamath Reservation]

K 175 648 near his house, whom his wife "had been lecturing . . . upon the best way to live with each other, and with other people." They were the chastened tribes whose hostilities Drew had summarily
K M 175 648 suppressed, now gathered under their peace chiefs: the Klamath were here under Lileks, the Modoc under Schonchin, and the Shasta bands under their several chiefs.

Steele saw an opportunity to stabilize the frontier, and set about to conclude a treaty. He justified his action by the belief that the country of the Klamath and Modoc extended into California, that "an unhappy difference existed between [Agent Amos E. Rogers at] Jacksonville and the military department [i.e. Drew]," and that there was impending danger of an outbreak of hostilities.

He and interested citizens now found it relatively easy to reach an agreement with the tribes whereby they consented to live in peace and friendship with one another, to give up to the soldiers for punishment any person who violated this principle; to live on the same terms with non-Indians, permitting them free passage through their country and charging them only for ferry passage across rivers or guiding them on their way. They further agreed not to get drunk or to steal when in the settlements or white camps, or to rob the Chinese sluice-miners; to remain out of town at night, to refrain from selling Indian children of their own or other tribes or from selling women to any save an Indian, unless the purchaser agreed to marry her before a judge.

The Klamath and Modoc convenanted not to raid the Pit River tribes and to submit to the regulation of the officers at Fort Klamath. In the settled country, except when hunting, Indians were not to carry bows and arrows or firearms, and they were not to bring the latter into the settlements, except to be repaired. In return, they were granted permission to visit the settlements when provided with a pass from the officers at Fort Klamath, and were assured of protection while there.[50]

M 175 648 643 In his capacity as counselor of the Indians, Steele also intervened in a disputed Modoc leadership. Their dominant chief, Schonchin, had served as spokesman for the Modoc, still a loose congeries of bands, and had led them since his succession in 1846. In his earlier days, he had fought valiantly against the whites.

> I thought [he recollected in later years] if we killed all the white men we saw, that no more would come. We killed all we could;

[Klamath Reservation]

> but they came more and more like new grass in the spring. I looked around and saw that many of our young men were dead and could not come back to fight. My heart was sick. My people were few. I threw down my gun. I said, "I will not fight again." I made friends with the white man."[31]

M 175 648 643

Despite the fact that Schonchin was favorably disposed toward the whites and had represented the Modoc in an agreement at which Steele had presided, Steele heeded more militant factions which sought to replace him. Two chief contenders came forward: the extremist, John Schonchin, a younger brother of the chief who was then absent, and the somewhat more moderate Kintpuash, whom Steele dubbed Captain Jack. At the election, the tribesmen in attendance chose the latter, and Steele designated him chief of all the Modoc.

M 175 648 643 578

M [666]

In the course of the council, under the mistaken belief that Modoc territory lay largely within California, Steele negotiated a treaty with that tribe whereby they pledged their readiness to relinquish all their territory in exchange for assurances that they would be permitted to retain the area about Tule Lake. Since Steele was not authorized to enter into agreements of this character, his treaty was not ratified by Congress, although the Modoc remained unaware of that fact. Shortly thereafter, he was removed from office by a political maneuver.[32]

M 175 648

Less than a month after the Yreka council, the newspapers carried the news that Congress had appropriated $20,000 to effect a treaty and purchase the lands of the Klamath, Modoc, and Paiute. Late in June, Huntington was instructed to effect the treaty, and in August he visited the tribes for a preliminary conference. About the same time, Lileks and a delegation of Klamath are said to have waited on their friend, Captain Kelly, to propose that such a treaty be entered into. Early in October, Huntington, together with Agent William Logan to represent the absent superintendent for California, repaired once more to Fort Klamath to enter into the treaty.

K M 175 648 •

The parties to the treaty, according to Huntington, included 21 Klamath chiefs and headmen, led by Lileks and Chiloquin, representing 710 Klamath then present. Of the signatories who can be identified, at least 9 were Klamath Marsh men. The Modoc were led by Schonchin, still recognized as head chief by Huntington, and included the Klamath-Modoc interbreed, Chief

K
M George (Sleketatk), Captain Jack, and one Chuck-e-i-ox
175 (Njakeaks).[53] They are said to have represented 339 Modoc.
648 Finally, there were two Paiute, who signed for some 22 members
622 then present of a group known as the Yahuskin band of Snakes.[54]
M The Walpapi Snakes, under their crafty leader, Panaina, were
[643] also to have been included, but they withdrew and were dealt
with in a separate treaty in August, 1865.[55]

Captain Kelly, who was present, gives figures for the tribes that differ somewhat from those of Huntington. He notes that all the Klamath, including their slaves, were present, and numbered 133 males over fifteen years of age, 286 women, and 214 children. Of the Modoc, 46 men, 15 women, and 16 children were in attendance. "About 40 of the Modoc warriors," he adds, "were absent with the women and children in their own country. They have about the same proportion of women and children as the Klamaths." Finally, the Snakes numbered 11 men, 5 women, and 6 children.[56] It is possible that the absent Modoc included members of the party advocating continued resistance.

Many years later, the Upland Klamath leader, Monchnkasgitk, recalled the treaty making:

> Huntington came to Council Grove and sent out invitations to all the Indians to meet him to discuss a treaty about the lands. I went as chief with Seven Warm Springs Indians to the first meeting at Council Grove. I met La Lake, head chief, and Chiloquen, chiefs of the Klamaths; also Captain Jack, Schonchen, and Chief George of the Modocs.
>
> Huntington met me there with the man who wrote for him, and another white man. We were there about a week and talked three days about the treaty. We built our first camp fire under a big pine tree which I think is still there. Huntington made a speech and said: "I have come from Washington, from the Great Father, to see about buying your land and have brought [with] me the things to pay for it." He then showed up fishhooks, beads, buttons, coarse blankets, and red paint. Huntington finished his speech by saying, "Tell me how much land you want to save for yourselves?" The chiefs went back to the camp and talked among themselves and agreed, and the next day told Huntington they wanted the land from the three snow mountains and the Cascades (the three sisters) from there to Steens Mountain; thence southerly along the mountains east of Goose Lake Valley to the California line, then westerly to the Cascades, taking in the Tule Lake country; then back to the beginning.

Parenthetically, it may be observed that this tract encompasses in a general way the entire holdings of the three signatory groups, save that the Modoc included only the land reserved for them under the treaty with Steele earlier in the year. K M 175 648 •

> Huntington replied [Monchnkasgitk continues] that was "too much land for you to take care of and hold, and I want you to go back to your camp and think it over, and then point out to me land near your homes here, which you can hold and take care of." So we went to camp and all talked it over for many hours, and finally agreed on Lee Lakes proposition, that we should keep the land to Tom sum ne, then to His chok sal as, Bal la wisk se, Tsne whel ste e los, Ba ha, Chok chok e lisk se, then to Kal wal by Ish tish e wax.
>
> To this Huntington agreed, saying, "That is all right; and the matter is now finished. You will be closed up, like in a high fence, so no one can get over to you, or their cattle get over, nor can you get out to them without permission; so, tomorrow I will issue you all the things I have, and to-night we will have a big dance."
>
> The next day the things Huntington had were issued and they all went and signed the treaty.[57]

The Klamath, Nash observes, are reported to have signed the treaty willingly but both Modoc and Paiute did so only with reluctance.[58]

In the designation of boundaries, the seeds for future contention were sown. As members of the Boundary Commission observed in 1896:

> The two Commissioners of the Government, with their assistants, proceeded into a country practically unknown to them to treat with an assemblage of Indians who were ignorant of the fundamental principles of the matter to be discussed, the Indian language having no words expressing the idea of direction, by equivalents of the points of the compass, or distance by measures of miles, yards, etc.[59] To this day the older Indians can only designate direction by pointing, and distance by fractions of a day's travel; hence their topographical descriptions were very vague, unless confined to particular points. It is not surprising, therefore, that confusion should ensue when the agreement, reached after days of discussion, under such conditions, was condensed into a few lines of our language.[60]

The terms of the treaty mark the passage of the Indians—who came to be designated the Klamath Tribe—from a state of sovereign independence to a place under the government of the K 175 648

175 United States, and more directly under the supervision of an
648 Agent. Part of the Agent's duties were "to promote the well-being of the Indians, advance them in civilization, and especially agriculture, and . . . secure their moral improvement and education."[61]

The Tribe thus engaged to enter upon a program of extensive change designed to make its members into farmers by American standards, sending their children to school, and utilizing the services of a physician. It was even envisaged that they should at some time privately own the land they tilled, though without the power to alienate it. The terms of payment make it very probable that both parties to the treaty thought the Indians would be able to attain self-sufficiency by the end of twenty years. The reservation was to be set apart for the Indians, subject to the will of the President of the United States, with rights of way for railroads and public roads reserved for United States citizens, and with governmental option to move other tribes upon it in the future. The Indians agreed to submit to "all laws and regulations which the United States may prescribe for their government and conduct," including that banning their use of liquor, to remain upon the reservation, save when given temporary leave by the Agent, and to relinquish independent military action. They were confirmed in their exclusive right to take fish, roots, seeds, and berries within the reserved area, and were to be protected there against the trespass of any unauthorized white.[62]

The prominent role that governmental planning assigned to economic self-sufficiency and to isolation from outside interference is set forth in the words in which Huntington in his report justified the choice of site.

> In determining the bounds of the reservation, I sought primarily to secure a tract of country which had local advantages for supporting a colony of Indians by industrial pursuits. . . . A second object, and one scarcely less important, was to so locate the tribes that their separation from whites would be as nearly complete as possible. This reservation is not likely to be traversed by any important line of travel, and but a small portion of it will be coveted by whites for settlement.[63]

With slight amendments the treaty was signed once more in December, 1869, by the chiefs and headmen of the Indians, ratified by Congress, and signed into law and proclaimed February 17, 1870.

ALLIE SAYS

539 You Tecumseh sent us a letter stating that you had a skookum tum tum.[*] I am glad to hear this. We are all the same here. Are all living comfortably and have a hias close tum tum.[†] Your wife and children hias close mitlite.[‡] No one troubles them or mistreats them. You must not get a sick tum tum[§] while you are gone. We are all right – and want you to have no fears about us. Your little girl is not entirely well, has not a very good appetite & I asked Mr. Dyar to let her have some store flour.

Yours Allie

BLOW SAYS

Old Hias man's wife is dead, and I had a notion to put Chick Chick and Link River Doctor in the guard house. The old woman said that L. R. Doctor was not guilty. Ortugul became foolish & could not seem to get Boston[*] law, and also, Eli[†] so we broke them of being Sargeants. They could not seem to understand matters properly.

We try to help Mr. Dyar and carry out his instructions but these two men could not throw away their Indian ways. I have had to talk to Yainax Ben because he was not quite straight about some of these matters. He has tried to persuade Mr. Dyar to let certain parties go unpunished that we all thought should be kept in the guard house. Old Chick Chick for one. Ben did not talk straight but told some untruths.

Allen David has told you how our young men are doing. My mind is that this is first-rate. I am very glad about these things could almost cry about it I am so glad. I don't want them to give these things up. I want you to know about these things.

I understand that no provision has ever been made for pay of Head
[648] Chief on this Agency. George the old chief who was hung[‡] was promised pay for being chief by those who first made a treaty with him and a paper was sent to Washington to that effect. I know that straight and this is why I tell you this. Lincoln was President at that time. Chief George told us this, and shortly after he was hung when La-Lakes became chief again but said nothing about pay. Now Lincoln and George are both dead and I don't know what has become of the paper. I want you and Oliver & Meacham to talk to the Hias Tyee[§] about this.

You Oliver[‖] promised Allen David that you would get a salary for him. Now you are going to Washington I want you to talk to the Tyee about this. I want Dave Hill & Tecumseh to know what the Tyee says about this. (By the way it would be a great relief to all of us if you can possibly bring this matter before the Comr. in the presence of Dave & Tecumseh as then perhaps Allen David might be convinced that it is useless to talk more about it – Dyar) We have cut our hair as Mr. Meacham wished us to do and try to be like white men. I live up to the treaty and am all right. Capt Jack did not and is no more. What Captain said is straight. I think is good that he should have a wagon. He wants one very much. I think if you tell the Hias Tyee about this he will not get frightened as a wagon don't cost very much. I think that we should be helped to these things if possible. I have been chief for a long time. God knows that I am free from the blood of White men and that I want to live right. I help Mr. Dyar and we both are big men. I know about Gen. Grant and I want him to know that I help him in keeping my people straight. I want him to know what I say today. I have not sent him any talk for a long time.

I talk to him as a man – a big man – and I want to consider him as my father and never give him up. I never want anything but the best of feelings between us. I don't want to talk foolishness to him, only about big things. Mr. Dyar keeps a close watch over us and he knows that I talk straight. I wish a mowing machine so that we can cut more hay for our cattle. I fear that some of them will die this winter.

Yours Truly
Blow

M
K situated about upper Klamath Lake and in the mountains to the
101 east; except for a part of the Modoc in Oklahoma. It is the
131 object of the present paper to discuss briefly the conditions of
M aboriginal life among these people, due consideration being given
K their natural environment and the influence of surrounding
128 peoples upon them.

TERRITORY.

M The territory occupied by the Klamath Lake and Modoc
K Indians lies chiefly in the drainage basins of Upper and Lower
101 Klamath lakes and Tule or Rhett lake. From a point near the
131 confluence of Keen creek with Klamath river the western boundary
of their territory probably extended along the watershed separating the Klamath lake and Rogue river drainages, to the
K foothills of the mountain in which Crater lake is situated. It
823 should be noted, however, that the Klamath, while they feared
Crater lake, did go upon certain occasions to the lake and seem not to have been molested there by other Indians. It would seem that the lake was looked upon as a sort of territory of mutual rights by the peoples in its vicinity. They visited it when they desired to acquire great merit in hunting or other pursuits in which supernatural power was necessary. To go and bathe in this wonderful lake was a brave thing to do, and made a man lucky for hunting or other similar pursuits and made him very
K strong for war. It would appear that the relations formerly
131 existing between the Klamath and the people of the Rogue river
drainage were not at all friendly, so that the Klamath seldom
648 ventured as far west as the crest of the range. They did on
occasion make up large parties and go up to the crest of the range for the purpose of hunting, but small parties rarely ventured so far. The region for some distance to the west and northwest of Crater lake was also visited by the Klamath for the
K purpose of gathering berries in season.

101 On the north the boundary extended as far as to the head-
131 waters of Deschutes river, thus including the whole drainage
133 basin of Klamath marsh.[1] On the east the boundary probably

---

K
[101] [1] The Bureau of Ethnology's map in Bulletin 30 gives to the Lutuami
[114] territory as far north in the Deschutes drainage as latitude 44. See also volume I of this Bulletin, 779, 1907.

Section II. The Setting — Klamath Reservation Culture

The Klamath Reservation was established in 1864 by a treaty between the United 175
States Government and three separate groups, the Klamath, the Modoc, and the 648
Yahuskin Snake (Paiute). Because the differences which once divided these 657
original groups have disappeared in the face of acculturation and the common 101
experience and status as Indian in contrast to White, the contemporary Klamath
may be considered as one people. This section consists of a sketch of today's 177
reservation culture, and will necessarily have to exclude mention of the local 128
variant of American culture, although Whites form the largest share of the 162
reservation's population.

The reservation lies in what is known as the Klamath Basin, which is to say 657
between the eastern Cascades and the Basin Range. It contains the heart of 13
what used to be Klamath country, for Modoc and Paiute lands were lost in the
treaty stipulations. The reservation consists of alternating valleys and low
ridges, and has an average elevation of 4000 feet. Of the more than a million
acres of land within its boundaries, some 800,000 are covered with stands of
commercially valuable timber, Ponderosa Pine, Douglas Fir, and other lesser
species. The reservation also includes numerous lakes, marshes and streams, which
through tributaries eventually drain into the Klamath river. The ecological [184]
aspects of these water courses were essential to the aboriginal Klamath economy,
as they are essential to the recreational hunting and fishing of the present [224]
population, White or Klamath. [226]

Today the Klamath represent an unassimilated enclave living on what remains of 101
their own territory, but in the midst of and intermingled with a dominantly 648
White culture. For nearly a century they have maintained multiple loyalties:
to the Agency, which represents the Government, to the Tribe, which was an artificial construct and has seldom been a viable corporate group, to the local [829]
towns and communities, which afford them a special status, to their own kin groups,
whose functions and structure have changed drastically, and to the State, which [178]
now embraces them as citizens.

In the century or more of White contact and settlement the Klamath have lost 648
their former isolation, their traditional ways, and much of their land. Yet 178
in the same years the Klamath have also acquired and learned much, and it would
have been unaccountably strange had they not. The growth of mill and market
towns and of ranching and farming settlements, the development of the lumber
industry, the constant if irritating supervision and tutelage of the Agency,
the improvement of communications, the frequency of inter-marriage and co-residence with non-Klamath, their participation in public education facilities,
all of these and other experiences have given new directions to Klamath life,
so that today no Klamath lives a life remotely resembling that of his ancestors
of a century ago. Yet these years of contact and change have not made White [181]
men of the Klamath. Instead, there has developed a variant socio-cultural
system, Klamath Reservation Culture, which is neither aboriginal nor American
in design.

Although much of the agricultural resources of the reservation have been transferred to White ownership, a number of the contemporary Klamath are successful 648
farmers or ranchers. Others occupy homesteads on farm or ranch land but do not 423
utilize these resources. These latter homesteads are little more than rural [241]
slums, the scenes of perennial drinking parties. For decades the timber industry has been the mainstay of the local economy, but relatively few Klamath have [511]
ever worked in that industry. Most Klamath live in one or another of the several [273]
[313]

648 Most Klamath live in one or another of the several
towns and settlements on the reservation, or else they have settled elsewhere,
361 in Portland, Salem, Eugene, in California, in Alaska, in the Midwest, or along
[167] the Atlantic seaboard. In 1955 the Tribe had 2118 members, and of these 40
percent lived away from the reservation (Stern & Swanson 1960). Partly because
[619] of the recent progress of the termination of federal supervision of the reservation,
by this date the percentage of members residing off the reservation has
[161] probably increased. In fact, for years there have been numerous "tribal members"
[619] with no experience whatsoever of reservation life.

648 Throughout the years of White contact inter-marriage and inter-breeding have
144 been frequent. Today, more than 70 percent of the Tribe's members are, genetically,
less than one-half "Indian," and less than one sixth are "full-bloods."
[171] Many are indistinguishable in appearance from their White neighbors, as most are
not easily distinguished in dress and language.

175 The isolation of the early reservation period was soon removed by the influx
177 of White settlers, who at first took up farms and started towns near the fringes
of the reservation. Through inter-marriage and through the consequences of
[361] allotment of land to individual Klamath, many Whites were soon residing within
the reservation's boundaries, either on the lands of a spouse, or on land bought
[423] or leased from tribal members. Another source of change were the ever present
[657] efforts of Agency officials to make over aboriginal ways, and later, the rapid
growth of the lumber industry and the development of full fledged frontier communities
[726] were also important sources of acculturative influences. In quick
succession the Klamath experienced a period of armed conflict (the Modoc War of
[786] 1872-73), a religious revivalistic movement such as that which swept the plains
area, extensive governmental planning and intervention, the allotment of land
[181] in severalty, and a growing participation in the cash economy. Because aboriginal
Klamath values had stressed achieved status for those who worked to accumulate
[556] wealth and property, for some Klamath the early period of contact provided increased
opportunities, and there was a group of men who for a time were effective
[436] entrepreneurs. It was through such personal efforts and through the "easy money"
had from private sales or the leasing of agricultural lands, from pro rata shares
of boundary settlements, and from per capita payments for sales of tribal timber
that the Klamath made the transition to a money economy.

648 The participation in and contribution of the Klamath to the economy of the region
[313] is a significant point of interchange between Klamath and White, and one with
many ramifications. In considerable measure, the local timber industry prospers
[423] or slumps, depending on the allotted cut in the tribal forest. Similarly,
local merchants are somewhat dependent upon the assured income of tribal members,
[434] as they are upon the purchases of mill workers, fallers, and cat-skinners.
The major town on the reservation, Chiloquin, obtains the largest share of its
[632] revenue from sales at a municipally owned beer-hall and from the fines and forfeited
[651] bails paid by visitors to the city jail, both of which establishments are
patronized largely by Klamath.

648 In other aspects of community life the participation of Klamath is perhaps best
621 characterized as that of passive spectators. Many Klamath have come to have a
sense of being aliens in the heterogeneous local culture, although there is a
563 small assimilated minority.

[571] Thus Klamath may interact as equals in card rooms and pool hall, and are met
with a stereotyped "friendliness" in interactions in stores and on the street.
However, the great majority live in intimate interdependence separate from the
main currents of White social life. White ethnic exclusiveness is reflected

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are exclusively 621
White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office outside [575]
the tribal structure, and although a high percentage have registered, very [794]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are frequently
tax exempt, as have been their per capita payments. Simultaneously, [651]
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chiloquin [674]
during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a reconstituted 648
"Klamath Tribe," with a corporate structure and assets to be administered 657
by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal supervision
has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual
Klamath have shown an equally noncommittal relationship to tribal affairs. Attendance 619
at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

592
Klamath families are another important locus of loyalty and identification.
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

882
155 drop out rate of Klamath adolescents, a slacking of attention, and a decline
156 in test performance and grades.

871 Something of the character of adult Klamath concerns and behaviors has already
156 been suggested. Many work in only a desultory, disinterested fashion, and it
is unusual for a Klamath woman to have a full-time job. Thus self-concepts are
[461] not so closely bound to job or profession as are those of local Whites. In
1953, for example, it was found that 65% of adult Klamath were wholly or partly
434 dependent upon per capita payments for their livelihood. Whereas the reluctance
[462] of Klamath women to take outside work reflects the pressures on them to remain
in the home and the extent of their responsibilities there, it also reflects
the fairly secure economic position resulting from the special benefits of
tribal membership. Aside from the twice-yearly per capita payments, these benefits
include the privilege of year round hunting and fishing, medical care, loan
services, tax exemptions on land and privileged employment rights at the Agency.
[464] On the other side of the coin, outside of the Agency, the principal local employers
are Whites, and for one reason or another they are very reluctant to hire
tribal members. In historical perspective, the development of tribal income paid
out in the form of per capita payments has paralleled the decline of Klamath
participation in the labor market. The contemporary Klamath do not work so often
nor do they work so steadily as did their parents and grandparents. There are
fewer Klamath loggers now than there were in the past, almost no business men now,
and fewer active ranchers and farmers.

434 In spite of shifting policies and personnel, the influence of the Klamath Agency
657 officials has been one of constant supervision over and intervention into the
affairs of Klamath individuals and groups. The controls over the expenditures
of children's funds was noted, and the same controls are exercised with respect
[241] to those tribal members who have been deemed incompetent. Yet the activities
of stable ranchers and farmers have also been supervised by extension workers,
[654] and efficient, prospering Klamath farmers complain that, with a good price decided
on and a buyer waiting, they have to await the approval of an extension worker.
Thus the adequacy of Klamath individuals is frequently in doubt, whether by experience
with a particular tribal member's high style of living, or by policy.
657 At the same time in many ways the Klamath have been protected from responsibility
426 for their own actions. Payment for debts incurred with local merchants is an
example, for the reservation being under federal jurisdiction, goods unpaid for
could not be repossessed, nor could income be garnisheed. As Stern and Swanson
phrase this situation, the Klamath have attained economic security "attended
by supervision."

657 Of course, through constant experience with Agency personnel and policy the
829 Klamath have learned that bureaucratic restrictions may be evaded or circumvented,
and they have long since acquired knowledge of the appropriate manner
of phrasing a request for funds or services. The Klamath complain of this that
forced contact with the Agency has made liars out of them.

648 In summary, little more than a century of contact has merged the originally
177 distinct Klamath, Modoc, and Paiute, and has altered them physically, culturally,
171 and personally. In spite of a small assimilated minority and a large off-reservation
population, the reservation Klamath exhibit a distinct way of life
657 which is novel if heterogeneous. This Klamath Reservation Culture is the
familiar context of everyday experience for contemporary tribal members. Thus
181 it is the source of what stability and security they know. No matter how variant,
or how disorganized this pattern of life may be, it is one whose outlines are
the consequence of the thousands of daily decisions, the many lines of action,

Fidel: Male, Age 19

Background Data

*159
156 Fidel's case is that of a young man in the process of separating himself from
his family, yet without any clear sense of where he wants to go. He has never
[461] worked at any job, although he quit school in the 10th grade, when he was sixteen.
Except for 8 months residence in the San Francisco area with his family, and five
[871] school years spent in a Catholic boarding school, he has never lived away from
the reservation. He is the third eldest of six children. He presently lives at
[592] home, if the household which contains himself, his parents, and his younger sib-
[434] lings may be called that. As an unmarried minor approaching maturity, his tribal
income is administered by a trust officer who allocates to Fidel $110.00 monthly
[657] for spending money. Additionally, Fidel sends bills for various expenses to the
bank, which pays them. These arrangements have been in force for three years.

[733] Fidel's mother is a somewhat confused, defeated, semi-alcoholic who is very
reserved when sober and gay and promiscuous when drunk. His father is a Skagit
[582] Indian who has for years been steadily employed as a cat skinner for a logging
company, which work keeps him away from home for months at a time. During the
[618] logging slack season, his father is only occasionally at home. He is usually
[221] away hunting or fishing. When he is at home he is frequently drunk, and when
drunk characteristically assaults his wife and berates his children. The father
does not contribute to the income, the up-keep, or the conduct of household
[593] affairs. In recent years Fidel has defended his mother and the children from his
father, on several occasions has driven him from the house, and on one occasion
knocked him cold with a rifle butt. There is some doubt as to whether this per-
[848] son is actually Fidel's father, the doubt being due to his mother's promiscuity,
which is of long standing, and to Fidel's almost total rejection of him. Fidel's
*159 relations with his father illustrate his marked and extensive ambivalence towards
156 most personal relationships. He will call him or refer to him as "father" or
593 "dad" and in the next breath "uncle," at one moment praise his skill at hunting,
and the next deride him. Fidel cannot fully accept any relationship; he exhibits
the same ambivalence towards his mother, his siblings, his closest friends, girls,
and so on. Moreover, Fidel cannot undertake any course of action without doubt
and reservations. He can neither love nor hate fully.

Fidel's family life is marked by a complete lack of cohesion, cooperation, common
[421] activity, and common property. The major shared sentiment is an indifference to
one another. Each member occupies a part of the house where he keeps his belongings, and these are rarely shared. For example, Clifton once needed a rifle for a hunting trip. It was borrowed directly from the father; Fidel could not borrow it for him. A major source of difficulty is intra-family theft, which engenders violent reactions. The mother is psychologically divorced from the father, and strongly oriented towards her eldest, married daughter with whom she spends much time.

*159 Fidel thinks of himself as a guide and skillful hunter, insofar as he thinks
156 of himself as anything. On several occasions he has been in trouble with the
law, usually for drag racing or drinking when a minor. He spends his time
[673] loafing about, watching TV, playing pool, fishing, hunting, visiting with his
buddies, and sleeping. He is seldom in bed before 1 AM, and equally seldom
[512] awake before two or three PM. His main ambition is to get out of the area, away
from his family, and off by himself. He has thought about studying art, which
may result from an identification with a friend who is doing so.

THE HOME OF THE PEOPLE.

131 The home of the Klamath tribe of southwestern Oregon lies upon the
657 eastern slope of the southern extremity of the Cascade Range, and very
648 nearly coincides with what we may call the headwaters of the Klamath River, the main course of which lies in Northern California. Its limits are outlined in a general manner in the first paragraph of the treaty concluded between the Federal Government and the Indians, dated October 14, 1864, which runs as follows: "The Indians cede all the country included between the water-shed of the Cascade Mountains to the mountains dividing Pit and McCloud Rivers from the waters on the north; thence along this water-shed eastwards to the southern end of Goose Lake; thence northeast to the southern end of Harney Lake;* thence due north to the forty-fourth degree of latitude; thence west along this same degree to Cascade Range." It must be remarked that the homes and hunting-grounds of two "bands" of the Snake Indians were included within these limits, for these people were also made participants to the treaty.

Here, as with all other Indian tribes, the territory claimed must be divided into two parts, the districts inclosing their habitual dwelling-places and those embodying their hunting and fishing grounds, the latter being of course much larger than the former and inclosing them. The habitual haunts and dwelling-places of the tribes were on the two Klamath Lakes, on Klamath Marsh, on Tule Lake, and on Lost River. Some of these localities are inclosed within the Klamath Reservation, of which we will speak below.

133 The Cascade Range is a high mountain ridge following a general direction from north to south, with some deflections of its main axis. The line of perpetual snow is at least 10,000 feet above the sea-level, and the altitude of the highest peaks about 12,000 to 14,000 feet. On the west side the sloping is more gradual than on the east side, where abrupt precipices and steep slopes border the Klamath highlands and the valley of Des Chutes River. The range is the result of upheaval and enormous volcanic

* Harney Lake is the western portion of Malheur Lake, and now united with it into a single sheet of water.

000 one in a series of similar butcheries. Apparently it occurred in 1852, and
the particulars are all given in Texts, pages 13 and 14.

175 One of the earliest reports upon these tribes made to the Bureau of
101 Indian Affairs at Washington is that of Joel Palmer, Superintendent of
131 Indian Affairs for Oregon, dated Dayton, Oregon, September 11, 1854.
Palmer states that the lands of the Klamath Indians extend upon the eastern base of the Cascade range for about thirty miles east, and that east of
them live the "Mo-docks," who speak the same language as the Klamaths;
and east of these again, extending farther south, are the "Mo-e-twas" (Pit
175 River Indians). These two last-named tribes have always evinced a deadly
648 hostility to the whites, and the Modocs boasted of having within the last
four years murdered thirty-six whites. Palmer entered into an agreement
with the Klamath Indians to keep the peace with the white people, and also
sent messengers to the Modocs and Pit Rivers, believing that henceforth
[161] the immigrants would be spared from their attacks. The Klamath Lakes
were then enfeebled by wars with the surrounding tribes and by conflicts
among themselves, and were said to number but four hundred and fifteen
souls. He counted seven villages on Upper Klamath Lake, two on Pliock
Creek (P'laíkni or Sprague River), three on Toqua Lake (Túkua), and one
175 on Coasto (Kohåshti) Lake.* The Indians had some guns, horses, camp
411 equipage, and the aboriginal war-club and "elk-skin shield" (kaknō'lsh).
231 Little Klamath Lake he calls An-coose, a corruption of Agáwesh.

714 Neither Klamath Lake nor Modoc Indians have taken any part in the great Oregon war of 1854–'56, although their sympathies were of course strongly in favor of the aboriginal cause.

000 For the year 1854 Powers records a battle fought by Captain Judy against Modoc and Shasti Indians on the Klamath River, north of Yreka, in which some women of the Shasti were killed.

The Report of 1859 speaks of continued hostilities on the side of the Modocs against passing immigrants and of the murdering of a party of five white men in Jackson County, Oregon. Two of the murderers belonged to the tribe of Chief Lelékash, and three of the perpetrators were seized and killed by the Klamath Indians (page 392).

---

* This would make only six, not seven, villages.

175
622 Alexander S. Taylor has the following passage in his "California Farmer" of June 22, 1860: "Cumtukus, Lalacks, Schonches, and Tertupkark are names of chiefs among Klamath Lake Indians of the Oukskenah tribe. The big Klamath Lake is called Toakwa." Except the first, the above head-men were all identified in the Dictionary with the well-known names of Lelékash, Skóntchish (a Modoc chief) and Tatápkaksh. Cumtukni, who died about 1866, is mentioned by Stephen Powers as a great orator, prophet, and rain-maker.[†]

175
● 648
726 Whether the two incursions made upon the Klamath Lake people by the Rogue River Indians of Tinné lineage, across the Cascade range, of which detailed accounts were furnished in our Texts by Dave Hill, took place about 1855 or earlier I have not the means of ascertaining. The Lake tribe were not slow in inflicting vengeance upon the attacking party, for they crossed the mountain pass and fell upon the camps of their enemies, making sad havoc among them.

Frequent disputes and encounters occurred between the two chieftaincies and the *Shasti Indians* around Yreka, California; but the warlike qualities of the latter were often too strong for the aggressors, and the conflicts were not very bloody.[†] With the Pit River or Móatwash tribe the matter was different. They were not, like the Shasti, possessed of the warrior spirit, and therefore had to suffer terribly from the annual raids perpetrated upon them. In April and May the Klamath Lakes and Modocs would surround the camps, kill the men, and abduct the women and children to their homes, or sell them into slavery at the international bartering place at The Dalles. Some of these raids were provoked by horse-stealing, others by greed for gain and plunder, and the aggressors never suffered heavily thereby. When they began is not known, but the treaty of 1864 put an end to them. The recitals in the Texts, pages 19–27 and 54, 55, 000

---

[*] Overland Monthly, 1873, June number, page 540. His appearance had something fascinating for the Indians, and some are said to have traveled two hundred miles to consult him. His name appears to be Kúm^{e}takni = "coming from a cave," or "living in a cave."

[†] One of these fights took place between the Shasti, Modoc, and Trinity River Indians for the possession o an obsidian quarry north of Shasta Butte, mentioned by B. B. Redding in American Naturalist, XIII, p. 668, et seq., and Archiv f. Anthropologie, XIV, p. 425.

7:Gatschet E-4,5 (1877) 1890 NR10 Klamath NR10

000 give us graphic sketches of these intertribal broils. Some of the eastern Pit Rivers seem to have lived on friendly terms with the Modocs; but the bands farther south, especially the Hot Spring and Big Valley Indians, were the principal sufferers by these incursions. In a raid of 1857 fifty-six of their women and children were enslaved and sold on the Columbia River for Cayuse ponies, one squaw being rated at five or six horses and a boy one horse.*

The Pit River Indians were a predatory tribe also, and very dangerous to the immigrants passing through their country to northwestern Oregon. Their continued depredations made it a duty of the Government to inflict upon them a heavy chastisement, and Maj. Gen. George Crook, commanding the Colorado Department of the United States Army, was intrusted with its execution. This campaign of 1867 is described by him as follows:†

> I continued the campaign into the Pit River country with Company H, First Cavalry, Lieutenant Parnelle; Company D, Twenty-third Infantry, Lieutenant Madigan, First Cavalry, commanding; and Archie McIntosh, with his twenty Fort Boisé Indian scouts. We found on Pit River a party of warriors in camp. They fled. The next day we discovered a large party of warriors in the bluffs on the river. We had a severe fight, lasting two days and nights. They effected their escape by means of holes and crevices in the ground. A great many were killed, among whom were some of note; how many could not be ascertained. Our loss was Lieutenant Madigan and three men killed, and eight soldiers and one citizen wounded.

The more unruly portion of these Indians were subsequently removed to the Round Valley Reservation, California, and about two hundred are still in their old homes.

175
648
Between the Klamaths and the neighboring Snake tribes there was always a sort of disaffection, based upon difference of race, language, and habits; but whether their earlier relations were always those of open hostility or not is past finding out.‡ The wording of the treaty makes it probable that the hunting grounds north and east of their present seats on Sprague River were shared in common by both, and that the Snake Indians frequently

175 changed their settlements, as hunting nations are in the habit of doing.
648 Thus Pauline Marsh, near Silver Lake, and Pauline Lake, on one of the head springs of Des Chutes River, were both named after the Snake chief Panaína of our Texts. The bands established upon the Reservation since the treaty was concluded are called Walpapi and Yahushkin. At first they ran off and committed depredations in the vicinity, whereupon the Government was compelled to force them back. General Crook made several expeditions in the execution of the task. These campaigns were short and decisive, and the Klamath Lake scouts engaged in them did good service, as evidenced by General Crook's reports * and Dave Hill's Text, pages 28–33. Upon the defeat and killing of Panaína, the Walpapi chief, the tribe finally quieted down and remained neutral in the commotion caused by the Modoc war of 1872–'73.

175
161
164 No indications are at hand of the number of Indians formerly inhabiting the headwaters of the Klamath River. Before the first census was taken estimates deserving no credence were made, varying from one thousand to two thousand Indians. In those times the scourges of small-pox, syphilis, and whisky did not inflict such terrible ravages as they do now among the Indians; but instead of these the continual tribal quarrels, family vengeance, the ordeals of witchcraft, dearth of food, and the inhuman treatment of the females must have claimed many more victims than at
[523] present. Emigration and intermarriages with other tribes were rather the
[167] exception than the rule, and are so even now.

THE TREATY OF 1864.

175
648 During the ten years following Wright's massacre the country began to assume a somewhat different aspect through the agricultural and stock-raising settlements of white people that sprung up in Lost River Valley, around Little Klamath Lake and in other places. The cession of lands to the "Oregon Central Military Road Company" from Eugene City, in Willámet Valley, through the Cascade range, across the Klamath Marsh, to

---

[113] * Contained in the Report of the Secretary of War, 1868–'69, Part I, pp 69, 70, dated September 2, 1867, and March 19, 1868. The troops killed twenty-four Snake Indians in the expedition of 1867. See also Texts, Note to 28, 14.

175 Warner Lake, and thence to the boundary of Idaho, with its "six miles
248 limit" grants on both sides, took place before the conclusion of the treaty.

In order to subject the troublesome Snake and Modoc tribes to a stricter control, and to secure more protection to settlers and the immigrants traveling through Oregon, Fort Klamath was established north of Upper Klamath Lake, in Lake County, and garrisoned with several companies, who were of great service in preserving order in these sparsely inhabited tracts. The Klamath Lake Indians were more inclined to keep up friendship with the white people than the other tribes, nevertheless some turbulent characters among them necessitated military restraint.

The Superintendent of Indian Affairs of the Northern District of California, Judge E. Steele, adjusted some grave difficulties between the Shasti and the Máklaks Indians, which threatened to break out into a terrible war of devastation against the Shasti and the white settlers alike. Some of the Máklaks "braves" had been killed upon the lands of white settlers, and the injured Indians had begun retaliation already. Colonel Drew, stationed at Fort Klamath (who fought marauding bands of Shoshoni and Bannocks during the summer of 1864), had arrested and executed "Captain" George, a Klamath Lake chief, for criminal acts, and killed an Indian commonly known as Skukum John. The chiefs and some representative Indians of the contending tribes met Judge Steele near Yreka, California, on February 14, 1864, and for some trifling consideration agreed to forego all further hostilities among themselves, to allow free passage to anybody traveling through their territories, and to maintain terms of friendship with all whites, negroes, and Chinese. The Modocs also made the special promise to harass no longer the Pit River Indians by annual raids. It also appears from Mr. Steele's allocution to the Indians that they had been selling to whites and others Indian children of their own and of other tribes, and also squaws, the latter mainly for the purpose of prostitution.*

The establishment of Fort Klamath, the increase of white men's settlements, the possibility of Indian outbreaks on account of the greater vicinity of the farms to the Indian villages, and the desire of the Indians themselves to obtain rations, supplies, and annuities brought the opportunity of a

---

* Report of the Commissioner of Indian Affairs for 1864, pp. 84, 85 and 108–110.

175 648 treaty with these Indians more forcibly before the Government than ever before. In compliance with instructions from Indian Commissioner William P. Dole, Superintendent J. W. Perit Huntington, accompanied by Agent Logan, went through the Des Chutes Valley to Fort Klamath, and found there a large number of Indians of both sexes assembled, seven hundred and ten of whom were Klamath Lake, three hundred and thirty-nine Modoc people, and twenty-two of the Yahuskin band of Snake Indians. They unanimously concurred in the desire that Lindsey Applegate, a settler of Jackson County, Oregon, be appointed as their agent. The treaty was concluded on the 14th of October, 1864, and duly signed by the contracting parties, including twenty-six chiefs and principal men of the tribes. Huntington's estimate of funds necessary for fulfilling treaty stipulations and subsisting the Indians the first year amounted to a total of $69,400. The text of the treaty being too long for insertion entire, I restrict myself here to the contents of the principal paragraphs:

175 648 657 Article 1 stipulates the cession of the territory described above (p. xvi), and sets apart as a *reservation* for the tribes referred to the tract included within the limits following: Beginning upon the Point of Rocks, about twelve miles south of the mouth of Williamson River,* the boundary follows the eastern shore north to the mouth of Wood River; thence up Wood River to a point one mile north of the bridge at Fort Klamath; thence due east to the summit of the ridge which divides the upper and middle Klamath Lakes (now called Klamath Marsh and Upper Klamath Lake); thence along said ridge to a point due *east* of the north end of the upper lake; thence due east, passing the said north end of the upper lake to the summit of the mountains on the east side of the lake; thence along said mountain to the point where Sprague's River is intersected by the Ish-tish-ea-wax Creek (probably Meryl Creek); then in a southerly direction to the summit of the mountain, the extremity of which forms the Point of Rocks; thence along said mountain to the place of beginning. The tribes will remove to this reservation immediately after the ratification of the treaty and remain thereon. No whites, except employés and officers of the United States Government, are allowed to reside upon this tract, and the Indians have

---

*At the foot of Nilakshi Mountain.

175 the exclusive right of taking fish and gathering edible roots, seeds, and
648 berries within the reservation. Provision is made by which the right of
657 way for public roads and railroads across said reservation is reserved to
citizens of the United States.

Article 2. As a payment for the ceded lands the Indians shall receive $8,000 per annum for a period of five years, $5,000 per annum for the next five years, and the sum of $3,000 per annum for the five years next succeeding.

Article 3 provides for the payment of $35,000 for removing the Indians to the reservation, subsisting them during the first year, and providing them with clothing, teams, tools, seeds, etc.

313 Articles 4 and 5 provide for the establishment of a saw-mill, a flouring-
256 mill, a manual-labor school, and hospital buildings, all to be maintained
874 and supplied with working material at the expense of the United States for
783 the period of twenty years. Employés for running these establishments
shall be paid and housed by the Government also.

423 Article 6 reserves the right to the Government to provide each Indian
family with lands in severalty to the extent of forty to one hundred and
twenty acres, and to guarantee possession to them. Indians are not allowed
to alienate these lands.

Article 9. The Indians acknowledge their dependence upon the Government of the United States, and pledge themselves to be friendly with all citizens thereof, to commit no depredations upon the persons or property of said citizens, and to refrain from carrying on any war upon other Indian tribes.

273 Article 10 prohibits the sale and use of liquors upon the Reservation,
and Article 11 permits the Government to locate other Indian tribes thereon,
the parties to this treaty not losing any rights thereby.

The treaty was proclaimed February 17, 1870.

Like most of the treaties concluded between the United States Government and the Indian tribes, this compact was made much more to the advantage of the white man than of his red brother. Not only were the stipulated annuities rather small for a body of Indians, which was then considered to number about two thousand people, but these annuities were

177 cemetery was inaugurated between the Williamson River and Modoc Point,
764 one mile and a half south of the bridge.

175 President U. S. Grant's peace policy in regard to the Indians was
648 inaugurated by act of Congress dated April 10, 1869. The supervision of
657 the Indian agencies was placed in the hands of the authorities of religious
[797] denominations, a board of commissioners appointed,* and the spiritual interests of that reservation turned over to the Methodist Church.

SCIENTIFIC RESEARCHES ON THESE INDIANS.

114 The study of the ethnography of a tribe usually precedes that of its language; sometimes both are pursued simultaneously, and this is undoubtedly the correct method. In the case of the Máklaks, Horatio Hale,† the linguist of Ch. Wilkes's United States Exploring Expedition (1838–1842), and still holding forth as a pioneer in his lines of research, took down a vocabulary from a Klamath Lake Indian whom he met on the Columbia River in 1841. No ethnographic remarks upon the tribe accompany this vocabulary, probably because information obtained from interpreters, who speak the Chinook jargon only, is notoriously unreliable.

Next in time follow the extensive explorations of John Charles Frémont‡ of the interior basin west of the Rocky Mountains and of the Pacific coast from 1843 to 1844, and again from 1845 to 1846, during which the Klamath Lakes and Klamath Marsh were visited and explored. His reports contain graphic sketches of all that was seen and observed by his parties; but scientific accuracy is often wanting, and many countries are described without giving the Indian local names, which are indispensable to identification.

The acquisition of the Pacific coast by the United States (California in 1846, Oregon in 1848) naturally suggested projects of connecting the two oceans by a transcontinental railroad, starting from the Mississippi River and reaching to the Bay of San Francisco. The Central Govern-

---

† Born in Newport, New Hampshire, in 1817.

‡ Born at Savannah, Georgia, January 21, 1813; candidate for the Presidency of the United States in 1856; died in New York City, July 13, 1890.

114 that these explorations were the starting-point of all further researches upon the Pacific coast, and as such they are creditable to the men with whom and the epoch at which they originated.

The topographic map of the Klamath headwaters is now being prepared by the U. S. Geological Survey. It is laid out upon a scale of 1 to 250,000, with contour intervals of 200 feet, the rivers and water sheets in blue. The sheets are named as follows: Ashland, Klamath,* Shasta, Modoc Lava Bed, Alturas—the last three belonging to California. The surveys were made from 1883 to 1887 by Henry Gannett, chief geographer, A. H. Thompson, geographer in charge; triangulation by the George M. Wheeler survey, by Mark B. Kerr; and topography, by Eugene Ricksecker and partly by Mark B. Kerr.

THE MODOC WAR OF 1872-1873.

175 The well-known maxim, "it is cheaper to feed the Indians than to
648 fight them," has forced itself upon the governments of all American coun-
657 tries in such indelible characters that it has become a rule for them to conclude treaties with the different "nations" to keep them at peace, feed them by rations or annuities, and confine them within the limits of certain territories. The treaty of 1864 was not attended by all the favorable results expected. The Snake Indians ran off from the Reservation during April, 1866, the Modocs in 1865. The latter tribe were not compelled to leave their old domain, now ceded to the United States, till 1869. Moreover, it always takes several years to gather straying Indians upon a reservation
000 after a treaty has become an accomplished fact. The Superintendent of Indian Affairs in Oregon, Mr. Meacham, on December 30, 1869, after a long and excited "talk," succeeded in bringing two hundred and fifty-eight Modocs to Modoc Point, upon the reservation allotted to them. On April 26, 1870, the supply of rations was exhausted, and the more obstinate half of the tribe left the Reservation again for the old domain upon Lost River and the lakes, whereas the other half, under Skóntchish, went to Yáneks, on Sprague River, where the Superintendent located them. All Modocs

---

* The name for the sheet east of Klamath has not yet been determined.

C

000 could not remain unpunished. Brought before a jury at Fort Klamath, Kíntpuash, Chief Skóntchish, Black or Húka Jim, and Boston Charley were condemned to the gallows and hung at the Fort October 3, 1873, while two accessories to the deed—Bántcho and Slú'lks (now George Denny)—were condemned to incarceration at Fort Alcatraz, San Francisco Bay.*

Thus ended the long-contested struggle of the little Modoc band against the Oregon and California volunteers and the regular troops of the United States Army. Certainly the heroism and ingenuity displayed by the Modocs would have been worthy of a better cause, and would have passed down to posterity in the brightest colors of patriotism had not the murderous "entreacte" and Canby's death deprived the struggle of its heroic luster. The unworthy termination of this war is well typified by the fact that the skeleton of the Modoc captain is now dangling as an anatomical specimen in the museum of the Surgeon-General's Office, at Washington, District of Columbia.

STATISTICS.

648 From the end of the Modoc war to the present year the condition of
177 affairs has not changed much in the Klamath Highlands. The reports of
178 the United States agent repeat the same story of progress towards civiliza-
657 tion every year; but in view of the difficulty of bringing a hunter tribe into the high road of Christian culture and industrial progress we can not attach much credence to such reports so long as they are couched in generalities and do not contain special facts attesting mental improvement by schooling.

248 In agriculture success is possible only in the Sprague River Valley,
657 but pasturing will succeed almost on every spot of the Reservation. The
241 report of 1888, compared with that of 1880, shows a considerable improve-
231 ment in this direction. The 2,500 horses and mules counted in 1880 had increased to 4,532 in 1888; the 200 head of cattle to 2,201. In the latter year the number of swine figured 208, of domestic fowl, 1,000. Of the 20,000 tillable acres of land 1,400 were cultivated by the Indians in

---

* Slú'lks was released, and stays now at the Modoc Reservation, Indian Territory, with Scarface Charley and some other warriors of that war.

648 1888 and 500 broken by them; 10,000 acres were inclosed by fences.
657 The crops of 1888 amounted to 8,000 bushels of wheat, 4,000 of oats and
241 barley, 1,000 bushels of vegetables, 3,000 tons of hay; and 500 pounds of
231 butter were manufactured. Of lumber 100,000 feet were sawed. The
313 Indians transported with their own teams 500 tons of freight, and thereby
434 earned $1,500. The two boarding-schools, one at the Klamath Agency
and the other at Yáneks, in the same year boarded 215 pupils at a cost to
the Government of $18,764—about $10.40 a month per capita.

311 The number of acres contained within the Klamath Reservation is 1,056,000, and of these only about 20,000 acres are considered to be tillable land. The rest is occupied by woods, marshes, rocks, and other hindrances to cultivation.

797 The school and church interests are in the hands of the Methodist Episcopal Church, which also has a vote in the appointment of the United States agent.

657 The statistics of population have furnished reliable data only from the
161 time when annuities were first distributed among these Indians. This ne-
162 cessitated an annual count of each family, giving the number of the individuals belonging to each. One of these was made during my presence on the reserve on October 30, 1877, before the winter supplies were dealt out to the tribe. The summary is as follows:

David Hill, chief, at Agency and on Williamson River	225
P'lú, head chief, at the bridge, Williamson River	122
Long John, chief	103
Jack, chief	92
Lílo, chief	23
Total	565

The census taken in the Sprague River Valley, Yáneks subagency, furnished the following figures, Klamath Lake Indians and Modocs being indiscriminately included:

Littlejohn, chief	14
Skóntchish, chief	18
Modoc Johnson, head chief	71
Ben, chief	61
Brown, chief	30
Total	194

NOTES.

[197] 19. The long and fertile valley of the Pit River, an eastern affluent of the Sacramento River, is inhabited by several tribes of Indians who speak dialects of the same language family. Of the peculiarities of these tribes, Stephen Powers has given the first comprehensive sketch in the Overland Monthly, 1874, pp. 412–416, and in Contributions to North American Ethnology, vol. III, pp. 267–274. The various tribes greatly differ in their physical and mental qualities. The Pacamallies, on Hat Creek, at the lower end of the valley, were much dreaded by peaceable travellers on account of their sudden attacks from an ambush. The Indians in Big Valley are a fleshy, stout, and physically well-made people, while the Hot Spring Valley people has become deteriorated through prolonged national misfortune. Against both of these the slaving raids of the Klamaths and Modocs were mainly directed.

[721] [567] [727] 19, 2. The raids were undertaken by the Klamaths and Modocs just before wókash-time; that is, in April and May. They had no other purpose than to make slaves of the females and children of the unwarlike, poor, and suffering Pit River Indians, and to keep them either at their homes or sell them for ponies, provisions, beads, etc., at the Dalles to the Columbia River tribes. Adult men were not enslaved, but killed outright if captured. Similar instances of suppression of weaker tribes of the West by warlike Indians who were their neighbors are those of the Kayuses on Middle Columbia River, of the Yuki between Sacramento River and the Pacific Ocean, of the Húpa on Trinity River, Cal., all of whom were, at the advent of the whites, the terror of the districts surrounding their homes.

[648] 19, 3. shlüótak for shlüóta ak; the Pit Rivers ran away at the *mere sight* of the Klamath men; ḵá-i tata siúkat, the Pit Rivers never killed any Klamath men. Both statements are exaggerations; Hill's own account and Toby Riddle's biographic notice tend to prove the contrary.

[727] 19, 3. nellínat, or nell'nat. When they had killed an enemy, they did not follow the custom of the Oregonians of taking the scalp. This custom is not found among any of the Central Californian tribes.

[193] 19, 4. hû'stchoḵ-huya; by the suffix -huya, -uya, the action of the verb is shown to take place at intervals, or in a small degree. "They did only little damage by killing or massacring." Cf. shenótank-huya, 20, 2, and -uya in the "List of Suffixes".

[196] 19, 4. tû'm tát sa. Change of the subjects introduced by the pronoun sha, sa, in consecutive sentences, is sometimes observed, as here and in 19, 16; 20, 3. Hill often uses sha when speaking of the Klamath Lake men, where nat, *we*, would be more appropriate.

[193] 19, 6. Kitchkanin nû for kitchkáni nû (or ni) nû. Pronouns and particles are repeated quite frequently.

19, 11. Wúksalks is a camping-place distant about six miles from Linkville. It was not possible for me to obtain definite information about the trail followed most generally in those raids, but Dave Hill said that from there they went due south. He

173 *539 726 was born about the year 1840, and since he was a boy then, carrying only a pistol, this raid may have taken place about the year 1858. His second raid, which was undertaken the year afterward, was made when he was nearly twenty years old. After this he stayed five years in Oregon City, on the Lower Willámet River.

19, 16, and 20, 1. What is said here up to the word snawä'ds is evidently an anticipation of what follows in 20, 6. 7.

192 19, 16. sas tillindsa, or shash tilíndsha: shash is apposition to wéwanuish, which stands here, as frequently, for wewanuíshash; 23, 5, we find: wewánishash.

20, 2. lápik for lápi gi: "two are, two were."

487 20, 9. Tiunŏ'leshtat. The distance between Klamath Marsh and the Pit River country was estimated at three days' Indian travel; but it often took four days to reach there on horseback.

192 20, 10 and 11. mak̲laksksákai refers to the encampment and immediate surroundings of the Indian captors, the Klamath Lake men and the Modocs, who had gone with them.

487 20, 13. guhuáshktcha. They seem to have returned home over the same trail which they had followed in going south. They passed between Little Klamath and Rhett Lake, which latter is also called Tule and Modoc Lake.

193 20, 17. tsúi gé-u, etc. This sentence has to be construed as follows: tsúi gúikaka hú'k lû'gs spunísh gé-u: "hereupon that slave, transferred by me, ran away."

21, 2 and 3. Bóshtin tpă-ók. This man was an American settler on Lost River, 648 who, with other settlers, had previously attacked one of the Pit River tribes, in punishment for depredations committed. In the fight which took place, some whites were killed by the Pit Rivers, and this prompted the abovementioned settler to slaughter an ox for the Lake men, in order to raise their spirits for deadly revenge on the common enemy. The beef was slaughtered and eaten at his farm.

21, 5. Tsúi nat, etc. This incident was explained to me by Dave Hill, as follows: The famous Captain George was at that time war-chief both of the Klamaths and the Modocs. He had ordered Kiukamtch, the head-man of the Nushaltkága=Modocs, to join the expedition against the Pit Rivers. His refusal to go prompted Dave Hill and others to deprive him of his elk-skin cuirasses; but finally, to secure success to the expedition, the parfleshes were returned to their owners.

193 21, 7. Húmasht nat. A verb like gi or shúta has to be supplied.

21, 12. séllaluish, translated here by "war-expedition", still retains its verbal nature; for it is connected with two temporal *adverbs:* lupí' and húnk. More circumstantially the sentence can be rendered: "we rode far beyond the terminal point of our previous raiding campaign."

193 21, 18. léwak, a verb composed of two particles. Gétak and kánktak, formed almost in the same manner, are also used as verbs. Below, léwak is separated into its two components by a pronoun: lă nāt wák ka-á; lă' nŭt wák galdsawiá-a.

21, 19. wéwanani. The terminal -ni turns the wéwanuish into a kind of adjectival phrase. See the peculiar use made of this ending in the Dictionary and in the Grammar.

22, 8. hátaktk. The final k is the verb gi, ki, "said"; tchín hátaktk is: tchí nû hátakt gi.

302 22, 21. shatchlχámia is one of the various modes of painting face and body in use among the western Indians. White paint was put on in this manner (see Dictionary) only when the Indians were on the war-path. From the same verbal base is derived

turned here to Fort Klamath; but he Lieut. Small over there separated Goose Lake

gunî'gstant gémpaluk Spá-ish Valleytála. Lä'p Sátas wéwanuish ä'na.
opposite for returning to Surprise Valley. Two Snake females he took with him.

NOTES.

28. The various bands of Snake Indians inhabiting Oregon east of the Cascade Mountains are gaining their sustenance chiefly by the chase. This accounts for their constant wanderings and ubiquitous presence sometimes at Camp Harney, or the Owyhee and Snake River, at other times near Warner Lake, or the Klamath Marsh.

The date of this raid could not be determined; it may have preceded the fight related below by ten or twenty years.

222 501 28, 1. É-uksi, "to Klamath Marsh"; on Williamson River (K̲ók̲e), which forms the outlet of the Marsh, the Snakes saw women of the Lake tribe crossing or passing down the river in their dug-out canoes, which they use for gathering wókash (the seed of the pond-lily) on the Marsh.

173 **28, 2.** gépkapsh, formed by syllabic elision from gepkápkash; cf. **28, 19.**

*539 **28, 2.** sákatla, to come up, to arrive by the trail.

726 **28,** 3 and 4. wéwalíks pi'la, the old women only; the younger ones, on whom prin-
● 648 cipally devolves the work of wókash-gathering, found time to escape in their canoes
[193] from the raiders.

[192] **28, 4.** k̲lewidshápka. The men had gone fishing to distant places, leaving their
[222] females in the camp, not apprehensive of any hostile attack.

[192] **28, 8.** kilō's, or kilû's, is the epithet given to "Dry-Leg", the Snake chief; it means a bold fighter, leader of a fighting band; literally: "irate, wrathful", and may be here taken as an equivalent to "war-chief" (sesaclólish lak̲í).

[193] **28, 13.** Moadoki'sh, apocopated for Moadokíshash; also **28, 1:** wéwanuish (wé-
[192] wan'sh) for wewanuíshash (shlää gépkapsh). Nā'lsh tchí'sh, *us* also; that is, we of the
[657] Klamath Lake tribe, were gathered by Mr. Perit Huntington into one district, the newly established Klamath Reservation. A large number of the Lake People were then scattered about Klamath Marsh, which is visited by them now in summer only for fishing, gathering wókash and berries, and for hunting.

[657] **28, 14.** Dave Hill, now interpreter (lúldatkish) at the Klamath Lake Agency, took
[175] a part in this short but interesting expedition, in the capacity of an Indian scout. He fixes himself the date of it by the words "tína illolólatko", or a *full* year after the Indians had been gathered on the Reservation by Mr. Perit Huntington. The treaty was concluded on October 14, 1864, and the campaign was undertaken in 1866 by a small body of American troops for the purpose of bringing back to the Reservation a band of Snake Indians who had run away from it. This unruly tribe, jealous of its former independence, has left the Reservation even since then, and could only after much exertion be induced to return. The fights took place west of Warner Lake, and north of the border-line between California and Nevada, within the former haunts of these western Shoshonis.

[175] The Report of the Acting Commissioner of Indian Affairs for 1867, page 99 sq., mentions this expedition in the following laconic terms: "October 27, 1866, troops consisting of 21 men, First Oregon infantry, and five Indian Klamath scouts, under Lieutenant Oatman, and 27 men, First Oregon cavalry, under Lieutenant Small, had a fight with a band of hostile Snake Indians near Lake Abbott [should read: Abert], in the Klamath country, Southern Oregon. The Indians had so chosen their position that the troops were obliged to dismount to attack them. The fight lasted one and a half hour, and 14 Indians were killed and many wounded."

On page 100 of the same Report, another fight against Snake Indians is spoken of: "Late in November, 1866, in a conflict between the troops and Snake Indians near Fort Klamath, 10 Snake Indians were killed by the troops, and three more by the friendly Klamath and Moadocs who accompanied them." This may have been the same fight as the one above, reported with much less accuracy of detail.

[103] **29, 3.** Spá-ish Valley, name corrupted from Surprise Valley. This valley is situated in the northeastern angle of California, and on the shore of its two alkali lakes several American settlements have sprung up. A few Snake Indians live peaceably around Fort Bidwell, which is located at the northern extremity of the valley.

29, 10. tálaat tχalamti'tal, consonantic assimilation for tálaak tχalamti'tal, due west.

[192] **29,** 17 and 19. nā'ts, natch, for nā'ls, nā'lsh, nā'lash, *us*; náts a gépksl, for nā'lash a gépkash í.

173
*539
726
648

29, 17 and 18. gayá-itsampk. The advance of the troops was ordered in consequence of Hill's report that Snake Indians had been seen by him and his fellow-scout.

[192] 29, 19. tû'=hak; hak means: on this side of something or somebody, referring to an object located between the speaker and something more distant.

29, 19 and 20. shlă'pka (for shlă'apka) and tássuipk (for tássui-apk) "they saw and attacked them in Hill's absence"; tínshampk "they scampered off unseen by Hill". If the simplex verbal forms shlă'a, tássui (or táshui), tínshna were used, they would imply that Hill then saw the Snake Indians himself, that he was among the troops charging them, and that he had seen them *in person* scampering off. [193] [196]

30, 3. lewé-ula really means: not to permit, not to allow, to forbid.

[192] 30, 3. tchín gi, short for tchí ni gi: "so I said."

30, 5. Instead of gatpánkshkshi could also stand in the text: gatpannápkshi; the final -i being used in a temporal sense in both terms.

[193] 30, 8. kû'meta, contr. from kû'mme tchish, or from kû'metat tchish.

30, 9. snashuála, etc. They piled up rocks to serve them as barricades to shoot from behind.

[192] 30, 11. u-i'tana, distributive form of ó-itchna; see Dictionary.

31, 7. Nă'wapksh, etc. Transcribed into the fuller and more explicit grammatic forms, this phrase would read: Nă'wapkash yamakíshtana kétcha tχálamna, "to the northwest of Goose Lake." For Nă'wapksh, Né-uapksh, see Dictionary. [193] [196]

31, 13. This campaign terminated in a decided victory over the runaway Snake warriors, but failed to accomplish its real purpose of bringing them back to the Reserve. Nevertheless, these Indians had been severely chastised by losing quite a number of men killed and wounded, and seven women of their tribe captured by the military.

(60) And he had told them that long ago, someone—perhaps Gmoḱaḿc̄—to do thus. (61) Gmoḱaḿc̄ helped the Indians. (62) It was never like that long ago, only the river flowed, they say. (63) And they were weak. (64) They were unable to kill fish. (65) And because they were thus, he told them thus, "I will make [something] for you [pl.], where you will kill [fish] every spring." (66) Thus he them, Gmoḱaḿc̄ told, long ago. (67) [That] is as I know it, that much.

Introductory Note to Text 27

In this text Mrs. Butler describes two incidents dealing with the cruelty of the early white settlers. Various renditions of these stories were also obtained from other informants. The first incident concerns a party of white men, led by a now-famous local figure, who came upon a party of Klamath women picking wokas, and wantonly shot one of them in the face. According to Mrs. Butler, the woman lived, and the scar still showed years later. The second occurrence concerns a group of Rogue River Indians (?) who were hired by a settler to dig a deep trench. Once the trench was dug, the settler and his men opened fire on the Indians and threw their bodies into this ready-made grave. According to Mrs. Butler's text, this incident was one of the sparks which led to the Modoc War. The names of these white men have been omitted from the text for obvious reasons. 539* 648

The informant also describes the customs of "raiding" and "slavery," as practiced by the Indians of Southern Oregon. She points out that this was a far different thing from the concept of slavery as found in Rome or ancient Egypt or Asia. Many of the children, originally stolen in childhood, grew up among their captors and received good treatment, eventually coming to love their new home more than the old. 539* 567

[TEXT CONTINUED ON PAGE 139]

27. Some Historical Incidents
(Mrs. Aggie Butler)

(1) Now I will tell, something, a little to you [pl.]. (2) We Indians 539*
lived in the distant past, and we lived correctly [lit. "well"], not doing 173
anything [bad]. (3) And there were many of us Klamath Indians living 648
everywhere, all along the shores of the Lake.

(4) And once the white men attacked us old ladies gathering wokas. (5) And they almost killed there, shot some. (6) And he was among them—(Proper name)—he, [of] whom the white people are so very proud. (7) He was there with them. (8) And [he?] shot one of the women, in the face, and it showed.

(9) And some did not hide from them, and they left them alone in their winter-houses, living. (10) And the Indians, those Klamath men, were away hunting for some time, and on their returning [the women] told them. (11) And the women [told] them what the white people had done to them, and they almost tracked them, but they did not do anything again, to that white man.

(12) And then the Warmsprings people always used to quarrel with
them, and having come, they made slaves, of the Klamaths. (13) And
the Klamaths having tracked them, killed some, having taken the women [726]
back. (14) So thus the people of the old days always fought wars here. [567]
(15) And they [did] the very same way to the Pit River Indians, having
gone, the Klamaths, and they enslaved their children too. (16) They
raised them, however. (17) And some never went away from them, [for]
they loved some of them. (18) They did the same thing to the Paiutes.
(19) And they made slaves of the Paiutes also, and they grew up right
there, so they live there today, those Paiutes who used to be slaves there.

(20) And the white people did evil to the Indians, and once that one called (Proper name), to the Rogue River Indians. (21) And that white man wanted all of them to dig, on his land. (22) And having dug something, then he killed some of them there, and threw them down into that ditch. (23) And he covered them [with] earth, the children too. (24) And one who escaped told of it. (25) And because of being thus at that time, when the Modocs made war [i.e., the Modoc War], then one of the chiefs spoke thus, "Let them not do it to us, as that (Proper name) [did] to the Pit River Indians awhile ago! (26) Perhaps they want to do the same to us. (27) They want to 'speak' to us Modocs in the same fashion."

[TEXT CONTINUED ON PAGE 141]

that Modoc said once. (28) They never forgot it, [their] doing thus, 539*
[their] killing the Indians wrongfully [lit. "badly"]. 173
(29) And I have only related little bits of it. (30) But I know a great 648
deal, but I am not telling all of it, however. (31)—How the Indians used
to fight amongst themselves, always they fought even among themselves. [721]
(32) Even among themselves they enslaved someone's child, and sold it. [567]
(33) That much is all I will tell. (34) I have nothing else to tell.

Introductory Note to Text 28

This text is a continuation of the foregoing by Mrs. Butler's sister. 124
Both are part of a recorded conversation about Klamath history in gen- 128
eral, and no particular attempt was made to formalize the texts into
"stories." When Mrs. Butler had finished her historical narrative above, the topic turned to the Modoc War, and Miss Skellock began to discuss their father's role in that conflict. Rightfully, this text should include the remarks in English which led up to the Klamath portion, and also an explanation and continuation in English which follows it. Limitations of space require that these English parts be edited and abbreviated, however.

Introductory Remarks in English

"Our father was a scout in the Modoc War. He was with the white 539*
soldiers and went to those Lava Beds where the Modocs were." 726
648
173

28. Recollection of the Modoc War

(Miss Irene Skellock)

(1) My father went there, to the battleground. (2) And he was with the white men. (3) And he was a soldier—ah—a "scout." (4) And they were falling on both sides of him, soldiers. (5) And if they shot one, the soldier behind him marched up to the front. (6) However, they never shot him. (7) And he, however, was afraid of seeing (?) those Modoc Indians only. (8) So he lived in fear, thus they said, and some of those Klamath Indians who went with him, they also were afraid. (9) And that's all I'm going to tell [in Klamath].

[TEXT CONTINUED ON PAGE 143]

Concluding Remarks in English

"He said that whenever someone was killed in front of them they had to jump into their place. Oh, he said he sure was scared! He was with those white soldiers fighting the Modocs in the Lava Beds." 539* 726 648* 173

Mrs. Butler adds: "He told how they had to go to the war, because they (the white people) told them that they'd take all the Klamath Indians away, if they didn't go. All those who went were related, since they didn't want them to take anybody away. Others, some of them, refused and took their canoes across to Pelican Bay. Some did not want to get into the war. One man, a good shot, said, 'I'm not going. I'm going to die! They can kill me right here. I don't want to go.' But they never took him."

29. Menstruation Practices
(Mrs. Pansy Ohles)

539* 841

(1) When a woman has her menstrual period, she does not come to eat because of menstruation. (2) [She] does not eat with us. (3) [She] does not bathe, does not get wet. (4) [She] will not get chilled. (5) [She] does not feel well, and does not put her hand in water.

30. The Second Coming
(Mrs. Pansy Ohles)

539* 776 787

(1) According to God's promise [lit. "rule"]. (2) All the earth will burn up. (3) And at that time God will return again.

[TEXT CONTINUED ON PAGE 145]

*648 poses. The proposal was that Klamath and Sycan marshes be
*657 constituted two grazing districts for leasing purposes. The Indians
427 further proposed "that the funds derived from the said grazing
311 privilege shall be divided per capita among the Indians of this
563 Reservation." The 41 signatories included the leading names on
the reservation. Matthews rightly doubted the feasibility of
• [651] making such a division; for the General Deficiency Act of March
3, 1883, provided that unearned income of this sort should go
into a tribal fund in the Treasury.[46]

With the allotment of land, the leasing of individual tracts came into common practice. In advocating this measure Agent Petet urged in now familiar terms "that some Indians might get some money in this way to buy cattle of their own, who scarcely ever would be able to get a start in any other way." He thought that "if a few of the active Indians could do well in this business, it will be an incentive to others to fence their lands and try to make something off of it."[47] An informal grazing system was authorized. Meanwhile five men—Jesse Kirk, Henry Jackson, Harrison Brown, Frank Lynch (Tall Jim), and Scot Modoc—pushed matters further by enquiring into the rights of allottees with unfenced tracts to graze and expel cattle, asking further that money received from pasturage be distributed equally among tribal members, and that the price for grazing be raised to one dollar per head.[48]

Eight other Indians, led by Charley Pitt, under the advice of Daniel Cronemiller, a lessee, and with the assistance of Petet, erected a fence six miles in length enclosing the outer boundaries of about 4,000 acres of allotments, their own as well as others'. One of them, George Gray, was chosen by his fellows to count and drive in all cattle brought into the pasture by lessees.[49]

Emery advocated a continuation of the practice of permitting leasing by allottees of fenced lands. He cited the contract entered into by a Klamath interbreed, William Ball, formerly an Indian judge, with two whites. By its terms, Ball agreed to give exclusive pasture to their 300 head of cattle on his tract at Klamath Marsh at one dollar per head for the season. "This money," the Agent remarked, "insures a competency for him and his family for a year, and leaves him abundance of grass and

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

gaged them, and many were reported to be hopelessly involved 648* 657*
in debts. Despite all administrative efforts to the contrary, re- 423
ported Superintendent Fred A. Baker, whites were acquiring title 432
to Klamath lands at a rate which he estimated would render the [563]
Indians homeless in twenty-five years.[63]

Since that time the pressure on the remaining allotted lands has been unremitting. Of 1,624 allotments issued totaling 247,515 acres, there remained in trust status as of August 13, 1954, the date when the Termination Act became law, only 1,130 allotments or fractions thereof, amounting to 133,000 acres. Three years later, 371 additional tracts had been sold at owners' requests, 107 had been fee patented, and restrictions had been removed from 20. The 630 tracts remaining by October 1, 1957, comprised but 73,681 acres.[64]

Along with income from leasing and sale of allotments came 648*
that from claims payments. By the terms of the McLaughlin 657*
Agreement of 1901, the Indians were to receive $537,007.20 in 423
payment for excluded lands. Of this, $25,000 was to be issued in 432
per capitas within 150 days from ratification and an additional 427
$350,000 was to be deposited to the tribal credit in the U.S. 434
Treasury, the interest at five per cent annually to be issued in 651
yearly per capita payments. The remaining sum, after payment
of attorney fees, was to be utilized for drainage and irrigation of
allotments on a pro rata basis, with issuance-in-lieu of stock cat-
tle or other articles to those not so benefited.[65]

Amounts thus received were small. Payment of the $25,000 648*
was made in 1907, each individual receiving approximately 657*
$22.00—no princely sum. The annual interest produced per 434
capita payments of approximately $15.00; but a provision that by a petition of the men of the Tribe the amount might be increased to ten per cent of the principal fund led to its successive diminution. As early as 1909, a petition was submitted for this payment,[66] and Charles S. Hood took the lead in enquiring of the Secretary of the Interior whether parents were empowered to withdraw the money due their children.[67] The move seems to have been denied. Stringent regulations, however, were established by the Secretary to govern eligibility to receive a share of the trust funds. These related to improvement of allotments, self-support, moral character and controlled use of liquor, and

*648 ability of the subject to manage his own affairs; but unconditional
*657 payments to the infirm, aged, and decrepit were also to be
434 allowed.[68] Undoubtedly, lease monies made some Indians, who
[427] would otherwise not have qualified, financially eligible for their
share of the trust funds. By 1915 most of the Indians had realized their full pro rata share of the trust funds, and annuities were received only by children and a very few others. The children's shares by this time were being paid to their parents or guardians.[69]

*648 A similar development took place in the allocation of the re-
*657 maining part of the funds, designated for irrigation improve-
•651 ments or stock issues. When the pro rata shares of this amount,
653 $110,662.16, proved insufficient for the irrigation work required
231 in the Modoc Point area, the tribal council advocated that all
the amount be issued in cattle.[70] Some 4,000 heifers, as desired, were accordingly purchased, with each Indian residing on the reservation receiving four head, save the youngest member of the family, who received three. Although the clerk in charge of the Agency stated that "all Indians residing off the reservation and who were enrolled at that time received nothing,"[71] he is clearly in error, for issues were made to a number of persons dwelling off the reservation.

*648 Here once more is to be seen the interplay of government
*657 policy and considerations of tribal status. The cattle issues were
231 designed by the government to foster stock raising as a reserva-
tion industry, but they were made at a time when land leasing and pro rata shares of the tribal fund had already created an expectation of direct cash receipts. In these terms, a number of the reservation Indians almost at once sold their cattle to neighboring white stockmen, and Superintendent Wilson had to threaten to bring the law upon the latter in order to recover them.[72] Meanwhile, off-reservation members were pleading their absence from the reservation and the advisability of using the money instead "to good advantage toward family necessities."[73] Finally, the discovery that many of the heifers issued were spayed, and so were useless for breeding purposes, capped the experiment. As Watson wrote, "Almost every Indian who has been at the office lately claims that he has from one to five or

> I might call attention to the fact that at the last election in Klamath County a trust patented Indian was elected Justice of the Peace, and a fee patented Indian was elected Constable of the Beatty District on the Klamath reservation. It seems a rather unusual situation when a trust patented Indian can preside as a judge over a court and pass sentence on other people and at the same time question the same court's jurisdiction over him.[8] 648* 657* 641 [693]

Nor was this all. Federally regulated land on the reservation was off bounds for officers of the law from city, county, and state; yet in 1947 there were only two special Indian officers and two deputies to enforce law and order over almost one million acres of reservation. It was physically impossible for them to follow up all cases, and consequently they could not deal effectively with the misdemeanors of delinquents or with truancy from the county schools. [625]

In the 1920's, soon after the opening of the reservation, towns such as Chiloquin were faced with the influx of a mobile population in which the unmarried "timber beast" was prominent. Roistering and violence occasionally assumed major proportions, and law enforcement broke down at first. Within the first three years after its incorporation in 1926, Chiloquin witnessed no less than twelve appointments to the position of town marshal. At times the Superintendent, concerned over the effect upon the Indians, intervened, delivering an ultimatum or sending in his officers to restore order. His jurisdiction, in turn, was also limited: When Arnold brought pressure to bear upon Chiloquin authorities to close down gambling in the pool halls and card rooms, the gamblers merely shifted their operation to Bly, just over the eastern boundary of the reservation, and the same procedure had to be repeated by state and local officials there. 648* 657* 621 625 563 674

The interdependence of law enforcement on state lands and reservation was emphasized during the depression. In 1931, when logging on the reservation—and with it tribal income—had been temporarily reduced by Washington, a tribal leader, Wade Crawford, succeeded in securing a congressional cut in the administrative budget of the Agency, which from about 1924 had been supported out of tribal revenue. Since the budgetary allocation for law enforcement then became inadequate, the federal officers left, until there remained only a constable and an 648* 657* 641 625 [651]

*648
*657 Although tribal members in Chiloquin lagged little behind their
621 white neighbors in registering to vote (1958), their concern was
563 less with local than with national issues.*

641 A second aspect of Indian citizenship was the support of local
619 government through payment of taxes. Since all property held
666 in trust or restricted status by the government, together with
*648 income derived from such property, was exempt from taxation,
*657 many tribal members occupied an unusual position among their
641 fellow citizens. The effect was particularly felt by the county and
• 651 local communities, which were heavily dependent upon property
taxes. For years, Klamath County sought to secure funds from the government to compensate it for the trust lands within its boundaries, which were served by county roads, sheriffs, courts, and schools. Johnson-O'Malley funds finally provided money in lieu of taxes to support the schools; to these the Klamath Tribe on occasion added funds for special purposes, but the other causes were unavailing.

In Chiloquin, officials resented the action of one Superintendent, who advised tribal residents that any property bought within the city with funds in trust or restricted status might be restored to corresponding status, even though it had been owned in fee simple when purchased. Such house lots were thus removed from the tax rolls and, although benefited by sewers and other municipal improvements, could not be levied for their support. It was not commonly recognized by white citizens of
[563] Chiloquin that a number of tribal members paid taxes regularly upon property held in fee simple and that a multitude of indirect taxes fell as heavily upon tribal consumers as upon their fellow citizens. Rather, the image was that of a people exempt from financial responsibility toward the support of local institutions from which they benefited. Though a distortion, like many other parts of the stereotype, this evaluation nonetheless contained a substantial kernel of truth.

If truth be told, the citizens of Chiloquin were no more disposed to pay taxes than American citizens anywhere, and indeed they were somewhat less inclined to do so than those elsewhere in Oregon. In 1951-52, the millage rates of Chiloquin were by far the lowest among the organized communities of Klamath

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

County. Of regular municipal income in the year, 1956-57, taxa- 648*
tion supplied only a little over four per cent. The largest sources 657*
of revenue were the water system, the city tavern (which alone 641
supplied over one-third of the budget), and the proceeds from 651 •
law enforcement (amounting to over one-fourth of the budget). Since, after the repeal of Indian prohibition in 1951, tribal members had become the major patrons of the municipal tavern, comprising in 1958 an estimated eighty per cent of its clientele, it is evident that in this indirect manner they had come to constitute a major support in the operation of the municipal government.

Nor was this all. The sizable sum derived from law enforce- 648*
ment was highly unusual. While the major enforcement problem 657*
in most Oregon cities of comparable size was traffic violations, 641
Chiloquin in 1956-57 found no less than ninety-three per cent of 674
its offenses to be felonies and misdemeanors other than traffic violations. Tribal members and other Indians, including re-
peaters, accounted for over seventy-two per cent of the arrests; [681]
they paid over seventy per cent of the fines and forfeited bail; [464]
and they furnished over ninety-six per cent of the trusty labor performed in the city.[7]

Aside from a few individual instances, this record does not 648*
reflect a policy of discriminatory arrests on the part of the city 657*
administration. It does, however, mark one of the significant 674
confrontations upon the reservation. It was conditioned in part [641]
by the special statutory position of the Klamath, for as an Indian [656]
under federal supervision he was enjoined by law from having or using liquor and from marrying a white within the state. Until these disabilities were removed in 1951, tribal members were subject to arrest for acts not held criminal when committed
by non-Indians. During prohibition, tribal members had learned [273]
to operate stills, had taken to drinking extracts, proprietary medicines, rubbing alcohol, and "canned heat" in lieu of scarce liquors, and had both patronized and served as bootleggers. Habits of defiant drinking, akin to those of other Americans during the "dry" years, lingered even into the years after repeal.

Klamath experience with strong drink and violence had neither begun with the reservation towns nor was it confined to them;

648 Most Klamath live in one or another of the several
towns and settlements on the reservation, or else they have settled elsewhere,
361 in Portland, Salem, Eugene, in California, in Alaska, in the Midwest, or along
[167] the Atlantic seaboard. In 1955 the Tribe had 2118 members, and of these 40
percent lived away from the reservation (Stern & Swanson 1960). Partly because
[619] of the recent progress of the termination of federal supervision of the reservation, by this date the percentage of members residing off the reservation has
[161] probably increased. In fact, for years there have been numerous "tribal members" with no experience whatsoever of reservation life.
[619]

648 Throughout the years of White contact inter-marriage and inter-breeding have
144 been frequent. Today, more than 70 percent of the Tribe's members are, genetically, less than one-half "Indian," and less than one sixth are "full-bloods."
[171] Many are indistinguishable in appearance from their White neighbors, as most are
not easily distinguished in dress and language.

175 The isolation of the early reservation period was soon removed by the influx
177 of White settlers, who at first took up farms and started towns near the fringes
of the reservation. Through inter-marriage and through the consequences of
[361] allotment of land to individual Klamath, many Whites were soon residing within
the reservation's boundaries, either on the lands of a spouse, or on land bought
[423] or leased from tribal members. Another source of change were the ever present
efforts of Agency officials to make over aboriginal ways, and later, the rapid
[657] growth of the lumber industry and the development of full fledged frontier communities were also important sources of acculturative influences. In quick
[726] succession the Klamath experienced a period of armed conflict (the Modoc War of
1872-73), a religious revivalistic movement such as that which swept the plains
[786] area, extensive governmental planning and intervention, the allotment of land
in severalty, and a growing participation in the cash economy. Because aboriginal
[181] Klamath values had stressed achieved status for those who worked to accumulate
[556] wealth and property, for some Klamath the early period of contact provided increased opportunities, and there was a group of men who for a time were effective
[436] entrepreneurs. It was through such personal efforts and through the "easy money"
had from private sales or the leasing of agricultural lands, from pro rata shares
of boundary settlements, and from per capita payments for sales of tribal timber
that the Klamath made the transition to a money economy.

648 The participation in and contribution of the Klamath to the economy of the region
is a significant point of interchange between Klamath and White, and one with
[313] many ramifications. In considerable measure, the local timber industry prospers
[423] or slumps, depending on the allotted cut in the tribal forest. Similarly,
local merchants are somewhat dependent upon the assured income of tribal members, as they are upon the purchases of mill workers, fallers, and cat-skinners.
[434] The major town on the reservation, Chiloquin, obtains the largest share of its
[632] revenue from sales at a municipally owned beer-hall and from the fines and forfeited bails paid by visitors to the city jail, both of which establishments are
[251] patronized largely by Klamath.

648 In other aspects of community life the participation of Klamath is perhaps best
621 characterized as that of passive spectators. Many Klamath have come to have a
sense of being aliens in the heterogeneous local culture, although there is a
563 small assimilated minority.

[571] Thus Klamath may interact as equals in card rooms and pool hall, and are met
with a stereotyped "friendliness" in interactions in stores and on the street.
However, the great majority live in intimate interdependence separate from the
main currents of White social life. White ethnic exclusiveness is reflected

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are ex- 621
clusively White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office out- [575]
side the tribal structure, and although a high percentage have registered, very [794]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are fre-
quently tax exempt, as have been their per capita payments. Simultaneously, [651]
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chilo- [674]
quin during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a recon- 648
stituted "Klamath Tribe," with a corporate structure and assets to be adminis- 657
tered by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal super-
vision has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual
Klamath have shown an equally noncommittal relationship to tribal affairs. Atten- 619
dance at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

*648 ability of the subject to manage his own affairs; but unconditional
*657 payments to the infirm, aged, and decrepit were also to be
434 allowed.[68] Undoubtedly, lease monies made some Indians, who
[427] would otherwise not have qualified, financially eligible for their share of the trust funds. By 1915 most of the Indians had realized their full pro rata share of the trust funds, and annuities were received only by children and a very few others. The children's shares by this time were being paid to their parents or guardians.[69]

*648 A similar development took place in the allocation of the re-
*657 maining part of the funds, designated for irrigation improve-
651 ments or stock issues. When the pro rata shares of this amount,
653 $110,662.16, proved insufficient for the irrigation work required
231 in the Modoc Point area, the tribal council advocated that all the amount be issued in cattle.[70] Some 4,000 heifers, as desired, were accordingly purchased, with each Indian residing on the reservation receiving four head, save the youngest member of the family, who received three. Although the clerk in charge of the Agency stated that "all Indians residing off the reservation and who were enrolled at that time received nothing,"[71] he is clearly in error, for issues were made to a number of persons dwelling off the reservation.

*648 Here once more is to be seen the interplay of government
*657 policy and considerations of tribal status. The cattle issues were
231 designed by the government to foster stock raising as a reservation industry, but they were made at a time when land leasing and pro rata shares of the tribal fund had already created an expectation of direct cash receipts. In these terms, a number of the reservation Indians almost at once sold their cattle to neighboring white stockmen, and Superintendent Wilson had to threaten to bring the law upon the latter in order to recover them.[72] Meanwhile, off-reservation members were pleading their absence from the reservation and the advisability of using the money instead "to good advantage toward family necessities."[73] Finally, the discovery that many of the heifers issued were spayed, and so were useless for breeding purposes, capped the experiment. As Watson wrote, "Almost every Indian who has been at the office lately claims that he has from one to five or

*648 capitas that far exceeded those previously received from tribal
*657 funds, the incentives of ranching declined. Vainly did C. H.
434 Asbury claim that the new giant was no more than a "temporary
313 industry" that would serve to finance stock raising.[80] When a
*648 special appropriation in 1919 permitted a large number of cattle
*657 to be issued to the Indians, many of them were promptly sold
434 for cash.[81] By 1922 the livestock industry was proclaimed "al-
231 most bankrupt," and the error was acknowledged of having
423 broadcast the cattle issues without recognizing that not everyone
432 had either the inclination or the ability for ranching. By then,
allottees had disposed of valuable haylands and grazing tracts in Sycan Marsh, the valleys of the Williamson, Sprague, and Wood rivers, and at Modoc Point. Klamath Marsh tracts were soon to follow.[82] Wrote Superintendent L. D. Arnold in 1926:

> I have been advised by a number of men who have lived among these Indians for many years that at one time they were very progressive and were engaged successfully in the stock business. Practically all of the Indians at that time lived on their allotments, did considerable farming, harvested many thousands of tons of hay, and owned many thousand head of cattle. They were industrious and were considered capable of handling stock in an efficient manner. During recent years there has been a general decline industrially among them. They have sold their cattle; they have left their allotments; many of them are now not engaged in any profitable work. As a matter of fact I do not believe that there are one thousand head of cattle owned by Indians on this reservation at the present time. Last year the most prominent Indian stockman sold almost his entire herd for about $35,000—the last of the Indians who were formerly quite prosperous.[83]

With the sale of their haylands, the source of their winter feed, the Indians were relinquishing "the very foundation of the stock industry." The older Indians, the mainstay of the industry, had for the most part disposed of their stock and lands, while their juniors showed no inclination for ranching. Arnold did not foresee an encouraging future.[84] The issuance of drought cattle in 1935 was an unavailing attempt to revive the industry.[85]

*648 The fate of irrigation farming is typical in many ways of several
*657 Agency programs. As early as 1884, Nickerson had advocated
312 constructing an irrigation ditch to water some 4,000 acres and
• 653 provide support for a settlement of 80 to 100 Indian families.[86]

His planning and that of his successors was concerned solely 648*
with the engineering problems and the financing involved. The 657*
desirability of irrigating, at a time when reclamation projects 312
were springing up everywhere, was never doubted. When a 653 •
small ditch was dug in 1900, largely by the Indians themselves, [578]
to bring the waters of Crooked Creek upon lands between the Agency and Fort Klamath, the "remarkable" increase in yield that resulted gave rise in turn to exacerbated strife over water rights among the allottees affected. As Agent O. C. Applegate observed, there was need for "an organization of interested parties upon a plan of mutual cooperation," modeled perhaps upon irrigation districts then coming into being elsewhere in the Basin.[87] The organization was not forthcoming.

No further attempts seem to have been made to prepare the Indians for irrigated farming, but the plans for additional units nonetheless went ahead. The lower course of the Modoc Point canal was dug in 1901-03, and in 1905 the Agency Spring Ditch was constructed. The years 1912-20 saw completion of the Modoc Point, Sand Creek, and Spring Creek units. Of all units, the Modoc Point and Agency projects were the largest, embracing 5,400 acres and 4,234 acres respectively. The Modoc Point project, which Applegate had at first estimated would require $5,000, in the end cost $356,535.00 for construction alone; and its many defects have since led to additional costs approximating two-thirds of that figure for operation and maintenance.[88]

Nor were the difficulties surrounding the Modoc Point project
limited to construction. As of 1920 only a total of 5,000 acres was [311]
being cultivated on the reservation. The largest acreage tilled by an individual was 200 acres sown in oats and alfalfa by the young Klamath interbreed, Joseph Ball. Lesser amounts were being farmed by Harrison Brown (100 acres), Drummer David (80 acres), and Lincoln P. Butler (80 acres).[89] While some Indians were building their own irrigation ditches in the Yainax area,[90] those served by the Modoc Point system seemed to prefer dry farming.

The Act of Congress authorizing the Modoc Point project had stipulated that the cost of construction be paid by the Tribe. A number of Indians, however, petitioned to have the cost assessed on an acreage basis against the land served, and this policy met

*648 the approval of the Interior Department. Accordingly, a con-
*657 struction charge of $30.00 per acre and an annual operations and
312 maintenance charge of $1.00 per acre was levied against the
• 653 land. The Indians whose lands lay within the area proved reluctant to irrigate. In 1926 not over 300 acres, out of a total then estimated at 6,000 acres, was under irrigation. Arnold vainly urged the retention of an expert irrigation farmer both to encourage the Indians to bring water upon their lands and to give them the necessary technical advice. In his firm opinion, "the only thing that prevents this project from being a success is the failure of the people to properly prepare the land for irrigation and to use the water efficiently."[91]

Grounds for dissatisfaction existed. Not only were operation and maintenance expenses high, but there were malfunctions which from time to time required stoppages for repairs, thus causing irregular service. Some users complained that they could not get water when they wanted it; others claimed that seepage from the canal upon their land produced an alkaline deposit. At a time when the small Fort Creek system near Fort Klamath and the Spring Creek unit east of Beatty on the Upper End were functioning adequately under local management, the Modoc Point Indian farmers were objecting to paying the annual operation and maintenance charges for the water. Arnold, faced with an expensive project on his hands, was advocating legislation that would permit leases of up to ten years in length in order to put the irrigable lands into use.[92]

In 1928, Arnold summarized the strong discontent of the Indians toward the project. Although, as he conceded, opinion on details was divided, the Indians held firmly to the view

> that the Government should pay the construction charges now against the land and not compel either the land owners or the tribe to pay it. They seem to feel that the project was built without their consent and they should not be held responsible for its failure financially. Some of them seem to feel that the project should be turned over to the land owners who would operate it. Others do not appear to know just what they do want, but they do not want to pay anything.

Arnold advocated that the land be gotten under irrigation and put on a paying basis, to which the inexperience and reluctance of the farmers themselves was the main obstacle. Failing that,

the project should be abandoned entirely and the loss charged 648*
to the Tribe.[93] 657*

It is unnecessary to enter into the later history of the Modoc 312
Point project, which made it a subject of interest at several 653 •
Congressional hearings and a point of contention even into post-termination days, for the basic issues have remained the same. A number of Indians owning land within the project in the course of time sold their lands, just as most of those Indians owning lands served by the Sand Creek project had soon sold out to white farmers.[94]

The failure of the Modoc Point project can be attributed in part to the very real engineering difficulties in maintaining a canal system through a pumice region, feeding from a stream (the Sprague) in multiple use. More than this, however, was involved. There was the expertism of the Agency and Bureau, confusing the technical knowledge about construction and maintenance of such a system with the decision to build it. On the one hand the administrative staff was reluctant to entrust the decision to the Indians; on the other, the Indians did not provide a responsible leadership interested in developing such a program. The enterprise once launched therefore carried responsibility on only one side. There was no effort to enlist tribal support through involvement of tribal members in the fundamental decisions; nor was there sufficient training of the farmers to be affected in the special techniques entailed in irrigation.
Indians resented charges against the land and attempted to [241]
avoid them by continuing to cultivate the fields by dry farming.
Among the farmers, white and Indian, no effective organization
for water use developed. With income from timber available, [434]
the inexperienced farmer sought release from a situation for
which the rewards were not commensurate with the risks and [427]
the onus of subjection to Agency dictates. Leasing or sale of the [423]
lands in the end involve more than the realization of value from
property, which could otherwise only be secured by investment [432]
of labor. For the Indian, relinquishment of farming also freed him from some of the surveillance and scrupulous regulation to which he was subjected.

Plans that saw the Indian farming or ranching struck in the 648*
end upon the stubborn fact that he could frequently realize more, 657*
434

882
155 drop out rate of Klamath adolescents, a slacking of attention, and a decline
156 in test performance and grades.

871 Something of the character of adult Klamath concerns and behaviors has already
156 been suggested. Many work in only a desultory, disinterested fashion, and it
is unusual for a Klamath woman to have a full-time job. Thus self-concepts are
[461] not so closely bound to job or profession as are those of local Whites. In
1953, for example, it was found that 65% of adult Klamath were wholly or partly
434 dependent upon per capita payments for their livelihood. Whereas the reluctance
[462] of Klamath women to take outside work reflects the pressures on them to remain
in the home and the extent of their responsibilities there, it also reflects
the fairly secure economic position resulting from the special benefits of
tribal membership. Aside from the twice-yearly per capita payments, these benefits include the privilege of year round hunting and fishing, medical care, loan
services, tax exemptions on land and privileged employment rights at the Agency.
[464] On the other side of the coin, outside of the Agency, the principal local employers are Whites, and for one reason or another they are very reluctant to hire
tribal members. In historical perspective, the development of tribal income paid
out in the form of per capita payments has paralleled the decline of Klamath
participation in the labor market. The contemporary Klamath do not work so often
nor do they work so steadily as did their parents and grandparents. There are
fewer Klamath loggers now than there were in the past, almost no business men now,
and fewer active ranchers and farmers.

434 In spite of shifting policies and personnel, the influence of the Klamath Agency
657 officials has been one of constant supervision over and intervention into the
affairs of Klamath individuals and groups. The controls over the expenditures
of children's funds was noted, and the same controls are exercised with respect
[241] to those tribal members who have been deemed incompetent. Yet the activities
of stable ranchers and farmers have also been supervised by extension workers,
[654] and efficient, prospering Klamath farmers complain that, with a good price decided
on and a buyer waiting, they have to await the approval of an extension worker.
Thus the adequacy of Klamath individuals is frequently in doubt, whether by experience with a particular tribal member's high style of living, or by policy.
657 At the same time in many ways the Klamath have been protected from responsibility
426 for their own actions. Payment for debts incurred with local merchants is an
example, for the reservation being under federal jurisdiction, goods unpaid for
could not be repossessed, nor could income be garnisheed. As Stern and Swanson
phrase this situation, the Klamath have attained economic security "attended
by supervision."

657 Of course, through constant experience with Agency personnel and policy the
829 Klamath have learned that bureaucratic restrictions may be evaded or circumvented, and they have long since acquired knowledge of the appropriate manner
of phrasing a request for funds or services. The Klamath complain of this that
forced contact with the Agency has made liars out of them.

648 In summary, little more than a century of contact has merged the originally
177 distinct Klamath, Modoc, and Paiute, and has altered them physically, culturally,
171 and personally. In spite of a small assimilated minority and a large off-reservation population, the reservation Klamath exhibit a distinct way of life
657 which is novel if heterogeneous. This Klamath Reservation Culture is the
familiar context of everyday experience for contemporary tribal members. Thus
181 it is the source of what stability and security they know. No matter how variant,
or how disorganized this pattern of life may be, it is one whose outlines are
the consequence of the thousands of daily decisions, the many lines of action,

County. Of regular municipal income in the year, 1956-57, taxation 648*
supplied only a little over four per cent. The largest sources 657*
of revenue were the water system, the city tavern (which alone 641
supplied over one-third of the budget), and the proceeds from 651
law enforcement (amounting to over one-fourth of the budget). Since, after the repeal of Indian prohibition in 1951, tribal members had become the major patrons of the municipal tavern, comprising in 1958 an estimated eighty per cent of its clientele, it is evident that in this indirect manner they had come to constitute a major support in the operation of the municipal government.

Nor was this all. The sizable sum derived from law enforcement 648*
was highly unusual. While the major enforcement problem 657*
in most Oregon cities of comparable size was traffic violations, 641
Chiloquin in 1956-57 found no less than ninety-three per cent of 674
its offenses to be felonies and misdemeanors other than traffic violations. Tribal members and other Indians, including repeaters, accounted for over seventy-two per cent of the arrests; [681]
they paid over seventy per cent of the fines and forfeited bail; [464]
and they furnished over ninety-six per cent of the trusty labor performed in the city.[7]

Aside from a few individual instances, this record does not 648*
reflect a policy of discriminatory arrests on the part of the city 657*
administration. It does, however, mark one of the significant 674
confrontations upon the reservation. It was conditioned in part [641]
by the special statutory position of the Klamath, for as an Indian [656]
under federal supervision he was enjoined by law from having or using liquor and from marrying a white within the state. Until these disabilities were removed in 1951, tribal members were subject to arrest for acts not held criminal when committed
by non-Indians. During prohibition, tribal members had learned [273]
to operate stills, had taken to drinking extracts, proprietary medicines, rubbing alcohol, and "canned heat" in lieu of scarce liquors, and had both patronized and served as bootleggers. Habits of defiant drinking, akin to those of other Americans during the "dry" years, lingered even into the years after repeal.

Klamath experience with strong drink and violence had neither begun with the reservation towns nor was it confined to them;

KLAMATH INDIAN RESERVATION
AND
KLAMATH COUNTY, OREGON

Section II. The Setting — Klamath Reservation Culture

The Klamath Reservation was established in 1864 by a treaty between the United 175
States Government and three separate groups, the Klamath, the Modoc, and the 648
Yahuskin Snake (Paiute). Because the differences which once divided these 657
original groups have disappeared in the face of acculturation and the common
experience and status as Indian in contrast to White, the contemporary Klamath 101
may be considered as one people. This section consists of a sketch of today's 177
reservation culture, and will necessarily have to exclude mention of the local 128
variant of American culture, although Whites form the largest share of the 162
reservation's population.

The reservation lies in what is known as the Klamath Basin, which is to say 657
between the eastern Cascades and the Basin Range. It contains the heart of 13
what used to be Klamath country, for Modoc and Paiute lands were lost in the
treaty stipulations. The reservation consists of alternating valleys and low
ridges, and has an average elevation of 4000 feet. Of the more than a million
acres of land within its boundaries, some 800,000 are covered with stands of
commercially valuable timber, Ponderosa Pine, Douglas Fir, and other lesser
species. The reservation also includes numerous lakes, marshes and streams, which
through tributaries eventually drain into the Klamath river. The ecological [184]
aspects of these water courses were essential to the aboriginal Klamath economy, [224]
as they are essential to the recreational hunting and fishing of the present
population, White or Klamath. [226]

Today the Klamath represent an unassimilated enclave living on what remains of 101
their own territory, but in the midst of and intermingled with a dominantly 648
White culture. For nearly a century they have maintained multiple loyalties:
to the Agency, which represents the Government, to the Tribe, which was an artificial [829]
construct and has seldom been a viable corporate group, to the local
towns and communities, which afford them a special status, to their own kin groups,
whose functions and structure have changed drastically, and to the State, which [178]
now embraces them as citizens.

In the century or more of White contact and settlement the Klamath have lost 648
their former isolation, their traditional ways, and much of their land. Yet 178
in the same years the Klamath have also acquired and learned much, and it would
have been unaccountably strange had they not. The growth of mill and market
towns and of ranching and farming settlements, the development of the lumber
industry, the constant if irritating supervision and tutelage of the Agency,
the improvement of communications, the frequency of inter-marriage and co-residence
with non-Klamath, their participation in public education facilities,
all of these and other experiences have given new directions to Klamath life,
so that today no Klamath lives a life remotely resembling that of his ancestors
of a century ago. Yet these years of contact and change have not made White [181]
men of the Klamath. Instead, there has developed a variant socio-cultural
system, Klamath Reservation Culture, which is neither aboriginal nor American
in design.

Although much of the agricultural resources of the reservation have been transferred 648
to White ownership, a number of the contemporary Klamath are successful 423
farmers or ranchers. Others occupy homesteads on farm or ranch land but do not
utilize these resources. These latter homesteads are little more than rural [241]
slums, the scenes of perennial drinking parties. For decades the timber industry [511]
has been the mainstay of the local economy, but relatively few Klamath have
ever worked in that industry. Most Klamath live in one or another of the several [273]
[313]

648 Most Klamath live in one or another of the several
towns and settlements on the reservation, or else they have settled elsewhere,
361 in Portland, Salem, Eugene, in California, in Alaska, in the Midwest, or along
[167] the Atlantic seaboard. In 1955 the Tribe had 2118 members, and of these 40
percent lived away from the reservation (Stern & Swanson 1960). Partly because
[619] of the recent progress of the termination of federal supervision of the reservation,
by this date the percentage of members residing off the reservation has
[161] probably increased. In fact, for years there have been numerous "tribal members"
[619] with no experience whatsoever of reservation life.

648 Throughout the years of White contact inter-marriage and inter-breeding have
144 been frequent. Today, more than 70 percent of the Tribe's members are, genetically,
less than one-half "Indian," and less than one sixth are "full-bloods."
[171] Many are indistinguishable in appearance from their White neighbors, as most are
not easily distinguished in dress and language.

175 The isolation of the early reservation period was soon removed by the influx
177 of White settlers, who at first took up farms and started towns near the fringes
of the reservation. Through inter-marriage and through the consequences of
[361] allotment of land to individual Klamath, many Whites were soon residing within
the reservation's boundaries, either on the lands of a spouse, or on land bought
[423] or leased from tribal members. Another source of change were the ever present
efforts of Agency officials to make over aboriginal ways, and later, the rapid
[657] growth of the lumber industry and the development of full fledged frontier communities
were also important sources of acculturative influences. In quick
[726] succession the Klamath experienced a period of armed conflict (the Modoc War of
[786] 1872-73), a religious revivalistic movement such as that which swept the plains
area, extensive governmental planning and intervention, the allotment of land
[181] in severalty, and a growing participation in the cash economy. Because aboriginal
Klamath values had stressed achieved status for those who worked to accumulate
[556] wealth and property, for some Klamath the early period of contact provided increased
opportunities, and there was a group of men who for a time were effective
[436] entrepreneurs. It was through such personal efforts and through the "easy money"
had from private sales or the leasing of agricultural lands, from pro rata shares
of boundary settlements, and from per capita payments for sales of tribal timber
that the Klamath made the transition to a money economy.

648 The participation in and contribution of the Klamath to the economy of the region
is a significant point of interchange between Klamath and White, and one with
[313] many ramifications. In considerable measure, the local timber industry prospers
[423] or slumps, depending on the allotted cut in the tribal forest. Similarly,
local merchants are somewhat dependent upon the assured income of tribal members,
[434] as they are upon the purchases of mill workers, fallers, and cat-skinners.
The major town on the reservation, Chiloquin, obtains the largest share of its
[632] revenue from sales at a municipally owned beer-hall and from the fines and forfeited
[251] bails paid by visitors to the city jail, both of which establishments are
patronized largely by Klamath.

648 In other aspects of community life the participation of Klamath is perhaps best
621 characterized as that of passive spectators. Many Klamath have come to have a
sense of being aliens in the heterogeneous local culture, although there is a
563 small assimilated minority.

[571] Thus Klamath may interact as equals in card rooms and pool hall, and are met
with a stereotyped "friendliness" in interactions in stores and on the street.
However, the great majority live in intimate interdependence separate from the
main currents of White social life. White ethnic exclusiveness is reflected

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are exclusively 621
White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office outside [575]
the tribal structure, and although a high percentage have registered, very [794]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are frequently
tax exempt, as have been their per capita payments. Simultaneously, [651]
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chiloquin
during a typical year arrests of tribal members amounted to 70 percent of [674]
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a reconstituted 648
"Klamath Tribe," with a corporate structure and assets to be administered 657
by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal supervision
has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual
Klamath have shown an equally noncommittal relationship to tribal affairs. Attendance 619
at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

592
Klamath families are another important locus of loyalty and identification.
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

581 Probably one-third of all Klamath women have
borne at least one child out of wedlock. At the same time, there is considerable
[848] out-marriage, and while Klamath and local White unions are not frequent, numerous
[563] tribal members have married off the reservation, to Whites, to other Indians,
and to other ethnic groups. With regard to common-law marriage, one occasionally
[588] hears a Klamath protest that such an unsanctioned union constitutes "Indian-
[177] style" marriage, but all evidence leads to the interpretation that the style
is Twentieth century, not aboriginal.

602 Klamath family relationships are by no means limited to the household group,
596 but are sometimes extended to other consanguinal and affinal kin. Occasionally
there is sufficient integration and stability in these relationships to require
[591] notation of the existence of an extended family, but in all cases the bonds are
[177] extremely loose, and the extended group is rarely a residential unit, which
aboriginal Klamath extended families were. These are, thusly, de facto groupings
rather than de jure. They arise out of special needs and do not have sufficient
[626] status to involve prescribed behaviors. One of the striking cultural losses
is the organization of the co-residential extended family as an agent of social
control.

602 Generally, all kinship bonds are loose or permissive. Although the organiza-
[594] tion of nuclear families is tighter, frequently these groupings, too, are not
co-residential units. All such kin groups are marked by the absence of obliga-
592 tory responsibilities. Perhaps the household group is best represented as the
nearest collectivity to which an individual may turn when in need, with the
571 loose, extended group standing as the next nearest such collectivity. But there
are other groupings with similar functions, friendship networks, adolescent
peer groups, drinking cliques, and similar bonds in specialized role relationships
with local merchants, some of whom act as bankers, brokers, and bondsmen to
their own clientele.

593 Within the total kin network, perhaps the strongest, the most durable, and the
603 most influential ties are those between siblings, and between grandparents and
grandchildren. In some measure this reflects the structuring of the domestic
593 group. There the influence of the principal male is weak. The husband-
592 father frequently does not work, he may rarely be at home, and he seldom acts
as a disciplinarian. Whether or not there is a male attached to the household
[422] group, the wife-mother is usually the power figure. The character of domestic
relationships is suggested by the fact that several households, admittedly ex-
treme cases, had kitchen shelves which were partitioned off by individual owner-
ship of the foodstuffs each section contained, so much here belonging to Father,
that section being Mother's, and this over here the Son's. Thus even with re-
gard to the canned goods needed for daily meals, there was no family property.
[181] Quite clearly, family organization is marked by extreme individuation.

593 One important antecedent of the character of these family bonds has been the
657 constant flow of per capita payments to all and sundry, to the most stable and
434 industrious and to the most delinquent. Controls over the expenditure of
children's funds by parents has been one important feature of these payments,
which although designed to prevent misuse of funds, have also acted so as to make
children more independent of family authority. Klamath children not only come
to feel that they are economically independent, but they feel that the source
of the funds is inexhaustible, and they flaunt their position in their parent's
faces. Additionally, the frequent absence of a stable male identification
figure within the family circle, a male tied to a job by value and need, has
thrown the burden of domestic responsibility upon Klamath women. This is a
serious source of strain in household groups.

882
155 drop out rate of Klamath adolescents, a slacking of attention, and a decline
156 in test performance and grades.

871 Something of the character of adult Klamath concerns and behaviors has already
156 been suggested. Many work in only a desultory, disinterested fashion, and it
is unusual for a Klamath woman to have a full-time job. Thus self-concepts are
[461] not so closely bound to job or profession as are those of local Whites. In
1953, for example, it was found that 65% of adult Klamath were wholly or partly
434 dependent upon per capita payments for their livelihood. Whereas the reluctance
of Klamath women to take outside work reflects the pressures on them to remain
[462] in the home and the extent of their responsibilities there, it also reflects
the fairly secure economic position resulting from the special benefits of
tribal membership. Aside from the twice-yearly per capita payments, these benefits
include the privilege of year round hunting and fishing, medical care, loan
services, tax exemptions on land and privileged employment rights at the Agency.
[464] On the other side of the coin, outside of the Agency, the principal local employers
are Whites, and for one reason or another they are very reluctant to hire
tribal members. In historical perspective, the development of tribal income paid
out in the form of per capita payments has paralleled the decline of Klamath
participation in the labor market. The contemporary Klamath do not work so often
nor do they work so steadily as did their parents and grandparents. There are
fewer Klamath loggers now than there were in the past, almost no business men now,
and fewer active ranchers and farmers.

434 In spite of shifting policies and personnel, the influence of the Klamath Agency
657 officials has been one of constant supervision over and intervention into the
affairs of Klamath individuals and groups. The controls over the expenditures
of children's funds was noted, and the same controls are exercised with respect
[241] to those tribal members who have been deemed incompetent. Yet the activities
of stable ranchers and farmers have also been supervised by extension workers,
[654] and efficient, prospering Klamath farmers complain that, with a good price decided
on and a buyer waiting, they have to await the approval of an extension worker.
Thus the adequacy of Klamath individuals is frequently in doubt, whether by experience
with a particular tribal member's high style of living, or by policy.
657 At the same time in many ways the Klamath have been protected from responsibility
for their own actions. Payment for debts incurred with local merchants is an
426 example, for the reservation being under federal jurisdiction, goods unpaid for
could not be repossessed, nor could income be garnisheed. As Stern and Swanson
phrase this situation, the Klamath have attained economic security "attended
by supervision."

657 Of course, through constant experience with Agency personnel and policy the
829 Klamath have learned that bureaucratic restrictions may be evaded or circumvented,
and they have long since acquired knowledge of the appropriate manner
of phrasing a request for funds or services. The Klamath complain of this that
forced contact with the Agency has made liars out of them.

648 In summary, little more than a century of contact has merged the originally
177 distinct Klamath, Modoc, and Paiute, and has altered them physically, culturally,
171 and personally. In spite of a small assimilated minority and a large off-reservation
population, the reservation Klamath exhibit a distinct way of life
657 which is novel if heterogeneous. This Klamath Reservation Culture is the
familiar context of everyday experience for contemporary tribal members. Thus
181 it is the source of what stability and security they know. No matter how variant,
or how disorganized this pattern of life may be, it is one whose outlines are
the consequence of the thousands of daily decisions, the many lines of action,

and the modes of behaving through which the Klamath interact with their behavioral milieu. 181 For this reason it is not to be supposed that White exclusionism 657 or Agency policy alone are the significant antecedents of the stable pluralism of reservation life. For a Klamath to leave the amorphous atmosphere of his home or the circle of his drinking pals to enter into the unfamiliar and unprepared-for activities of White life is a source of fear and anxiety.

Thus, however it may seem to the outsider, the existing way of life on the Klamath reservation offers substantial predictability to tribal members, a place to live, a corporate body with which to identify, and multiple stable human relationships. As a cultural system it may be stable in form although changing in detail, and therefore this novel set of human relationships is not likely to quickly disappear. The Klamath today may not be the same persons who were settled on the reservation a century ago, [177] and aboriginal Klamath, Modoc, and Paiute cultural attributes may have disappeared, [171] yet they are still self-consciously Indian. In studies of acculturation, it is frequently argued that groups like the Klamath are marginal, that is, hung suspended between two cultural 181 worlds. 657 We feel that such a metaphor is both confusing and misleading. It assumes the presence of a reasonably intact cultural alter of aboriginal design 121 and a unilineal path of acculturation process. As indicated above, the former is not present on the contemporary Klamath reservation. As to the latter, we argue that the structural consequences of acculturation are many, and a lineal assimilation process is only one of them. The Klamath situation, we feel, is that of an unassimilated minority group which is itself very actively engaged in maintaining its special position and which is subject to multiple external pressures for maintaining its present boundaries. The Klamath are, therefore, in a position analogous to religious and racial enclaves. They are a group distinct from and in some ways opposed to American culture who fit, as it were, into a special niche in the larger structure of American society. If the term marginality is to be used with reference to any Klamath individual it can only refer to his orientation towards conflicting reference groups in the heterogeneous contemporary community.

Section III. Approach to the Rorschach Protocols

The interpretive approach to the Rorschach protocols was dictated to a large 121 extent by the overall purpose of the investigation. 125 An avowedly inductive and idiographic study requires a broadly clinical, not a narrowly statistical, analysis of the obtained Rorschach responses. The conclusions reached on the basis of this kind of research may be considered hypotheses to be tested in controlled deductive research.

The validity of the Rorschach method for personality exploration is not at issue in the present study; there are obviously more clear-cut and efficient research methods available for that purpose. Rather, the test is being utilized as one means of gaining insights about the adaptive mechanisms of individuals in a particular sub-group that is undergoing an acculturation process — a case-study approach. These insights may lead hopefully to theoretical advances in that area of study called Culture and Personality.

From this statement of the general purpose of the research, several specific 121 methodological decisions follow. It becomes clear immediately that there will be no comparisons of groups by statistical methods and few statistical tabulations of group means and standard deviations. There will be no description of that artificial construct — the modal Klamath personality. On the contrary,

Grandma Williams: Female, Age 67

Background Data

*159
156 Understandably, it is difficult to find a match for a person like Weasel, par-
ticularly in the instance of a woman who occupies a similar status. The few
[595] Klamath women who were like Weasel were not available for testing. Grandma
William's position is that of the mother of a large, disorganized nuclear family
[733] like Weasel's, one marked by excessive drinking, violence, and promiscuity.
[83] She is a vigorous, hearty, earthy old woman who has borne eight children by
three husbands. She is once divorced and twice widowed, her first husband
[587] having died after three years of marriage, her third after thirty-five. She
completed six years of school, all that was available when she was a girl, and
[871] she has lived and visited for extended periods in Washington state, Missouri,
[178] California, and Mexico.

•[657] Grandma William's mother was a traditional Klamath wife and mother, and her father
for years an Agency Indian policeman. In her words, both her family of orientation
[464] and her family of procreation have had "bad luck." This bad luck consists of nu-
merous bouts with the law over acts of violence. Her father died in the Federal
penitentiary where he was serving a life sentence for murder. Several of her
sons have killed men in the past. One is reputed to have killed at least five,
and he is now in a State institution. Her other children are noted for their
violence, and local informants say of Grandma that they cannot understand how
such "a wonderful, good old lady managed to produce so many worthless children."
[577] Few feel that she deserves such a fate. Community acceptance of Grandma Williams
is based upon several attributes, her steady, hard work, her commitment to raising
[177] a family, her devoutly Christian behavior, her espousal of dominant White values,
and, especially, her hearty good humor. She has never accepted the guilt of
either her father or her sons, maintains that they were falsely accused, and
has worked steadily to secure her one son's pardon.

[191] Grandma Williams was raised in a Klamath speaking household and acquired her
English in school. She is very proud of her education and maintains that chil-
[871] dren today are not so well tutored in the 3 Rs as she was. She claims that "I
can just about out-spell, out-write, and out-figure all of my kids." This is by
[593] no means the only aggressive, competitive attitude she maintains towards her
children, none of whom have ever quite lived up to her standards. In this res-
[603] pect, Clifton was once able to witness her training a grandson, who was an alert,
spontaneous, active lad. The boy was made to be too polite and too formal, be-
[867] haviors in keeping perhaps with urban middle-class society, but very much out of
place on the reservation. All of her sons have maintained their main affiliations
with the local "cowboy" culture, but they are ridiculed for their efforts at
riding and calf roping because of their obesity and clumsyness, none of them
coming near, in physical type, to the slim hipped, pencil shaped cowboy ideal.
[657] She is an excellent example of a woman who, early in the reservation period, was
carefully tutored by conscientious minister-teachers in inappropriate behaviors
[871] and values, and who has attempted to transmit these to her children. It would
[177] seem that she has produced over-trained, and mis-trained, hostile children, who
promptly discovered that regardless of their veneer of "culture" they were re-
jected from many local circles because of their Indianness.

*159 Grandma is a direct, forceful person, another Klamath woman with a sharp wit
157 (yet a less personal one than Aunt May's). She is quick to initiate inter-
changes and to attempt to knit together a strained situation. Yet her responses
156

Fidel: Male, Age 19

Background Data

*159
156 Fidel's case is that of a young man in the process of separating himself from
his family, yet without any clear sense of where he wants to go. He has never
[461] worked at any job, although he quit school in the 10th grade, when he was sixteen.
Except for 8 months residence in the San Francisco area with his family, and five
[871] school years spent in a Catholic boarding school, he has never lived away from
the reservation. He is the third eldest of six children. He presently lives at
[592] home, if the household which contains himself, his parents, and his younger sib-
lings may be called that. As an unmarried minor approaching maturity, his tribal
[434] income is administered by a trust officer who allocates to Fidel $110.00 monthly
•[657] for spending money. Additionally, Fidel sends bills for various expenses to the
bank, which pays them. These arrangements have been in force for three years.

[733] Fidel's mother is a somewhat confused, defeated, semi-alcoholic who is very
reserved when sober and gay and promiscuous when drunk. His father is a Skagit
[582] Indian who has for years been steadily employed as a cat skinner for a logging
[618] company, which work keeps him away from home for months at a time. During the
logging slack season, his father is only occasionally at home. He is usually
[221] away hunting or fishing. When he is at home he is frequently drunk, and when
drunk characteristically assaults his wife and berates his children. The father
does not contribute to the income, the up-keep, or the conduct of household
[593] affairs. In recent years Fidel has defended his mother and the children from his
father, on several occasions has driven him from the house, and on one occasion
knocked him cold with a rifle butt. There is some doubt as to whether this per-
[848] son is actually Fidel's father, the doubt being due to his mother's promiscuity,
which is of long standing, and to Fidel's almost total rejection of him. Fidel's
*159 relations with his father illustrate his marked and extensive ambivalence towards
156 most personal relationships. He will call him or refer to him as "father" or
593 "dad" and in the next breath "uncle," at one moment praise his skill at hunting,
and the next deride him. Fidel cannot fully accept any relationship; he exhibits
the same ambivalence towards his mother, his siblings, his closest friends, girls,
and so on. Moreover, Fidel cannot undertake any course of action without doubt
and reservations. He can neither love nor hate fully.

Fidel's family life is marked by a complete lack of cohesion, cooperation, common
[421] activity, and common property. The major shared sentiment is an indifference to
one another. Each member occupies a part of the house where he keeps his belongings, and these are rarely shared. For example, Clifton once needed a rifle for a hunting trip. It was borrowed directly from the father; Fidel could not borrow it for him. A major source of difficulty is intra-family theft, which engenders violent reactions. The mother is psychologically divorced from the father, and strongly oriented towards her eldest, married daughter with whom she spends much time.

*159 Fidel thinks of himself as a guide and skillful hunter, insofar as he thinks
156 of himself as anything. On several occasions he has been in trouble with the
law, usually for drag racing or drinking when a minor. He spends his time
[673] loafing about, watching TV, playing pool, fishing, hunting, visiting with his
buddies, and sleeping. He is seldom in bed before 1 AM, and equally seldom
[512] awake before two or three PM. His main ambition is to get out of the area, away
from his family, and off by himself. He has thought about studying art, which
may result from an identification with a friend who is doing so.

125
128 response provided some of the first clues as regards this important personality
attribute (Clifton 1960). But other test evidence, as well as life history and
[157] observational data, leads to the same conclusion, regardless of the presence or
absence of a restrained movement response.
[124]

157 One facet of Klamath guardedness and restraint is the general reluctance of
157 Klamath individuals to reveal or communicate to others their needs, wishes, in-
156 terests, or concerns. This may, in part, be seen as a function of suspicion,
of fearful concern with the possible reactions of others, but another character-
istic of Klamath persons may be associated with this reserve. The reference here
is to a general, overt, and conscious devaluation of the self. The Klamath sel-
[125] dom have much good and often much that is bad to say of themselves. Although
this characteristic is not directly manifested in the Rorschach records, these
records do indicate the presence of multiple and conflicting, or unacceptable
prototypal roles.

Another aspect of Klamath guardedness seems to be a precipitate of the very high investment of energies in sheer self-protecting maneuvers, and the time spent in the avoidance of entangling committments to group life. We feel that the Klamath have so over-invested in reserve and self-protection that they have little time or energy to expend on other activities or upon other aspects of their situation. This, we feel, may be responsible for another shared component of Klamath character, their inability in laying plans for the future, and the minimal expenditure upon creative effort. By way of contrast, the Klamath do concentrate upon the superficially rewarding or painful aspects of their current situation.

121 The analysis so far points to a general isolation of Klamath individuals from
156 significant, durable human associations. Given the facts of Klamath reservation
155 culture we consider that this characteristic is probably adaptive, although it
might not seem so if measured against an ideal model of mental health based upon
•657 the functioning of west European, urban, middle-class persons. Considering the
[171] realities of the Klamath situation, guarded restraint in itself may hardly be
considered as pathological. Yet so great a reserve and so extensive an insula-
[158] tion of the self from important human transactions may be a major source of stress
and may predispose Klamath individuals to variant forms of mental illnesses.

157 Several of the cases contained in this report provide evidence for this hypothesis.
In the instance of Slim, for example, we find that a superficially adequate ad-
158 justment may simply be the manifestation of an obsessive control over and reduc-
[121] tion of emotional and intellectual processes to the point of a tentative diag-
nosis of alpha schizophrenia. The cases of Susan, Nell, Fidel and Sparrow are
examples of extremely loose, unrealistic and disorganized thinking with overtones, in some instances, of an almost paranoid suspiciousness, or a reliance upon bizarre, highly personal fantasy. Evidence for a well defined idiosyncratic role or personna which is very poorly integrated with the rest of the personality is seen in the cases of Slim's false optimism, Carrie's brashness, and Aunt May's superficial warmth. We suggest that these more disordered aspects of adjustment may profitably be seen, in part, as a function of a generally poor contact with others, reduced insight into the self and others, and extensive social isolation. The mediating difficulty may well be a relative absence of opportunities to validate beliefs and convictions. Thus in many respects adaptive, Klamath guarded restraint probably serves as a precipitating factor in thinking disorders, sociopathic adaptations, alpha schizophrenia, and paranoid delusions.

128 The validity of this assessment does not depend upon these ten case studies alone.
127 Very similar if more limited conclusions were obtained in a previous, independent

On the face of these parallel descriptions it would seem that the Klamath are 121
similar, as regards guarded restraint, to a variety of differently situated, 156
differentially acculturated North American Indian populations, populations with
diverse cultural heritages. These similarities are, of course, susceptible to 157
different explanations. It would be a simple matter, for example, to explain 171
away the similarities as false, that is, as being a function of unreliable techniques
of assessment and highly ambiguous descriptive constructs or constructs 177
lacking in validity. Aside from being no explanation at all, this approach would [114]
involve discarding most of the available cross-cultural psychological data as
well as existing assessments of the personality dynamics of North American Indians.
Although this is the course advocated by many methodological puritans in the area
of culture and personality research we choose to accept the similarities as valid.

A second way of explaining these similarities might invoke the assumption of an underlying "North American Indian" character structure or basic personality analogous to Devereux's delineation of a core personality type for the Plains (Devereux 1951). Accepting this assumption the persistence of core traits must then somehow be accounted for. In the instance of the Plains, Devereux presents one possibility, namely that acculturation has resulted in a "stripped-down" and impoverished personality type (Devereux 1951: 25). Somewhat differently, Hallowell and his followers have argued that basic personality somehow manages to weather the vicissitudes of history and acculturation (Hallowell 1955: 309;
Spindler 1955: 151). The common feature of both of these explanations is the [114]
assumption of an underlying, basic set of psychological characteristics linked to aboriginal prototypes and common to the population occupying a given culture area.

In the instance of the Klamath there is very little evidence to suggest, unequivocally, 121
that guarded restraint was a dominant component of aboriginal character 156
structure. The information is scanty and points to the definite presence
of great reserve and considerable suspicion, but only as one mode of interpersonal 157
relations among others. Moreover, the Klamath reservation situation does 177
not allow a comparison of differentially acculturated groups after the model
used by Hallowell for the Ojibwa, and the effort to apply Spindler's technique [657]
of an internal comparison raised more problems than it resolved in this setting.
Finally, the evidence from the Klamath psychological data indicates that, if [171]
anything, older members of the tribe are less reserved and suspicious. In short, we cannot assert from available evidence that guarded restraint was basic or dominant in aboriginal Klamath character structure. We suggest that at minimum this characteristic was present, but that it did not receive the emphasis it now gets.

Aside from this difficulty, there are a great many conceptual problems associated 121
with the postulation of an underlying, basic trait of guarded restraint for the 156
North American Indians generally. We feel that it is stretching the point to
attempt to account for present similarities among unrelated cultures of such 157
different cultural heritages with a construct so broad. Due to the absence of 171
firm measures of aboriginal character structure this approach to explanation also involves substantial methodological problems which are not easily resolved.

Instead of explaining contemporary similarities in either of these ways it is 121
possible to view modern Indian populations in the light of common acculturative 156
experiences and their status as dependent wards, as enclaved minority groups,
and as persons who have been promised much but who have attained little. Spindler 157
has suggested that when acculturation conditions permit both a ready identification 171
177

THE HOME OF THE PEOPLE.

131 657 648 The home of the Klamath tribe of southwestern Oregon lies upon the eastern slope of the southern extremity of the Cascade Range, and very nearly coincides with what we may call the headwaters of the Klamath River, the main course of which lies in Northern California. Its limits are outlined in a general manner in the first paragraph of the treaty concluded between the Federal Government and the Indians, dated October 14, 1864, which runs as follows: "The Indians cede all the country included between the water-shed of the Cascade Mountains to the mountains dividing Pit and McCloud Rivers from the waters on the north; thence along this water-shed eastwards to the southern end of Goose Lake; thence northeast to the southern end of Harney Lake;* thence due north to the forty-fourth degree of latitude; thence west along this same degree to Cascade Range." It must be remarked that the homes and hunting-grounds of two "bands" of the Snake Indians were included within these limits, for these people were also made participants to the treaty.

Here, as with all other Indian tribes, the territory claimed must be divided into two parts, the districts inclosing their habitual dwelling-places and those embodying their hunting and fishing grounds, the latter being of course much larger than the former and inclosing them. The habitual haunts and dwelling-places of the tribes were on the two Klamath Lakes, on Klamath Marsh, on Tule Lake, and on Lost River. Some of these localities are inclosed within the Klamath Reservation, of which we will speak below.

133 The Cascade Range is a high mountain ridge following a general direction from north to south, with some deflections of its main axis. The line of perpetual snow is at least 10,000 feet above the sea-level, and the altitude of the highest peaks about 12,000 to 14,000 feet. On the west side the sloping is more gradual than on the east side, where abrupt precipices and steep slopes border the Klamath highlands and the valley of Des Chutes River. The range is the result of upheaval and enormous volcanic

---

* Harney Lake is the western portion of Malheur Lake, and now united with it into a single sheet of water.

133 considerable size.* Hot springs of sulphuric taste flow westward east of Linkville, one of them showing a temperature of 190° Fahr.

The Klamath Reservation is studded with a large number of isolated
and short volcanic hill ridges, with a general direction from northwest to
southeast. South of Klamath Marsh there are elevations culminating at
5,650 and 6,000 feet, and in Fuego Mountain 7,020 feet are attained.
Yámsi Peak, between Klamath Marsh and Sykan Marsh (5,170 feet) reaches
an altitude of not less than 8,242 feet, thus rivaling many peaks of the
● [657] Cascade Range. The Black Hills, south of Sykan (Saikéni) Marsh, rise to
133 6,410 feet, but are surpassed by several elevations south of Sprague River,
103 near the middle course of which the Yáneks Agency (4,450 feet) is situated.
Sprague River (P'laíkni k̲ók̲e), the most considerable tributary of Williamson River, drains a valley rich in productive bottoms and in timber.

The basaltic ridge, which forms a spur of the Cascade Range and passes east of Fort Klamath (I-ukák), slopes down very abruptly toward the Quaternary lake basin, now forming a low marshy prairie and watered by Wood River (E-uk̲alkshíni k̲ók̲e), which enters upper Klamath Lake near Koháshti and by Seven Mile Creek, nearer the Cascade Range. This basaltic spur, called Yánalti by the Indians, represents the eastern side of a huge fault-fissure. Its altitude constantly decreases until it is crossed by a rivulet one-eighth of a mile long, called Beetle's Rest (Tgúlutcham Kshutē'lsh), which issues from a pond, drives a mill, and then joins Crooked River (Yánalti k̲ók̲e, or Tutashtalíksini k̲ók̲e). This beautiful spring and stream were selected by the Government as the site for the Klamath Agency buildings. The old agency at Koháshti (Guhuáshkshi or "Starting-place") on the lake, three miles south, was abandoned, and a subagency established at Yáneks. The agency buildings are hidden in a grove of lofty pine trees. South of these the ridge rises again and culminates in an elevation, called Pítsua (4,680 feet). The junction of Sprague and Williamson Rivers is marked by a rock called Ktái-Tupákshi, and described in Dictionary, page 149, as of mythic fame. South of Sprague River the ledge rises again, and, approaching close to the lake shore, forms Modoc Point, a bold head-

---

[114] * I have not been able to visit *personally* other parts of the Klamath highlands than the eastern shore of Upper Klamath Lake, from Fort Klamath to Linkville.

175 treaty with these Indians more forcibly before the Government than ever
648 before. In compliance with instructions from Indian Commissioner William P. Dole, Superintendent J. W. Perit Huntington, accompanied by Agent Logan, went through the Des Chutes Valley to Fort Klamath, and found there a large number of Indians of both sexes assembled, seven hundred and ten of whom were Klamath Lake, three hundred and thirty-nine Modoc people, and twenty-two of the Yahuskin band of Snake Indians. They unanimously concurred in the desire that Lindsey Applegate, a settler of Jackson County, Oregon, be appointed as their agent. The treaty was concluded on the 14th of October, 1864, and duly signed by the contracting parties, including twenty-six chiefs and principal men of the tribes. Huntington's estimate of funds necessary for fulfilling treaty stipulations and subsisting the Indians the first year amounted to a total of $69,400. The text of the treaty being too long for insertion entire, I restrict myself here to the contents of the principal paragraphs:

175 Article 1 stipulates the cession of the territory described above (p. xvi),
648 and sets apart as a *reservation* for the tribes referred to the tract included
657 within the limits following: Beginning upon the Point of Rocks, about twelve miles south of the mouth of Williamson River,* the boundary follows the eastern shore north to the mouth of Wood River; thence up Wood River to a point one mile north of the bridge at Fort Klamath; thence due east to the summit of the ridge which divides the upper and middle Klamath Lakes (now called Klamath Marsh and Upper Klamath Lake); thence along said ridge to a point due *east* of the north end of the upper lake; thence due east, passing the said north end of the upper lake to the summit of the mountains on the east side of the lake; thence along said mountain to the point where Sprague's River is intersected by the Ish-tish-ea-wax Creek (probably Meryl Creek); then in a southerly direction to the summit of the mountain, the extremity of which forms the Point of Rocks; thence along said mountain to the place of beginning. The tribes will remove to this reservation immediately after the ratification of the treaty and remain thereon. No whites, except employés and officers of the United States Government, are allowed to reside upon this tract, and the Indians have

---

*At the foot of Nílakshi Mountain.

175 the exclusive right of taking fish and gathering edible roots, seeds, and
648 berries within the reservation. Provision is made by which the right of
657 way for public roads and railroads across said reservation is reserved to citizens of the United States.

Article 2. As a payment for the ceded lands the Indians shall receive $8,000 per annum for a period of five years, $5,000 per annum for the next five years, and the sum of $3,000 per annum for the five years next succeeding.

Article 3 provides for the payment of $35,000 for removing the Indians to the reservation, subsisting them during the first year, and providing them with clothing, teams, tools, seeds, etc.

313 Articles 4 and 5 provide for the establishment of a saw-mill, a flouring-
256 mill, a manual-labor school, and hospital buildings, all to be maintained
874 and supplied with working material at the expense of the United States for
783 the period of twenty years. Employés for running these establishments shall be paid and housed by the Government also.

423 Article 6 reserves the right to the Government to provide each Indian family with lands in severalty to the extent of forty to one hundred and twenty acres, and to guarantee possession to them. Indians are not allowed to alienate these lands.

Article 9. The Indians acknowledge their dependence upon the Government of the United States, and pledge themselves to be friendly with all citizens thereof, to commit no depredations upon the persons or property of said citizens, and to refrain from carrying on any war upon other Indian tribes.

273 Article 10 prohibits the sale and use of liquors upon the Reservation, and Article 11 permits the Government to locate other Indian tribes thereon, the parties to this treaty not losing any rights thereby.

The treaty was proclaimed February 17, 1870.

Like most of the treaties concluded between the United States Government and the Indian tribes, this compact was made much more to the advantage of the white man than of his red brother. Not only were the stipulated annuities rather small for a body of Indians, which was then considered to number about two thousand people, but these annuities were

175 to be paid only after the ratification of the treaty by the President and the
648 Senate, which did not take place till five years after the conclusion, viz,
• 657 February 17, 1870. Meanwhile the Indians were always subject to the possibility of being removed from the homes of their ancestors by the stroke of a pen. The bungling composition of the document appears from the fact that a grave mistake was committed by inserting the term "east" instead of *west* (italicized in our text above), and by not mentioning the land grant made to the Oregon Central Military Wagon Road Company before 1864, which, when insisted upon, would, with its twelve-mile limits, take away the best parts of the Reserve, the Sprague River Valley, for instance. At the time when I visited the country, in the autumn of 1877, the Klamath Lake Indians showed much animosity against the settlers establishing themselves within their domain. The company having left many portions of their projected wagon road unfinished, Congress, by act approved March 2, 1889, directed the Attorney-General to cause suits to be brought within six months from that date, in the name of the United States, in the United States Circuit Court for Oregon, to try the questions, among others, of the seasonable and proper completion of said road, and to obtain judgments, which the court was authorized to render, declaring forfeited to the United States all lands lying conterminous with those parts of the road which were not constructed in accordance with the requirements of the granting act. (Cf. on this subject Ex. Doc. 131, House of Representatives, Forty-ninth Congress, first session, and Ex. Doc. 124, Senate, Fiftieth Congress.)

The first representative of the Government, Subagent Lindsey Applegate, erected some buildings at the northwest point of Upper Klamath Lake, called Skohuáshki (abbr. Koháshti); but as early as 1866 he called attention to the fact that the place had no suitable water-power, but that three miles above the little creek at Beetle's Rest was a most excellent motor for driving a saw-mill and a grist-mill, and, being on the edge of the pine woods, was a well-fitted and shady place for the agency buildings. This advice was followed in 1868, two years before the ratification of the
177 treaty. In the same year the old practice of cremating dead bodies was
764 abandoned and inhumation introduced. The grave-yard was established
around the ash-pile of cremation, still visible in 1877, and in 1878 a second

177 cemetery was inaugurated between the Williamson River and Modoc Point,
764 one mile and a half south of the bridge.

175 President U. S. Grant's peace policy in regard to the Indians was
648 inaugurated by act of Congress dated April 10, 1869. The supervision of
652 the Indian agencies was placed in the hands of the authorities of religious
[797] denominations, a board of commissioners appointed,[*] and the spiritual interests
of that reservation turned over to the Methodist Church.

SCIENTIFIC RESEARCHES ON THESE INDIANS.

114 The study of the ethnography of a tribe usually precedes that of its language; sometimes both are pursued simultaneously, and this is undoubtedly the correct method. In the case of the Máklaks, Horatio Hale,[†] the linguist of Ch. Wilkes's United States Exploring Expedition (1838–1842), and still holding forth as a pioneer in his lines of research, took down a vocabulary from a Klamath Lake Indian whom he met on the Columbia River in 1841. No ethnographic remarks upon the tribe accompany this vocabulary, probably because information obtained from interpreters, who speak the Chinook jargon only, is notoriously unreliable.

Next in time follow the extensive explorations of John Charles Frémont[‡] of the interior basin west of the Rocky Mountains and of the Pacific coast from 1843 to 1844, and again from 1845 to 1846, during which the Klamath Lakes and Klamath Marsh were visited and explored. His reports contain graphic sketches of all that was seen and observed by his parties; but scientific accuracy is often wanting, and many countries are described without giving the Indian local names, which are indispensable to identification.

The acquisition of the Pacific coast by the United States (California in 1846, Oregon in 1848) naturally suggested projects of connecting the two oceans by a transcontinental railroad, starting from the Mississippi River and reaching to the Bay of San Francisco. The Central Govern-

[†] Born in Newport, New Hampshire, in 1817.

[‡] Born at Savannah, Georgia, January 21, 1813; candidate for the Presidency of the United States in 1856; died in New York City, July 13, 1890.

114 that these explorations were the starting-point of all further researches upon the Pacific coast, and as such they are creditable to the men with whom and the epoch at which they originated.

The topographic map of the Klamath headwaters is now being prepared by the U. S. Geological Survey. It is laid out upon a scale of 1 to 250,000, with contour intervals of 200 feet, the rivers and water sheets in blue. The sheets are named as follows: Ashland, Klamath,* Shasta, Modoc Lava Bed, Alturas—the last three belonging to California. The surveys were made from 1883 to 1887 by Henry Gannett, chief geographer, A. H. Thompson, geographer in charge; triangulation by the George M. Wheeler survey, by Mark B. Kerr; and topography, by Eugene Ricksecker and partly by Mark B. Kerr.

THE MODOC WAR OF 1872-1873.

175
648
657
The well-known maxim, "it is cheaper to feed the Indians than to fight them," has forced itself upon the governments of all American countries in such indelible characters that it has become a rule for them to conclude treaties with the different "nations" to keep them at peace, feed them by rations or annuities, and confine them within the limits of certain territories. The treaty of 1864 was not attended by all the favorable results expected. The Snake Indians ran off from the Reservation during April, 1866, the Modocs in 1865. The latter tribe were not compelled to leave their old domain, now ceded to the United States, till 1869. Moreover, it always takes several years to gather straying Indians upon a reservation after a treaty has become an accomplished fact. 000 The Superintendent of Indian Affairs in Oregon, Mr. Meacham, on December 30, 1869, after a long and excited "talk," succeeded in bringing two hundred and fifty-eight Modocs to Modoc Point, upon the reservation allotted to them. On April 26, 1870, the supply of rations was exhausted, and the more obstinate half of the tribe left the Reservation again for the old domain upon Lost River and the lakes, whereas the other half, under Skóntchish, went to Yáneks, on Sprague River, where the Superintendent located them. All Modocs

---

* The name for the sheet east of Klamath has not yet been determined.

7:Gatschet E-4,5 (1877) 1890 NR10 Klamath NR10

000 could not remain unpunished. Brought before a jury at Fort Klamath, Kíntpuash, Chief Skóntchish, Black or Húka Jim, and Boston Charley were condemned to the gallows and hung at the Fort October 3, 1873, while two accessories to the deed—Bántcho and Slû'lks (now George Denny)—were condemned to incarceration at Fort Alcatraz, San Francisco Bay.*

Thus ended the long-contested struggle of the little Modoc band against the Oregon and California volunteers and the regular troops of the United States Army. Certainly the heroism and ingenuity displayed by the Modocs would have been worthy of a better cause, and would have passed down to posterity in the brightest colors of patriotism had not the murderous "entreacte" and Canby's death deprived the struggle of its heroic luster. The unworthy termination of this war is well typified by the fact that the skeleton of the Modoc captain is now dangling as an anatomical specimen in the museum of the Surgeon-General's Office, at Washington, District of Columbia.

STATISTICS.

648
177
178
● 657 From the end of the Modoc war to the present year the condition of affairs has not changed much in the Klamath Highlands. The reports of the United States agent repeat the same story of progress towards civilization every year; but in view of the difficulty of bringing a hunter tribe into the high road of Christian culture and industrial progress we can not attach much credence to such reports so long as they are couched in generalities and do not contain special facts attesting mental improvement by schooling.

649
657
241
231 In agriculture success is possible only in the Sprague River Valley, but pasturing will succeed almost on every spot of the Reservation. The report of 1888, compared with that of 1880, shows a considerable improvement in this direction. The 2,500 horses and mules counted in 1880 had increased to 4,532 in 1888; the 200 head of cattle to 2,201. In the latter year the number of swine figured 208, of domestic fowl, 1,000. Of the 20,000 tillable acres of land 1,400 were cultivated by the Indians in

---

* Slû'lks was released, and stays now at the Modoc Reservation, Indian Territory, with Scarface Charley and some other warriors of that war.

7:Gatschet E-4,5 (1877) 1890 NR10 Klamath NR10

648 1888 and 500 broken by them; 10,000 acres were inclosed by fences.
657 The crops of 1888 amounted to 8,000 bushels of wheat, 4,000 of oats and
241 barley, 1,000 bushels of vegetables, 3,000 tons of hay; and 500 pounds of
231 butter were manufactured. Of lumber 100,000 feet were sawed. The
313 Indians transported with their own teams 500 tons of freight, and thereby
434 earned $1,500. The two boarding-schools, one at the Klamath Agency and the other at Yáneks, in the same year boarded 215 pupils at a cost to the Government of $18,764—about $10.40 a month per capita.

311 The number of acres contained within the Klamath Reservation is 1,056,000, and of these only about 20,000 acres are considered to be tillable land. The rest is occupied by woods, marshes, rocks, and other hindrances to cultivation.

797 The school and church interests are in the hands of the Methodist Episcopal Church, which also has a vote in the appointment of the United States agent.

657 The statistics of population have furnished reliable data only from the
161 time when annuities were first distributed among these Indians. This ne-
162 cessitated an annual count of each family, giving the number of the individuals belonging to each. One of these was made during my presence on the reserve on October 30, 1877, before the winter supplies were dealt out to the tribe. The summary is as follows:

David Hill, chief, at Agency and on Williamson River	225
P'lú, head chief, at the bridge, Williamson River	122
Long John, chief	103
Jack, chief	92
Lílo, chief	23
Total	565

The census taken in the Sprague River Valley, Yáneks subagency, furnished the following figures, Klamath Lake Indians and Modocs being indiscriminately included:

Littlejohn, chief	14
Skóntchish, chief	18
Modoc Johnson, head chief	71
Ben, chief	61
Brown, chief	30
Total	194

7:Gatschet E-4,5 (1877) 1890 NR10 Klamath NR10

161 The Snake Indians were not counted at that time, but were assumed
657 to have the same population as in 1876: 137. This gives a total of Indians
162 for the Reservation of 896. This count included about eight mixed bloods and seven Warm Spring Indians from the Des Chutes River. The boarding-school at the Klamath Agency then had eighteen pupils of both sexes.

The reports of the Indian Commissioner for 1880, 1881, 1882, 1883, and 1884 can not be fully relied on, since they give the same figures for *each* of these years with an unvarying total of 1,023 Indians—Klamaths, 707; Modocs, 151; Snake Indians, 165.

The report of 1888, Joseph Emery agent, gives 788 Klamath Lake and Modoc Indians and 145 Snake Indians, a total of 933 individuals.

Probably the most reliable data were furnished by the Indian census made in 1881 for the United States Census Bureau, from March to August:

	Klamaths.	Modocs.	Molale.	Snakes.	Totals.
Total of tribes on Reservation	676	122	55	165	1,018
Number of males	286	58	30	80	454
Number of females	390	64	25	85	564
Unmarried at fourteen years and upwards	109	6	9	11	135
Number married	286	55	14	65	420
Number of full bloods	664	122	53	165	1,004
Number of mixed bloods	12	....	2	....	14
Number below twenty-one years	291	58	35	89	473
Number above twenty-one years	385	64	20	76	545
Supported one half or more by civilized industries	36	6	7	....	49
Supported one-half or more by Government	37	3	....	2	42
Number wearing citizens' dress	630	112	55	165	962
Acres under cultivation	2,249	140	36	....	2,425
Number attending school	36	1	....	3	40

This enumeration is remarkable on account of the large number of Molale Indians mentioned in it, an element of the population which is nowhere else designated as such in the periodical reports made by the agents.

173 **28, 2.** gépkapsh, formed by syllabic elision from gepkápkash; cf. **29, 10**.

*539 **28, 2.** sákatla, to come up, to arrive by the trail.

726 **28, 3 and 4.** wéwaliks pi'la, the old women only; the younger ones, on whom 648 principally devolves the work of wókash-gathering, found time to escape in their canoes [193] from the raiders.

[192] **28, 4.** k̲'lewidshápka. The men had gone fishing to distant places, leaving their [222] females in the camp, not apprehensive of any hostile attack.

[192] **28, 8.** kilō's, or k̲ilū's, is the epithet given to "Dry-Leg", the Snake chief; it means a bold fighter, leader of a fighting band; literally: "irate, wrathful", and may be here taken as an equivalent to "war-chief" (sessclólish lak̲i).

[193] **28, 13.** Moadoki'sh, apocopated for Moadokíshash; also **28, 1**: wéwanuish (wé- [192] wan'sh) for wewannishash (shlää gépkapsh). Nā'lsh tchi'sh, *us* also; that is, we of the [657] Klamath Lake tribe, were gathered by Mr. Perit Huntington into one district, the newly established Klamath Reservation. A large number of the Lake People were then scattered about Klamath Marsh, which is visited by them now in summer only for fishing, gathering wókash and berries, and for hunting.

[657] **28, 14.** Dave Hill, now interpreter (lúldatkish) at the Klamath Lake Agency, took [175] a part in this short but interesting expedition, in the capacity of an Indian scout. He fixes himself the date of it by the words "tína illolólatko", or a *full* year after the Indians had been gathered on the Reservation by Mr. Perit Huntington. The treaty was concluded on October 14, 1864, and the campaign was undertaken in 1866 by a small body of American troops for the purpose of bringing back to the Reservation a band of Snake Indians who had run away from it. This unruly tribe, jealous of its former independence, has left the Reservation even since then, and could only after much exertion be induced to return. The fights took place west of Warner Lake, and north of the border-line between California and Nevada, within the former haunts of these western Shoshonis.

[175] The Report of the Acting Commissioner of Indian Affairs for 1867, page 99 sq., mentions this expedition in the following laconic terms: "October 27, 1866, troops consisting of 21 men, First Oregon infantry, and five Indian Klamath scouts, under Lieutenant Oatman, and 27 men, First Oregon cavalry, under Lieutenant Small, had a fight with a band of hostile Snake Indians near Lake Abbott [should read: Albert], in the Klamath country, Southern Oregon. The Indians had so chosen their position that the troops were obliged to dismount to attack them. The fight lasted one and a half hour, and 14 Indians were killed and many wounded."

On page 100 of the same Report, another fight against Snake Indians is spoken of: "Late in November, 1866, in a conflict between the troops and Snake Indians near Fort Klamath, 10 Snake Indians were killed by the troops, and three more by the friendly Klamath and Moadocs who accompanied them." This may have been the same fight as the one above, reported with much less accuracy of detail.

[103] **29, 3.** Spá-ish Valley, name corrupted from Surprise Valley. This valley is situated in the northeastern angle of California, and on the shore of its two alkali lakes several American settlements have sprung up. A few Snake Indians live peaceably around Fort Bidwell, which is located at the northern extremity of the valley.

29, 10. tálaat tχalamti'tal, consonantic assimilation for tálaak tχalamti'tal, due west.

[192] **29, 17 and 19.** nū'ts, natch, for nā'ls, nā'lsh, nā'lash, *us*; náts a gépkal, for nā'lash a gépkash í.

m'na snáwädsh, tsúi ni snä'kēlua; gä'tak lak̲í gí hûk.
his wife, then I remove (him); no longer chief remains he.

NOTES.

[177] **58–62.** The legal practices, regulations, and ordinances given here by a subchief of the Klamath Lake tribe are observed by all the chiefs, and are apparently fashioned after American models. The principle which seems to guide most of the judicial decisions of the chiefs, is given in one (59, 20. 21) of these regulations: "If a chief makes law like white people, that will be right."* This article is composed of three parts:

Part I. List of the chiefs acting as judges on the reservation in 1877.

Part II. Legal customs governing the Klamath Lake people.

Part III. Instances of application of these legal customs; amount of fines, terms of imprisonment, etc. These are the "*novellæ*" of Klamath legislation.

58, 1–3. P'lú, Lilu, and some other headmen mentioned here have signed the treaty of Oct. 14, 1864.

[563] [657] 58, 4. Móatuash. There are only two Pit River *families* living on the whole reservation.

58, 8. Tcháktot belongs to the Yahúskin tribe of Snake Indians. Cf. Ind. Aff. Report 1873, p. 324.

[193] 58, 10 etc. The future tense employed in these behests, regulations and defenses recalls the French future used in an impressive manner instead of the imperative: *tu ne tueras point, tu ne déroberas point.*

58, 10. shlí-uapk shash. The pronoun shash has here almost the force of a reciprocal pronoun, for the meaning of the sentence is: "do not shoot at people of your own tribe." The same is true of sas in palluápk sas, 58, 10; 58, 13 (twice); pálla shash, 61, 14.

[194] 58, 10. ksaggayuapkámsni is pronounced as one word, as the removal of the accent from the syllable -uápk demonstrates; and so in many of the following verbs standing in the future tense. For the sake of clearness, I have preferred to resolve these forms graphically into their component elements.

[192] [193] 58, 11. wátsam, etc. The possessive wátsam stands here instead of the instrumental case watsátka through attraction from wännikísham. Tchíkla here means to ride away on another's horse, the horse being missed by his owner.

---

* Dave Hill introduces himself in the first person as chief; but many of these decisions can be given by the headchief only, not by any of the subchiefs, to whose number Dave Hill belonged. The Modocs at Yáneks claim to observe these regulations; the Snake Indians do not.

plied, for Minnie sending to interpret the agent for conversing with.

NOTES.

64, 1. In September 1877 Púkish, an elderly Indian, died after a very short illness on the western side of Upper Klamath Lake. The rumor that he had been bewitched and thereby feloniously killed by K̲ák̲ash, one of the conjurers who treated him, soon gained credence, and the excitement in the tribe ran high. The first account of the occurrence was obtained by one of the subchiefs, who, with his colleagues, passed sentence over the unfortunate K̲ák̲ash.

[192] [193] [551] [769] **64, 1.** hû't, "this one", forms one of the substitutes for names of deceased persons, which no Indian dares to pronounce. Hû't refers to a person standing visibly *before* the speaker, and it is remarkable that the dead are referred to by this pronoun, and not by a pronoun marking distance out of sight, like hûkt, hû'kta etc. Cf. hû't hishuaksh, 64, 9., gén, 64, 2., hû'nk pī'sh, 64, 5., 68, 11. etc The subject nánka kukíaks does not exclude the use of the subject pronoun sha, *they*, the account being worded in the conversational style.

*539 593 77, 1. The name Púl is pronounced in very different ways, and most people think it is the English name Ball; Póluk is Pö'l hû'k; tchía, "lived", would be preferable to t'shin in this connection.

[192] 77, 2. 3. kä'tsa, kétsa properly means to cast away; here: to abandon, leave; almost identical with wutódsna occurring below, 78, 2.

77, 4. säwána sas: he did not give many horses for her to her parents.

78, 8. púllank sas. This shash properly refers to Pámpi and his family, for Púl's wife took the dug-out canoe of Pámpi and rowed with it to the soldiers. This was in the northeastern part of Upper Klamath Lake, and occurred in the winter of 1876–'77.

[103] 78, 13. É-ustat is the location of the old agency buildings at Kohásbti, in northeast corner of Upper Klamath Lake.

[192] 78, 14. hí'-i. On that occasion Ball left his wagon in the midst of the woods; hi, hí-i means "on the ground".

[657] [692] [697] 78, 15. nä'ulχa sha pä'n. About the middle of September 1877 a strong escort of Indians brought Ball and his wife to the "law-house" at the Klamath agency to be tried by the chiefs. A delay of several days occurred before he was confronted with the judges, and during the time he was imprisoned at the "skúkum-house", a strong log cabin at the agency serving as jail. He is still a very young man, and on being brought there he was allowed to ride on horseback with a rifle on his shoulders. His father is an Indian from the Spokane tribe, and Spúkän is his name.

[192] 78, 16. sχókta, to pay a fine; to be fined (by the chiefs). See: "Legal Customs", 62, 5.

*171 on the other, were entirely absent among the Klamath. Nevertheless
556 the mechanism of the Northwest Coast for the exchange of presents,
the potlatch, does appear here in the form of prescribed reciprocal
584 visits between the families of bride and groom. It has not been clearly
recognized that these features of Northwest Coast social life have
spread even farther from that focus into the northern Plains and to
north central California.

*171 Of the slender stock of Klamath ceremonials, the scalp dance is
widely known, the war or incitement dance is common to northwestern
535 California and perhaps all of Oregon. Kroeber has pointed out that
726 so far as California is concerned scalp and war dances are mutually
exclusive in their distributions.[418] But the Klamath, like all others
*171 of eastern Oregon, carry out both dances. The girls' adolescence rite
of the Klamath is one with those of western Oregon and northern
881 California. This is a local phrasing of similar rites known from
Alaska to the Southwest, but lacking east of the Sierra-Cascades.
Specific details of the Klamath affair are closer to northern Cali-
*171 fornian forms than to those of Oregon. The Ghost dance of 1870 was
evanescent among them. Its first form was that characteristic of the
original dance of Nevada; later it was overlaid by features char-
acteristic of central California.[419]

177 Some historical relief emerges in this survey. It is definitely
traceable in some details and can be established inferentially for more
basic elements. The most recent stratum of adopted traits is post-
[285] reservation, i.e., later than 1865. This includes two types of basketry
derived from the Northern Paiute settled on the reservation, a sifting
basket and a coiled water bucket, and the Ghost dance. The earlier
[668] form of the Ghost dance was instituted by the same group of Paiute
in 1870 or '71. This was the familiar circle of dancers, whose leaders
[343] dreamed new regulations; its ideology the return of the dead. In
1873 a Pit River introduced central Californian elements; a dance
[534] lodge, probably the clap-stick rattle, new songs, etc. To the same
stratum belongs the imitation of the Warm Springs-Yakima one-piece
[533] moccasin.

[291] Other elements are recognized as pertaining to pre-reservation
days, but probably not earlier than the middle of the last century;
177 the hand drum derived from the north, and perhaps the social dances
534 in which it is used; the hand game brought by a Spokane (?) man.
535

[418] Kroeber, Handbook, 144, 844.

[419] Spier, Ghost Dance.

southern Northwest Coast, Oregon, California as far south as the Sinkyone (and perhaps the Costanoan), and the Basin. The number was variable in central and southern California, as Kroeber has pointed out, but was as regularly four on the Colorado river as in the Southwest.[339] The curious feature is that five as the pattern number did not regularly make its appearance in the adolescence rites; it is seemingly missing from them on the northern margin of its distribution and again in the southern Basin. What we have to recognize is that the pattern number does not operate automatically at every possible opportunity; further, that there may be an appreciable lag before a specified number of days, things, etc., is made to conform to the standard number. Thus the Ghost dance of 1890 derived by the Walapai from the Southern Paiute, whose pattern number was five, appeared among them as a five-day ceremony although their pattern was four. 171* 881 801 [668]

Characteristic of this local area was some device to hold the adolescent girl's gaze averted when she left her seclusion. It was a visor of blue-jay feathers among the Takelma, Shasta, and Karok, an eyeshade of skin among the Northern Pomo. Elsewhere her head must be covered in some fashion; it was so prescribed by Hupa, Wiyot, Sinkyone, Coast Central Pomo, Tübatulabal. The visor appeals to me as the local analogue of the large hat or mat prescribed by Northwest Coast tribes: Ten'a, Tlingit, Tsimshian, Bella Coola, Kwakiutl, Nisqually, and Tillamook. The Nootka and Achomawi-Atsugewi headbands may also be analogues. In some instances the girl's head must be covered with a basket even as she rests: Takelma, Shasta, Yuki, Luiseño. This is, to be sure, only a specific form based on a more widespread view that the adolescent's glance was malignant and must be cast down. This notion prevailed as far south as the Colorado river (Yurok, Eastern Pomo, and Mohave in addition to those just cited), but was notably absent in the Basin and Southwest, and may not have been nearly so strongly emphasized on the Northwest Coast. It cropped up again in a far distant area, the southern Great Lakes (Winnebago, Menomini, and probably Ojibway, Ottawa, Sauk-Fox, and Kickapoo), where the menstruant might not look up or out of the lodge. The otherwise unintelligible prescription that the Klamath maiden must dance with downcast eyes—for I did not find that there was any belief that her gaze was malignant—is thus explicable as a bald imitation of neighboring types of behavior. 171* 881

[339] Handbook, 875.

Carrie: Male, Age 36

Background Data

156 Carrie is the model of a self-made, upwardly mobile, brash and back-slapping
*159 young American male. He is a tribal leader whose power is rooted in an amalgamation of various dissident elements, rather than in a large kin group, and a
[622] business man with numerous interests. He says, of himself, that "I have no occupation, as occupations go. I guess you might say I am a confidence man."

*159 Like the other subjects, Carrie was raised on a ranch by his parents. He is a high school graduate and a graduate of a junior college course in accounting.
[873] His work record suggests his ambition and his upward progression, for he started as a farm laborer, went to truck driving, then worked during World War II as
[464] a production machinist, completed his education, then worked for the Agency and, finally, was able to settle down to living off his several sources of income. He has never been out of the state except for short business trips. He spends most of his time on the reservation attending to tribal and his own business,
156 and participating in various voluntary and formal associations. More recently
*159 he has become active in politics on a local level and by some has been ear-marked as a "comer." His intellectual horizons are very wide, extending to a keen
*[66] awareness of the difficulties faced by Dag Hammarskjold. His reputation is excellent and he is particularly esteemed by many Whites, although this esteem is
[626] not shared by all Klamath, which reflects only the factionalism of Klamath politics and, perhaps, the efforts of some to control a man who is too successful.

[184] Carrie has been married once and this marriage has lasted 15 years. He has six children and his family life, again, is precisely what might be expected of a successful young American. Carrie's entire style of life is entirely different from that of most other young Klamath men.

*159 Very little is known of Carrie's early life except that his background is rural Klamath and that his mother was a housewife and his father an indifferently and intermittantly employed laborer.

156 The writer never made much headway with understanding Carrie until the day he
124 was brow-beaten into taking the Rorschach. Before this time he had been seen only as an aggressive, back-slapping, competitive, and somewhat empty character. He had agreed to testing, but had managed to slip out of several appointments until one day when the entire complement of field workers descended on him during a visit, arguing and insisting that he had to set the example. Carrie was thus hung on his own petard, and when we walked into the testing room there was some question as to who was the most fearful of the consequences of this episode, Carrie or the examiner. Carrie was manifestly tense and fearful, but in a very short period of time relaxed and accepted the test situation. Rapport was excellent, and Carrie clearly defined the situation as one where he should discuss
156 his private concerns, motives, and sentiments. From sessions like this it became evident that Carrie's brash front consisted of a set of behaviors he saw as appropriate to his position. That is, the social Carrie was a well defined role. Behind this persona lay a genuine concern with the welfare of tribal members and their future, as well as strong personal aspirations, deep committments to family and community, and fears associated with his private feeling that he was not an adequate or relaxed "mixer." He stated, for example, that "I guess I just don't have the courage to get out, even among my own people. I'm not much of a talker and I guess you'd say I'm kind of backward. I really prefer to be alone by myself." Some of this apprehensiveness is associated

While the political strength of a family is seen not only in the 648*
succession of interest but in a propensity for members of a family 657*
to vote *en bloc*, this is far from invariably true. The schism 619
separating Jesse Kirk from his half-brother, Joseph, is one promi- 602
nent instance—and by no means the only one—to the contrary. [665]
In fact, alignment within the family and extended kin has often [578]
been modified by contending considerations.

Nonetheless, for some leaders the solidarity of family some- 648*
times took precedence over impartiality in the discharge of office. 657*
One tribal council member is quoted as defending his action 661 •
favoring certain enrollments by the explanation "... that since 602
two children were his niece's children, he felt that it was his duty 619
to guard the interests of his minor relatives."[8] Political leaders, seeking to emphasize the purity of their motives, needed to go no further in justification than to declare that they sought only the welfare of their grandchildren.

Although intermarriage and alternative associations have long 648*
overlaid clear identification with the several peoples who had 657*
entered into the treaty, such affiliations have continued to exert 563
political force, however greatly diminished in recent years. In 621
turn, they related to the two broad communities on the reserva- 619
tion. The Lower End remained predominantly Klamath, while Modoc, Paiute, as well as a number of Klamath and Pit River, comprised the Upper End community some forty miles away.
Even after the closing of the subagency at Yainax, the populations [184]
of Sprague River and Beatty continued to reflect the special character of the eastern reservation.

In turn, the relatively easier access of the Lower End to out- [177]
side influences—a subject already reviewed in discussing modern tribal demography—superimposed the effects of differential acculturation and intermarriage upon the traditional subtribal
allegiances that distinguished the two Ends. Difficulty of travel 648*
along the road from the Agency to Yainax had given rise to the 657*
practice, long maintained, of holding separate councils at each 621
place. Thus at the two Ends there had developed political com- 665
munities responsive to their own local leaders. Harrison Brown, 619
in 1931, played upon a familiar theme when he recognized in Wade Crawford, a leader from the Lower End "... a young man who is not a full-blood, who is trying to stir up trouble and we

*648 might be exploited instrumentally to broaden the base of appeal.
*657 Other devices entailed the manipulation of particularistic
665 loyalties. Politicians from the less populous and ethnically more
619 diverse Upper End endeavored to retain districting, whereby
the members of the executive body were elected in equal numbers by each End; and they also sought to preserve communal representation, which ensured that each of the traditional subtribal groups, Pit River and Paiute, as well as Modoc and Klamath, would find a place in that body. These measures were opposed as a matter of course by Crawford, the Lower End leader; but it was he in turn who had been responsible for the election in 1927 in which only the Lower End took part, thus creating a second tribal council and precipitating the Bureau's demand for a tribal constitution.

*648 The tactics employed to control voting were diverse. In general
*657 elections, Jackson favored restriction of voting to polling places
665 located on the reservation, against attempts by his rival to secure
619 absentee balloting, a measure that would swell the response from
646 his off-reservation constituency. For General Council meetings,
666 Jackson sought to continue the practice of alternating their site
between the Ends, and for those held at the Agency he provided stages at tribal expense to transport members from the Upper End.

Seating within the General Council was conventionally by faction, a device that provided an easy check upon voting regularity, although the chairs along the wall afforded a retreat for the less partisan. Jackson further favored a standing vote,[12] while Crawford, particularly while he was out of power, called instead for a secret ballot. Each side on occasion exercised the boycott to prevent the mustering of a quorum when the issue was likely to go against it,[13] and Crawford also resorted to the filibuster, under cover of which his forces might withdraw in order to attain the same end. Each also strove, when he no longer controlled the executive body, to route business instead through the General Council.

*648 In the recruitment of a following, leaders found many occasions
*657 to render personal services, appointing the faithful to tribal
665 positions, serving as advocate in their favor, sponsoring the enroll-
619 ment of their children as tribal members, or advancing them
• 661

money from the tribal fund set aside for the purpose. Interlocking 648*
memberships of the Executive Committee, the Enrollment 657*
Committee, and the Loan Board made those bodies the apex of 665 619
tribal power. If the first-named was the central body, and important 661
particularly in relations with agencies beyond the Tribe, the [646]
other two were no less essential in the administration of patronage. [647]

The Tribal Loan Board had been established to preside over 648*
a fund set aside from the Yamsay Judgment of 1938, by which the 657*
issue of the Military Road had finally been settled. The fund had 619
been designed to provide capital advances for tribal members, 452
many of whom found bankers reluctant to lend to them. Although 647
loans were supposed to be applied only to improvements, it became common practice to spend them merely as an anticipation of the next per capita. When the Bureau called a halt to its operations in 1955, the Board had out on loan approximately a half-million dollars, or the equivalent of almost $250 per member, and a collector had to be engaged to recover a sizeable portion of it.[14]

The Enrollment Committee was the third seat of power. Ad- 648*
mission of one's children to tribal membership was eagerly 657*
sought, and not alone for reasons of sentiment. Once he was a 619
tribal member, a child was vested with a pro-rata share of the 647
undivided tribal estate, amounting at the time of termination to 434
some $43,500. In addition he qualified to receive the per capita dividends that, subject to Agency restriction, were commonly drawn upon to defray current family living expenses.

Despite—and sometimes because of—these tactical measures, 648*
by which partisan leaders strove to bind them, many tribal 657*
members were driven into abstention by the bitter contentions 646
that marked the final generation of tribal life. Although hundreds 619
flocked to the luncheon set out at tribal expense in the Council Hall for those attending the General Council, morning meetings failed so frequently to draw a quorum that they were discontinued; and even afternoon sessions sometimes could not muster one hundred adults from among the thronging diners to transact tribal business. When they did come, they were often in holiday mood, frequently interrupting speakers, and exhibiting a keen appreciation for lengthy, eloquent, and often irrelevant harangues

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

No sooner had the party of nine pupils finally gotten under 648*
way than Applegate received a letter from the Commissioner 657*
calling attention to a letter sent him, apparently by Jesse Kirk 871
himself. In it, the writer accused Police Captain Joseph Kirk, a part-Modoc, and Judge Jack Palmer, a Lower End Klamath, of using their influence against sending children to nonreservation schools. "There are two parties here," wrote Applegate, "who [665] •
oppose each other on nearly all propositions, the two leaders of which are Captain Joseph Kirk and Rev. Jesse Kirk, half brothers, and who are among our most advanced and able men." He promised to refer the matter to Gen. A. C. Hawley, a Special Agent then visiting Klamath.[15]

Ironically, Jesse Kirk's stand was soon reversed. Soon after he had deposited his sons at Carlisle, the elder boy, Clayton, in company with another pupil, Joseph Ball, ran away and was only recaptured in Pittsburgh. In Applegate's view, Joe Ball, an interbreed and a product of the public school in Klamath Falls, was the ringleader of the escapade and had led his more impressionable companion astray.[16] The senior Kirk thereupon sought to have both sons returned, and Applegate tried to put him off.[17] To Major Pratt at Carlisle he wrote ruefully:

> . . . I have been reconsidering the idea of sending you a class and even regret that I did send the class of nine, as things have turned out. It is hard to get pure bloods to go, and the pressure to get away from the reservation to our non-reservation schools is almost invariably from the mixed element. The Klamaths and Modocs are a determined lot and Rev. Jesse Kirk, son of a resolute old warchief, is no exception to the rule. A short time ago the principal champion of Carlisle he is now ready to move Heaven and Earth to secure the return of his boys since Clayton's escapade, and I wish they were all back.[18]

This action brought into confrontation an embattled Agent 648*
and the defiant leaders of the reservation. In Jesse Kirk the 657*
Indians has as leader a product of those very "civilizing" forces 622
upon which the government had rested sanguine hopes. The son 159
and namesake of one of the treaty signatories, we have encountered him previously as schoolboy and carpenter's apprentice, as interpreter and as ordained Methodist preacher. In 1886 a representative of the Indian Rights Association characterized him as "a superior man, in poor health and great poverty, . . .

error which has crept in from the lapse of years or the result of 648*
modern nomenclature applied to the mountains by the younger 657*
Indians since the treaty was made." They noted that the latter 423
confidently located points upon the boundary that their elders, the actual signatories, could identify only with uncertainty or conflict.[40] The reservation boundaries thus delineated often exceeded considerably those described by the signatories. The claims of the younger men recall the oral traditions of the treaty councils, for they are surely part of the same outlook.

The commission report brought dismay to the Klamath. The eastern boundary, recalls one adherent of Jesse Kirk, was satisfactory as finally delineated, but strong feeling simmered regarding the location of the southern boundary. The finding that the southeastern boundary point, *kalwal*, Point of Rocks, lay at Barkley Springs, placed it too far north, the Indians claimed, and it had the effect of leaving the Swan Lake area (where the Applegates had interests)[41] outside the reservation. The suspicions thus generated soured Klamath relations with the Agent as well as with his brother, but remained latent until other frictions aroused them.

In 1900, James McLaughlin, U.S. Indian inspector, executed what was to be the penultimate agreement upon the boundary issue. In his report to the Secretary of the Interior, he warmly praised a local assistant:

> I was fortunate in securing as guide and interpreter, the services of Jesse Kirk, an intelligent full blood Klamath Indian, to accompany me throughout my field work, as he had accompanied the Boundary Commission in 1896 when the boundary line described in the treaty of October 14, 1864 was determined, and was also employed by the Allotting Agents throughout the entire allotment of lands on the Klamath reservation, and, having a most remarkable memory, knows the legal sub-divisions of section, township and range of every allottee on the reservation.[42]

With ratification of the agreement hanging in the balance, the 648*
Indians once more proposed a delegation to Washington, to be 657*
comprised of Jesse Kirk, William Crawford, and Jeff Riddle.[43] 578
There was, however, a significant discord. In a petition trans- 665 •
mitted to the Commissioner of Indian Affairs, Harrison Brown, judge of the Indian Court, related that after the council with

*648 McLaughlin, Jesse Kirk had called together about forty Indians
*657 in a secret, "pretend Council" to select the delegation. When
578 queried, Kirk maintained that it had the sanction and authori-
•665 zation of the Agent. Brown had then sought out Applegate, who
told him "that he had concluded to have nothing to do with said council."

About the date that the delegation was due to leave, Brown and others assembled at Yainax, where they asked for and received a petition in which they set forth their views. Then and there it was signed by forty-three persons, together with further endorsements from the Lower End. Brown then conferred with Applegate and with Henry Jackson. The Agent, he reported, assented to the action that had been taken. However, that night two members of the Indian police, allegedly acting on Applegate's orders, accosted Brown and relieved him of the petition. The next day, in Klamath Falls, one John S. Orr, who seems to have been serving as advocate for Brown's faction, received a letter from Applegate instructing him to desist from communicating with the authorities at Washington.

The petition, with corroboration by Henry Jackson, was duly notarized at Klamath Falls. F. H. Mills, who signed as witness, was soon to reappear.[44]

As matters turned out, Jesse Kirk finally left for Washington alone, armed with letters of introduction from the Agent to Oregon's Senators McBride and Simon, Congressmen Tongue and Moody, and Commissioner Hermann of the General Land Office. Applegate had gone out of his way to secure for Kirk a special fare on the railroad and a loan from the bank in Klamath Falls. Reading his almost anxious instructions to the delegate, now arrived in the capital, one has a clear impression that the Agent felt that he was writing to a devoted friend.[45]

He was soon disillusioned. As we know now, Jesse Kirk had even then fired off his salvo declaring his half-brother, Joseph Kirk, and Jack Palmer to be the chief foes of the nonreservation schools. Soon thereafter, his son's escapade at Carlisle led Kirk violently to reverse his own position.

In Washington, the delegate made his rounds. Several of his letters, to the Secretary of the Interior, the Commissioner of Indian Affairs, and to Commissioner Hermann, urged ratification

of the McLaughlin agreement, praising the Inspector as "a man 648*
that got heart in him for a Poor Indian People."[46] Toward the 657*
end of his visit, the envoy was stricken with appendicitis, and his 578
half-brother and political foe, Joseph Kirk, rushed to his bedside 665 •
and remained to bring him home.

New contacts, both with officials and attorneys and possibly 648*
with the delegates from other tribes, must greatly have enlarged 657*
the horizon for men like Jesse Kirk. Indeed, James McLaughlin, 578
returned to the reservation to execute a new agreement with the 665
Tribe rectifying a mistake in the boundary surveys used, soon 423
found the new mettle in the man. The revised draft, he reported,
was

> duly executed by more than the necessary number of Indians belonging to the Agency, but not without having to overcome strong opposition, evidently prearranged and determinedly led by the most influential Indian of the reservation, Reverend Jesse Kirk, who demanded that the clause providing for irrigation of their lands be stricken out, also the clause for the payment of the legal fees of attorneys having duly approved contracts. I, however, remained firm and would not concede any modification or change of a single word, letter or punctuation mark in the agreement as prepared by the Commissioner of Indian Affairs, and it was thus concluded by a large majority of the Indians signing the agreement. When Rev. Jesse Kirk found that I was going to succeed in obtaining the required number of signatures he, together with his followers, finally came forward and signed the agreement—and he also signed as one of the two Interpreters.
>
> The opposition of said Rev. Jesse Kirk, was influenced by the fact that he visited Washington last winter, remaining there some months, during which time he learned that large appropriations were being made by Congress for general irrigation purposes on Indian reservations, and that the Klamath could have from such appropriations all the money necessary for irrigating their lands without providing for such in this agreement, and as the contract with their attorneys was for a period of eight years, and expires on July 21, 1901, he captiously desired to exclude the clause protecting them.

Jesse Kirk, so McLaughlin learned, had been informed in 648*
Washington that the Indians need not employ attorneys, since the 657*
case was sure to be decided in their favor. Many Indians, how- 578
ever, did not agree with his view and desired to keep good faith 665
668

[Klamath Reservation]

*648 *657 578 • 665 668 with the attorneys. There were some, who nonetheless wanted to submit a petition setting forth their views.[47]

If all who signed the agreement after Jesse Kirk were his adherents, he could count on 121 men against 70 for the proadministration faction.

*648 *657 665 666 668 578 Domestic issues added weight to discontent. Soon after taking office, Oliver Applegate had set up road districts, each presided over by the policeman within it, and had permitted the police to settle minor differences within their several districts.[48] He had, moreover, apparently reversed the policy of Emery, who had permitted the Indians to elect both police and judges for the reservation. Early in 1900, a group of Klamath, apparently led by Jesse Kirk, became insistent that elections be reinstituted. Applegate was reluctant to accede, since he "felt that an Agents selection of his military force and administrators of justice should not be trammeled by selections which might be the result more of 'political' management than of the honest opinions of the majority." However, he agreed to ask for an opinion from the Commissioner.[49]

Gen. A. C. Hawley was sent to consider the issue, and conducted his investigation largely during Jesse Kirk's absence in Washington. At the end of his tour, Hawley strongly supported the position entertained by Applegate, who observed:

> . . . if at any time this electoral system should become in order, in the selection of the agent's personal assistants and executive force, the time had not yet arrived to put this privilege in the hands of the people. It would increase rather than limit the number of tribal and family feuds and keep alive the numerous personal jealousies which we are endeavoring to stamp out.[50]

The matter, however, was far from settled. Early in 1902, on the eve of Jesse Kirk's departure for Washington to secure ratification of the revised McLaughlin agreement, a petition was prepared by his faction requesting the privilege of being allowed to elect the mooted officers, subject to approval of the U.S. Indian Agent. This document bore 120 signatures, and is in line with estimates of the strength of this faction. The covering letter, by Jesse Kirk, urged in behalf of the Klamath that

> they desire to take steps forward and prepare themselves in citizenship for the years to come, and encourage them into civili-

> zation only, and not into blankets and long haired Indians in 648*
> old custom. But to encourage them in education as well as chris- 657*
> tianity, which will enable them to be a civilized people. 665•

He cited the industry of the Klamath, claiming that they were 668
self-sustaining through such enterprises as stock raising and 578
laboring. The concession of a safeguard in elections may have [666]
been his, for he stressed that election of officers must be confirmed not only by the Agent but by the Secretary of the Interior. The Commissioner simply forwarded the documents to Applegate,[51] who, as if to point up the grievances, had just named three new judges.[52]

The actions of the Agent—now retitled Superintendent—in the investigation of the death of one George Modoc brought into the fray that educated gadfly, Charles S. Hood. A Carlisle graduate and leader of the returned Modoc, Hood took an interest in the case when Grant Smith, a fellow tribesman, was held on suspicion of having had a hand in the death. Some four months later, Hood wrote Applegate urging that Smith be released to look after his family and stock, with the understanding that Smith would come back to stand trial. Apparently rebuffed, Hood then wrote to the U.S. Attorney in Portland, who sternly demanded of Applegate, "Will you please inform me by what process or authority he is confined in jail, and whether or not in your judgment if [he] is liberated he will run away." Stung, the Superintendent denied that statement and claimed that Smith had been on parole most of the time so that he could look after his affairs.[53] The attacks upon him seem to have driven Applegate toward a more extreme position, as reflected in his recourse for local cases to police courts instead of the less subordinate Court of Indian Offenses.[54]

In 1904, the pace quickened. Through the early part of the year, Knott C. Egbert found Henry Jackson ungovernable. In April, Jesse Kirk, once more in Washington, directed a letter to Commissioner Jones. It was transmitted by Oregon's Senators Mitchell and Fulton and Representative Williamson, with these words:

> We have every confidence in Mr. Kirk, and we are sure he would made no recommendations that he did not feel were fully justified, and we are also aware of the fact that the Indians of

> *648 the Agency, in the main, have implicit confidence in him, or
> *657 they would not send him here each year as their agent to look
> •665 after their interests."[55]

668 In his letter, Kirk once more called for elections, stating, "The 578 present manner of selection does not result in securing the services [666] of the best men. . . ." He was instructed, he said, to suggest and request that an election be held on the fifth of July when the tribe in council might make its selection, and further proposed

> that you instruct your Superintendent to be guided by such selection in the appointment of persons to fill these offices; these appointments by the Superintendent, of course, to be ratified and approved by you. This in order that, should our selection be ignored by the Superintendent, we may have the opportunity of being heard by you."[56]

This bold typescript letter, its flowing style so unlike Jesse Kirk's, bears every earmark of expert assistance. The source of that aid, either legal or legislative, is suggested by the circumstance that the next letter, to Applegate, was forwarded by the congressional trio with a covering letter dated the same day. The Kirk epistle set forth the same demands for an election, but did not mention an appeal to the Commissioner. In their covering letter, Mitchell and his colleagues observed, "Mr. Kirk seems to be very strongly of the opinion that the plans suggested in this communication should be adopted," and they urged that Applegate give it "very careful consideration."[57]

On his return, Jesse Kirk set about a direct assult upon the Superintendent. First came a letter from the "Delegate and Agent of the Klamath, Modoc, and Yahooskin band of Snake Indians" to the Commissioner, charging that livestock were permitted to trespass upon the reservation and that O. C. Applegate and his stockman and chief of police, George W. Loosley, "systematically" ignored and suppressed complaints on the subject. Loosley, it was charged, continually evaded his duty and "loiters indolently his time away at the agency. . . ." Jesse Kirk, for his part, wanted no white cattle at all upon the reservation. This letter, together with that written earlier to the commissioner on the elections, was buttressed by two petitions circulated together, bearing 184 and 183 signatures, each certified by nine men, Jesse

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

Kirk, Henry Jackson, Drummer David, Logan Pompey, Albert 648*
Jackson, Yank Lobert, Ike Jackson, William A. Moore, and Sar- 657*
gent Brown.[58] 665•

A letter to the Commission one month later, signed by the same 668
nine men, asserted that Abraham Charley (then captain of 578
police) was immediately responsible for stock trespass upon the reservation through his policy of renting tribal and unfenced allotted lands, a practice for which he lacked tribal consent.[59]

Within the month, the delegate wrote Senator Mitchell on behalf of a runaway schoolboy who, it was claimed, preferred to go to Chemawa. Mitchell sent the letter on to the Commissioner. When the Commissioner detailed the matter to his subordinate, Applegate at last flared forth.

> Permit me to say in this connection that the interference of the "Rev." Jesse Kirk in the affairs of the Agency and Schools has become nearly intolerable and that it is a decided menace to the peace and tranquility of the Schools and in fact of the entire reservation. His hostility to the authorities is now boldly asserted, though for a long time treacherously veiled, and it may be necessary, and that very soon, to restrain him in some way or to remove him from the reservation.[60]

Applegate had not long to wait for the next blow. His letter crossed one from the Commissioner transmitting a telegram and a letter sent to the President by Jesse Kirk and others charging the Superintendent with mismanagement of the affairs of the Agency and schools. Applegate was ineffectual, claimed the letter; he did not maintain discipline and permitted drunkenness; he bestowed undue favors upon Abraham Charley, particularly in allowing him to take out a grazing permit; he let the fields grow up to weeds; and he opposed sending children to nonreservation schools. Applegate roundly denied all charges, pointing out that three of his ten accusers were former Agency employees, dropped from service for various reasons, and that another three were expolicemen who had been found undesirable. All of them he branded "henchmen and followers of the chief conspirator, the 'Rev.' Jesse Kirk." Even then they were circulating another petition on the reservation.[61]

Before Applegate's round was fairly on the way, the hapless administrator received the next salvo. This time the Commissioner forwarded the letters and petitions from the Kirk faction

*648 on the trespass and election issues, together with a telegram
*657 protesting approval of the Abraham Charley permit and sup-
• 665 porting letters from the Washington law firm of Dudley and
668 Michener. Several months passed before Applegate came around
578 to answering, which he did in temperate and reasoned tones. His remarks add little to what he had said previously.[62]

Meanwhile, Applegate was given an assignment which could only embroil him further. Upon instructions from the Commissioner, he and an assistant set forth with representatives of the Booth-Kelly Lumber Company, which had succeeded to the Military Road claims, to select lands in lieu of the 111,000 acres they held across the face of the reservation. Eventually, a tract of 87,000 acres of prime timber in the northeastern corner of the reservation was selected.[63]

Jesse Kirk is said to have opposed vehemently any cession of land, while his half-brother favored the arrangement finally arrived at.[64] Not until the fiery Indian leader was dead did the tribe finally agree to accept the sum of $108,750 from the United States in return for a quitclaim against the government; and that was achieved in the face of determined opposition from Clayton Kirk, who took up the battle from his father and bombarded Washington with petitions.

In later days Applegate believed that "in equity the Indians ought to have had the entire reservation. . . . They should be fully compensated." In 1904, however, he stood too close to the factionalism, and Ivan's role in the negotiations was too well recalled for him to avoid suspicion. Any of his acts were likely to become, in Merton's term, a self-fulfilling prophecy of complicity.[65]

Conditions at Klamath now prompted the Commissioner to send out as inspector Supervisor of Indian Schools M. F. Holland, whose harsh measures precipitated the final battle. At the
[361] Agency, a number of Indians, several of them employees, had erected a dozen shanties out of rejected lumber from the sawmill. Holland evidently found Slabtown, as the settlement was known, an eyesore. A former inhabitant there has suggested that Holland may also have been irked by the community's practice of providing food for various councils conducted by Jesse Kirk. The supervisor now ordered Slabtown razed. Accordingly, Applegate served notice on the residents to remove by the first of March.[66]

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

At the same time, Holland ordered that Indians be prohibited 648*
from loitering about the Agency office and other buildings. 657*

Soon thereafter, Jesse Kirk with a group estimated by Apple- 665 •
gate to number twenty or thirty persons and enumerated by the 668
opposition at fourteen, either attempted to test the prohibition 578
or were the objects of its first enforcement. In the ensuing scuffle with the Indian police, Holland seems to have been struck.[67] "Though the effort to expel them was successful, and without loss of life," related Applegate, "they left the Agency in a defiant and sullenish humor and the ensuing night sent to the other Agency (Yainax) for reinforcements and yet maintain an ugly and rebellious gathering on the reservation." Terming the incident a "riot," the Superintendent called in all seven policemen from the Lower End, added five more special police, and sought permission to expedite purchase of ammunition.[68]

What had been the business of the "rebels" at the Agency that day? They had been collecting signatures for another of Jesse Kirk's petitions, this time directed against O. C. Applegate, George W. Loosley, and "their special appointed man, Abraham Charley."[69] The petition had been drawn up by Jesse Kirk and a local attorney, F. H. Mills, retained by the Indians. Mills, a deputy district attorney for Klamath Falls, had previously taken Indian cases,[70] but a crusading element seems evident in his involvement in this dispute. J. W. Evans, the Assistant Superintendent at Yainax, noted that Henry Jackson had been paying his fees and that the Indians had put up $500 as a retainer.[71]

After their rebuff at the Agency, the Kirk faction withdrew to Yainax, where they held meetings at the home of Henry Jackson and gathered signatures for their petition. In the end, 133 men, over half of the eligible voters, signed. Evans claimed that deceit and force were used, and that a "kind of secrecy" was maintained, but Mills contended that others had also desired to sign, being prevented from doing so by subsequent events. Mills, charged Evans, "used his personal influence to get the Indians to sign."

While the meeting was still in session, one of the Indian police came in with a request from three of the "leading Indians" (unnamed by Evans) of the Yainax district, asking that the police stop the session, on the grounds that the disputes would engender trouble. Evans thereupon ordered Abraham Charley, captain of

*648 police, to put an end to that meeting and to call one at the house
*657 of Harrison Brown—a proadministration leader—to try to effect
• 665 a settlement. At that session, not unexpectedly, feelings ran high.
668 Unable to come to an agreement, the Kirk faction broke off dis-
578 cussion and resumed their meeting at Jackson's.

Thereupon, Abraham Charley summoned all parties to the office of the Assistant Superintendent in the Yainax school, where, for six hours, some forty men argued. Finally, Evans stated that he could not prevent circulation of the petition so long as that did not cause a disturbance. Harrison Brown's party promptly surged forward and sought to seize the petition by force, but were prevented, said Evans, by the police. The conditions of unrest having been established, Evans was able to require that the petition be delivered up to him "until a general council could be regularly called and decide on its disposal."

Evans ended his report with a denunciation of Jesse Kirk as "a disturbing element on the reservation, [who] has a bad influence on the Indians. He should be told to go to his ranch and work it, or be put off the reservation." Of the attorney, he observed:

> Frank Mills should be told to leave the Indians and go out of the Government's business, and if there is anything to be attended to or settled, there are proper officers belonging to the Commissioner's Department and Department of the Interior who can do it."

Despite his brave front, Oliver Applegate had already privately conceded defeat and was writing his friend and former subordinate, Knott C. Egbert, at Siletz reservation, suggesting that he apply for the Superintendency. He was evidently dismayed by the turn events had taken and alarmed, suggests his son, for the safety of his family. Moreover, a letter from Egbert intimates that Applegate felt a lack of administrative support, since he had been confirmed as Superintendent through his service as Agent, and had not passed the civil service examinations. Egbert proposed that he take the examination quietly in Portland; but the Applegates had long opposed the establishment of the civil service, and the advice seems to have proven repugnant.[73]

Meanwhile, early in March, a council was held at Yainax. It was presided over by Levi Walker, and the principal business

was transacted by Jack Palmer, Harrison Brown, Ike Mose, and 648*
Abraham Charley. A committee of ten men submitted a report 659*
of the findings of the council, presenting the proadministration 665 •
viewpoint and requesting "that these men [Kirk and party] be 668
not allowed to do any more business pertaining to the tribe without 578
tribal authority."[74]

Jesse Kirk and his adherents did not participate in the "loyal" council. After the scene in Evans' office, Kirk and Jackson had consulted with Mills in Klamath Falls. In the company of the attorney they then returned to demand the petition. Evans refused, informing Mills that "no attorney had any right to interfere in tribal affairs without permission from the Interior Department." The three retired and with others of the faction drew up another petition which they forwarded to Washington.[75]

In his letter of transmittal to the firm of Dudley and Michener in the capital, who were in turn to present the matter to the Commissioner, Mills shed a new perspective upon matters. After reviewing some of the earlier developments, he turned to the [692]
investigations of Inspector Holland, which, as he said, [681]

> proceeded along smothly [sic] enough until the questions of money and property became the subject of inquiry when it developed that during the last four years a system of collecting money, stock, lumber and other property had been adopted; it seems that this was done by first having the "Indian" court (a sort of disciplinary tribunal which has been authorized or rather sanctioned by the department) impose a penalty or punishment and then allow the indian defendant to pay in cash or such other property as he might chance to have and notwithstanding that such court has no such authority to impose fine or collect money in that way. . . . During the time of the investigation some of the fines which had been collected one or two years were paid back to the defendants. . . . It is conclusive proof had there not been an illegal practice . . . no such returns would have been made. . . .

Although Holland had inquired into only one case, there had been several. Jesse Kirk had requested of George Loosley, chief of police, the list of fines imposed, but was denied it. Finally, Loosley consented to divulge the sum, amounting to $2,651 collected over a four-year period.

At the center of the case, claimed Mills, was Applegate, related through marriage to three brothers of the Loosley family. Two

*648

*657 of them, George and Fred, while employees of the Agency, had
• 665 purchased lumber, posts, and similar items from Indians to build
668 upon their 10,000-acre ranch.

578 The most serious malfeasance he charged, however was "the
[423] matter of leasing under the special permit system of unallotted
[427] tribal lands during the past three or four years." The usual system was for the Superintendent and George Loosley (who was also Agency stockman) to lease a district to an Indian, for example Abraham Charley or Harrison Brown, who in turn leased to whites at one dollar per head of cattle. "It is only those who have engaged in leasing the lands," Mills went on, "that have threatened violence if the petition was sent on to Washington. . . ." He suspected "a large discrepancy between the books of account and the amounts paid in for grazing upon the various districts of unallotted tribel [sic] lands as well as trespasses." During the past four years, less than $4,000 (and probably only $2,667) had been paid in, as against estimated returns of $10,000 from grazing alone.

The Indians therefore demanded the removal of Applegate and George Loosley, the election of officials, and an end to cattle trespass. They demanded more effective voice for the council in
[871] leasing and in disbursing Indian money. Finally, they noted other grievances in the treatment of sick school children and demanded that they be permitted to send their children to outside schools.[76]

The accuracy of these charges is secondary to the images of the truth they generated. It is of principal importance that Jesse Kirk was able to convince a large following that the charges were indeed correct. From the standpoint of his faction he then became a man deeply concerned with administrative abuses and striving to remove them by free elections. In that view, Applegate's obduracy drove Kirk reluctantly to more explicit detail until in the end he was forced openly to seek the Superintendent's removal.

In Washington, a new administration was in the saddle, and the new Commissioner was the reformer, F. E. Leupp. Even if Applegate were innocent, the embroilments under his administration would not have recommended his retention. In May, he vacated his office for Horace G. Wilson. Applegate had already received a temporary appointment as clerk at the Grande Ronde

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

Reservation, and within a year he was to return to Klamath as 648*
clerk for Indian employment. Evidently, the Bureau did not place 657*
much credence in the accusations.[77] 665 •

The "rebels" were jubilant, and the Commissioner found it 668
necessary to visit the reservation and issue a statement denying 578
that the Superintendent had been forced to resign. Though he "gave it good to Jesse," he did little to dampen his spirit.[78] Evans, writing to his former superior, detailed Kirk's efforts to assume a fuller leadership. He had informed the Indians that Superintendent Wilson had no right to go to Washington unless by their direction and with their instructions. Moreover, he was maintaining that "the man who was here was not the real Commr. but a just believe one. The real man would talk different to them he says."[79] His period of triumph, however, was brief, for in December, 1906, Jesse Kirk succumbed to typhoid.[80]

His death ended a critical phase of Klamath political development. When it closed, tribal political leaders had established the institution of the delegation that, bypassing the Bureau, dealt directly with congressional leaders in Washington. In matters requiring expert counsel, they relied upon attorneys retained by tribe or faction. Claims against the government, as political leaders found, were effective issues to attract adherents; and those who sought self-enhancement were ready to take advantage of them.

With the enlargement of sphere, the extension of operations to Washington, decisive action tended to be removed from the reservation to the capital. In the factionalism just reviewed, it is significant that there appears, perhaps for the first time, the spectacle of partisan councils, each excluding the opposition and each purporting to represent tribal opinion.

Saddened by the conflict, Knott C. Egbert wrote prophetic words from Siletz. "The Klamaths," he observed, "might be enormously wealthy if less turbulent, and had behaved. . . . After all though, notwithstanding it would make them paupers, it may be best for the govt. to buy them out and sell the surplus lands. They will sooner become rational." And he added, "One could well dread the sweating period through which the Klamaths must pass on the path to full citizenship, involving as it does the acquisition of money, the drinking of lots rum &c. . . ."[81]

[P.182 is blank]

crease of tribal business following allotment, the Bureau of Indian Affairs pressed for the formation of a supplementary executive body. At Klamath the need for such a body may have been underscored by the abuse of the common council in the partisan sessions called by the Kirk and Brown factions. Thus, 1908 saw the introduction of an executive body, called the tribal council, to function in addition to the occasional councils. Initially, it was made up of twelve men, six from each End of the reservation, and with communal representation: its membership included seven Klamath, three Modoc, and one each from the Pit River and Paiute. Since it proved difficult to maintain a quorum, the number was subsequently reduced to eight members. 648* 657* 646 [665] [563]

In 1927, the factionalism which had earlier brought into question the legitimacy of the common council now touched the tribal council; for in that year a dissident group elected a rival body and claimed that it had superseded the existing council. Their action placed in jeopardy the efficient administration of the tribal resources, and the Commissioner of Indian Affairs consequently insisted that matters be set upon a constitutional footing. After considering several tribal charters submitted to them as models, the Klamath in 1929 enacted their own constitution and by-laws for the executive body, now restyled the Business Committee. Its six members, three from each End, were to consider ". . . business matters pertaining to the Tribe. [Matters] of great importance to the Tribe and which the Business Committee believe should be referred to a general tribal council" might be so referred by a vote of five members of the Committee, with the consent of the Superintendent.[2] 648* 657* 646 665 [578] [642]

Once more, in 1950, envisaging a time when the tribal government would have full control over the common estate, a new constitution was enacted, this time for the General Council. By its terms, all powers were vested in that body, made up of all adult tribal members. In addition, an Executive Committee was designated, to be composed of the eight members—the number had again been increased—of the erstwhile Business Committee, together with the President and Secretary of the General Council. To this new committee, the General Council was authorized to delegate powers, although as matters turned out it did so only reluctantly and after long delay. In turn, by appropriate vote 648* 657* 642 646

While the political strength of a family is seen not only in the 648*
succession of interest but in a propensity for members of a family 657*
to vote *en bloc*, this is far from invariably true. The schism 619
separating Jesse Kirk from his half-brother, Joseph, is one promi- 602
nent instance—and by no means the only one—to the contrary. [665]
In fact, alignment within the family and extended kin has often [578]
been modified by contending considerations.

Nonetheless, for some leaders the solidarity of family some- 648*
times took precedence over impartiality in the discharge of office. 657*
One tribal council member is quoted as defending his action 661
favoring certain enrollments by the explanation ". . . that since 602
two children were his niece's children, he felt that it was his duty 619
to guard the interests of his minor relatives."[8] Political leaders, seeking to emphasize the purity of their motives, needed to go no further in justification than to declare that they sought only the welfare of their grandchildren.

Although intermarriage and alternative associations have long 648*
overlaid clear identification with the several peoples who had 657*
entered into the treaty, such affiliations have continued to exert 563
political force, however greatly diminished in recent years. In 621
turn, they related to the two broad communities on the reserva- 619
tion. The Lower End remained predominantly Klamath, while Modoc, Paiute, as well as a number of Klamath and Pit River, comprised the Upper End community some forty miles away.
Even after the closing of the subagency at Yainax, the populations [184]
of Sprague River and Beatty continued to reflect the special character of the eastern reservation.

In turn, the relatively easier access of the Lower End to out- [177]
side influences—a subject already reviewed in discussing modern tribal demography—superimposed the effects of differential acculturation and intermarriage upon the traditional subtribal
allegiances that distinguished the two Ends. Difficulty of travel 648*
along the road from the Agency to Yainax had given rise to the 657*
practice, long maintained, of holding separate councils at each 621
place. Thus at the two Ends there had developed political com- 665
munities responsive to their own local leaders. Harrison Brown, 619
in 1931, played upon a familiar theme when he recognized in Wade Crawford, a leader from the Lower End ". . . a young man who is not a full-blood, who is trying to stir up trouble, and we

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 want to set him aside, as he does not understand what we want.
*657 . . . I am one of the full-blood Klamath leaders," he continued,
621 "and I don't want any trouble with the government."[9]

• 665 In the factional struggle marking the final generation of tribal
619 government, Wade Crawford and his wife, Ida, drew their principal strength from the Lower End and the absentee membership; while many of the leaders opposing them, including Harrison Brown, Levi Walker, Boyd Jackson, and later Jesse Lee Kirk, hailed from the Upper End and found their major strength there. Despite exceptions and progressive weakening, the dichotomy was long a working reality, of which the loyalty of the Paiute to Boyd Jackson was only the most signal of many expressions.

A review of tribal minutes over the last half-century reveals a striking faithfulness in the voting of the most prominent adherents of those leaders. It seems clear that out of factionalism small but stable parties were beginning to emerge, to which, however, the large body of tribal members remained uncommitted. It was upon his immediate followers that a leader relied for support in raising funds or carrying a point to the undecided. At the same time, his image drew dimension from the character, as well as the number, of his adherents. That the personal image was still important, and that loyalties were not invoked in terms of issues alone, is seen by the personal denigration which took place between factional opponents and by the identification of each partisan group with its leader in the phrase, "He's a Crawford—or Jackson—man."

*648 The professional politician had come to dominate the ranks of
*657 leaders. It was not simply that industry in the management of
665 one's private affairs held less significance in a world made equal
619 by the flow of per capitas. The tasks confronting the new leaders also were different. It was no longer sufficient to provide aid out of one's pocket and offer sage advice in public gatherings. The new leader must be prepared to devote most of his time to political matters. He must concern himself with the administrative duties of the tribal office, to prolonged negotiation with Bureau personnel and with the officials and private individuals representing the interests of neighboring whites. On occasion, there were the delegations to Washington. Daily, there were the chores to be undertaken for constituents in the fence-mending that was

integral to the maintenance of power. Tribal leadership had be- 648*
come a full-time job, requiring its own set of special talents. The 657*
rewards offered were considerable, not only those of power and 665 •
prestige, but in per diem fees and in the funds advanced on 619
occasion by followers and—persistent rumor had it—by outside interests as well.

The rise of the new leaders did not entirely spell the eclipse of the old. Even in the last decade of tribal government, a senior [646] member of the executive was James Johnson, a wealthy stockman from the Lower End. Another man, Seldon Kirk, one of the three politically prominent sons of Jesse Kirk, worked as a carpenter for the Agency, and was therefore sometimes accused of being a pawn of the administration. He took up the guerdon from his brother, Clayton, and later came to exemplify a moderate position in his own right, even in the last, turbulent days of the Tribe. Until his retirement, he served as permanent chairman of the [646] General Council, then was succeeded by his brother, Jesse Lee. The example of Seldon Kirk in turn brought onto the political scene several younger men, like him occupying the middle ground, and concerned only peripherally with the party building activities of the professional politicians.

Tribal government thus developed along the intersection of an informal, particularistic political system and a counterposed, highly rationalized bureaucracy; and the emergence of the new leaders was merely one of the consequences. Within the frame so defined, the leaders were beset with the party-political[10] task of marshaling support for their programs. It was hazardous to trust alone to appeals to reason, for the issues were often complex and difficult to interpret for a wary electorate. Since the number of his devoted adherents was inadequate to carry the day, the practical politician had resort to a supplementary arsenal of tactical devices. It was at this level that political acculturation proved to have been most pervasive.

In he first instance, a leader might sometimes seek to mobilize support by playing upon a popular cause. Often this took the form of a defense against an outsider. A claim against the government, attacks upon the Bureau, particularly in the person of the Superintendent,[11] the repulse of intrusions upon the tribal domain by white commercial or sporting interests: these issues

*648 might be exploited instrumentally to broaden the base of appeal.
*657 Other devices entailed the manipulation of particularistic
• 665 loyalties. Politicians from the less populous and ethnically more
619 diverse Upper End endeavored to retain districting, whereby the members of the executive body were elected in equal numbers by each End; and they also sought to preserve communal representation, which ensured that each of the traditional subtribal groups, Pit River and Paiute, as well as Modoc and Klamath, would find a place in that body. These measures were opposed as a matter of course by Crawford, the Lower End leader; but it was he in turn who had been responsible for the election in 1927 in which only the Lower End took part, thus creating a second tribal council and precipitating the Bureau's demand for a tribal constitution.

*648 The tactics employed to control voting were diverse. In general
*657 elections, Jackson favored restriction of voting to polling places
665 located on the reservation, against attempts by his rival to secure
619 absentee balloting, a measure that would swell the response from
646 his off-reservation constituency. For General Council meetings,
666 Jackson sought to continue the practice of alternating their site between the Ends, and for those held at the Agency he provided stages at tribal expense to transport members from the Upper End.

Seating within the General Council was conventionally by faction, a device that provided an easy check upon voting regularity, although the chairs along the wall afforded a retreat for the less partisan. Jackson further favored a standing vote,[12] while Crawford, particularly while he was out of power, called instead for a secret ballot. Each side on occasion exercised the boycott to prevent the mustering of a quorum when the issue was likely to go against it,[13] and Crawford also resorted to the filibuster, under cover of which his forces might withdraw in order to attain the same end. Each also strove, when he no longer controlled the executive body, to route business instead through the General Council.

*648 In the recruitment of a following, leaders found many occasions
*657 to render personal services, appointing the faithful to tribal
665 positions, serving as advocate in their favor, sponsoring the enroll-
619 ment of their children as tribal members, or advancing them
661

money from the tribal fund set aside for the purpose. Interlocking 648*
memberships of the Executive Committee, the Enrollment 657*
Committee, and the Loan Board made those bodies the apex of 665 •
tribal power. If the first-named was the central body, and important 619
particularly in relations with agencies beyond the Tribe, the 661
other two were no less essential in the administration of patronage. [646]
[647]

The Tribal Loan Board had been established to preside over 648*
a fund set aside from the Yamsay Judgment of 1938, by which the 657*
issue of the Military Road had finally been settled. The fund had 619
been designed to provide capital advances for tribal members, 452
many of whom found bankers reluctant to lend to them. Although 647
loans were supposed to be applied only to improvements, it became common practice to spend them merely as an anticipation of the next per capita. When the Bureau called a halt to its operations in 1955, the Board had out on loan approximately a half-million dollars, or the equivalent of almost $250 per member, and a collector had to be engaged to recover a sizeable portion of it.[14]

The Enrollment Committee was the third seat of power. Ad- 648*
mission of one's children to tribal membership was eagerly 657*
sought, and not alone for reasons of sentiment. Once he was a 619
tribal member, a child was vested with a pro-rata share of the 647
undivided tribal estate, amounting at the time of termination to 434
some $43,500. In addition he qualified to receive the per capita dividends that, subject to Agency restriction, were commonly drawn upon to defray current family living expenses.

Despite—and sometimes because of—these tactical measures, 648*
by which partisan leaders strove to bind them, many tribal 657*
members were driven into abstention by the bitter contentions 646
that marked the final generation of tribal life. Although hundreds 619
flocked to the luncheon set out at tribal expense in the Council Hall for those attending the General Council, morning meetings failed so frequently to draw a quorum that they were discontinued; and even afternoon sessions sometimes could not muster one hundred adults from among the thronging diners to transact tribal business. When they did come, they were often in holiday mood, frequently interrupting speakers, and exhibiting a keen appreciation for lengthy, eloquent, and often irrelevant harangues

*648 *657 619 tial in controlling Bureau programs and appropriations, tribal delegations formed an instrument of power the mere awareness of which undoubtedly tempered ordinary intercourse between Bureau and Tribe.

*648 *657 619 • 665 In turn, the knowledge that the final decisions were made in distant Washington endowed local politics with an aspect remote from reality. Congressmen, mindful of the right of the citizen to be heard, began to be treated to the spectacle of official delegates comprising members of both factions, who argued among themselves before committee hearings, each claiming to represent the position of "the Klamath people." If a tribal politician was defeated for a place on the delegation, he had only to raise funds from supporters in order to make his way to the capital. Enlisting the aid of long-time legislative allies, he would then secure a hearing every whit as attentive as that accorded the official representatives of the Tribe. In the words of Wade Crawford, uttered after a local defeat in 1947:

> I can be outvoted, that doesn't mean one thing to me. . . . There are 400 Congressmen and 96 Senators, and I'm going to talk to each man that will give me five minutes. People ought to understand who Congress is. Anybody can go. You don't have to be an official delegate, you can go as an individual."

*648 *657 619 421 Since Washington had become the seat of decision, local consensus was rendered largely superfluous, and tribal affairs descended to a level of wrangling and petty maneuver. Nonetheless, major issues were being debated, concerned with no less a subject than the disposal of the tribal estate and the consequent transformation of the Tribe itself. Because Bureau administration was prominently involved in the handling of tribal or personal property, any attempt to secure release from federal trusteeship was customarily addressed first to the freeing of tribal resources. In 1900, the Board of Indian Commissioners, hailing the changes anticipated from allotment, had called for the pro rata apportionment among members of any undivided tribal funds, the retention of which, they contended, merely served to perpetuate the Indian problem. They continued:

> A law of this character would enable us all to see some reasonable limit of time to special Indian laws and special Indian administration. It would put an end to the expectation of per-

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 pro rata apportionment of the tribal assets. Toward this end, he
*657 turned increasingly for support toward the absentee membership.

423 Thus it was that in 1945, returned to Washington as a delegate,
619 Crawford sought passage of a bill that combined some of the
*648 aims of the final settlement proposals with federal purchase of
*657 the tribal tracts, which would then be established as national
423 forests, and with the liquidation of other properties. This met
619 opposition from the dominant tribal party, by this time under the
• 665 leadership of Boyd Jackson, Dice Crain, and Jesse Lee Kirk. In successive versions, the proposed legislation was the subject of hearings conducted both in Washington and on the reservation. As an outcome of suggestions made then, Supt. Bert. G. Courtright prepared a trial bill permitting voluntary withdrawal of competent members, each of whom was to be paid a portion of his share in the tribal estate. A shift of political winds now swept Crawford, who became the chief proponent of this bill, back into political ascendancy.

*648 At this juncture, Seldon Kirk, the respected chairman of the
*657 General Council, intervened to secure establishment of an extra-
642 ordinary special committee of those "who believe in the per-
619 petuation of the Klamath Reservation." Among the eight members, in addition to Kirk himself, were Jackson and several of his adherents. The committee drew up a new constitution for the Tribe, designed to provide a structure satisfactory for self-government over a proposed transition of two decades. It was adopted in 1950, but only after being linked with the voluntary withdrawal bill; and thus for a time both parties rested satisfied.
*648 From a long-range view, it is noteworthy that Crawford had
*657 turned from a plan for an enduring tribal cooperative to one
619 directed to the piecemeal withdrawal of members who wished to sever tribal connections. In their turn, the former advocates of final settlement had become the champions for the preservation of the tribal body.

Further attempts by Crawford to amend the voluntary withdrawal bill and other circumstances delayed action on it until 1953, by which time the government had embarked upon a program seeking to terminate federal supervision over a number of Indian reservations. Chief among them was that at Klamath, for which terms were proposed similar to those outlined for the

timber-rich Menominee.[21] Crawford and Jackson, examining the 648*
federal proposal, which envisaged a private corporation, jointly 657*
concluded that such an arrangement would be uneconomic for 619
the Tribe under Oregon law, and in its place advocated a tribal
cooperative. This harmony between factional leaders seemed [665] •
highly suspect to tribesmen long attuned to discord; and they
rejected the proposal.

Eager for a resolution, congressional forces now brought pres- 648*
sure upon the Bureau, which produced another draft of the 657*
proposal and, under similar pressure,[22] the factional leaders were 619
brought to a compromise in the final hours of the 1954 session. 423
Enacted as Public Law 587, the legislation provided that mem- 665
bers might elect either to withdraw, receiving their pro rata share of tribal property, or remain in a surviving economic entity. Thereafter, as it became apparent that the unanticipated size of the withdrawing body was likely to remove large tracts of timber from sustained-yield management, thus plunging the Klamath Basin into a cycle of "boom and bust," various bodies, both public and private, began tardily to intervene. Since the legislation had favored their position, the Crawford forces adamantly opposed any changes whatsoever, while Jackson and Jesse Lee Kirk were equally zealous in endorsing any amendment that promised to better the position of the remaining members.

In the latter days of the termination program, as they approached the election that was to mark the personal decision to withdraw or remain, there emerged among tribal members a new coalition of moderates, seeking a position independent of the factions. The Klamath Information and Education Office, established by the State Department of Education under the Termination Act, had encouraged tribal members to come together to explore together the issues posed by the Act, so that they might cast their votes more intelligently. The Reservation Discussion Group that resulted included in its membership individuals who had long held aloof from the partisan struggle, together with younger moderates holding secondary tribal posts. The coalition now entered the lists and, in one of the last formal elections held by the General Council, scored impressive gains. They lacked a clear-cut program, however, and soon after their victory their group was sundered. Within the remaining members, however,

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 members of the Discussion Group remained influential. More
*657 significantly, perhaps, for the long run, they began to employ
619 their newfound unity in fund-raising enterprises in Chiloquin,
423 and thus took an initial step in creating a new civic image for
• 665 the Klamath.

*648 When the vote was held, over seventy per cent of the tribal
*657 membership elected to withdraw, the government purchasing
619 their land and creating from it the Winema National Forest. Of
666 the other voters, the majority did not directly elect to enter into
423 the trust under which the U.S. National Bank has since been
managing their joint resources. In this last decisive moment, they returned no ballot at all, and thus were automatically included among the remaining members. The outcome of the vote was in part an expression of confidence among the Klamath in their ability to handle their own affairs, in a measure a rejection of any continued trust status, colored with the anticipation of realizing a large sum—approximately $43,500 per person. However, so complex were the issues and so heavily were they beclouded at the time of voting by contending claims and interpretations, that it is doubtful whether many members could in fact specify all the considerations which guided their final decision.

668 In the period since the enactment of termination in 1954, the Klamath became increasingly receptive toward inclusion within the broader rubric of what Mead has termed "American Indian nationality," and have begun to participate in pan-Indian affairs.[23] Membership in the National Congress of American Indians, participation in American Indian Days at Sheridan, Wyoming,[24] sponsorship of the All-Indian Invitational Basketball Tournament in Chiloquin and of an American Indian Beauty contest held in conjunction with it: these were only some of the more concrete manifestations. Although pan-Indianism has been growing, the receptivity on the part of the Klamath seems keyed to their needs in the crisis that confronted them. Threatened with the loss of the tribal body that had symbolized their collective heritage, they repaired to others which enabled them to preserve their identity. Those who would see the termination vote as an election by the majority of tribal members to become completely assimilated into the larger society must reckon in the significance of this neonativist movement.

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are ex- 621
clusively White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office out- [575]
side the tribal structure, and although a high percentage have registered, very [794]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are fre- [651]
quently tax exempt, as have been their per capita payments. Simultaneously,
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chilo- [674]
quin during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a recon- 648
stituted "Klamath Tribe," with a corporate structure and assets to be adminis- 657
tered by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal super-
vision has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual 619
Klamath have shown an equally noncommittal relationship to tribal affairs. Atten-
dance at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

> *657 *648 622 top rail of a fence, facing the redskins assembled in the meadow before him, flanked by a group of young and energetic Indians who were his sworn friends and allies, he dispensed summary justice to the most notorious recent offender. . . . He then proceded [sic] to explain, through a Klamath interpreter, that the old chief, though entitled to all honor and respect for his years of valuable service, had ceased to be an effective officer and should be replaced by a younger and more active man. The new day had arrived, he said, when the Indians were adopting the white man's ways of life, and chief among these was the white man's law, which demanded that justice should be done and order maintained without fear or favor, and which provided for such justice and order by the election of officers who were chosen for their capabilities in performing these duties. He suggested that another meeting be held a week later for the nomination of candidates for head chief of the whole reservation—not only of the Klamaths who owed allegiance to La-Lakes, but also of the Modocs, Paiutes, and Pit Rivers who made their homes on the reservation. The old chief was naturally crestfallen at this procedure, and his relatives and friends grieved, but there seems to have been no attempt at open rebellion against the dicta of the young white leader. . . . Throughout the whole campaign, however, the feeling of personal loyalty to the old sachem was the greatest obstacle to be overcome."[13]

*657 *648 622 643 •666 The election that followed pitted Henry Blow, "a prominent sub-chief under La-Lakes, a man of the finest personal and executive qualities," with support from both Lower End Klamath and the Modoc,[14] against Allen David, "a tall handsome, and popular young brave from the upper country,[15] progressive, well versed in the ways of the white man, from travel among the Willamette settlements," backed not only by Lower End Klamath but by the Upland band and the Paiute as well. Charley Preston was a third nominee, "a man popular on account of his personal qualities and admired for his ability in various industries acquired by residence among the whites, but not possessing the prestige of a sub-chief." Young Applegate seems also to have been proposed, but declined. "There were many at this meeting who deplored the whole procedure in view of their allegiance to the old chief. . . ." At the election which followed, Allen David was elected by a plurality of five.[16] Thus a panreservation polity was established, to which tribal distinctions thereafter were subordinated.

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 those Indians who were "ready, competent and willing" to re-
*657 ceive lands in severalty, to report such opposition as might be
423 raised, "and . . . endeavor to overcome it by pointing out the advantages of individual ownership."[3]

A month later Emery reported on a council that he had called,
[622] at which he and Captain Carpenter had explained the law. "The
• [666] Indians," he continued, "were then permitted to council among themselves for an hour, when, by the request of the Chiefs and leading men, they were again called together, and requested to be given the privilege to vote—which was given—nearly all present voting in affirmative. The number present was estimated at 600." Later he held another council at Yainax "at which were over 200 Indians, nearly all of whom received favorably the proposition of the Government." At another passage he noted, "no leading Indian opposes the measure."[4] Over 800 names were enrolled for allotment, out of a total of 933.

By the provisions of the act as amended in 1891, each enrolled
[311] member was to receive a single allotment, comprising one-eighth of a section (80 acres) of farming land or double the amount of grazing land. Emery termed the Klamath a grazing reservation with a proportion of agricultural to pastoral lands of one to twenty-five; and accordingly requested that double allotments be issued and that all eligible members take turns at selecting the first allotment, repeating by rotation on the second tract. "This," he observed, " will distribute the good land *more equally* among the Indians." Matthews, terming the mountainous portions of the reservation worthless, advocated that after allotment these acres be held in common by the tribe.[5]

The actual allotment of land was delayed several years, pending settlement of a controversy over the external boundaries of the reservation and of the overlapping claims of the California and Oregon Land Company, successor to the Military Road tracts. The Indians grew somewhat restive under the delay, and Matthews found it necessary to warn that "should the Indians be persuaded to give up their surplus lands before they have made improvements upon their allotments I fear there would be much dissatisfaction among them."[6] Only in 1895 did Maj. Charles E. Worden, assisted by Jesse Kirk as interpreter, launch

*648

668

with the attorneys. There were some, who nonetheless wanted to submit a petition setting forth their views.[47]

If all who signed the agreement after Jesse Kirk were his adherents, he could count on 121 men against 70 for the proadministration faction.

Domestic issues added weight to discontent. Soon after taking office, Oliver Applegate had set up road districts, each presided over by the policeman within it, and had permitted the police to settle minor differences within their several districts.[48] He had, moreover, apparently reversed the policy of Emery, who had permitted the Indians to elect both police and judges for the reservation. Early in 1900, a group of Klamath, apparently led by Jesse Kirk, became insistent that elections be reinstituted. Applegate was reluctant to accede, since he "felt that an Agents selection of his military force and administrators of justice should not be trammeled by selections which might be the result more of 'political' management than of the honest opinions of the majority." However, he agreed to ask for an opinion from the Commissioner.[49]

Gen. A. C. Hawley was sent to consider the issue, and conducted his investigation largely during Jesse Kirk's absence in Washington. At the end of his tour, Hawley strongly supported the position entertained by Applegate, who observed:

> . . . if at any time this electoral system should become in order, in the selection of the agent's personal assistants and executive force, the time had not yet arrived to put this privilege in the hands of the people. It would increase rather than limit the number of tribal and family feuds and keep alive the numerous personal jealousies which we are endeavoring to stamp out.[50]

The matter, however, was far from settled. Early in 1902, on the eve of Jesse Kirk's departure for Washington to secure ratification of the revised McLaughlin agreement, a petition was prepared by his faction requesting the privilege of being allowed to elect the mooted officers, subject to approval of the U.S. Indian Agent. This document bore 120 signatures, and is in line with estimates of the strength of this faction. The covering letter, by Jesse Kirk, urged in behalf of the Klamath that

> they desire to take steps forward and prepare themselves in citizenship for the years to come, and encourage them into civili-

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[366] •

He cited the industry of the Klamath, claiming that they were self-sustaining through such enterprises as stock raising and laboring. The concession of a safeguard in elections may have been his, for he stressed that election of officers must be confirmed not only by the Agent but by the Secretary of the Interior. The Commissioner simply forwarded the documents to Applegate,[51] who, as if to point up the grievances, had just named three new judges.[52]

The actions of the Agent—now retitled Superintendent—in the investigation of the death of one George Modoc brought into the fray that educated gadfly, Charles S. Hood. A Carlisle graduate and leader of the returned Modoc, Hood took an interest in the case when Grant Smith, a fellow tribesman, was held on suspicion of having had a hand in the death. Some four months later, Hood wrote Applegate urging that Smith be released to look after his family and stock, with the understanding that Smith would come back to stand trial. Apparently rebuffed, Hood then wrote to the U.S. Attorney in Portland, who sternly demanded of Applegate, "Will you please inform me by what process or authority he is confined in jail, and whether or not in your judgment if [he] is liberated he will run away." Stung, the Superintendent denied that statement and claimed that Smith had been on parole most of the time so that he could look after his affairs.[53] The attacks upon him seem to have driven Applegate toward a more extreme position, as reflected in his recourse for local cases to police courts instead of the less subordinate Court of Indian Offenses.[54]

In 1904, the pace quickened. Through the early part of the year, Knott C. Egbert found Henry Jackson ungovernable. In April, Jesse Kirk, once more in Washington, directed a letter to Commissioner Jones. It was transmitted by Oregon's Senators Mitchell and Fulton and Representative Williamson, with these words:

> We have every confidence in Mr. Kirk, and we are sure he would made no recommendations that he did not feel were fully justified, and we are also aware of the fact that the Indians of

> *648 the Agency, in the main, have implicit confidence in him, or
> *657 they would not send him here each year as their agent to look
> 665 after their interests."[55]

668 In his letter, Kirk once more called for elections, stating, "The
578 present manner of selection does not result in securing the ser-
• [666] vices of the best men. . . ." He was instructed, he said, to suggest
and request that an election be held on the fifth of July when the tribe in council might make its selection, and further proposed

> that you instruct your Superintendent to be guided by such selection in the appointment of persons to fill these offices; these appointments by the Superintendent, of course, to be ratified and approved by you. This in order that, should our selection be ignored by the Superintendent, we may have the opportunity of being heard by you."[56]

This bold typescript letter, its flowing style so unlike Jesse Kirk's, bears every earmark of expert assistance. The source of that aid, either legal or legislative, is suggested by the circumstance that the next letter, to Applegate, was forwarded by the congressional trio with a covering letter dated the same day. The Kirk epistle set forth the same demands for an election, but did not mention an appeal to the Commissioner. In their covering letter, Mitchell and his colleagues observed, "Mr. Kirk seems to be very strongly of the opinion that the plans suggested in this communication should be adopted," and they urged that Applegate give it "very careful consideration."[57]

On his return, Jesse Kirk set about a direct assult upon the Superintendent. First came a letter from the "Delegate and Agent of the Klamath, Modoc, and Yahooskin band of Snake Indians" to the Commissioner, charging that livestock were permitted to trespass upon the reservation and that O. C. Applegate and his stockman and chief of police, George W. Loosley, "systematically" ignored and suppressed complaints on the subject. Loosley, it was charged, continually evaded his duty and "loiters indolently his time away at the agency. . . ." Jesse Kirk, for his part, wanted no white cattle at all upon the reservation. This letter, together with that written earlier to the commissioner on the elections, was buttressed by two petitions circulated together, bearing 184 and 183 signatures, each certified by nine men, Jesse

*648
*657 Although tribal members in Chiloquin lagged little behind their
621 white neighbors in registering to vote (1958), their concern was
563 less with local than with national issues.[8]

641 A second aspect of Indian citizenship was the support of local
619 government through payment of taxes. Since all property held
• 666 in trust or restricted status by the government, together with
*648 income derived from such property, was exempt from taxation,
*657 many tribal members occupied an unusual position among their
641 fellow citizens. The effect was particularly felt by the county and
651 local communities, which were heavily dependent upon property
taxes. For years, Klamath County sought to secure funds from the government to compensate it for the trust lands within its boundaries, which were served by county roads, sheriffs, courts, and schools. Johnson-O'Malley funds finally provided money in lieu of taxes to support the schools; to these the Klamath Tribe on occasion added funds for special purposes, but the other causes were unavailing.

In Chiloquin, officials resented the action of one Superintendent, who advised tribal residents that any property bought within the city with funds in trust or restricted status might be restored to corresponding status, even though it had been owned in fee simple when purchased. Such house lots were thus removed from the tax rolls and, although benefited by sewers and other municipal improvements, could not be levied for their support. It was not commonly recognized by white citizens of
[563] Chiloquin that a number of tribal members paid taxes regularly upon property held in fee simple and that a multitude of indirect taxes fell as heavily upon tribal consumers as upon their fellow citizens. Rather, the image was that of a people exempt from financial responsibility toward the support of local institutions from which they benefited. Though a distortion, like many other parts of the stereotype, this evaluation nonetheless contained a substantial kernel of truth.

If truth be told, the citizens of Chiloquin were no more disposed to pay taxes than American citizens anywhere, and indeed they were somewhat less inclined to do so than those elsewhere in Oregon. In 1951-52, the millage rates of Chiloquin were by far the lowest among the organized communities of Klamath

[Klamath Reservation]

In turn, by appropriate vote
*648 within ninety days, the General Council might—and on occasion
*657 did—reverse the action of its Executive Committee. Finally, by a
642 petition of at least one-fourth of the eligible voters, an action of
646 the General Council might be submitted to a referendum of tribal
• [666] members.[3]

In the succession of tribal bodies, the interest of the government was not solely the convenience of securing formal sanction in property matters concerning the common interest of enrolled [182] members. The tribal government was to provide as well a regular channel by which the government might assess tribal opinion, consult with leaders, and announce programs; and it was to furnish tribal members with experience in responsible citizenship. Through this instrument, a representative body was to be articulated with Bureau administration, its decisions being rendered concrete in official minutes and subjected to review by higher administrative echelons.

Tribal rule is municipal in character, as seen in the restricted scope of its powers.[4] The narrow administrative domain with which the Klamath executive dealt is suggested by the names of the permanent adjuncts of the Executive Committee, the Tribal Loan Board and the Enrollment Committee. In 1947, some fifteen tribal members and one other were employed in General Council and Loan Board activities. By contrast, the Superintendent employed 123 persons, including 31 tribal members and 40 Indians from other groups, in the administration of agency, health, extension, law and order, roads, forestry and grazing, and irrigation.[5] Over these areas the Executive Committee might exercise a veto by cutting from the proposed Agency budget tribal funds allocated to an unwanted item. In this way, the hospital, bull pool, and tribal herd have occasionally been threatened. Ordinarily, however, the Executive Committee took no positive action in the development of a budget. Understandably, Klamath efforts to appoint a tribal member to serve as watchdog over Agency administration were not kindly received.

[693] In the formulation of general policy, the executive drew upon the advice of the tribal attorney, as well as upon unofficial counsel, both sought and volunteered. All major policy decisions required approval by the General Council and were subject to review within the Bureau of Indian Affairs and the Department

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 might be exploited instrumentally to broaden the base of appeal.
*657 Other devices entailed the manipulation of particularistic
665 loyalties. Politicians from the less populous and ethnically more
619 diverse Upper End endeavored to retain districting, whereby
the members of the executive body were elected in equal numbers by each End; and they also sought to preserve communal representation, which ensured that each of the traditional subtribal groups, Pit River and Paiute, as well as Modoc and Klamath, would find a place in that body. These measures were opposed as a matter of course by Crawford, the Lower End leader; but it was he in turn who had been responsible for the election in 1927 in which only the Lower End took part, thus creating a second tribal council and precipitating the Bureau's demand for a tribal constitution.

*648 The tactics employed to control voting were diverse. In general
*657 elections, Jackson favored restriction of voting to polling places
665 located on the reservation, against attempts by his rival to secure
619 absentee balloting, a measure that would swell the response from
646 his off-reservation constituency. For General Council meetings,
• 666 Jackson sought to continue the practice of alternating their site
between the Ends, and for those held at the Agency he provided stages at tribal expense to transport members from the Upper End.

Seating within the General Council was conventionally by faction, a device that provided an easy check upon voting regularity, although the chairs along the wall afforded a retreat for the less partisan. Jackson further favored a standing vote,[12] while Crawford, particularly while he was out of power, called instead for a secret ballot. Each side on occasion exercised the boycott to prevent the mustering of a quorum when the issue was likely to go against it,[13] and Crawford also resorted to the filibuster, under cover of which his forces might withdraw in order to attain the same end. Each also strove, when he no longer controlled the executive body, to route business instead through the General Council.

*648 In the recruitment of a following, leaders found many occasions
*657 to render personal services, appointing the faithful to tribal
665 positions, serving as advocate in their favor, sponsoring the enroll-
619 ment of their children as tribal members, or advancing them
661

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 *657 646 619 in the Klamath language.[15] In this setting, the chairman and principal leaders sought with great difficulty to operate under Robert's Rules of Order. Council minutes record numerous instances in which many of those present cast no vote.

In this, as in other political contexts, the observer could sense what some members admitted readily: a reluctance to commit themselves to decisions that might lead to dangerous consequences on either side. As in their dealings with the Agency, individuals accepted as a right what those controlling the executive had to offer, and declined to be bound thereby. Factional charge and innuendo had so sapped confidence in the Klamath leadership that interviews conducted in the course of termination revealed that all but one of the respondents (118 in all) favored a management plan administered by unknown trustees over an organization headed by their own members.[16]

It was not, however, factionalism alone that was at the root [178] of the uncertainty. The long dependence of individuals upon per capitas, and the corresponding lack of experience in pursuing a livelihood, understandably enough made many wary of any change that might threaten the economic niche in which they dwelt. Moreover, on many of the more complex issues involving property their very lack of experience made them easily swayed • [666] by irrelevancies. Not infrequently, Seldon Kirk, when presiding over a vote of the General Council, would query, "I wonder how many of you know what you were voting for?"—and, calling for a reballoting, would see the issue solidly reversed.

*648 *657 619 If they were uncertain in the exercise of their power, tribal members nonetheless felt a strong need to display it. Real and fancied acts of coercion had left a legacy of alienation, to which the impersonal bureaucratic operation of the Agency only added. In a span during which tribal membership had done little more than double, the Agency staff had swelled from an early 5 members to an ultimate figure of 139, some twenty-five times as great. With expansion, the Agency program had become compartmentalized, each division taking on a life of its own and growing endlessly ramified. Bureaucratization, together with the frequent turnover in the upper echelons of administration, led to increasing impersonalization of relations. Subtly, the training of Klamath

*648 members of the Discussion Group remained influential. More
*657 significantly, perhaps, for the long run, they began to employ
619 their newfound unity in fund-raising enterprises in Chiloquin,
423 and thus took an initial step in creating a new civic image for
665 the Klamath.

*648 When the vote was held, over seventy per cent of the tribal
*657 membership elected to withdraw, the government purchasing
619 their land and creating from it the Winema National Forest. Of
• 666 the other voters, the majority did not directly elect to enter into
423 the trust under which the U.S. National Bank has since been managing their joint resources. In this last decisive moment, they returned no ballot at all, and thus were automatically included among the remaining members. The outcome of the vote was in part an expression of confidence among the Klamath in their ability to handle their own affairs, in a measure a rejection of any continued trust status, colored with the anticipation of realizing a large sum—approximately $43,500 per person. However, so complex were the issues and so heavily were they beclouded at the time of voting by contending claims and interpretations, that it is doubtful whether many members could in fact specify all the considerations which guided their final decision.

668 In the period since the enactment of termination in 1954, the Klamath became increasingly receptive toward inclusion within the broader rubric of what Mead has termed "American Indian nationality," and have begun to participate in pan-Indian affairs.[23] Membership in the National Congress of American Indians, participation in American Indian Days at Sheridan, Wyoming,[24] sponsorship of the All-Indian Invitational Basketball Tournament in Chiloquin and of an American Indian Beauty contest held in conjunction with it: these were only some of the more concrete manifestations. Although pan-Indianism has been growing, the receptivity on the part of the Klamath seems keyed to their needs in the crisis that confronted them. Threatened with the loss of the tribal body that had symbolized their collective heritage, they repaired to others which enabled them to preserve their identity. Those who would see the termination vote as an election by the majority of tribal members to become completely assimilated into the larger society must reckon in the significance of this neonativist movement.

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are exclusively 621
White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office outside [575]
the tribal structure, and although a high percentage have registered, very [794]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are frequently [651]
tax exempt, as have been their per capita payments. Simultaneously,
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chiloquin [674]
during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a reconstituted 648
"Klamath Tribe," with a corporate structure and assets to be administered 657
by a trustee, or they had the choice of withdrawing and of receiving a
pro rata share of tribal assets. In a later election, about 77 percent of the 619
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal supervision
has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual
Klamath have shown an equally noncommittal relationship to tribal affairs. Attendance 619
at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions
and more temporary "shack-jobs." Probably one-third of all Klamath women have [588]

> *657 She worked all night once, and I thought there must be some-
> *648 thing to it. But her power got small. You know what the Chris-
> 756 tians say, "Backslide," not working strong enough. She said, "My
> 177 help is getting small."[12]

178 Alec Wilson was a shaman, one of perhaps three in the lower Williamson River area. After the Agency had outlawed shamanistic curing, he gave up his practice. Later, his child fell ill. His wife railed at him, "You call yourself an Indian doctor! Why don't you do something? Can't you see your own child is dying?" Helplessly, he explained, "My tricks [i.e. powers] are all gone, have left me; I can't do nothing without my tricks."

Though prohibited, shamanistic activities continued into recent times. In 1897, Emery dealt severely with two instances of curing at Paiute Camp, awarding a month at hard labor each to Doctor Sam and Tom Godowa for attempting a shamanistic cure of the latter's daughter and a week in jail to Tom Chocktoot, headman of the Paiute, for a similar effort on behalf of Pete Pauline's daughter. Chocktoot had also to return the sack of flour
K and blanket he had received as his fee.[13] A number of adults who
[838] were products of the boarding school recall the transvestite shaman, White Cindy. One man was cured by him in the early 1890's;[14] and a woman who fell ill through dreaming of him underwent the required shamanistic cure, although she was a Methodist. Henry Jackson is said to have retained shamans to perform cures at his house, and he is widely suspected to have hired the assassin of the Modoc shaman, Doctor George, in 1899,
K on the suspicion that he had encompassed the death of his sons.[15]

*648 While the campaign against the shamans was proceeding,
*657 other events had taken place. In 1871, a Paiute had introduced
756 • 668 upon the Upper End (Yainax) the nativistic Ghost Dance reli-
177 gion; and Doctor George, at that time not yet a shaman, had
M 648 brought it to the Tule Lake Modoc. There it was taken up by the
657 Modoc shaman, Curley-haired Doctor, and played an ideological
756 role during the Modoc War. A Klamath commoner named
668 O'Toole brought the religion to the Lower End, at the Lakes,
177 where a dance was organized by Allen David (then head chief), Lobert, a headman and shaman, O'Toole, and Frank Chilks, another commoner. No Agency employees among the Indians participated.

648*

After the end of the Modoc War, a second movement, the 657*
Earthlodge Cult, was brought to the reservation by two Pit River 668 •
Indians, Henry Jackson and Pit River Charley, who had learned 177
about it while visiting relatives in northern California. Shortly 178
after this cult was introduced, a delegation of Klamath and Modoc from both Ends of the reservation visited Falls City, California, and Fort Crook to witness dances and seek the "message." Gradually, the Earthlodge Cult passed into a second phase, known as the Dream Dance. At the Upper End, the leaders were again Doctor George and Monchnkasgitk, while at the Lower they included Allen David, Jason Howard, a commoner, Chanchan, a shaman from Pelican Bay, O'Toole, and Lobert. The Paiute abstained from both the earlier and the later phases of this cult. The movement effectively stopped about 1878 with the building of the Methodist Church.

Nash, whose account has been followed here, has set forth the ritual and the theological content of each movement and has convincingly analyzed the social tensions and individual [illegible]ves, so far as they can be recovered, that gave significance [illegible] the movements. The Ghost Dance was given antiwhite con[illegible]
the Tule Lake Modoc, but not by the other groups. The Earth- [184]
lodge Cult, on the other hand, was strongly antiwhite at the Upper End, but not at the Agency. Around this time the Indians were becoming alarmed by reports that they were going to be exterminated by the troops and agitated by the boundary line and military road disputes, which especially affected the Upper End. Such fears may have contributed to the growth and local character of the Earthlodge Cult.

Viewed together, these movements constituted a progressive accommodation to the Klamath scene. As Nash characterizes it:

> The Ghost Dance represented a sharp break with Modoc and Klamath ritual tradition. The Earthlodge Cult was more in accord with this tradition, and the Dream Dance was still more consonant with it, and in the course of its development became
> incorporated into it. At the same time the aboriginal distinction [756]
> between the ritual experience of shamans and the ritual experience of nonshamans was broken down. Participants in the Dream Dance, particularly the strong dreamers, began acting like shamans; and shamans who participated in the Dream Dance acted more like ordinary men. . . . As the Dream Dance grew older, the traditional gap between shamans and non-

*648
*657

•668
177
178
756

shamans widened again as ordinary people ceased dreaming, and shamans incorporated Dream Dance symbols and practices into their rituals.[16]

*648
*657
799

While these nativistic movements were going on, the first steps were being taken to provide Christian training to replace the native faith which was being discredited. In 1872, Thomas Pearne, an educated Indian from the Yakima reservation, had been appointed interpreter. During that year, until his resignation to return to Washington Territory in the following spring, he carried on missionary work among the Klamath, bringing [622] thirty-six into the church. Among them was Lileks, who at his death three years later was numbered among the "Praying Indians."[17]

The following year, the Reverend James Harer was appointed Commissary at Yainax, where for a brief period he preached at religious meetings which were well attended.[18] By 1876, the Agent at the Lower End and the farmer at Yainax still were holding forth. Employees had volunteered to advance half the salary for a missionary if the Methodist Missionary Society would match the amount; but nothing came of it.[19] Roork, the following year, took a number of the principal men and women, along with some scholars from the Indian School, to the annual conference of the Methodist Episcopal Church in Salem, probably in another appeal for a missionary.[20]

The flavor of those early meetings is preserved in one of the letters to Dave Hill, dictated in 1875 by Allen David.

> After we had had our talk at the Agency I sent word for all the people to come to my house to talk about these things, and see who would agree to listen to what Dave, Tecumseh and I had said, and who would get our hearts and who would not. I told them to come on Sunday the Lord's day and we would all the same as mammook [make, hold] church, we would make good hearts and the Lord would mammook close nanish [take good care of] us on his day. So some Yainax Inds.—Brown Mosenkosket and some Modocs, some Lake Inds., some Chiloquin's people and some of all the Inds. came. Chikaskane first spoke and said that at first he had a bad heart. That the chiefs first listened to the Agents and got their hearts and then tried to get the other Inds. to get the same hearts; that they had put him in the guard house which was right, and Mr. Dyar was also right for he was in the wrong and all the same as said to the Chiefs

of the McLaughlin agreement, praising the Inspector as "a man 648*
that got heart in him for a Poor Indian People."[46] Toward the 657*
end of his visit, the envoy was stricken with appendicitis, and his 578
half-brother and political foe, Joseph Kirk, rushed to his bedside 665
and remained to bring him home.

New contacts, both with officials and attorneys and possibly 648*
with the delegates from other tribes, must greatly have enlarged 657*
the horizon for men like Jesse Kirk. Indeed, James McLaughlin, 578
returned to the reservation to execute a new agreement with the 665
Tribe rectifying a mistake in the boundary surveys used, soon 423
found the new mettle in the man. The revised draft, he reported,
was

> duly executed by more than the necessary number of Indians belonging to the Agency, but not without having to overcome strong opposition, evidently prearranged and determinedly led by the most influential Indian of the reservation, Reverend Jesse Kirk, who demanded that the clause providing for irrigation of their lands be stricken out, also the clause for the payment of the legal fees of attorneys having duly approved contracts. I, however, remained firm and would not concede any modification or change of a single word, letter or punctuation mark in the agreement as prepared by the Commissioner of Indian Affairs, and it was thus concluded by a large majority of the Indians signing the agreement. When Rev. Jesse Kirk found that I was going to succeed in obtaining the required number of signatures he, together with his followers, finally came forward and signed the agreement—and he also signed as one of the two Interpreters.
>
> The opposition of said Rev. Jesse Kirk, was influenced by the fact that he visited Washington last winter, remaining there some months, during which time he learned that large appropriations were being made by Congress for general irrigation purposes on Indian reservations, and that the Klamath could have from such appropriations all the money necessary for irrigating their lands without providing for such in this agreement, and as the contract with their attorneys was for a period of eight years, and expires on July 21, 1901, he captiously desired to exclude the clause protecting them.

Jesse Kirk, so McLaughlin learned, had been informed in 648*
Washington that the Indians need not employ attorneys, since the 657*
case was sure to be decided in their favor. Many Indians, how- 578
ever, did not agree with his view and desired to keep good faith 665

with the attorneys. There were some, who nonetheless wanted to submit a petition setting forth their views.[47]

If all who signed the agreement after Jesse Kirk were his adherents, he could count on 121 men against 70 for the proadministration faction.

Domestic issues added weight to discontent. Soon after taking office, Oliver Applegate had set up road districts, each presided over by the policeman within it, and had permitted the police to settle minor differences within their several districts.[48] He had, moreover, apparently reversed the policy of Emery, who had permitted the Indians to elect both police and judges for the reservation. Early in 1900, a group of Klamath, apparently led by Jesse Kirk, became insistent that elections be reinstituted. Applegate was reluctant to accede, since he "felt that an Agents selection of his military force and administrators of justice should not be trammeled by selections which might be the result more of 'political' management than of the honest opinions of the majority." However, he agreed to ask for an opinion from the Commissioner.[49]

Gen. A. C. Hawley was sent to consider the issue, and conducted his investigation largely during Jesse Kirk's absence in Washington. At the end of his tour, Hawley strongly supported the position entertained by Applegate, who observed:

> . . . if at any time this electoral system should become in order, in the selection of the agent's personal assistants and executive force, the time had not yet arrived to put this privilege in the hands of the people. It would increase rather than limit the number of tribal and family feuds and keep alive the numerous personal jealousies which we are endeavoring to stamp out.[50]

The matter, however, was far from settled. Early in 1902, on the eve of Jesse Kirk's departure for Washington to secure ratification of the revised McLaughlin agreement, a petition was prepared by his faction requesting the privilege of being allowed to elect the mooted officers, subject to approval of the U.S. Indian Agent. This document bore 120 signatures, and is in line with estimates of the strength of this faction. The covering letter, by Jesse Kirk, urged in behalf of the Klamath that

> they desire to take steps forward and prepare themselves in citizenship for the years to come, and encourage them into civili-

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

> zation only, and not into blankets and long haired Indians in old custom. 648*
> But to encourage them in education as well as christianity, which will enable 657*
> them to be a civilized people. 665

He cited the industry of the Klamath, claiming that they were 668 • self-sustaining through such enterprises as stock raising and 578 laboring. The concession of a safeguard in elections may have [666] been his, for he stressed that election of officers must be confirmed not only by the Agent but by the Secretary of the Interior. The Commissioner simply forwarded the documents to Applegate,[51] who, as if to point up the grievances, had just named three new judges.[52]

The actions of the Agent—now retitled Superintendent—in the investigation of the death of one George Modoc brought into the fray that educated gadfly, Charles S. Hood. A Carlisle graduate and leader of the returned Modoc, Hood took an interest in the case when Grant Smith, a fellow tribesman, was held on suspicion of having had a hand in the death. Some four months later, Hood wrote Applegate urging that Smith be released to look after his family and stock, with the understanding that Smith would come back to stand trial. Apparently rebuffed, Hood then wrote to the U.S. Attorney in Portland, who sternly demanded of Applegate, "Will you please inform me by what process or authority he is confined in jail, and whether or not in your judgment if [he] is liberated he will run away." Stung, the Superintendent denied that statement and claimed that Smith had been on parole most of the time so that he could look after his affairs.[53] The attacks upon him seem to have driven Applegate toward a more extreme position, as reflected in his recourse for local cases to police courts instead of the less subordinate Court of Indian Offenses.[54]

In 1904, the pace quickened. Through the early part of the year, Knott C. Egbert found Henry Jackson ungovernable. In April, Jesse Kirk, once more in Washington, directed a letter to Commissioner Jones. It was transmitted by Oregon's Senators Mitchell and Fulton and Representative Williamson, with these words:

> We have every confidence in Mr. Kirk, and we are sure he would made no recommendations that he did not feel were fully justified, and we are also aware of the fact that the Indians of

> *648 the Agency, in the main, have implicit confidence in him, or
> *657 they would not send him here each year as their agent to look
> 665 after their interests."

•668 In his letter, Kirk once more called for elections, stating, "The
578 present manner of selection does not result in securing the ser-
[666] vices of the best men. . . ." He was instructed, he said, to suggest and request that an election be held on the fifth of July when the tribe in council might make its selection, and further proposed

> that you instruct your Superintendent to be guided by such selection in the appointment of persons to fill these offices; these appointments by the Superintendent, of course, to be ratified and approved by you. This in order that, should our selection be ignored by the Superintendent, we may have the opportunity of being heard by you."

This bold typescript letter, its flowing style so unlike Jesse Kirk's, bears every earmark of expert assistance. The source of that aid, either legal or legislative, is suggested by the circumstance that the next letter, to Applegate, was forwarded by the congressional trio with a covering letter dated the same day. The Kirk epistle set forth the same demands for an election, but did not mention an appeal to the Commissioner. In their covering letter, Mitchell and his colleagues observed, "Mr. Kirk seems to be very strongly of the opinion that the plans suggested in this communication should be adopted," and they urged that Applegate give it "very careful consideration."[37]

On his return, Jesse Kirk set about a direct assult upon the Superintendent. First came a letter from the "Delegate and Agent of the Klamath, Modoc, and Yahooskin band of Snake Indians" to the Commissioner, charging that livestock were permitted to trespass upon the reservation and that O. C. Applegate and his stockman and chief of police, George W. Loosley, "systematically" ignored and suppressed complaints on the subject. Loosley, it was charged, continually evaded his duty and "loiters indolently his time away at the agency. . . ." Jesse Kirk, for his part, wanted no white cattle at all upon the reservation. This letter, together with that written earlier to the commissioner on the elections, was buttressed by two petitions circulated together, bearing 184 and 183 signatures, each certified by nine men, Jesse

Kirk, Henry Jackson, Drummer David, Logan Pompey, Albert 648*
Jackson, Yank Lobert, Ike Jackson, William A. Moore, and Sar- 657*
gent Brown.[58] 665

A letter to the Commission one month later, signed by the same 668 •
nine men, asserted that Abraham Charley (then captain of 578
police) was immediately responsible for stock trespass upon the reservation through his policy of renting tribal and unfenced allotted lands, a practice for which he lacked tribal consent.[59]

Within the month, the delegate wrote Senator Mitchell on behalf of a runaway schoolboy who, it was claimed, preferred to go to Chemawa. Mitchell sent the letter on to the Commissioner. When the Commissioner detailed the matter to his subordinate, Applegate at last flared forth.

> Permit me to say in this connection that the interference of the "Rev." Jesse Kirk in the affairs of the Agency and Schools has become nearly intolerable and that it is a decided menace to the peace and tranquility of the Schools and in fact of the entire reservation. His hostility to the authorities is now boldly asserted, though for a long time treacherously veiled, and it may be necessary, and that very soon, to restrain him in some way or to remove him from the reservation.[60]

Applegate had not long to wait for the next blow. His letter crossed one from the Commissioner transmitting a telegram and a letter sent to the President by Jesse Kirk and others charging the Superintendent with mismanagement of the affairs of the Agency and schools. Applegate was ineffectual, claimed the letter; he did not maintain discipline and permitted drunkenness; he bestowed undue favors upon Abraham Charley, particularly in allowing him to take out a grazing permit; he let the fields grow up to weeds; and he opposed sending children to nonreservation schools. Applegate roundly denied all charges, pointing out that three of his ten accusers were former Agency employees, dropped from service for various reasons, and that another three were expolicemen who had been found undesirable. All of them he branded "henchmen and followers of the chief conspirator, the 'Rev.' Jesse Kirk." Even then they were circulating another petition on the reservation.[61]

Before Applegate's round was fairly on the way, the hapless administrator received the next salvo. This time the Commissioner forwarded the letters and petitions from the Kirk faction

*648 on the trespass and election issues, together with a telegram
*657 protesting approval of the Abraham Charley permit and sup-
665 porting letters from the Washington law firm of Dudley and
• 668 Michener. Several months passed before Applegate came around
578 to answering, which he did in temperate and reasoned tones.
His remarks add little to what he had said previously.[62]

Meanwhile, Applegate was given an assignment which could only embroil him further. Upon instructions from the Commissioner, he and an assistant set forth with representatives of the Booth-Kelly Lumber Company, which had succeeded to the Military Road claims, to select lands in lieu of the 111,000 acres they held across the face of the reservation. Eventually, a tract of 87,000 acres of prime timber in the northeastern corner of the reservation was selected.[63]

Jesse Kirk is said to have opposed vehemently any cession of land, while his half-brother favored the arrangement finally arrived at.[64] Not until the fiery Indian leader was dead did the tribe finally agree to accept the sum of $108,750 from the United States in return for a quitclaim against the government; and that was achieved in the face of determined opposition from Clayton Kirk, who took up the battle from his father and bombarded Washington with petitions.

In later days Applegate believed that "in equity the Indians ought to have had the entire reservation. . . . They should be fully compensated." In 1904, however, he stood too close to the factionalism, and Ivan's role in the negotiations was too well recalled for him to avoid suspicion. Any of his acts were likely to become, in Merton's term, a self-fulfilling prophecy of complicity.[65]

Conditions at Klamath now prompted the Commissioner to
send out as inspector Supervisor of Indian Schools M. F. Holland,
whose harsh measures precipitated the final battle. At the
[361] Agency, a number of Indians, several of them employees, had
erected a dozen shanties out of rejected lumber from the sawmill.
Holland evidently found Slabtown, as the settlement was known,
an eyesore. A former inhabitant there has suggested that Holland
may also have been irked by the community's practice of providing food for various councils conducted by Jesse Kirk. The
supervisor now ordered Slabtown razed. Accordingly, Applegate
served notice on the residents to remove by the first of March.[66]

668 •
578

At the same time, Holland ordered that Indians be prohibited from loitering about the Agency office and other buildings.

Soon thereafter, Jesse Kirk with a group estimated by Applegate to number twenty or thirty persons and enumerated by the opposition at fourteen, either attempted to test the prohibition or were the objects of its first enforcement. In the ensuing scuffle with the Indian police, Holland seems to have been struck.[67] "Though the effort to expel them was successful, and without loss of life," related Applegate, "they left the Agency in a defiant and sullenish humor and the ensuing night sent to the other Agency (Yainax) for reinforcements and yet maintain an ugly and rebellious gathering on the reservation." Terming the incident a "riot," the Superintendent called in all seven policemen from the Lower End, added five more special police, and sought permission to expedite purchase of ammunition.[68]

What had been the business of the "rebels" at the Agency that day? They had been collecting signatures for another of Jesse Kirk's petitions, this time directed against O. C. Applegate, George W. Loosley, and "their special appointed man, Abraham Charley."[69] The petition had been drawn up by Jesse Kirk and a local attorney, F. H. Mills, retained by the Indians. Mills, a deputy district attorney for Klamath Falls, had previously taken Indian cases,[70] but a crusading element seems evident in his involvement in this dispute. J. W. Evans, the Assistant Superintendent at Yainax, noted that Henry Jackson had been paying his fees and that the Indians had put up $500 as a retainer.[71]

After their rebuff at the Agency, the Kirk faction withdrew to Yainax, where they held meetings at the home of Henry Jackson and gathered signatures for their petition. In the end, 133 men, over half of the eligible voters, signed. Evans claimed that deceit and force were used, and that a "kind of secrecy" was maintained, but Mills contended that others had also desired to sign, being prevented from doing so by subsequent events. Mills, charged Evans, "used his personal influence to get the Indians to sign."

While the meeting was still in session, one of the Indian police came in with a request from three of the "leading Indians" (unnamed by Evans) of the Yainax district, asking that the police stop the session, on the grounds that the disputes would engender trouble. Evans thereupon ordered Abraham Charley, captain of

*648 police, to put an end to that meeting and to call one at the house
*657 of Harrison Brown—a proadministration leader—to try to effect
665 a settlement. At that session, not unexpectedly, feelings ran high.
• 668 Unable to come to an agreement, the Kirk faction broke off dis-
578 cussion and resumed their meeting at Jackson's.

Thereupon, Abraham Charley summoned all parties to the office of the Assistant Superintendent in the Yainax school, where, for six hours, some forty men argued. Finally, Evans stated that he could not prevent circulation of the petition so long as that did not cause a disturbance. Harrison Brown's party promptly surged forward and sought to seize the petition by force, but were prevented, said Evans, by the police. The conditions of unrest having been established, Evans was able to require that the petition be delivered up to him "until a general council could be regularly called and decide on its disposal."

Evans ended his report with a denunciation of Jesse Kirk as "a disturbing element on the reservation, [who] has a bad influence on the Indians. He should be told to go to his ranch and work it, or be put off the reservation." Of the attorney, he observed:

> Frank Mills should be told to leave the Indians and go out of the Government's business, and if there is anything to be attended to or settled, there are proper officers belonging to the Commissioner's Department and Department of the Interior who can do it."

Despite his brave front, Oliver Applegate had already privately conceded defeat and was writing his friend and former subordinate, Knott C. Egbert, at Siletz reservation, suggesting that he apply for the Superintendency. He was evidently dismayed by the turn events had taken and alarmed, suggests his son, for the safety of his family. Moreover, a letter from Egbert intimates that Applegate felt a lack of administrative support, since he had been confirmed as Superintendent through his service as Agent, and had not passed the civil service examinations. Egbert proposed that he take the examination quietly in Portland; but the Applegates had long opposed the establishment of the civil service, and the advice seems to have proven repugnant.[73]

Meanwhile, early in March, a council was held at Yainax. It was presided over by Levi Walker, and the principal business

was transacted by Jack Palmer, Harrison Brown, Ike Mose, and 648*
Abraham Charley. A committee of ten men submitted a report 659*
of the findings of the council, presenting the proadministration 665
viewpoint and requesting "that these men [Kirk and party] be 668 •
not allowed to do any more business pertaining to the tribe with- 578
out tribal authority."[74]

Jesse Kirk and his adherents did not participate in the "loyal" council. After the scene in Evans' office, Kirk and Jackson had consulted with Mills in Klamath Falls. In the company of the attorney they then returned to demand the petition. Evans refused, informing Mills that "no attorney had any right to interfere in tribal affairs without permission from the Interior Department." The three retired and with others of the faction drew up another petition which they forwarded to Washington.[75]

In his letter of transmittal to the firm of Dudley and Michener in the capital, who were in turn to present the matter to the Commissioner, Mills shed a new perspective upon matters. After
reviewing some of the earlier developments, he turned to the [692]
investigations of Inspector Holland, which, as he said, [681]

> proceeded along smothly [sic] enough until the questions of money and property became the subject of inquiry when it developed that during the last four years a system of collecting money, stock, lumber and other property had been adopted; it seems that this was done by first having the "Indian" court (a sort of disciplinary tribunal which has been authorized or rather sanctioned by the department) impose a penalty or punishment and then allow the indian defendant to pay in cash or such other property as he might chance to have and notwithstanding that such court has no such authority to impose fine or collect money in that way. . . . During the time of the investigation some of the fines which had been collected one or two years were paid back to the defendants. . . . It is conclusive proof had there not been an illegal practice . . . no such returns would have been made. . . .

Although Holland had inquired into only one case, there had been several. Jesse Kirk had requested of George Loosley, chief of police, the list of fines imposed, but was denied it. Finally, Loosley consented to divulge the sum, amounting to $2,651 collected over a four-year period.

At the center of the case, claimed Mills, was Applegate, related through marriage to three brothers of the Loosley family. Two

*648
*657 of them, George and Fred, while employees of the Agency, had
665 purchased lumber, posts, and similar items from Indians to build
•668 upon their 10,000-acre ranch.

578 The most serious malfeasance he charged, however was "the
[423] matter of leasing under the special permit system of unallotted
[427] tribal lands during the past three or four years." The usual system was for the Superintendent and George Loosley (who was also Agency stockman) to lease a district to an Indian, for example Abraham Charley or Harrison Brown, who in turn leased to whites at one dollar per head of cattle. "It is only those who have engaged in leasing the lands," Mills went on, "that have threatened violence if the petition was sent on to Washington. . . ." He suspected "a large discrepancy between the books of account and the amounts paid in for grazing upon the various districts of unallotted tribel [sic] lands as well as trespasses." During the past four years, less than $4,000 (and probably only $2,667) had been paid in, as against estimated returns of $10,000 from grazing alone.

The Indians therefore demanded the removal of Applegate and George Loosley, the election of officials, and an end to cattle trespass. They demanded more effective voice for the council in leasing and in disbursing Indian money. Finally, they noted other
[871] grievances in the treatment of sick school children and demanded that they be permitted to send their children to outside schools.[76]

The accuracy of these charges is secondary to the images of the truth they generated. It is of principal importance that Jesse Kirk was able to convince a large following that the charges were indeed correct. From the standpoint of his faction he then became a man deeply concerned with administrative abuses and striving to remove them by free elections. In that view, Applegate's obduracy drove Kirk reluctantly to more explicit detail until in the end he was forced openly to seek the Superintendent's removal.

In Washington, a new administration was in the saddle, and the new Commissioner was the reformer, F. E. Leupp. Even if Applegate were innocent, the embroilments under his administration would not have recommended his retention. In May, he vacated his office for Horace G. Wilson. Applegate had already received a temporary appointment as clerk at the Grande Ronde

Reservation, and within a year he was to return to Klamath as 648*
clerk for Indian employment. Evidently, the Bureau did not place 657*
much credence in the accusations.[77] 665

The "rebels" were jubilant, and the Commissioner found it 668 •
necessary to visit the reservation and issue a statement denying 578
that the Superintendent had been forced to resign. Though he "gave it good to Jesse," he did little to dampen his spirit.[78] Evans, writing to his former superior, detailed Kirk's efforts to assume a fuller leadership. He had informed the Indians that Superintendent Wilson had no right to go to Washington unless by their direction and with their instructions. Moreover, he was maintaining that "the man who was here was not the real Commr. but a just believe one. The real man would talk different to them he says."[79] His period of triumph, however, was brief, for in December, 1906, Jesse Kirk succumbed to typhoid.[80]

His death ended a critical phase of Klamath political development. When it closed, tribal political leaders had established the institution of the delegation that, bypassing the Bureau, dealt directly with congressional leaders in Washington. In matters requiring expert counsel, they relied upon attorneys retained by tribe or faction. Claims against the government, as political leaders found, were effective issues to attract adherents; and those who sought self-enhancement were ready to take advantage of them.

With the enlargement of sphere, the extension of operations to Washington, decisive action tended to be removed from the reservation to the capital. In the factionalism just reviewed, it is significant that there appears, perhaps for the first time, the spectacle of partisan councils, each excluding the opposition and each purporting to represent tribal opinion.

Saddened by the conflict, Knott C. Egbert wrote prophetic words from Siletz. "The Klamaths," he observed, "might be enormously wealthy if less turbulent, and had behaved. . . . After all though, notwithstanding it would make them paupers, it may be best for the govt. to buy them out and sell the surplus lands. They will sooner become rational." And he added, "One could well dread the sweating period through which the Klamaths must pass on the path to full citizenship, involving as it does the acquisition of money, the drinking of lots rum &c. . . ."[81]

[P. 182 is blank]

*648 members of the Discussion Group remained influential. More
*657 significantly, perhaps, for the long run, they began to employ
619 their newfound unity in fund-raising enterprises in Chiloquin,
423 and thus took an initial step in creating a new civic image for
665 the Klamath.

*648 When the vote was held, over seventy per cent of the tribal
*657 membership elected to withdraw, the government purchasing
619 their land and creating from it the Winema National Forest. Of
666 the other voters, the majority did not directly elect to enter into
423 the trust under which the U.S. National Bank has since been managing their joint resources. In this last decisive moment, they returned no ballot at all, and thus were automatically included among the remaining members. The outcome of the vote was in part an expression of confidence among the Klamath in their ability to handle their own affairs, in a measure a rejection of any continued trust status, colored with the anticipation of realizing a large sum—approximately $43,500 per person. However, so complex were the issues and so heavily were they beclouded at the time of voting by contending claims and interpretations, that it is doubtful whether many members could in fact specify all the considerations which guided their final decision.

• 668 In the period since the enactment of termination in 1954, the Klamath became increasingly receptive toward inclusion within the broader rubric of what Mead has termed "American Indian nationality," and have begun to participate in pan-Indian affairs.[23] Membership in the National Congress of American Indians, participation in American Indian Days at Sheridan, Wyoming,[24] sponsorship of the All-Indian Invitational Basketball Tournament in Chiloquin and of an American Indian Beauty contest held in conjunction with it: these were only some of the more concrete manifestations. Although pan-Indianism has been growing, the receptivity on the part of the Klamath seems keyed to their needs in the crisis that confronted them. Threatened with the loss of the tribal body that had symbolized their collective heritage, they repaired to others which enabled them to preserve their identity. Those who would see the termination vote as an election by the majority of tribal members to become completely assimilated into the larger society must reckon in the significance of this neo-nativist movement.

773 Crow's laughter turned the human and animal objects of his wrath into stones,[6] 776 the basalt outcropping which are today pointed out around the Klamath [823] Reservation as evidence for the truth of the old tale. To summarize, while the culture hero was not himself a source of power for men, the forces at his command were essentially the same as those which every Klamath sought in a formalized quest. Although concerned with natural phenomena like winds, heat, and rain, Kemu'kemps was on the whole indifferent to the fate of men. Like other anthropomorphic or zoömorphic culture heroes, he became the theme of many tales, a source of amusement and entertainment in the aboriginal Klamath culture. But even though humor was present in the tales concerning him, he appears to have been regarded as real and with a slight tinge of awe. There is no question of his marked importance in the aboriginal culture.

177 To evaluate properly the Klamath culture hero in the modified setting of the contemporary society, 175 attention must be paid to the religious modifications in the group since the inception of culture change through the encroach- [721] ment of Anglo-American settlers. The Klamath were never drawn into hostilities with the Whites, unlike their linguistic relatives, the Modoc. Contacted sporadically by Europeans from 1825 on, the Klamath were ultimately drawn into a treaty with the United States in 1864. This reflected pioneer movements to the west and the growth of White population in Oregon. [791] An enforced culture change began with the treaty.[7] There was as a result [797] proscription of the shaman's ecstatic curing activities and an intensity of Christian missionization. Other introductions included a new technology, White education in reservation boarding schools, a new status in relation to an established administrative agency, and new concepts of property, society, and political tribe.[8] The result was in some instances chaotic rebellion, a resistance which took the form not so much of open revolt but rather of a half-hearted and often uncomprehending shift to new cultural values and [182] patterns. The effects are observable today in the tacit rejection of governmental administration and external Euro-American social goals, and in the disorganization of society and personality on the reservation.

175 Klamath history is well known since the treaty of 1864. Like many western 668 American tribes, the Klamath were ripe for the native messianic movements, the cults which promised a return to the past and implied expulsion of the European oppressor. An example is the Ghost Dance of 1870.[9] Here Christian

---

[825] [6] Gatschet, pt. 1, 131-132. Some informants suggest that the name for Crow or Raven, Ka'ākemps, is the same as Kemu'kemps. This is doubtful, of course. Parenthetically, many modern Klamath insist that there are no snakes in the Williamson River valley because all were turned to stone by Crow's laughter.

[113] [9] Leslie Spier, *The Ghost Dance of 1870 among the Klamath of Oregon* (University of Washington Publications in Anthropology, 2: 2, Seattle, 1927), 39-56.

Here Christian
175 elements, like the sign of the cross, were interspersed with native Klamath
• 668 traits relating to the shamanistic seance and to the aboriginal folklore. The
177 acculturation process also involved modification and integration of Ghost
[578] Dance forms introduced from adjacent tribes.[10] The growth of tribal, rather
than hamlet, factions split the reservation at this time, and there was the
pattern, familiar among other Indians, of chief rivalling shaman and of progressive
against conservative. While the 1870 cult is one abortive attempt
at native cultural revival, the post-contact history of the Klamath is replete
with illustrations of a religiously conceived resistance to the disrupting
pressures from without. Variously listed are the Earthlodge Cult, the Dream
Dance, and several other revivalistic and messianic forms.[11]

175 By about 1900, nativistic movements on the Klamath Reservation had
177 burned themselves out. Tribal life of a half century ago was fraught with
[668] essentially the same problems which dog it today. People entered into economic
competition in the greater society and became nominally Christian (and so
[797] lent Methodist sanctions to social institutions). However, the older values
[791] were only with difficulty accommodated to the new. One or two shamanistic
practitioners survived but others felt that their power was gone. One informant
[533] tells of her uncle, a shaman, saying sadly, "My songs (shaman power)
have left me." Shamanism as an integrating factor in Klamath life and in
that of other Pacific Northwest groups is reflected in another important
771 movement, somewhat different from the frenzied Ghost Dance. This is the
175 Shaker Cult, also a synthesis of native and Christian elements but with
177 longer range objectives. Originating in the north in the 1880's, it diffused
slowly, reaching the Klamath in 1914.[12] Basically Christian in its orientation,
795 the Shaker Cult admits a fundamentalistic Protestant eschatology;
but in its emphasis on a "God is Light" theme, the employment of the cross
as a particularly efficacious holy symbol, the use of bells, and the presence
of curing seances, it assumed a peculiar flavor. Numerous aboriginal elements
[755] also are discernible.[13] Techniques reminiscent of shamanistic curing are employed
(for example, the removing of causes of disease from the sufferer's
body by means suggestive of shamanistic legerdemain), although the Shakers
vigorously disclaim the older shamans, describe their work as of the devil,
178 and insist that the spirit of God effects Shaker cures. But the Shaker Cult,
771 too, although it enjoyed a following on the Klamath Reservation for some
years, is dying. A few older people now meet in each other's homes for services.
795 The Shaker church at Chiloquin, Oregon, is now rarely used, and the younger

---

[10] Spier, 1927, p. 45. The Ghost Dance was evidently introduced from the Northern Paiute. The Klamath held that Kemu'kemps was coming from the south and that the dead were to return. See p. 53.

[113] [13] Erna Gunther, "The Shaker Religion of the Northwest," in *Indians of the Urban Northwest*, ed. Marian Smith (New York, 1949), pp. 37-76.

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are ex- 621
clusively White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office out- [575]
side the tribal structure, and although a high percentage have registered, very [194]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the [571]
place and role of the Klamath is a special one.

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are fre- [651]
quently tax exempt, as have been their per capita payments. Simultaneously,
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chilo- [674]
quin during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a recon- 648
stituted "Klamath Tribe," with a corporate structure and assets to be adminis- 657
tered by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal super-
vision has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual 619
Klamath have shown an equally noncommittal relationship to tribal affairs. Atten-
dance at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but [191]
dirty joke, that one may hear the Klamath language used; but it is used as a
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

Fidel: Male, Age 19

Background Data

*159
156 Fidel's case is that of a young man in the process of separating himself from
his family, yet without any clear sense of where he wants to go. He has never
[461] worked at any job, although he quit school in the 10th grade, when he was sixteen.
Except for 8 months residence in the San Francisco area with his family, and five
[871] school years spent in a Catholic boarding school, he has never lived away from
the reservation. He is the third eldest of six children. He presently lives at
[592] home, if the household which contains himself, his parents, and his younger sib-
lings may be called that. As an unmarried minor approaching maturity, his tribal
[434] income is administered by a trust officer who allocates to Fidel $110.00 monthly
[651] for spending money. Additionally, Fidel sends bills for various expenses to the
bank, which pays them. These arrangements have been in force for three years.

[733] Fidel's mother is a somewhat confused, defeated, semi-alcoholic who is very
reserved when sober and gay and promiscuous when drunk. His father is a Skagit
582 Indian who has for years been steadily employed as a cat skinner for a logging
company, which work keeps him away from home for months at a time. During the
648 logging slack season, his father is only occasionally at home. He is usually
[221] away hunting or fishing. When he is at home he is frequently drunk, and when
drunk characteristically assaults his wife and berates his children. The father
does not contribute to the income, the up-keep, or the conduct of household
[593] affairs. In recent years Fidel has defended his mother and the children from his
father, on several occasions has driven him from the house, and on one occasion
knocked him cold with a rifle butt. There is some doubt as to whether this per-
[848] son is actually Fidel's father, the doubt being due to his mother's promiscuity,
which is of long standing, and to Fidel's almost total rejection of him. Fidel's
*159 relations with his father illustrate his marked and extensive ambivalence towards
156 most personal relationships. He will call him or refer to him as "father" or
593 "dad" and in the next breath "uncle," at one moment praise his skill at hunting,
and the next deride him. Fidel cannot fully accept any relationship; he exhibits
the same ambivalence towards his mother, his siblings, his closest friends, girls,
and so on. Moreover, Fidel cannot undertake any course of action without doubt
and reservations. He can neither love nor hate fully.

Fidel's family life is marked by a complete lack of cohesion, cooperation, common
[421] activity, and common property. The major shared sentiment is an indifference to
one another. Each member occupies a part of the house where he keeps his be-
longings, and these are rarely shared. For example, Clifton once needed a rifle
for a hunting trip. It was borrowed directly from the father; Fidel could not
borrow it for him. A major source of difficulty is intra-family theft, which
engenders violent reactions. The mother is psychologically divorced from the
father, and strongly oriented towards her eldest, married daughter with whom
she spends much time.

*159 Fidel thinks of himself as a guide and skillful hunter, insofar as he thinks
156 of himself as anything. On several occasions he has been in trouble with the
law, usually for drag racing or drinking when a minor. He spends his time
•[673] loafing about, watching TV, playing pool, fishing, hunting, visiting with his
buddies, and sleeping. He is seldom in bed before 1 AM, and equally seldom
[512] awake before two or three PM. His main ambition is to get out of the area, away
from his family, and off by himself. He has thought about studying art, which
may result from an identification with a friend who is doing so.

among them who is their counselor, . . . and who tells the 648*
Indians on the reservation that they can leave the reservation 657*
when they please."[5] Despite the contrary views of the U.S. 166
District Attorney, two years later the Commissioner held that 423
any adult Indian or the head of a family was free to take a homestead on the public domain, and was further exempted from paying entry fees or commission.[6] When the General Allotment Act came into force next year, provision was made that nonreservation Indians might be allotted on the public domain.[7]

As reservation control weakened, there was an increase in the 648*
incidence of crime. Dyar had had to contend with "professional" 657*
gamblers in his day, with the prostitution of Indian women, and 674
with a few instances of bootlegging. When two Agency employees were killed in separate incidents little more than a month apart, the events had "had a very disheartening effect upon these [Indians] and many of them [were] for the time inclined to let go all holds and go back to their old customs."[8] Significantly one of those deaths, a shooting by a white sheepherder, occurred along the public road through the reservation.

Soon, across the reservation line on Wood River beyond Fort Klamath, saloons began to spring up. Nickerson stopped one man, a discharged soldier from Fort Klamath, and seized the liquor he was transporting to that oasis. He thereupon found himself facing extensive litigation, for the man had influential associates in Linkville. Before he was done with this and other cases arising from enforcement of the liquor regulations, the Agent was out of pocket nearly $1,000 in his own defense.

Although bootlegging, quarrels, and some shootings continued 648*
to involve whites, frictions began to develop with alien "half- 657*
breeds." The death of one of the employees slain in Dyar's time 674
was at first attributed to a "half-breed"; another was involved in 563
shooting up a saloon in the Wood River settlement; it was at least an outside Indian, a Pit River, who shot an Indian policeman at the Lost River fishery in 1883, and an interbreed who slew police lieutenant David Hill at the same place nine years later. An interbreed served as contact man for a saloonkeeper of the Wood River settlement, and another was accused of bootlegging in the nearby woods and at the autumn camps on Huckleberry

[Klamath Reservation]

*648 *657 • 674 [563] Mountain. Indeed, it became customary for some Agents to attribute any breach of law, author unknown, to a member of that class.

As the country became more thickly populated, there came a brief period when outlaws took advantage of the distinct jurisdiction of the reservation. Cattle rustlers and horse thieves plied their trade across the line, stealing from Indians and whites alike. About the turn of the century, when the stage was being robbed with discouraging frequency, some of the outlaws seem to have operated occasionally out of the thinly patrolled reservation. At least one man, after having stolen a horse and saddle on the reservation, was soon thereafter caught in a stage holdup. These conditions while they lasted gave increased point to the need to maintain surveillance over whites within the reservation.

Against these various threats, the Agents strove valiantly. In the 1880's, when trespassing cattle from the eastern side of the reservation brought the integrity of the boundaries into issue, Emery resorted to cavalry to clear them off. Repeatedly, Agents ordered undesirables off the reservation, recommended to the Commissioner action to be taken on the licensing of traders, and sent the Indian police after runaway schoolboys and their seniors who were off the reservation without pass. Indians traveling in a group away from the reservation were accompanied by an Agency employee, often a member of the police. Whites who wished to work for Indians were screened. "I am quite sure from the statement of your letter," wrote O. C. Applegate to a man who proposed to work for Henry Jackson, ". . . that you are a man who wishes to be governed by the rules of the reservation. I therefore have no objection to your doing the work you propose for Jackson. . . ."[9] To the pass system was sometimes added the condition of the white sponsor. "Hereafter," Applegate declared, "I shall not give an Indian girl a pass to remain in town on the plea that she wants to work, until she brings an application from some responsible party."[10]

*648 *657 427 Leasing likewise passed through the hands of the Agent during much of this period. "It is true that you are capable of handling small things," Superintendent H. G. Wilson wrote Modoc Henry, "but as it is against the regulations to lease land outside of this

> I might call attention to the fact that at the last election in 648*
> Klamath County a trust patented Indian was elected Justice of 657*
> the Peace, and a fee patented Indian was elected Constable of 641
> the Beatty District on the Klamath reservation. It seems a rather [693]
> unusual situation when a trust patented Indian can preside as a judge over a court and pass sentence on other people and at the same time question the same court's jurisdiction over him.[3]

Nor was this all. Federally regulated land on the reservation [625]
was off bounds for officers of the law from city, county, and state; yet in 1947 there were only two special Indian officers and two deputies to enforce law and order over almost one million acres of reservation. It was physically impossible for them to follow up all cases, and consequently they could not deal effectively with the misdemeanors of delinquents or with truancy from the county schools.

In the 1920's, soon after the opening of the reservation, towns 648*
such as Chiloquin were faced with the influx of a mobile popu- 657*
lation in which the unmarried "timber beast" was prominent. 621
Roistering and violence occasionally assumed major proportions, 625
and law enforcement broke down at first. Within the first three 563
years after its incorporation in 1926, Chiloquin witnessed no 674
less than twelve appointments to the position of town marshal. At times the Superintendent, concerned over the effect upon the Indians, intervened, delivering an ultimatum or sending in his officers to restore order. His jurisdiction, in turn, was also limited: When Arnold brought pressure to bear upon Chiloquin authorities to close down gambling in the pool halls and card rooms, the gamblers merely shifted their operation to Bly, just over the eastern boundary of the reservation, and the same procedure had to be repeated by state and local officials there.

The interdependence of law enforcement on state lands and 648*
reservation was emphasized during the depression. In 1931, when 657*
logging on the reservation—and with it tribal income—had been 641
temporarily reduced by Washington, a tribal leader, Wade 625
Crawford, succeeded in securing a congressional cut in the [651]
administrative budget of the Agency, which from about 1924 had been supported out of tribal revenue. Since the budgetary allocation for law enforcement then became inadequate, the federal officers left, until there remained only a constable and an

County. Of regular municipal income in the year, 1956-57, taxation 648*
supplied only a little over four per cent. The largest sources 657*
of revenue were the water system, the city tavern (which alone 641
supplied over one-third of the budget), and the proceeds from 651
law enforcement (amounting to over one-fourth of the budget). Since, after the repeal of Indian prohibition in 1951, tribal members had become the major patrons of the municipal tavern, comprising in 1958 an estimated eighty per cent of its clientele, it is evident that in this indirect manner they had come to constitute a major support in the operation of the municipal government.

Nor was this all. The sizable sum derived from law enforcement 648*
was highly unusual. While the major enforcement problem 657*
in most Oregon cities of comparable size was traffic violations, 641
Chiloquin in 1956-57 found no less than ninety-three per cent of 674
its offenses to be felonies and misdemeanors other than traffic violations. Tribal members and other Indians, including repeaters,
accounted for over seventy-two per cent of the arrests; [681]
they paid over seventy per cent of the fines and forfeited bail; [464]
and they furnished over ninety-six per cent of the trusty labor performed in the city.[7]

Aside from a few individual instances, this record does not 648*
reflect a policy of discriminatory arrests on the part of the city 657*
administration. It does, however, mark one of the significant 674
confrontations upon the reservation. It was conditioned in part [641]
by the special statutory position of the Klamath, for as an Indian [656]
under federal supervision he was enjoined by law from having or using liquor and from marrying a white within the state. Until these disabilities were removed in 1951, tribal members were subject to arrest for acts not held criminal when committed
by non-Indians. During prohibition, tribal members had learned [273]
to operate stills, had taken to drinking extracts, proprietary medicines, rubbing alcohol, and "canned heat" in lieu of scarce liquors, and had both patronized and served as bootleggers. Habits of defiant drinking, akin to those of other Americans during the "dry" years, lingered even into the years after repeal.

Klamath experience with strong drink and violence had neither begun with the reservation towns nor was it confined to them;

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

*648 *657 • 674 but the access they provided to the means, the example set by the whites in the heyday of logging, and the greater chance of detection all made for a record in which these communities figured prominently. Moreover, in protest against a status they did not like but found it difficult to alter, tribesmen turned their violence outward against the public symbols of white dominance and inward upon their intimates and themselves.

The record is easy to read. Cars were stolen from a garage and raced by a gang of boys; others robbed a store; someone, in the years of prohibition, broke into the municipal tavern, then a forbidden place; others entered the jail, this time to remove some wine held as evidence in a bootlegging case; a boy, forcing his way into the post office, damaged the letter boxes. In subsequent years, the special Indian officer and a school principal were each set upon and beaten.

During the same period, private citizens among the whites were unmolested. The assaults had taken place against the seats of white power. When these events were discussed with a number of the elder Klamath, themselves law-abiding citizens, they reacted with abhorrence of the beatings—the Indian officer in particular had served long years on the reservation and had a reputation for fairness—but exhibited an indulgent amusement for the forays against stores and jocularity over the raid on the jail. The impression was very strong that in the twentieth century the Klamath, while sparing the neutrals in their midst, were still sending out war parties against the enemy.

[273] Among themselves, violence, especially in their drinking parties, was more deadly. Both the statistical and narrative reports from the early days of the reservation detail occasional instances of death through violence, but the number is small, and it is unlikely, in the light of the counteraccusations freely hurled between feuding groups, that a murder could easily have been concealed. It is therefore signal that when, in 1929, the Klamath Falls *Evening Herald* summarized murder trials for the previous year, in five instances both individuals had been tribal members, while in a sixth a Klamath had slain a white during a drinking party in Chiloquin. In three other cases, both parties had been white, and in another, Mexican.[8] Since that

time, few years have not seen at least one murder upon the 648*
reservation. 657*
674

Lesser crimes have also been frequent. Of the 1958 sample
of the reservation population above the age of sixteen, no fewer
than forty-three per cent had been arrested for misdemeanor,
seventeen per cent for felony. Liquor had led to arrest for thirty- 648*
seven per cent, and no fewer than forty-nine per cent were 657*
judged to have problems associated with drinking. The corre- 273
sponding figures were slightly higher for those members living in [674]
Chiloquin, where opportunity, observation, and arresting officers
were all more frequent.

In situations in which other peoples have sought redress in [154]
religious movements or covert sorcery, Klamath have more
commonly fallen back upon drink and violence. For them the [765]
bottle has proven a maladaptive instrument, as shown by a
recent survey of the causes of death of 139 members who expired during a period of four and one-half years: drinking was adjudged to be a contributory factor in no fewer than fifty-seven per cent of the deaths.[9] The violence which often caps drinking bouts is likewise self-destructive: for it often strikes close friends or family members.

From the viewpoint of the city fathers, then, the Klamath have been an unruly segment of the citizenry; and the figures on law and order pose the difficulty confronting the community in the maintenance of an orderly life. Alternatively, however, those same figures represent a sizable income to be realized through the administration of the law. In the latter days of the reservation, as the Indians themselves were clearly aware,[10] the city seemed on the one hand to be profiting from the sale of beer and wine to tribal members and on the other to collect large fines from them when, under the influence of alcohol, they had fallen into the toils of the law. The implications of this policy, by which almost two-thirds of the income of the town was supplied, made many white citizens uneasy. The city fathers, concerned with a parsimonious administration, were not eager to seek a substitute and, indeed, any change would have presented obstacles.

So long as the tribal government remained to articulate their 648*

6. The figures, based upon eligible adults, are, respectively, 81 per cent for whites, 68 per cent for tribal members.

7. These data come from the analysis of Bert R. Swanson. Stern and Swanson (1960).

8. *Evening Herald* (April 23, 1929), editorial, p. 4; (April 24, 1929), editorial, p. 4.

White ethnic exclusiveness is reflected
in minimal Klamath participation in formal organizations, lodges, political 648
groups, scouts, and various clubs. Elite groups such as the Masons are ex- 621
clusively White, while the elite Methodist church contains a single Klamath 563
member. In the century of contact few Klamath have held elective office out- [575]
side the tribal structure, and although a high percentage have registered, very [794]
few vote in local, state, or national elections. The dual structure of local
communities is best reflected in the sharp division of networks of friendships [666]
and home visiting, White on the one hand, Klamath on the other. Clearly, the
place and role of the Klamath is a special one. [571]

Their special status has numerous implications. For years, to obtain their [273]
drinking liquor the Klamath had to turn to bootleggers, a legal disability which [671]
was removed only in 1951. Local law enforcement has sometimes been difficult
due to dual or conflicting jurisdictions, and jurisdiction over major crimes
committed by Klamath was given over to the state of Oregon in 1953. The land [423]
holdings of Klamath property owners, because of their special status, are fre-
quently tax exempt, as have been their per capita payments. Simultaneously, [651]
the Klamath have exhibited little constructive concern with local affairs. As
was noted, their contribution to the community takes a special form. In Chilo- [674]
quin during a typical year arrests of tribal members amounted to 70 percent of
the total, and they also paid 70 percent of all fines and forfeited bails and
performed 96 percent of all trustee labor (Stern & Swanson 1960). The wardship [178]
status has, however, suffered gradual attrition, and in 1954 the passage of
Public Law 587 began the final termination of federal supervision of the tribe, [657]
and the dissolution of the reservation.

Under PL 587 the Klamath were allowed the choice of remaining within a recon- 648
stituted "Klamath Tribe," with a corporate structure and assets to be adminis- 657
tered by a trustee, or they had the choice of withdrawing and of receiving a 619
pro rata share of tribal assets. In a later election, about 77 percent of the
membership elected the latter, and chose to withdraw. However, the control of
the new "tribe's" assets and the fact that many persons who withdrew have been
designated as "in need of assistance" indicates that although federal super-
vision has been ended, the control and intervention of Whites has not.

The separation of Whites and Klamath in local communities is by no means entirely 563
due to White attitudes of exclusiveness or to overt discrimination. Individual 619
Klamath have shown an equally noncommittal relationship to tribal affairs. Atten-
dance at tribal meetings has been very low in spite of numerous inducements such
as free bar-b-ques. In General Council meetings (and tribal affairs, generally) [665]
the conduct of business is marked by extensive and endemic factionalism, delays,
repetitious debate, failure to resolve or even to state issues, and pointless,
lingering sessions. Here is one place, outside of the telling of a ripe but
dirty joke, that one may hear the Klamath language used; but it is used as a [191]
tool to beat down an opposing tribal member who does not understand it. Though
the General Council and the Tribe are symbolic of a corporate separateness and
of a Klamath identity, this minimal participation and the distrust of the ability
of tribal leaders to manage the tribe's resources weakens them as systems of
action.

Klamath families are another important locus of loyalty and identification. 592
The household or domestic group itself averages about four members, but there
are many single male households and many domestic groups headed by women.
The latter is symptomatic of the instability of the marriage tie. Marriage, 581
in the legal sense, is itself approximated in frequency by common-law unions [588]
and more temporary "shack-jobs." Probably one-third of all Klamath women have

Weasel: Male, Age 29

Background Data

159*
In contrast to all other subjects Weasel's role in the reservation community
is a totally negative, destructive one, largely that of a supposedly vicious [156]
criminal. He was born and raised on an economically un-productive ranch, which
for twenty years or more has been the location of continuous drinking parties.
Weasel was raised within a circle of a pack of older brothers, half-brothers, [593]
and step brothers, all of whom were bigger, stronger, and more capable than he. [733]
His father has been an alcoholic for thirty years and has rarely worked or contributed
much to the organization of the family, which as a co-residential [592]
household usually included more than a dozen persons. In all, Weasel had 17
full and part siblings, half of whom are now deceased, three directly as a result [165]
of drinking, three from acts of violence or car accidents.

Weasel's formal education ceased when he was 15, in the ninth grade, at which [871]
time he was arrested on a burglary charge. Since then he has spent six years [674]
in reformatories or penal institutions. He was tested while in jail on an
assault charge. Shortly thereafter he was found not-guilty, then re-arrested [697]
and sentenced on a different assault with a deadly weapon charge to three years
in the state penitentiary.

Weasel has repeatedly moved out of the circle of the family group, only to
fail "outside" and return to its sheltering arms. For a time Weasel was a [542]
professional boxer, but one without much skill or stamina. He never won a fight
and his face shows the evidence of the capabilities of his opponents. His
membership in this profession did not last long, and Weasel states, rather
proudly, that the Boxing Commission expelled him "For conduct unbecoming a
professional boxer." Weasel was once married (a common-law marriage, which [588]
for Weasel's primary reference groups is well sanctioned) but this lasted just
16 weeks. During this period Weasel stayed sober, the longest time he has spent [581]
without a drink since the age of 12. Weasel was consciously trying to reform [733]
himself, but now feels that he was a fool to ever try. Additionally, Weasel
has repeatedly made a circuit of nearby towns and cities either singly or in [156]
the company of a brother or friend. These visitations have more of the character [579]
of raids than anything else, and Weasel is usually arrested in one or another
place and either charged or shipped out of town. [697]

In addition to being a minor criminal Weasel is frequently also the scapegoat 159*
for the aggressions of stronger men than he. He constantly asks for trouble, 156
but has never given any evidence that he can back of his threats with appropriate
force. His successful acts of aggression have always been sneak attacks, [186]
or attacks on feeble old men or young boys. He seldom attempts to avoid the
consequences of these actions, and, indeed, is frequently not able to do so,
because of his extreme drunken condition. He seems to obtain some gratification
from the minor prestige afforded his performances in these roles, but this
gratification is highly personalized and is not recognized as appropriate by
others. It may be that he has been attempting to build up his standing and reputation
within his own circle by acting out the role of a "dangerous Indian,"
but it would seem that he has been singularly unsuccessful in this. One aspect
of this behavior is his reputed skill with a knife. On two occasions he wanted
to obtain vocational training, once as a barber, the other time as a butcher,
both times implying that this would be a simple extension of his native talent.

hay for his own [cattle]."[50] The practice of contract grazing on 648*
tribal land was also continued, though with scanty returns.[51] 657*

Leasing brought regulatory headaches. Trespass could less 563
easily be controlled. Some stockmen who rented land from the 427
Indians turned in more cattle than the pasture could sustain, [311]
while keeping the fences in such disrepair that the cattle drifted
onto the unfenced lands of neighboring allotments.[52] In con- [625]
sequence, the meager band of reservation police had to be di-
verted to the task of enforcing the grazing rules. The Superin- [675] •
tendent was obliged to see that all contracts were made through
his office. When disputes arose, he was often forced to intervene
and even at times to threaten a lawsuit in order to collect on
behalf of an Indian. Meanwhile, some lessees were themselves
fencing the lands in lieu of part of the lease, so that many Indians
were no longer compelled to put in any work in order to receive
returns from their property.[53] By 1903, even unfenced allot-
ments were being leased. In that year payments from leases [434]
comprised thirty per cent of estimated personal income, providing
$8,220 distributed among some ninety to one hundred allottees.[54]

By 1908, a large number of Indians were entrusted with the 648*
"experiment" of managing their own allotments, including the 657*
hiring of necessary labor and leasing their tracts for a term not 423
to exceed the legal limit. The narrow discretion afforded, how- 427
ever, is seen from the provision that "the leases that you are to
draw this year will be drawn for you in this office," although the
Indian was to collect his own rental. Fifty-eight Indians were
empowered at once to handle their allotments and apparently
those of their children as well, upon these cautious terms.[55]

Leasing had scarcely gotten under way when a movement for 648*
the sale of lands began. The act had originally envisaged a trust 657*
period of twenty-five years, to be extended at the discretion of 423
the President, during which time the United States retained title to 432
the land. For many individuals, allotted just prior to 1910, that
period—although subsequently extended—was to expire in 1935.
However, amendments provided for sale under proper super-
vision when circumstances required, and by 1912 five sales had
been consummated, all involving heirship cases.[56]

When an allottee died, his land passed to his heirs—by the 648*
657*
423
428

*648 his own hands, Indians frequently became emancipated from
*657 responsibility to any strictly tribal body.

619 Exclusion of children born after a given date in 1910 gave rise to an unpropertied membership both on and off the reservation. With the return to the reservation of some acculturated members, often the product of intermarriage with whites, the outlook of

Klamath Agency Oregon,
June 7th 1869

To whom it may Concern:

The Indians of this Reservation have unanimously adopted as a rule that all persons may travel & drive stock through & across the Reservation, making regular drives each day, without paying anything, but any person grazing stock on the Reservation, remaining in one locality through the day will be required to satisfy the Indians claiming a residence where the said stock are stopped by paying a reasonable consideration. Also, if travelers remaining over night allow their stock to run inside of Indian enclosures or destroy grass reserved for meadow they should make a reasonable remuneration to the Indians. If people passing through the Reservation will adopt these rules no trouble will occur.

By I. D. Applegate (Sig.) L. Applegate
Commissary. Klamath U. S. S. Indian Agt at Klamath.

Approved Sept 30th 1872.

O. C. Applegate
Commissary at Yainax.

In care of Ben Drew, Head chief of Sprague River Klamaths.

Agreement concerning the grazing and driving of cattle on the reservation. (O. C. Applegate *Papers.*)

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one
who had obstructed Agency-sponsored reforms, but had left the
membership of the lesser chieftaincies intact. It is clear that
administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693
executive role to constitute a court, while a sheriff, chosen from
among the Indians, together with constables, one per chief, were
to maintain order. Chiefs, somewhat extralegally, soon began to
assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at
all, advising them that the object of the law is to *protect* the
people and not to *oppress* them."[19] Soon thereafter, he reduced
the court to a membership of only seven chiefs and set its sessions
at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622
against property (arson), together with what can only be considered [68] •
redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585]
were to be confirmed before the principal chief, who was to [643]
receive a fee; the bride price was not to be returned on the [586]
desertion of the husband; while the court might order the separation
of an irreconcilable couple. Monogamy alone was permissible.[21] [595]

Thus, not only were the chiefs given new and different powers,

[797]

Others—and they were to become more influential—lived for some time with whites and became convinced that the best policy for the Klamath was one of peace. They included Lileks, who in the course of the trading excursions to the north dwelled for several years at The Dalles and was exposed there, no doubt, to the examples of authority set by whites as well as by the Columbia River tribes themselves. Another was Dave Hill, who, starting about 1859, lived approximately five years in Oregon City. Allen David, later to succeed Lileks as head chief in reservation days, was "well versed in the ways of the white man, from travel among the Willamette settlement." Another was Charley Preston who, like Hill, had spent five years at Oregon City, working for white farmers and had become "quite civilized and learned many of the white man's ways. He returned to his tribe and became a headman. . . ."[17]

175
177
648
622

Men such as these became the leaders of a "peace party" among the Klamath, and their views achieved dominance in the growing centralization of power among the Klamath. Lileks may have consolidated the ascendancy he presently achieved as head of this group by marriages beyond his tribelet: to the four wives from his own, Klamath Marsh, division, he added one each from the Lower Williamson and Klamath Falls groups, as well as one from the Modoc. From the Columbia he or a contemporary brought back new "laws," which included the institution of flogging as punishment for murder or for persistent quarreling. In one instance, ascribed by Spier, with some question, to pre-reservation days, when two men of the Lower Williamson River tribelet slew a Klamath Falls man, Lileks had them haled to Klamath Marsh, where each was beaten five times.[18]

When, in 1858, it was indicated that Klamath and Rogue

175
648

*657 time had come, he summoned his people "to receive his solemn
*648 admonishments err [sic] his spirit take flight." Soon recovering,
622 he voiced to the Agency farmer, S. D. Whitemore, the suspicion
that the shaman who had cured him, and whose professional charges had stripped him of all his effects, had been in league with the subchiefs to bring about his death; and he requested that the shaman be imprisoned by the military. Later events made it clear that Monchnkasgitk had been a leader in the conspiracy, plotting to take the place of the old chief. Thereupon, Whitemore, then in charge of the Agency, called a council, at which he "stated that it will be highly necessary to consult their, and the government agent, or the change could not be regonized [sic]. . . . I learned that after a lengthy consultation with the indians has [sic] become impressed with the belief that Mosen Kasket and his band have no hostile intentions."[7]

[558] With Agency backing, Lileks once more was restored to a position of relative authority, but his recourse to outside support caused his personal prestige to decline. He thus had to resort increasingly to formal instruments to bolster his power and to implement the changes he sought. When one Spokane Ike slew
[682] his child in Jacksonville, Lileks asked that the Agent order all
Indians back upon the reservation. Spokane Ike was tried by the Indian court, Lileks presiding, and was fined fifty dollars.

[692] Lileks took readily to the court, and Whitemore reported, "The
indians are holding court dayly [sic]. I am not informed of the nature of their cases." O. C. Applegate described one session thus: "A few days ago the Grand Court of Klamath set, Chief LaLakes presiding, and many men were convicted of many
[681] crimes. One in particular had stolen a number of women, 20
mink skins and otherwise trampeled [sic] on the rights of his people, he now wears shackles and a heavy log chain and chops wood for La Lakes."[8]

*648 The head chief was by no means an advocate of indiscriminate
*657 change. He favored inhumation of the dead, which he had
622 witnessed among the whites in his travels to Jacksonville, Yreka,
177 and The Dalles, over the native practice of cremation; and about
[764] 1868 he secured its adoption.[9] On the other hand, when the
[567] proposal was made in 1865 to liberate the slaves, Lileks was
prominent in voicing his displeasure, undoubtedly backed by

was transacted by Jack Palmer, Harrison Brown, Ike Mose, and 648*
Abraham Charley. A committee of ten men submitted a report 659*
of the findings of the council, presenting the proadministration 665
viewpoint and requesting "that these men [Kirk and party] be 668
not allowed to do any more business pertaining to the tribe with- 578
out tribal authority."[74]

Jesse Kirk and his adherents did not participate in the "loyal" council. After the scene in Evans' office, Kirk and Jackson had consulted with Mills in Klamath Falls. In the company of the attorney they then returned to demand the petition. Evans refused, informing Mills that "no attorney had any right to interfere in tribal affairs without permission from the Interior Department." The three retired and with others of the faction drew up another petition which they forwarded to Washington.[75]

In his letter of transmittal to the firm of Dudley and Michener in the capital, who were in turn to present the matter to the Commissioner, Mills shed a new perspective upon matters. After reviewing some of the earlier developments, he turned to the [692]
investigations of Inspector Holland, which, as he said, [681] •

> proceeded along smothly [sic] enough until the questions of money and property became the subject of inquiry when it developed that during the last four years a system of collecting money, stock, lumber and other property had been adopted; it seems that this was done by first having the "Indian" court (a sort of disciplinary tribunal which has been authorized or rather sanctioned by the department) impose a penalty or punishment and then allow the indian defendant to pay in cash or such other property as he might chance to have and notwithstanding that such court has no such authority to impose fine or collect money in that way. . . . During the time of the investigation some of the fines which had been collected one or two years were paid back to the defendants. . . . It is conclusive proof had there not been an illegal practice . . . no such returns would have been made. . . .

Although Holland had inquired into only one case, there had been several. Jesse Kirk had requested of George Loosley, chief of police, the list of fines imposed, but was denied it. Finally, Loosley consented to divulge the sum, amounting to $2,651 collected over a four-year period.

At the center of the case, claimed Mills, was Applegate, related through marriage to three brothers of the Loosley family. Two

County. Of regular municipal income in the year, 1956-57, taxa- 648*
tion supplied only a little over four per cent. The largest sources 657*
of revenue were the water system, the city tavern (which alone 641
supplied over one-third of the budget), and the proceeds from 651
law enforcement (amounting to over one-fourth of the budget).
Since, after the repeal of Indian prohibition in 1951, tribal members had become the major patrons of the municipal tavern, comprising in 1958 an estimated eighty per cent of its clientele, it is evident that in this indirect manner they had come to constitute a major support in the operation of the municipal government.

Nor was this all. The sizable sum derived from law enforce- 648*
ment was highly unusual. While the major enforcement problem 657*
in most Oregon cities of comparable size was traffic violations, 641
Chiloquin in 1956-57 found no less than ninety-three per cent of 674
its offenses to be felonies and misdemeanors other than traffic
violations. Tribal members and other Indians, including re-
peaters, accounted for over seventy-two per cent of the arrests; [681] •
they paid over seventy per cent of the fines and forfeited bail; [464]
and they furnished over ninety-six per cent of the trusty labor
performed in the city.[7]

Aside from a few individual instances, this record does not 648*
reflect a policy of discriminatory arrests on the part of the city 657*
administration. It does, however, mark one of the significant 674
confrontations upon the reservation. It was conditioned in part [641]
by the special statutory position of the Klamath, for as an Indian [656]
under federal supervision he was enjoined by law from having
or using liquor and from marrying a white within the state.
Until these disabilities were removed in 1951, tribal members
were subject to arrest for acts not held criminal when committed
by non-Indians. During prohibition, tribal members had learned [273]
to operate stills, had taken to drinking extracts, proprietary
medicines, rubbing alcohol, and "canned heat" in lieu of scarce
liquors, and had both patronized and served as bootleggers.
Habits of defiant drinking, akin to those of other Americans
during the "dry" years, lingered even into the years after repeal.

Klamath experience with strong drink and violence had neither begun with the reservation towns nor was it confined to them;

Chiefs' Functions

The functions of chiefs both to the northwest and in central California differed sharply from those of the Klamath. 171* 622

On the Northwest Coast proper the authority of a chief was by no means absolute. The commoners were subject to his admonition rather than his will, his direct authority extending hardly beyond his immediate following. Such gifts as they made him were free-will offerings, large as they were, dictated solely by traditional sentiment. While these include almost all articles of food among the Kwakiutl, to the south, as among the Klallam and Snohomish, they were rather such things as were difficult to procure, such as the products of the hunt, and were no more than were given to any respected old man.[570]

The situation on the Columbia river and in coastal Washington and Oregon was different. These chiefs had real authority. Wishram, Quinault,[571] and Coos chiefs were obeyed, their authority being challenged only by the rich. Commoners among Wishram and Coos gave largely from their gains and in return could expect the aid of their chiefs when in distress. The chiefs sat as judges in cases of witchcraft and murder, assessing heavy fines and ordering the culprit killed if he defaulted. Such fines were not theirs but went to the family of the murdered man. They also paid such fines for their followers. What little is known of the Tillamook suggests an identical situation. [692] [682]

This judicial function, with its meting of fines and punishment, made its appearance among the Klamath by way of the Dalles early in the middle of the last century.

Northwestern California shows considerable similarity to western Oregon, but the authority of rich men was slight in comparison and they did not sit as judges. Among the Hupa, Shasta, and presumably their neighbors, they were obeyed because they gave of their store in times of scarcity and paid fines for followers who were in difficulties. The headmen in more southerly Californian groups exercised more formal authority, as the Yuki and Patwin headmen, who may have made decisions of war and directed town activities. In northeastern California (Maidu, Achomawi, Atsugewi) chiefs were much like

[571] Olson, Quinault field notes, 1926.

K In such a sphere, and in relations with strangers beyond, the
M myths picture encounters fraught with possible danger. They
609 may be initiated by a trucial period which endures until, by
proper guest-host behavior, by a claim of kinship or on the other
hand by an act of aggression, the issue of "friend or foe" is
K precipitated. Hospitality dictates that one receive and feed the
M stranger, though a visiting kinsman brings a gift of food or
[574] otherwise repays the kindness. If, however, hostility is decided
upon, it rarely becomes open: instead, both sides proceed indirectly, under the guise of amicability, and employ followers
or auxiliaries to encompass the destruction of the other. It is
here that the prescient qualities of the hero, his access to assistants and to supernatural forces, are decisive.[19]

K In ethnographic reality, the outer limits of society are marked
648 by the boundaries of common speech. Beyond this, the Klamath
maintain amity with the Molala, intermittent friendship and
hostility toward the Warm Springs and other Columbia River
Sahaptin, who sometimes raid them, and toward the Paiute;
inveterate hostility toward the Takelma of the upper Rogue
and other peoples west of the Cascades; and a predatory aggressiveness toward the Pit River and Shasta to the south, whom they
increasingly raid for slaves and loot.

K The horizons of such a society are not wide. With the ex-
M ception of the shaman, a part-time specialist, each man and each
571 woman has much the same skills and knowledge as his fellows.
156 The aberrant individual can do no more than assume the dress
[838] and behavior of the other sex, ascribing his action to supernatural
dictate. The transient forms of the community and the informal
constraint it imposes, the paucity of activities that demand concerted action, go hand in hand with a permissiveness in the
individual. When this takes aggressive form, it may threaten
the very fabric of society.

K The covert expression of hostility is likely to invest relations
M beyond the natal family with fear and mistrust. Revenge can
754 take the form of murder from ambush, sorcery to engender the
571 illness or death of the enemy, or the stealthy destruction of his
152 property.[20] One frequent cause of open slayings, and of the feuds
• 682 that ensue, is suspicion that a shaman has brought about the
death of one's kinsman. Commonly, such charges are leveled

K
M
754
571
152
682

against a member of another band or tribe, but malevolence or greed, it is thought, may sometimes lead a shaman to compound the illness or death of a fellow bandsman; and sometimes his spirits may act independently of him to bring the same end. Klamath recall with horror the unnatural event which took place in the present decade of the present century, when that suspicion caused a woman to slay her own mother for the fatal bewitchment of her child.

K
M
181

To end a description of the aboriginal life of Klamath and Modoc in this manner is to risk too somber a balance. Loosely structured in society, modest in scale, precariously balanced against the winters, their cultures made possible a good life in which dignity and worth had a place. That those were not, however, the halcyon days sometimes depicted today is intimated by the words spoken in 1873 by the Klamath leader, Henry Blow. If they exaggerate as almost certainly they do, they still possess an essential truth:

K
181
829

> Before the Bostons came there was no law. The strongest man took what he wanted and the man who had the most property and the most friends was the chief. It was a bad country in those times. Some men were bad and took away the property of other men. If a man was poor and had no friends, and had a beautiful squaw, some stronger man would steal his squaw and kill him if he resisted.[21] Might was right in those days and there was much fighting and killing everywhere. If a man was jealous because another was getting rich and had many friends, he would steal into his lodge and kill him when he was asleep, or lay in ambush to kill him as he went by. Those were bad times as we see now, since the Bostons have come and made law to protect every man's rights and property.[22]

*657 time had come, he summoned his people "to receive his solemn
*648 admonishments err [sic] his spirit take flight." Soon recovering,
622 he voiced to the Agency farmer, S. D. Whitemore, the suspicion
that the shaman who had cured him, and whose professional
charges had stripped him of all his effects, had been in league
with the subchiefs to bring about his death; and he requested
that the shaman be imprisoned by the military. Later events
made it clear that Monchnkasgitk had been a leader in the
conspiracy, plotting to take the place of the old chief. Thereupon,
Whitemore, then in charge of the Agency, called a council, at
which he "stated that it will be highly necessary to consult their,
and the government agent, or the change could not be regonized
[sic]. . . . I learned that after a lengthy consultation with the
indians has [sic] become impressed with the belief that Mosen
Kasket and his band have no hostile intentions."[7]

[558] With Agency backing, Lileks once more was restored to a
position of relative authority, but his recourse to outside support
caused his personal prestige to decline. He thus had to resort
increasingly to formal instruments to bolster his power and to
implement the changes he sought. When one Spokane Ike slew
[682] his child in Jacksonville, Lileks asked that the Agent order all
Indians back upon the reservation. Spokane Ike was tried by the
Indian court, Lileks presiding, and was fined fifty dollars.

[692] Lileks took readily to the court, and Whitemore reported, "The
indians are holding court dayly [sic]. I am not informed of the
nature of their cases." O. C. Applegate described one session
thus: "A few days ago the Grand Court of Klamath set, Chief
LaLakes presiding, and many men were convicted of many
[681] crimes. One in particular had stolen a number of women, 20
mink skins and otherwise trampeled [sic] on the rights of his
people, he now wears shackles and a heavy log chain and chops
wood for La Lakes."[8]

*648 The head chief was by no means an advocate of indiscriminate
*657 change. He favored inhumation of the dead, which he had
622 witnessed among the whites in his travels to Jacksonville, Yreka,
177 and The Dalles, over the native practice of cremation; and about
[764] 1868 he secured its adoption.[9] On the other hand, when the
[567] proposal was made in 1865 to liberate the slaves, Lileks was
prominent in voicing his displeasure, undoubtedly backed by

will cut off hair to you I. If you should have returned to yourself the whole marriage fee his,

*539 773 825 823 text is far from being complete. It refers to a locality above the confluence of Sprague and Williamson Rivers, called Ktaítini, or "Standing Rock". A high rock stands there at the edge of a steep hill, and, according to the legend, the Indians who put pitch on their head were changed into that rock. Near by, a lumber-dam looking like a beaver-dam, across the Williamson River, partly resting on rocks projecting from the bottom of the river. K'múkamtch longed for the destruction of this dam, muddied the water to prevent the Indians from fishing and hired the loon to destroy the objectionable structure. The loon dived into the waters and forced its way through the dam by main strength. The Indians dwelling on the shore depended for their living on the fisheries, and seeing their existence at stake tried to gig the loon, but succeeded only in hitting its tail-feathers. When the loon had accomplished his task K'múkamtch offered to reward him in any manner wished for. The loon then wished to have white spots on its back, and K'múkamtch satisfied the request by spitting chalk upon the downy surface of its body.

oars, his wife they abduct, (her) husband being the murderer. Furious he quits and
tsă'wik.
is demented

*171
622 those of the Klamath; theirs was an advisory function and they led in war.[672]

A corollary of the chief rich man's position in California and Oregon was that he did not himself engage in war. By reason of his wealth he could terminate the conflict by paying the blood money necessary to balance the score. This has been observed of the Tillamook, Shasta, Hupa, Kato, Pomo, and was perhaps general.[673] [701] There is some suggestion of this in Klamath custom; a chief was not ordinarily a war leader but he certainly did not make good the blood-money payments. On the other hand this may have been nothing more than the common western attitude that a chief was not of necessity a war leader.

*171
• 683 One characteristic feature of the cultures from Columbia river southward, which has been touched on before, was a well developed system of fines for injuries. This did not appear on the Northwest Coast nor in western Washington, but was by no means confined to northwestern California as has been implied. It is quite characteristic of a larger area: Wishram, Alsea, Coos, Takelma, Yurok, Karok, Hupa, Shasta, Pomo.[674] Remuneration was often demanded for comparatively slight injuries; thus an Alsea shinny player who was hit exceptionally hard had to be compensated. The eastern groups (Klamath, Maidu, etc.) had no such sentiment, but it is worthy of note that they did compound a murder by a property settlement, a notion which may have been absent still farther east in the Basin.

Speaker

*171
622
537
[756] Chiefs' speakers occurred among many western tribes. There were none such among the Klamath, whose shamans had however assistants with comparable functions. These have been discussed with shamanism. The chief's speaker was eminently characteristic of the Northwest Coast, where his activity in the potlatch and other ceremonies has been often remarked. He not only repeated the words of his chief to the gathering but also served as his representative and advocate. In the Great Basin, on the other hand, the function of the speaker was merely to repeat verbatim after an orator or story-teller.

m'na snáwädsh, tsúi nî snä'kēlua; gä'tak lak̲í gî hûk.
his wife, then I remove (him); no longer chief remains he.

NOTES.

[177] 58–62. The legal practices, regulations, and ordinances given here by a subchief of the Klamath Lake tribe are observed by all the chiefs, and are apparently fashioned after American models. The principle which seems to guide most of the judicial decisions of the chiefs, is given in one (59, 20. 21) of these regulations: "If a chief makes law like white people, that will be right."* This article is composed of three parts:

Part I. List of the chiefs acting as judges on the reservation in 1877.

Part II. Legal customs governing the Klamath Lake people.

Part III. Instances of application of these legal customs; amount of fines, terms of imprisonment, etc. These are the "*novellæ*" of Klamath legislation.

58, 1–3. P'lú, Lilu, and some other headmen mentioned here have signed the treaty of Oct. 14, 1864.

[563] [657] 58, 4. Móatuash. There are only two Pit River *families* living on the whole reservation.

58, 8. Tcháktot belongs to the Yahúskin tribe of Snake Indians. Cf. Ind. Aff. Report 1873, p. 324.

[193] 58, 10 etc. The future tense employed in these behests, regulations and defenses recalls the French future used in an impressive manner instead of the imperative: *tu ne tueras point, tu ne déroberas point.*

58, 10. shlí-uapk shash. The pronoun shash has here almost the force of a reciprocal pronoun, for the meaning of the sentence is: "do not shoot at people of your own tribe." The same is true of sas in palluápk sas, 58, 10; 58, 13 (twice); pálla shash, 61, 14.

[194] 58, 10. ksaggayuapkámsni is pronounced as one word, as the removal of the accent from the syllable -uápk demonstrates; and so in many of the following verbs standing in the future tense. For the sake of clearness, I have preferred to resolve these forms graphically into their component elements.

[192] [193] 58, 11. wátsam, etc. The possessive wátsam stands here instead of the instrumental case watsátka through attraction from wännikísham. Tchíkla here means to ride away on another's horse, the horse being missed by his owner.

---

* Dave Hill introduces himself in the first person as chief; but many of these decisions can be given by the headchief only, not by any of the subchiefs, to whose number Dave Hill belonged. The Modocs at Yáneks claim to observe these regulations; the Snake Indians do not.

plied, for Minnie sending to interpret the agent for conversing with.

NOTES.

64, 1. In September 1877 Púkish, an elderly Indian, died after a very short illness on the western side of Upper Klamath Lake. The rumor that he had been bewitched and thereby feloniously killed by Kákash, one of the conjurers who treated him, soon gained credence, and the excitement in the tribe ran high. The first account of the occurrence was obtained by one of the subchiefs, who, with his colleagues, passed sentence over the unfortunate Kákash.

[192] [193] [551] [769]

64, 1. hû't, "this one", forms one of the substitutes for names of deceased persons, which no Indian dares to pronounce. Hû't refers to a person standing visibly *before* the speaker, and it is remarkable that the dead are referred to by this pronoun, and not by a pronoun marking distance out of sight, like hûkt, hû'kta etc. Cf. hû't hishuaksh, **64**, 9., gén, **64**, 2., hû'nk pí'sh, **64**, 5., **68**, 11. etc The subject nánka kukiaks does not exclude the use of the subject pronoun sha, *they*, the account being worded in the conversational style.

*539 ● 683 [551] [756] **64, 1.** Tetĕmádshish or Aunt Susie is one of the numerous female "doctors", who eke out a scanty living from some patients of the Klamath Lake tribe. She received the above name for having been a washerwoman to the soldiers stationed at Fort Klamath, and the nickname Wúya-ak was bestowed on her on account of her predilection for small sucker fish.

64, 2. sämtsálχa. The means employed by her to discover that Dr. John had cast upon the patient a spell of a deadly character, were the singing or recital of tamánuash songs, and the *dreams* which she had on that subject. Her tamánuash songs had *seen* those of the accused conjurer. See 65, 9. The great majority of the tribe still believes in the possibility of witchcraft.

64, 7. The two sentences contained in this line anticipate the result of the whole trial, and the popular verdict. The proper place for them would be after 65, 15.

64, 9. Tuá ni etc. The defense made by Dr. John in his own case is not an unable one, nor is it devoid of oratorical powers. But if the arguments were delivered in the order as given by Dave Hill, they ought to have followed each other in a more logical order to attain their full effect.

64, 10. wák lish etc. The logical connection existing between this sentence and the foregoing has to be supplied by: "why should he have been my personal enemy?"

[192] **64, 10, 11, 15 etc.** i, ik stands here for ät (*ye*); because, when the headchief is addressed in council, all the others are addressed also. Lóli stands for lóla i. The trial took place on Williamson River.

64, 13. kúkamtchish. The distributive form is used here instead of the absolute verbal k'mû'tchish, because old age comes on *gradually, by degrees.*

64, 16. tchi insh instead of tchi nish; the language likes juxtaposition of two short equal vowels, even when a metathesis is required.

65, 8. Kátak etc. Aunt Susie's opinion, given just after Púkish's death and some time *before* the trial, did not fail to have a striking effect on the superstitious judges and tribe, for her arguments perfectly agree with the national ideas. But to us the arguments seem so weak, that no conviction seems justified, if not based on other evidence.

65, 9. nä'nsak etc. "Your defense does not disprove any of the points advanced against you."

[192] **65, 11.** K'mukámtsam nä'-ulaks: "the old customs of the people."

[124] **65, 16.** The second account of this tamánuash-case was obtained a few weeks after the trial; Dr. John was present at the agency buildings at the time of the dictation, furnishing the facts to my informant.

[697] **66, 4.** ká-ishnauk etc. This underground jail was in such an unhealthy condition that Dr. John could not have lived in it through the tenth part of his long term of imprisonment.

[625] **66, 5.** Tchikéskni and Skélag, names of two watchmen (i-álhish); the chiefs appoint watchmen from time to time. Skélag is "the young weasel" and Tchikéskni "man living at Tchikési camping-place". They were armed with pistols to foil any attempt at escape.

[192] **66, 10.** nä'dshek for nä'dsh ak: "the only one". Compare nádshiak, 60, 21; waítak, 56, 7. and *Notes.*

[192] [193] **66, 12.** shishí'tilatk. The past participle often stands for forms of periphrastic conjugation: shishítilatko gi, they *were* carrying in their dress. Cf. illólatko, 55, 20.

*539
683
[192]
[193]

66, 13. gé’hlaptchapka. The verb gelápka means to step on, to mount, ascend; with ’h infixed, to mount upon something by using one's hands; ge’hláptcha is to perform this while on the way, while going or travelling; gé’hlaptchapka, to perform this at a distance from other people and unseen by them. Doctor John escaped, aided by his son, in the midnight hour.

66, 14. m'na únakam gatpĕnótash. Gatpĕnóta is a derivative of gátp'na with a durative signification, the suffix -óta pointing to an action performed while another is going on. "His son having arrived close by, while he was imprisoned."

66, 16. shnû'ntatka, verbal intentional of shnû'nta, the suffix -tka being sometimes substituted for the usual -tki, -tki gíug.

PUNISHMENT OF MANSLAUGHTER THROUGH WITCHCRAFT.

OBTAINED FROM "SERGEANT" MORGAN IN THE KLAMATH LAKE DIALECT.

881 head; pollen on head. Legs, torso painted; white paint blown on with mouth; pollen blown on. Painting done by self; from own paint box. Painting before eating only. Tattooing. Nose pierced. Tattooing so girl can touch fire. Thighs, arms, breasts cut. Shell skirt for eating. Sage leggings. Chest band. Labret. Nose feather. Girl ducked in water during ceremonial bath. Belt, anklets, wristlets buried. Girl given new name.

Public rites (major or night dance): Given for group of selected girls. Poor girls excluded. Several girls together, only 1 menstruating. Dancers mill around menstruant. Men hold to wall. Dancers file out of house after each dance. Given during fixed season. Coincides with boys' initiation. Given in ceremonial enclosure. Conducted by chief, priest, clan. Single split-stick rattle. Deer-hoof headband. Deer-hoof anklets. Deer hoofs on moccasins. Cocoon, gourd, tortoise shell, pottery rattles. Masks worn. Attendants wear woolen fringed headdress; woolen fringed rattles. Male participants wear haliotis-rim horns; blind. Women paint face white; all colors. Sand paintings. Tobacco eaten. Haliotis gazing.

841 General menstrual customs.--Woman confined in penthouse against dwelling. Head, face covered when going outside. Bathes daily. Bathing optional.

Marriage

58 Service for bride: children belong to mother's family. Sororate obviated if children, payment rendered. Polyandry: lovers in separate towns. Marriage of man to first cousins, cross or parallel; to mother's sister. Mother-in-law, son-in-law taboos temporary, for newlyweds only; temporary up to first child; optional. Father-in-law, son-in-law taboos. Mother-in-law, daughter-in-law taboos. Husband punished for adultery by being fined, before wife will return. Woman's family pays husband fine for constructive adultery by woman. Repayment of bride price in event of divorce depends on number of children. Intercourse taboo inside dwelling. Lie on side to
548 prevent twins. Prostitution with compensation
to woman. Unchaste girl killed. Unmarried preg-
684 nant girl killed. Man fined for seduction.

Death

764 Treatment of corpse; taboos.--Body removed from house prior to death. Removed from house through roof; feet first; throw-out of animal after corpse; body carried on plank. Undertakers of opposite moiety; priest; shaman; chosen by chief; paid; gifts; one a scapegoat. Corpse's nose, ears pierced. Body buried with head uphill, upstream, downstream. Cremation for shamans especially. Pyre over pit. Urn burial. Any form scaffold burial. Undertaker(s) visit grave nightly; build fire at grave; put food out for ghost; wear brush on head. Widow's hair cut-

000 family, not that his sister-in-law belongs to
him." NM: Woman may refuse to marry brother-in-
law, saying she "does not want to die like [her]
sister did." Not obligatory for man either.

3841. At, WT: Only if widower treated first wife well. NM: See note 3839.

3842. Kl, Mo, SE, AW, AE, WT, WS, NS: Dead
587 woman's parents hire shaman to kill son-in-law,
756 if he refuses to marry one of deceased wife's
684 sisters. WM: Woman's parents hire men to kill
son-in-law outright.

587 3844. Kl, SE: Usually, however, relative of
595 man marries latter's stepdaughter.

3852. Kl: Informant "had heard lots about this,
595 among [N] California tribes and up at Warm
Springs--about man living with his sister-in-
law--but not practiced among Kl." AE: Not es-
000 pecially disapproved. WT: Indulged in only by
"loose" women, and generally disapproved.

3853. NS: Man sleeps with sister-in-law, only during brother's absence from home.

3855. NS: Not necessarily between namesakes only.

3856. SE: Extension of levirate also occurs; man may marry father's brother's wife, "to keep her in the family; he has to pay for his aunt, however, to give any children he may have by her status. But in outright levirate, gifts only given; levirate not always obligatory for man; "woman has to be good woman, to have treated dead husband well and pitched her face for him when he died, for his family to make strenuous efforts to keep her after his death." SW: Levirate more obligatory, for both man and woman concerned, than post-mortem sororate (see note 3839). WM: Day after funeral, when all relatives of dead man are crying, brother of deceased may ask widow for drink of water. If she gives it to him, they are considered as married from then on. Both widow and brother-in-law have blackened, pitched faces, and let pitch stay on until it wears off, but in event of speedy remarriage widow does not wear pitch necklace.

3857. SE: See preceding note.

3858. At: Widow may tell her brother-in-law she is going to marry another man; "All right," he says, and tells her to "take care of those children [by dead husband] good; be careful with them and let me know when they're sick."

[587] 3860. Kl: But because levirate is so obliga-
[684] tory for woman and for dead husband's brother,
rule seldom if ever violated. However, see ele-
ment 3973.

3862. By hiring shaman to kill woman, for all
[587] groups except WM, NS. WM: If woman refuses to
[684] give brother-in-law drink of water (see note
3856 WM) "then her brother-in-law or father-in-
law get mad at her and try to kill her." NS:
Woman shot with bow and arrow.

3866. SW: Kammatwa and Katiru groups intermediate between Shasta proper and Karok (see note 282) permit marriage of blood relatives; Shasta do not.

000 "They do this if the father-in-law is rich, and if her parents tell her to. But if the father-in-law has some close [male] relatives, her parents will tell her to take a relative of her father-in-law's for a husband, instead." WT: Man may marry his son's son's wife, for same reason woman marries her brother-in-law (see note 3839); man may not marry his son's wife. WM: Man tells nephew to marry his son's son's wife; does not marry her himself.

3923. AW: Mother tells her daughter that if latter plays with brother, she (daughter) "will be ashamed."

Adultery; divorce; nonaffinal remarriage.--

3930. Virtually denied by many informants. At: Bear will chew up adulterous man. NP: "They didn't have that sort of trouble in those days; they stayed together good."

3934. SE: With glowing ember.

● [684 837] 3935. Kl, Mo, At, AE, WT, WM, WS, MP, NM, NS: Killed by husband sometimes. SE: Adulterous wife returned to parents, and return of payment for wife demanded; parents sometimes kill such a daughter later. AE: Form of punishment which might end fatally sometimes meted out to adulterous wife; when she and husband come to flooded stream in springtime, husband lays pole across stream and crosses on it; tells woman to follow him. When she is halfway across on pole he pulls it up at his end; she falls into stream, and if she can, saves herself, or else is drowned.

3936. SE: Seducer poisoned by hired shaman.

3937. AW: Woman's husband may kill attacker, if latter does not have "a lot of powerful relations. But if he has a lot of relatives, the husband would be afraid of killing him; his relatives would take revenge."

[684 837] 3947. Kl: After wife severely beaten, husband tells her, "Better go home; I don't want you any more," and wife returns to her parents; "that's the last of her."

3949. MP: By wife.

[684 837] 3950. Kl, Mo, SE, SW, AW, AE, NS, MV: Husband may promise to behave better, and wife then sometimes returns to him, "if he makes a good promise." SE: In such instances, husband usually buys wife back. WS, MV: Woman may desert husband, marry another man.

3951. SE, NM: Wife's parents may hire shaman to poison erring husband, or (SE) man to shoot him.

3952. WM: Wife sometimes goes over to husband's paramour, fights with her, but not with husband.

3954. AE: That is, gives man some gifts.

3958. SE: Usually only if proposals are made to married woman, mother of children.

3959. AW: "Poor people divorce each other; they don't care about anybody, even if person had lots of relatives [to revenge affronts]. But rich people hardly ever divorce."

3960. At: Divorce and sexual license before marriage "used to be unknown; now men and women

040 run around, just like dogs. In old days women never ran around; they stayed home." SW: Husband may send wife home, and demand bride price be returned.

3960a. SW: Wife may return home, and her bride price need not be returned.

3961. Mo: Husband may send barren woman home to parents; "that's been done, lots of times; but if he loves her, he will keep her, and take another woman also as wife. SW: Barren wife not divorced, but her family must supply second wife free to her husband. WM: If woman barren, husband deserts her, often for another woman; does not bring this second wife home to live with first one; latter returns home to her parents.

3962. SW: Wife may leave husband, no return of bride price necessary.

3963. SW: No return of bride price if husband is aggressor.

3964. SW: If husband lazy, "after awhile wife returns home." If wife lazy, she is sent home and bride price must be returned. AE: If husband lazy or "mean," and woman returns to her family, her father or father's brother usually sends her back to her husband; tells her to come home "only in a good way, together with her husband." Daughters, when told this, usually return to husband. WT: If woman lazy, but if she stays home and behaves self, husband keeps her; but if she is "run-around" as well as lazy, husband turns her out of house.

3965. SW: If husband "mean," and beats wife, and wife returns home, first time she does so her parents send her back to her husband; second time she comes home for such reason she can stay; no return of bride price. AE: See note 3964. WM: Woman never fights back, if husband beats her, hits her with rock, but her brother or uncle may fight husband in her stead.

3966. SW: See notes 3960-3965. In all instances where repayment is mentioned above, such is necessary only if there have not been children born of union. But if 1 or more children have been born, money is not repaid (would ruin child's status), and either wife or husband may take charge of child.

3968. SW, At, AW: Boys usually stay with father, girl with mother's mother or grandmother. AW: "But hardly ever do this."

[586] 3972. Kl: Wife leaves her belongings in her husband's house. WT: Wife does not take her clothes, "because her husband has made them; she just takes clothes she has on." But anything she herself has made, such as baskets, she takes with her. WM: Woman takes clothes and baskets.

[587]
[684] 3973. Kl: If new husband does not pay before he marries woman, liable to be killed. AW: 6-10 strings of beads paid to widow's brother-in-law by her suitor. Brother-in-law then tells widow to marry suitor; if she demurs, he may threaten her with death. (Brother-in-law often more violent in demeanor toward widow than her husband ever was.) "The brother-in-law has a share in

3:Stern E-4,5 (1949-1957) 1965 NR10 Klamath NR10

[Klamath Reservation]

Of all the societal
relationships, the government sought directly
to change only those within the family. It was clear that a nation 657*
that was soon to impose upon the Mormons the American, and 648*
not the Biblical family, would permit no special marital practices 595
among the Indians. Polygamy was banned, although not retroactively 177
for unions such as those of Allen David and Monchnkasgitk, 178
which had been contracted prior to January 1, 1870.
Some leaders themselves appear to have advocated the change in
a desire to emulate whites. In 1877, Gatschet noted that there
were still two or three polygamous men.[26] Since polygamy had [556]
been a mark of the affluent, the ban, like the emancipation of the
slaves that preceded it, served to erode the status of the traditional chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals concerned. 622
In the legal code instituted when the court was established, 692
the consecration of marriage was made the function of 685
the head chief, to whom the groom was to pay a fee of five, three, 583
or two dollars or the same amount in horses, graduated according [643]
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] The traditional ritual [586]
of marriage still was being practiced by some families in the
1890's[28] but the gift exchanges between the families concerned
which set a public seal on the union were superseded, and the
controls exerted by the family over the couple were thereby
diminished. The effects of these and other changes were recognized
by Gatschet. "Matrimonial reverses . . . among the Klamath
[he declared] . . are one of the unavoidable consequences of
the gradual emancipation of the females from the former rule of
their brutal husbands through the advent of the whites, and also
of the obnoxious and corrupting neighborhood of the soldiers
at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independent 648*
of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

OLD CHILOQUIN SAYS

I am very much pleased that our young men are doing so well. I mean to try and stop all bad actions, fighting, gambling &c &c. I see Daves friends every day and give them good advice. I tell them to remember what Dave told them. I tell them not to get a cry tum-tum* about Dave nor a foolish angry tum-tum† for this will only make Dave feel bad when he comes home. Perhaps by and by I may have a different story to tell you. Perhaps there may be quarrelling & fighting among our people, but I hope not. Captain has said that he wants a great many things. I don't want to talk that way I am well pleased to see our young men trying to get right. 539

Yours Truly
Chiloquin

* Sad heart
† Heart

ALLEN DAVID SAYS

I want to let you know about Choler.* He paid one small horse & one large one equal to three in all as a fine for getting foolish and stealing a young girl, Dr. Chinchalo's daughter. The girl said that she wanted to get Choler for life, and we fined her also. [684] •

Allen David

* Appears on the rolls as Chula

FRANK SAYS

You Dave told me when he left that he wanted me to close nanitch* all the people. I called the young men together and told them that I wanted them to come all right. Allie also helped me and now all of us young men are agreed on this point. We don't want to throw away what you told us but to get and keep your tum-tum.† We don't want to break the laws or to get bad. We want to work and make rails, houses, farms, &c &c. If any of us want to get bad again I will let you know.

Frank [Chilks?]

* Take good care of
† Literally "heart"; here the meaning is "view."

DAVE'S WIFE SAYS

Our babe was sick a little while ago and an Indian Doctress cured it and I paid one blanket. Now all the children are well. Everything is right now except that Elmer crys a good deal in the night because he wants to see Dave. If you get money I want you to send me some. [756]

Your wife

How since they have lived, not I learnt.

NOTES.

[178]
[837]

Matrimonial reverses like the one given in this narrative are by no means uncommon among the Klamaths of the present day. They are one of the unavoidable consequences of the gradual emancipation of the females from the former rule of their brutal husbands through the advent of the whites, and also of the obnoxious and corrupting neighborhood of the soldiers at Fort Klamath.

many tribesman brought at once into a relationship so explicit and compelling in its demands.

K M 756 796

Such public gatherings must be held early in the winter and serve only to punctuate its length. As the season advances and the earth lodges become increasingly fetid and flea-ridden, housewives anxiously eye the dwindling supplies, and social bonds are threatened. During this time, says Ray, Modoc take pains to conceal from outsiders the location of the food cache or the presence of food in the house. Hospitality is necessarily curtailed and theft becomes common. Nonetheless, those shamans who have access to one of the spirits controlling weather still conduct public ceremonies, and they are assisted by the villagers.

K M 221 261 [356]

K M [574] [685] [756] [796] [789]

If spring is long delayed, the people may be reduced to eating hides, boiled or roasted. Even at this time, however, they will not eat their dogs. When the ground is sufficiently clear of snow, they venture forth to ferret out roots overlooked last year, to gather the tough lichen, and to pry off the tender cambium layer of young ponderosa and lodgepole pines. With the appearance of the first holes in the ice, the men swiftly set about fishing.

K M 261 22

As snow retreats and ice melts, and warmer winds waft the delicate odors of growing things, a feverish activity seizes the villages. Some settlements, favorably located, will continue to be occupied through the year. In others the earth lodges are dismantled. The decrepit and those too ill to move reconcile themselves to remaining in the mat lodges with a boy or girl to look after them. The others, raising the dugout canoes from the muddy shallows, where they have been submerged to prevent splitting, pile the household gear and children aboard and, with firm strokes of the pole or paddle, depart for the spring fishing stations. Already, in March, the runs of suckers are surging up the Williamson and Sprague.

K M 221 361

K M [501]

At the spot on the latter river where Gmukamps first instituted the tradition, the Klamath observe the first sucker ceremony, which ensures a propitious run. On the lower reaches of Lost River near present-day Olene, there is a famous fishing station, where Modoc and many Klamath congregate for several weeks, catching and drying an estimated fifty tons of fish. On a stream tributary to the upper Sprague, the teeming run of small suckers

THE PREHISTORIC PERIOD.

174 Before the middle of the nineteenth century the Máklaks people was unknown to mankind except to the nearest neighbors in Oregon and California. We are therefore justified in beginning its period of documentary history at that time, and in relegating to the domain of prehistorics all that is known of their previous condition. The information upon these points is furnished by three factors: tradition, archæologic remains, and language.

A. TRADITION BEARING UPON HISTORY.

121 Traditional folk-lore, when of the mythic order, generally dates from
773 an earlier epoch of fixation than historic traditions. The remote origin of *genuine* mythic folk-lore is sufficiently evidenced by the archaic terms embodied with it, by the repetition of the same phraseology for ages, and by the circumstance that all nations tend to preserve their religious ideas in an unchanged form. I am laying peculiar stress upon the term *genuine*, for Indians have often mixed recent ideas and fictions with archaic, original folk-lore and with ancient mythic ideas, the whole forming now one inextricable conglomerate which has the appearance of aboriginal poetic prose.

173 The Klamath people possess no historic traditions going further back
769 in time than a century, for the simple reason that there was a strict law
688 prohibiting the mention of the person or acts of a deceased individual by
171 *using his name.* This law was rigidly observed among the Californians no
784 less than among the Oregonians, and on its transgression the death penalty could be inflicted. This is certainly enough to suppress all historic knowledge within a people. How can history be written without names?

[126] Many times I attempted to obtain a list of the former head chiefs of the two chieftaincies. I succeeded only in learning the names of two chiefs recently deceased, and no biographic details were obtainable.

174 This people belongs to the autochthonic nations of America, called so because they have lost all remembrances of earlier habitats or of migrations.

226
787 first catch of suckers on spot. "If they don't eat it all up there, people won't catch any more suckers." After these observances, all suckers caught can be transported home to be eaten, dried.

284. SW: Wait until Karuk give White Deerskin dance at end of July before eating steelhead (rainbow trout); if any steelheads caught in salmon net before Karuk dance given, they must be thrown back into river. Fishermen who disregard this rule are in danger of being killed.

292. NP: "Dreamer" or singing shaman.

294. Kl: First 2 suckers.

296. SW: First run taboo to adolescent girls.

226
689 299. Kl: Old man in charge of rite tells youth, "Don't you pack those fish home on the first day; eat well; don't carry them around, or break their backbones." If youth disobeys, sticks bound from wrist to shoulder on boy's arms, and then bent upward and broken, thus breaking boy's arms at elbow; boy sometimes died. Any of old men present administer this punishment.

300. WM: See note 282.

Gathering

000 Gathering techniques and observances.--

300a. See note 357. AW: Pick up acorns from ground by hand; do not beat trees.

300b. Used to bend down limbs within hand's reach. MV: Obtained pine nuts at Lookout (in MF area); man intending to go for such, continent night before he starts. To obtain pine cones, he climbs tree, hooks branches with staff, cuts off cones.

301. Used to bend down limbs.

302. Used for whipping, knocking acorns and pine cones off limbs.

306. Branches left on pole, to serve as footholds. SW: Wrap grapevine around fir pole, or leave limbs on pole for footholds. AW: Native twine wrapped around sapling for foothold; limb left on sapling at upper end to serve as hook; pole hooked onto upper branches of tree, as climber progresses upward.

[222]
[824] 308. Kl, SW: Made of mountain mahogany.

311. SW: Iron bar across top end. AE: Use crutch-handled type mostly, but sometimes plain bipointed one as well.

312. Mo: Break or pull up entire plant of lamb's-quarters, pile plants on bare hard ground, and beat out seeds with long straight stick.

313. NS: Prepare meal for group, when first batch of any wild fruit gathered. Example, for manzanita berries, make large quantity of cider with first gathered berries, all drink. MV: Headman goes out and tests acorns for ripeness; tells people when they are ripe. His wife then goes out, secures 1 pack-basketful of acorns; dries them, and in about 6 days she is able to make 2 baskets of acorn mush from them. These she takes into assembly house; there members of secret society pray over mush and eat it; then everyone can go out and gather acorns.

ing exclusively or even principally upon kinsmen. A responsible man sometimes was appointed guardian of an estate, as was William Crawford in the case of the minor, Frederick Schonchin.[104] Indians sometimes volunteered to assume a somewhat analogous relationship even for nonkin. Thus William Ball, a prosperous interbreed, proposed to feed, clothe, and bury an aged and destitute couple from the Warm Springs reservation, "providing he can get their allotments to use while they live, and become the actual owner of their lands after death."[105] As interpersonal relations became increasingly concerned with the manipulation of property, litigation in the tribal court gained volume and acerbity.[106]

[891]

*648
*657
423

The Board of Indian Commissioners had foreseen that undivided tribal funds might perpetuate the "Indian problem" that allotment had been designed to solve, and they advocated breaking them up.[107] Among the Klamath were a number of persons, stemming principally from the more acculturated members, who shared the same sentiments toward unallotted lands. Paralleling the stress upon individual pecuniary interests, they developed what may be termed claims against the tribal equity. In one instance, Celia DuFault, sister-in-law of William Crawford, and a nonresident member, claimed part of the Klamath school farm as her allotment;[108] in another, the returned Modoc, Charles S. Hood, made inquiries concerning the Yainax school farm with an eye, it was alleged, to a similar allotment for himself and his children.[109]

*648
*657
423
313

These efforts must be viewed in the context of corresponding measures on the part of whites. The conflicting claims and suits had delayed the completion of allotment, and hence the sale of surplus lands, into a time when it became obvious that the tribal timber possessed great value. The government then decided that the surplus lands would be retained and the timber exploited for the tribal benefit. There were various plans, however, to contest the retention on an undivided tribal equity. In 1909, the eight-man tribal council requested that a bill be prepared "giving the Klamath Allottees an additional 160 acres of timber land on this reservation; and that this be done at once in order that the surplus lands may then be disposed of otherwise."[110]

*648
*657

Meanwhile, O. C. Applegate had remarked favorably upon a

Chiefs' Functions

The functions of chiefs both to the northwest and in central California differed sharply from those of the Klamath. 171* 622

On the Northwest Coast proper the authority of a chief was by no means absolute. The commoners were subject to his admonition rather than his will, his direct authority extending hardly beyond his immediate following. Such gifts as they made him were free-will offerings, large as they were, dictated solely by traditional sentiment. While these include almost all articles of food among the Kwakiutl, to the south, as among the Klallam and Snohomish, they were rather such things as were difficult to procure, such as the products of the hunt, and were no more than were given to any respected old man.[670]

The situation on the Columbia river and in coastal Washington and Oregon was different. These chiefs had real authority. Wishram, Quinault,[671] and Coos chiefs were obeyed, their authority being challenged only by the rich. Commoners among Wishram and Coos gave largely from their gains and in return could expect the aid of their chiefs when in distress. The chiefs sat as judges in cases of witchcraft and murder, assessing heavy fines and ordering the culprit killed if he defaulted. Such fines were not theirs but went to the family of the murdered man. They also paid such fines for their followers. What little is known of the Tillamook suggests an identical situation. [692] [682]

This judicial function, with its meting of fines and punishment, made its appearance among the Klamath by way of the Dalles early in the middle of the last century.

Northwestern California shows considerable similarity to western Oregon, but the authority of rich men was slight in comparison and they did not sit as judges. Among the Hupa, Shasta, and presumably their neighbors, they were obeyed because they gave of their store in times of scarcity and paid fines for followers who were in difficulties. The headmen in more southerly Californian groups exercised more formal authority, as the Yuki and Patwin headmen, who may have made decisions of war and directed town activities. In northeastern California (Maidu, Achomawi, Atsugewi) chiefs were much like

[671] Olson, Quinault field notes, 1926.

*657 time had come, he summoned his people "to receive his solemn
*648 admonishments err [sic] his spirit take flight." Soon recovering,
622 he voiced to the Agency farmer, S. D. Whitemore, the suspicion that the shaman who had cured him, and whose professional charges had stripped him of all his effects, had been in league with the subchiefs to bring about his death; and he requested that the shaman be imprisoned by the military. Later events made it clear that Monchnkasgitk had been a leader in the conspiracy, plotting to take the place of the old chief. Thereupon, Whitemore, then in charge of the Agency, called a council, at which he "stated that it will be highly necessary to consult their, and the government agent, or the change could not be regonized [sic]. . . . I learned that after a lengthy consultation with the indians has [sic] become impressed with the belief that Mosen Kasket and his band have no hostile intentions."[7]

[558] With Agency backing, Lileks once more was restored to a position of relative authority, but his recourse to outside support caused his personal prestige to decline. He thus had to resort increasingly to formal instruments to bolster his power and to implement the changes he sought. When one Spokane Ike slew
[682] his child in Jacksonville, Lileks asked that the Agent order all Indians back upon the reservation. Spokane Ike was tried by the Indian court, Lileks presiding, and was fined fifty dollars.

[692] Lileks took readily to the court, and Whitemore reported, "The indians are holding court dayly [sic]. I am not informed of the nature of their cases." O. C. Applegate described one session thus: "A few days ago the Grand Court of Klamath set, Chief LaLakes presiding, and many men were convicted of many
[681] crimes. One in particular had stolen a number of women, 20 mink skins and otherwise trampeled [sic] on the rights of his people, he now wears shackles and a heavy log chain and chops wood for La Lakes."[8]

*648 The head chief was by no means an advocate of indiscriminate
*657 change. He favored inhumation of the dead, which he had
622 witnessed among the whites in his travels to Jacksonville, Yreka,
177 and The Dalles, over the native practice of cremation; and about
[764] 1868 he secured its adoption.[9] On the other hand, when the
[567] proposal was made in 1865 to liberate the slaves, Lileks was prominent in voicing his displeasure, undoubtedly backed by

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one who had obstructed Agency-sponsored reforms, but had left the membership of the lesser chieftaincies intact. It is clear that administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693
executive role to constitute a court, while a sheriff, chosen from among the Indians, together with constables, one per chief, were to maintain order. Chiefs, somewhat extralegally, soon began to assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at all, advising them that the object of the law is to *protect* the people and not to *oppress* them."[19] Soon thereafter, he reduced the court to a membership of only seven chiefs and set its sessions at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622
against property (arson), together with what can only be con- [68]
sidered redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585]
were to be confirmed before the principal chief, who was to [643]
receive a fee; the bride price was not to be returned on the [586]
desertion of the husband; while the court might order the sepa-
ration of an irreconcilable couple. Monogamy alone was per- [595]
missible.[21]

Thus, not only were the chiefs given new and different powers,

*657 but they were made the arbiters for the acceptance by their
*648 fellows of changes in customary practice. Their position was
622 buttressed by the procedure at first adopted of issuing annuities through them, of loaning equipment to the chiefs for the use of their followers, of building houses for them, and of giving them priority when breaking ground for planting.[22]

*657 Even as an embodiment of indirect rule, however, the early
*648 reservation courts knew the intervention of the Agents. Meacham
756 records that, "Captain Knapp forbade thier [sic] Doctors to
692 practice and shackeled [sic] them for attempting to persist in the same."[23] And Meacham himself, having requested the commander of Fort Klamath to arrest and confine one Link River Doctor for the same offense, proceeded to try him during the next session of the court and sentenced him to four months' imprisonment at Fort Klamath.[24] Dyar similarly set sentence for Pitt River Dick, convicted of assaulting another Indian with a knife.[25]

*657 The degree to which the Agency had set itself up to confirm
*648 the chiefs, and thus to constitute the supreme authority, is shown
622 by the commission earlier awarded to Allen David, which runs,

> The Bearer
>
> for his intelligence, loyalty and long continued good behavior, is hereby appointed during good conduct Chief of the Chucklolum division of the Klamath Tribe. He will exercise authority over the said people subject to the will of the High Chief of the Klamath Nation and also of the proper authorities of the United States.

> Saml. D. Whitmore
> Acting Farmer
>
> Signed at the Klamath
> Agency Sept 28th 1867
> L. Applegate
> U. S. Indn Sub Agent

Note especially that the division referred to does not correspond with any of the Klamath tribelets. Thus a regrouping was either being recognized or, more probably, instigated by the Agency.[26]

Despite their increasing control, Agents continued to chafe under the independence still exercised by the chiefs. As Commissary Meacham chose to phrase it, "In thier [sic] present condition it is probably best that each tribe should be represented by thier hereditary chiefs, but I am satisfied that the time is not

appointed sergeants of the force. "This," he added, "would give 657*
these chiefs something to do & a support. They would be in- 648*
terested in watching their people and in keeping good order."[61] 625
The move also would counter the opposition to the police among 622
the chiefs themselves, led by Allen David.

Once the force was authorized, Nickerson became aware of 657*
its peculiar jurisdictional limitations. When he sent the police 648*
625

Joseph Emery

U. S. Indian Agent

This pass authorized an Indian police officer to leave the reservation for three months while on duty in the Linkville area. 1886.

to Linkville to round up Indians absent without passes and to pursue Indian horse thieves, he was informed that they had no power to make arrests off the reservation: the United States authorities must be notified to act. Yet when the turbulent Spokane Ike shot Skookum Doctor and fled, to be captured by the Indian police near Prineville, the U.S. District Attorney declined jurisdiction, saying that it lay either with the state courts or
with the tribe. Accordingly, "the chiefs in council, acting as a 657*
grand jury, accused Spokane Ike of the crime of murder. A court 648*
was held, the Indian Agent presiding. A jury, of twelve of the 622
most intelligent Indians of the tribe was selected. . . ." Both by 692*
the testimony of a witness and by his own statement the defend- 695
ant was found guilty of murder in the first degree. Upon further 000

[Klamath Reservation]

Upon further

*657 *648 696 instructions from Washington, he was publicly hanged. Struck by the solemnity of the proceedings, Nickerson reported, "Fully half the people of the nation was [sic] present. The order and behavior were admirable. The arrangements and execution of the plans were in the highest degree creditable to the Indians having charge of the same."[62]

*657 *648 434 625 The following year, a parsimonious Congress made necessary a reduction in pay. "They are all poor men," exclaimed Nickerson, "and can not support their families on one ration and 5 dollars per month. Young men have not the experience needed & do not command the respect of the tribe & nation." He searched about for alternatives to help them eke out an existence.[63] Opportunely, there arrived a copy of *Rules Governing the Court of Indian Offenses* which, pronounced Nickerson, would "work a radical change in the government of this people."

*657 *648 622 625 • 692 He suggested that Blow and Hill "loyal, intelligent, and progressive Christian men" be appointed as judges, to serve concurrently as policemen. To them he proposed to add another, Jesse Kirk, a pupil at the Agency school and a carpenter's apprentice, to be both a member of the force and a judge. Of the three, he wrote, "David Hill will make the most competent man for presiding Judge. If necessary I will nominate him for Captain and Blowe [sic] for Lieutenant of Police. Otherwise I would prefer that they remain as they [are] as Blowe is head chief of the nation."[64]

The triple role of Hill and Blow made it difficult to delimit their judicial functions. Wrote Nickerson in 1886:

> I was obliged to be quite positive and firm in the exercise of my authority as an agent, before they came to understand that they were not independent in the performance of their duties as Judges. It also required some time to convince them that they were not to become prosecutors of supposed criminals, and that they were not to form and express an opinion in advance of hearing all the testimony, and then not until they had taken time to deliberate together. I am satisfied that we have no better material for judges than those that are now acting in that capacity, and yet they are strongly opinionated, and are making but slow progress in the right direction.[65]

*657 *648 625 The police force, meanwhile, had been distributed so that four

served at the Agency and three at Yainax, with an additional 657*
policeman at each school to bring in new scholars, recapture 648*
runaways, and oversee the prisoners. Dave Hill presided over 625
the police building at the Agency, with quarters for his family and cells for the prisoners.[66] On occasion, policemen accompanied labor parties off the reservation and worked alongside them for pay in addition to their salaries; and they served as escort to the freighting runs to Ashland and Jacksonville and the late winter expeditions to the Lost River fisheries. They were a considerable power in maintaining order, even apprehending deserters from Fort Klamath; and Emery used them effectively in imposing his agricultural policy upon his wards.

The police, however, at times found themselves at odds with 657*
the very laws and regulations they were employed to uphold. 648*
Among those involved in the illicit traffic in reservation timber, 625
as already described, were several members of the police, together 622
with other Agency employees, and three chiefs: Monchnkasgitk, 578
Allen David, and David Hill. The latter, in 1888, learned at first hand the impersonal character of authority when, disturbed by some ruling concerning his son, he approached the clerk who was acting as Agent in the absence of Emery, in what that worthy described as "an angry, insulting, insolent, defiant, threatening, warlike and rebellious manner." He was arrested—resisting the while—and locked in the guardhouse; and the clerk requested that he be kept in solitary confinement for one week, or until the clerk had returned from Yainax.[67]

Emery apparently conceived that too much power was concentrated 657*
in a few hands, for later that year he reorganized the 648*
court, with the observation that "in the very nature of things the 692
Judge should not be the *Sheriff*." His appointments were drawn 622
from a new generation of leaders: William Crain, William Crawford, [693]
and Benjamin Butler.

> They are intelligent men [he observed], [and] can read and write and speak accurately the English language. One of them is a graduate of the Chemawa Indian School, another educated at the Klamath School and the third one is the best informed man on the reservation.
>
> Court is held once a quarter at Yainax—40 miles from here and twice a quarter at the Agency.

657*
648*
692

> *657 *648 • 692 A large number of Indian offences come before this Court for trial, consisting mainly of family quarrels, disputes about the ownership of property and acts of licentiousness.[88]

With the accidental death of Crain, Jesse Kirk was appointed in his stead.[89]

Thus, within a generation the administration had replaced the popular leaders with those among them who were Agency employees, and in turn had supplanted them with the products of its schools. Legally constituted authority was administered through the Agency, at first through a customary court of chiefs and later [625] through a Court of Indian Offenses. The Indian police, who took their orders directly from the Agent, were satisfactory to him as the instrument of his hand. Not so the courts, which tended instead to constitute seats of power alternative to that of the Agent. The result was to be that Agents tended to strengthen the police while circumscribing the functions of the courts.

*657 *648 622 571 Meanwhile, beyond the administrative structure thrived an unacknowledged informal leadership, based as in former days upon wealth and accomplishment. Unlike that of the Agency, it was not restricted in position nor limited narrowly in function. This was a leadership in which employees could also participate; and it was presently to see such diverse men as the old chiefs, Monchnkasgitk, Henry Blow, and Allen David, make cause with Dave Hill, and he with young Jesse Kirk, and he in turn with Jeff Riddle, son of Frank Riddle and Winema, the heroine of the Modoc War, and with Henry Jackson, the wealthy exslave. In this sense at least E. L. Applegate was right when he observed:

> [179] [178] [101] The tribal distinction among the Indians on this Reservation is practically disregarded by the Indians, and the ancient prejudices are rapidly fading away. The general name of Klamath People seems to be superseding all other distinctions.[90]

Of all the societal
relationships, the government sought directly
to change only those within the family. It was clear that a nation 657*
that was soon to impose upon the Mormons the American, and 648*
not the Biblical family, would permit no special marital practices 595
among the Indians. Polygamy was banned, although not retro- 177 178
actively for unions such as those of Allen David and Monchn-
kasgitk, which had been contracted prior to January 1, 1870.
Some leaders themselves appear to have advocated the change in
a desire to emulate whites. In 1877, Gatschet noted that there
were still two or three polygamous men.[26] Since polygamy had [556]
been a mark of the affluent, the ban, like the emancipation of the
slaves that preceded it, served to erode the status of the tradi-
tional chiefs.

An effort was also made to place under the authority of the 657*
court of chiefs certain relationships which had formerly been 648*
regulated privately between the families or individuals con- 622
cerned. In the legal code instituted when the court was estab- 692 •
lished, the consecration of marriage was made the function of 685
the head chief, to whom the groom was to pay a fee of five, three, 583
or two dollars or the same amount in horses, graduated according [643]
to his means. It was again the chiefs who punished fornication [684]
and polygamy and performed divorce.[27] The traditional ritual [586]
of marriage still was being practiced by some families in the
1890's[28] but the gift exchanges between the families concerned
which set a public seal on the union were superseded, and the
controls exerted by the family over the couple were thereby
diminished. The effects of these and other changes were recog-
nized by Gatschet. "Matrimonial reverses . . . among the Klamath
[he declared] . . are one of the unavoidable consequences of
the gradual emancipation of the females from the former rule of
their brutal husbands through the advent of the whites, and also
of the obnoxious and corrupting neighborhood of the soldiers
at Fort Klamath."[29]

With time, the seal upon marriage came to be set by the 657*
Methodist church and its ethics in turn permitted the independ- 648*
ent of spirit to flout tradition. One woman recalled that upon 581
the death of her husband his family proposed that she wed his 587
brother in customary manner, but she refused out of regard for 177
the memory of her husband and the sanctity of the bond of their 178
marriage in the church.

3:Stern E-4,5 (1949-1957) 1965 NR 10 Klamath NR 10

[Klamath Reservation]

was transacted by Jack Palmer, Harrison Brown, Ike Mose, and 648 *
Abraham Charley. A committee of ten men submitted a report 657 *
of the findings of the council, presenting the proadministration 665
viewpoint and requesting "that these men [Kirk and party] be 668
not allowed to do any more business pertaining to the tribe without 578
tribal authority."[74]

Jesse Kirk and his adherents did not participate in the "loyal" council. After the scene in Evans' office, Kirk and Jackson had consulted with Mills in Klamath Falls. In the company of the attorney they then returned to demand the petition. Evans refused, informing Mills that "no attorney had any right to interfere in tribal affairs without permission from the Interior Department." The three retired and with others of the faction drew up another petition which they forwarded to Washington.[75]

In his letter of transmittal to the firm of Dudley and Michener in the capital, who were in turn to present the matter to the Commissioner, Mills shed a new perspective upon matters. After reviewing some of the earlier developments, he turned to the [692] •
investigations of Inspector Holland, which, as he said, [681]

> proceeded along smothly [sic] enough until the questions of money and property became the subject of inquiry when it developed that during the last four years a system of collecting money, stock, lumber and other property had been adopted; it seems that this was done by first having the "Indian" court (a sort of disciplinary tribunal which has been authorized or rather sanctioned by the department) impose a penalty or punishment and then allow the indian defendant to pay in cash or such other property as he might chance to have and notwithstanding that such court has no such authority to impose fine or collect money in that way. . . . During the time of the investigation some of the fines which had been collected one or two years were paid back to the defendants. . . . It is conclusive proof had there not been an illegal practice . . . no such returns would have been made. . . .

Although Holland had inquired into only one case, there had been several. Jesse Kirk had requested of George Loosley, chief of police, the list of fines imposed, but was denied it. Finally, Loosley consented to divulge the sum, amounting to $2,651 collected over a four-year period.

At the center of the case, claimed Mills, was Applegate, related through marriage to three brothers of the Loosley family. Two

*648 Indian officer, both at Beatty. Thereupon, Chiloquin's marshal
*657 and his deputy also resigned, asserting that enforcement under
641 those conditions was too difficult—and too dangerous, to boot.
625 The county, which had already barred tribal members from the county jail, now took the position that, short of a government request, its courts would try no more Indian cases. Crawford
[692] countered with a proposal that the Court of Indian Offenses be reinstituted, while other leaders fell back upon that time-honored solution, the United States cavalry. Several months passed before funds were found to restore the reservation staff to normal strength.[4]

*648 Within the interlocking jurisdictions of the reservation and
*657 the reservation community, Klamath came to play out the role
641 of citizen as a voter, a taxpayer, and the object of legal control.
571 In small towns such as Chiloquin and Sprague River, relationships were primary in character, dominated by face-to-face relationships. Within the special environment of the reservation, with the vast potential of its unexploited resources, something of a western frontier tradition was preserved, with emphasis placed upon individualism and a high premium set upon voluntaristic action in concerting effort.

*648 These conditions were nowhere better evident than in Beatty.
*657 In this little community, with fewer than one hundred fifty
621 members, leadership was furnished by a few individuals and
563 action was highly informal. Perhaps the most influential person was a white storekeeper, a resident in the community for almost four decades, who had on occasion donated land and cash for worthy causes, who presided over a credit system, and who was much respected by the older tribal members. Among the latter, a leading spirit was the widow of his brother-in-law, who could be counted upon to act with him. His store was a frequent gathering place and the debating ground of the "hot stove league," where tribal politicians from the Upper End were often to be found. Another local leader was a young white, married to a tribal member, who farmed along the Sprague and in his spare time was a vigorous preacher in the Assembly of God Church.

Indians from other reservations, also married to Klamath, provided specialized leadership. One was prominent in the affairs of

*648 rigidity, and while its members freely attended the services of
*657 other sects, they were selective in admitting non-Klamath to their
795 worship. It was finally upon the issue of its Indian character that
177 the church was riven. The immediate circumstance was the effort
[563] of the "Annie Lee" faction to introduce the Bible into the ritual.
*648 A stout minority of the members refused to allow this, observing,
*657 in the words of one member, "The Indian has his religion: God
795 speaks to him through the 'shakes.' The white man hasn't got
578 them; he has to use the Bible." The contest soon came to litiga-
177 tion, during which the conservatives held services in private dwellings, while their rivals occupied the church building. Some years later, while the issue dragged on, a fire destroyed the structure; but the "Annie Lee" faction possessed sufficient vigor to rebuild it. Increasingly, that group had been gravitating toward the Four Square Gospel; and when the church was rebuilt it came to be used jointly with another fundamentalist sect.

*648 Thus, even the maintenance of an "Indian" religion, objectively
*657 syncretic in form and content, is sought by a state charter of
795 incorporation and internal disputes are placed before the courts
177 for decision. Moreover, its growth parallels the revivalistic move-
• [692] ment of fundamentalist sects upon the West Coast; it vies with them for members; and its destiny is finally interwoven with theirs. Any theory that sees in the growth of such a religion a reaction of the Klamath people to pressures of the time must consider that special history and account for the parallel growth of other sects among non-Klamath at about the same time. For the Klamath, those sects must be regarded alternant to the Shaker faith in providing opportunities for expression. In assessing the features that attracted converts, the appeal of familiar Christian practice, known from earlier Methodist services, must be reckoned, as well as those features which were strictly aboriginal. For some, indeed, the identity of the church as Indian may have been compelling, as fostering an image of independence from the almost overwhelming presence of American culture.

To evaluate the impact of the Shaker Church from the members involved is hazardous. Although only a handful of individuals became exclusively committed to the Shaker way, its impact extended far beyond their ranks. At the same time, the majority

his wife, then I remove (him); no longer chief remains he.

NOTES.

[177] **58–62.** The legal practices, regulations, and ordinances given here by a subchief of the Klamath Lake tribe are observed by all the chiefs, and are apparently fashioned after American models. The principle which seems to guide most of the judicial decisions of the chiefs, is given in one (59, 20. 21) of these regulations: "If a chief makes law like white people, that will be right."[*] This article is composed of three parts:

Part I. List of the chiefs acting as judges on the reservation in 1877.

Part II. Legal customs governing the Klamath Lake people.

Part III. Instances of application of these legal customs; amount of fines, terms of imprisonment, etc. These are the "*novellæ*" of Klamath legislation.

58, 1–3. P'lú, Lilu, and some other headmen mentioned here have signed the treaty of Oct. 14, 1864.

[563] [657] **58, 4.** Móatuash. There are only two Pit River *families* living on the whole reservation.

58, 8. Tcháktot belongs to the Yahúskin tribe of Snake Indians. Cf. Ind. Aff. Report 1873, p. 324.

[193] **58, 10** etc. The future tense employed in these behests, regulations and defenses recalls the French future used in an impressive manner instead of the imperative: *tu ne tueras point, tu ne déroberas point.*

58, 10. shlí-uapk shash. The pronoun shash has here almost the force of a reciprocal pronoun, for the meaning of the sentence is: "do not shoot at people of your own tribe." The same is true of sas in palluápk sas, 58, 10; 58, 13 (twice); pálla shash, 61, 14.

[194] **58, 10.** ksaggayuapkámsni is pronounced as one word, as the removal of the accent from the syllable -uápk demonstrates; and so in many of the following verbs standing in the future tense. For the sake of clearness, I have preferred to resolve these forms graphically into their component elements.

[192] [193] **58, 11.** wátsam, etc. The possessive wátsam stands here instead of the instrumental case watsátka through attraction from wännikísham. Tchíkla here means to ride away on another's horse, the horse being missed by his owner.

---

[*] Dave Hill introduces himself in the first person as chief; but many of these decisions can be given by the headchief only, not by any of the subchiefs, to whose number Dave Hill belonged. The Modocs at Yáneks claim to observe these regulations; the Snake Indians do not.

*539 58, 15. shetcháktanuapk stands for the more common form: shitcháktanuapk.

622 692 58, 16. nánuktua shéshatnish m'na: "all what your husband has transferred to your parents to obtain your hand"; m'na stands for hishuáksham. Cf. 61, 8.

[193] [192] 59, 7. mish, *you, to you*, is often used in this article for málash, málsh, *ye, to ye*, in allocutions to two or more persons. This is a way of expressing what may be called the "inclusive plural of the second person". This mode of speaking is observed in m's lápuk, 59, 7; lápuk mish, 59, 7. In the same manner 1 stands for ăt, 59, 8: 1 sissók-uapk, if ye whip each other; also 60, 22.

59, 9. 1 mí stands for mish mí.

59, 17. hă ḵúi gí'uapk: if he should fail to do his duty; 59, 19. hă tídsh gí'uapk: if he does his duty well; nanuktuánta: in every respect.

59, 22. í'χaks mí: what you may win by betting on the horses engaged in the race.

60, 2. kă'lish is the objective case of kă'liak, kéliak, "not having", the simple form of which, without -ak, would be kă'li or kă'liu (kă'li hû).

[583] 60, 11. túma wátch gitk. The horses have, of course, to be transferred to the parents of the bride and not to any of the chiefs.

[231] 60, 12. wátch. The horses owned by the Klamath Lake and Modoc people are valued from 20 to 25 dollars each; they descend from the hardy, enduring race of Cayuse ponies, and were originally obtained by bartering commodities with the Columbia River Indians at the Dalles, Oregon.

[192] [193] 60, 15. wátch spuní'-uapka; wátch refers to *one* horse only, for the verb spuní', to transfer, is used of one (living) object only; shăwána is: to give *many* objects. "Not even one horse your wife has to give to you, if she leaves you; but if you leave her, you must give her several."

60, 17. láp snawă'dshla. Polygamy was abolished by the headmen of the tribe shortly after the establishment of the reservation, and this ruling was one of the greatest [177] [595] benefits ever conferred upon that tribe by the progress of civilization. But those who had several wives then were not compelled to dismiss all but one, and so in 1877 two or three men were still polygamists. The irascible and excitable disposition of the Modoc and Klamath females must have produced many chin-music intermezzos with their husbands at the time when polygamy was predominant.

61, 3. Ḵá-i mí'sh etc. In this paragraph, in: ḵí'tgik, káktak, hémkanktgik, gitkik, the terminal k contains the abbreviated gi, which joined to the foregoing nû, n means [193] *I said.* The construction runs as follows: Hû'nk ni gi ḵá-i mish ḵí'tgi; nánuktuanta káktak gi píla m's n hû'nk hémkanktki gi; nă'-ulakt gí'tki 1 snawă'dshash tchí'sh káktak gi píl. Ḵá-i etc.

61, 6. tchik. This particle does not mean *if*, but cannot be rendered *here* (and below) with a more appropriate word. It is identical with tchĕk, *then*. A subordinate clause is here expressed by a co-ordinate one. Cf. 61, 9. 10. 12. 62, 4.

[192] [193] 61, 6. któktatska: "we clip their hair in every instance", is the distributive form of któtchka, któtaka, occurring in 58, 16.

61, 9. Tsúi etc. This inverted sentence has to be construed as follows: Tsúi tchish nósh híshuaksh wutódshish snawă'dsh m'na pă'n hû'nk snúkp'la, tsúi nă'-ulĕkan etc.

*539 593 77, 1. The name Púl is pronounced in very different ways, and most people think it is the English name Ball; Póluk is Pŏ'l hû'k; tchía, "lived", would be preferable to t'shin in this connection.

[192] 77, 2. 3. kä'tsa, kétsa properly means to cast away; here: to abandon, leave; almost identical with wutódsna occurring below, 78, 2.

77, 4. säwána sas: he did not give many horses for her to her parents.

78, 8. pállank sas. This shash properly refers to Pámpi and his family, for Púl's wife took the dug-out canoe of Pámpi and rowed with it to the soldiers. This was in the northeastern part of Upper Klamath Lake, and occurred in the winter of 1876–'77.

[103] 78, 13. É-ustat is the location of the old agency buildings at Koháshti, in northeast corner of Upper Klamath Lake.

[192] 78, 14. hí'-i. On that occasion Ball left his wagon in the midst of the woods; hi, hí-i means "on the ground".

[657] [692] [697] 78, 15. nä'ulχa sha pä'n. About the middle of September 1877 a strong escort of Indians brought Ball and his wife to the "law-house" at the Klamath agency to be tried by the chiefs. A delay of several days occurred before he was confronted with the judges, and during the time he was imprisoned at the "skúkum-house", a strong log cabin at the agency serving as jail. He is still a very young man, and on being brought there he was allowed to ride on horseback with a rifle on his shoulders. His father is an Indian from the Spokane tribe, and Spúkän is his name.

[192] 78, 16. sχókta, to pay a fine; to be fined (by the chiefs). See: "Legal Customs", 62, 5.

the index	having put forward.	Then	they	stop,	from the losers	when they have won	all (stakes).

As for the deposed Monchnkasgitk, his place was promptly 657*
filled by the election of one "Barcley." Despite the rebuff, 648*
Monchnkasgitk rose again in time to the position of subchief at 622
Yainax, where he came to be known as Moses Brown.[17]

The major election had removed from immediate power one who had obstructed Agency-sponsored reforms, but had left the membership of the lesser chieftaincies intact. It is clear that administration policy held that representation by a chief was
adequate to secure the interests of a band. Thus, in 1871, when 657*
John Meacham found the lot of the slaves little improved his 648*
remedy was to authorize them to elect a chief "to represent 622
them in the councils and courts of the tribes."[18] In the political 692
order thus established, the chiefs had been displaced from an 693 •
executive role to constitute a court, while a sheriff, chosen from among the Indians, together with constables, one per chief, were to maintain order. Chiefs, somewhat extralegally, soon began to assume magisterial functions.

It took some time to make the court aware of the bounds 657*
within which it ought to operate. John Meacham noted in his 648*
charges "an excessive disposition to go to law," and remarked, 622
"I have counciled [sic] the board of chiefs against this, especially 692
against making arrests for trifling offenses or for *no* offence at all, advising them that the object of the law is to *protect* the people and not to *oppress* them."[19] Soon thereafter, he reduced the court to a membership of only seven chiefs and set its sessions at monthly intervals.[20]

As outlined by Dave Hill, one of the members of the court, 657*
the list of offenses combined crimes against the person (murder, 648*
adultery, stealing, fornication, witchcraft, and fighting), those 622
against property (arson), together with what can only be [68]
considered redefinitions of customary procedure. Thus, cremation [764]
of the dead was enjoined and the license permitted a chief in
dealing with his followers was severely circumscribed. Marriages [585]
were to be confirmed before the principal chief, who was to [643]
receive a fee; the bride price was not to be returned on the [586]
desertion of the husband; while the court might order the
separation of an irreconcilable couple. Monogamy alone was [595]
permissible.[21]

Thus, not only were the chiefs given new and different powers,

served at the Agency and three at Yainax, with an additional 657*
policeman at each school to bring in new scholars, recapture 648*
runaways, and oversee the prisoners. Dave Hill presided over 625
the police building at the Agency, with quarters for his family and cells for the prisoners.[66] On occasion, policemen accompanied labor parties off the reservation and worked alongside them for pay in addition to their salaries; and they served as escort to the freighting runs to Ashland and Jacksonville and the late winter expeditions to the Lost River fisheries. They were a considerable power in maintaining order, even apprehending deserters from Fort Klamath; and Emery used them effectively in imposing his agricultural policy upon his wards.

The police, however, at times found themselves at odds with 657*
the very laws and regulations they were employed to uphold. 648*
